Translator's PREFACE.

HEN the translation of the history of Chile was first undertaken, it was more out of consideration of making that part of the world, so remote from ours, better known, as to the geographical part, the natural history, and the first settlements of the Spaniards, than to enter into a distinct narrative of the events of that invasion, which contain little instruction, being between a people of great arts and abilities on one side, and another of great natural courage, and no culture of the mind or body, on the other. The case was so extravagantly unequal between them, when the odds of guns, armour, horses, and discipline, are weighed against nakedness, anarchy, panick terrors, and simplicity, that it seems a kind of prodigy that the love of liberty and a stock of natural unpolished bravery, should hold a contest with armed avarice, spirited by superstitious zeal, for almost a whole century.

The natural history of Chile is so admirably performed, that it may be a model for most relations of that kind; for there are exact descriptions of all the beafts, birds, fishes, plants, minerals, coasts, rivers, bays, and inhabitants of the country, that can be wished for. There is, besides, an excellent account of the climate, the seasons, the winds, the manner of living both of the Indians and the Spaniards. The description of the great Cordillera, or chain of mountains, which runs for almost a thousand leagues in a parallel line with the South Sea, and divides Chile from the ultra mountain provinces, is so accurate, that nothing of that kind can be more so: the narrative of the manner of travelling through those vast plains of Cuyo and Tucuman, as far as Buenos Ayres, and the river of Plata; the topographical description of the streights of Magellan, with all its bays, ports, and its whole navigation, are of great instruction, as well as very entertaining.

In all this the jefuit, who was the author of this history, must be confessed to have deserved the character of a candid inquisitive philosopher; and in what he has performed besides, about the settlements of the Spaniards, he is very particular, especially in his description of the city of St. Jago de Chile; where any one may see the progress of priest-craft in that new world, by the vast riches of the convents, monasteries, and numeries: but above all the instructive chapters of this treatise, there is one about the methods of driving a trade between Europe and Chile to and from the Philippines

The Translator's PREFACE

and East Indies, which contains secrets of commerce and navigation, which I wonder how they were published, and 'tis possible may, e're it be long, be practifed by the Spaniards and other nations, if the navigation of the Mexican gulph becomes so troublesome, as it is like to be made by the naval powers of Europe, who seem to have chose those seas for the scene of all their maritime power to exert itself in.

There is a digression about the first discovery of the islands and continent of America by Columbus, and a progressive narration of all the other discoveries, as they were made, and by whom, which is very curious; but as it is borrowed from other writers, the author can challenge no other merit than that of a judicious compiler.

All that needs to be added to this preface, is, to let the world know that the translation was first encouraged by the Royal Society, of which the translator has the honour to be a member; and that it was two summers work, that it might be the less subject to errors; and to prevent them, that worthy encourager of all natural knowledge, as well as of his own profession, in which he excels, Dr. Hans Sloane, has contributed very obligingly some of his care and attention.

Author's PREFACE.

Eing come from the kingdom of Chile into Europe, I observed that there was so little known of the parts I came from, that in many places the very name of Chile had not been heard of. This made me think my felf obliged to fatisfy, in some measure, the defire of many curious persons, who pressed me to communicate to the world a thing so worthy of its knowledge. But I found myself in great difficulty how to comply with their pressing instances, being destitute of all the materials requifite for such a work, and at such a distance from the place that could furnish them, that I despaired of giving a just satisfaction: however, in obedience to those whose commands I cannot but respect, I resolved to write this account, more to comply with my duty, and give some information of those remote regions, than to pretend to a perfect and exact history, which this relation, in all its parts, (I confe[s,) comes very flort of. The reader then being thus prepared, will, I hope, have a regard to the little help I could have in this work, at such a distance as Rome and Chile are from one another; and by his prudence and goodness, excuse any thing that may seem less finished in this It has not work; particularly fince there is hopes of a general history of Chile,

yet appear-which cannot be long before it is finished.

er.

In the mean time, the first and second books of this relation will shew the natural state of the kingdom of Chile, both as to its climate and product; The third, will describe the qualities of its first inhabitants; The fourth and fifth, will describe the first entrance of the Spaniards into it, and the conquest of it by them; The fixth, will contain the various events of the war, caused by the noble resistance made by the Araucano's; The seventh, will shew the first means of peace attempted by father Lewis de Valdivia, of the company of Jesus, in order to facilitate the preaching of the holy gospel, and the glorious death of his holy companions; The last book, which is also the largest of all, will contain the first means of planting the christian faith, and its propagation among the Indians, which was particularly compassed, and is still carried on by the missions and ministry of our company; all which endeavours of theirs I explain and distinguish under six heads, shewing the necessity of the spiritual help that those new christians lie under, both as to preaching, and informing them in matters of the christian faith.

I must give here five advertisements: The first, That in what I have seen my self, I have not departed from the truth in any thing I have writ: as to what I relate by hearsay, or by authority from other wrive.

Vol. III. (a) ters.

The Author's PREFACE.

ters. I report it with the same candor as I heard and read it, without adding or diminishing any thing of the truth; and though all those I cite in this work are worthy to be believed, yet the least to be suspection ed of partiality, are such foreign writers who extol and commend this kingdom of Chile with such repeated encomiums. My second advertisement is, That confidering the Kingdom of Chile was the last part of South America that was discovered, and the nearest to the Antartick Pole, I could not treat of its discovery with good grounds, without touching a little upon the neighbouring kingdoms of Peru and Mexico, which were as a passage to it; and if I have enlarged now and then on the praises and description of those parts, it was, because I thought it might not be disagreeable to the reader; in which, if I am mistaken, he has only to skip some chapters of the fourth book, and go directly to those which treat of the first entrance of Don Diego de Almagro into Chile; Thirdly, I must take notice, that though I do sometimes, in speaking of the land of Chile, report some particularities which seem trisles, and not so proper for history, I do not relate them as singular and proper to that country alone, but rather to shew the uniformity both of nature and customs, as to life and religion, in all those parts; and some things are mentioned to encourage those new countries to drive on the advance. ment of religion, politeness, learning, and good morals.

Fourthly, I must take notice, That since I do not here make a general history of Chile, I have not had occasion to mention all the illustrious men, and noble commanders and foldiers, who have flourished in those parts from the beginning of the conquest: I only, therefore, take notice of fuch as I find named in the authors whom I cite; and they too not make ing it their business to write a distinct history of Chile, but only to relate some particular event, and so mention only some part of the government ment of some governors, or their wars, cannot be exact in the account of all those who have in different times and occasions acted in those wars and by this salvo I cover the honour of all our gallant commanders and foldiers of Chile, whose actions I omit, though they are worthy to be graven in marble, or Bronze, only for this reason. And though I own, that I am not ignorant of many who have flourished in my time, and before it, yet I have not so distinct an information as would be necessary to give them their due commendations, and fet their actions in that light which their valour deferves; therefore the general history of Chile will perform that part. Perhaps, even before that, this work of mine may exe cite some body to employ their talent in making a particular book of their elogiums and praises, which cannot fail of being well received in the world fince so many noble and illustrious families of Europe will be concerned

Lastly, I advertise, That though the principal motive of my writing this relation, was to publish the spiritual ministery of our company in the conversion of souls in this kingdom of Chile, set I could not but treat

en wo or the inh the me as dir

var who to like epit or de quee and cent *beat* upon tran ledge grea and I ba king zeal

and fuper

of fo

The Author's PREFACE.

first of the land and inhabitants, as being the object and subject of their endeavours; and I have been forced to be more dissue in it, than I would have been about a place already known to the world by any history or relations made of it. For this reason, I have employ'd fix books in the description of the land, and the valorous fierce disposition of its inhabitants, that the force and efficacy of the divine grace might shine out the more in the beginnings of the conversions of that untractable nation, mentioned in my two last books, which are almost as comprehensive as my fix first, which were divided into so many, only to answer the

diversity of matter which they contain.

riting in the treat first

Thus I have informed my reader of this work, in which he will find variety of entertainment. Some things will answer the curiosity of those who delight in knowing natural causes; others will be moved and incited to valiant actions by the examples of those performed here. Those likewise, who love historical relations, will be pleased, fince here is an epitome of the discovery of the best part of the Indies, according to the order of times, and persons concerned in the conquests and discoveries of so many kingdoms; and, lastly, the pious disposition of devout minds will be elevated to praise God for the signal favours, which the queen of heaven has bestowed on the kingdom of Chile in particular; and adore the Lord of ail things, for having in little more than one century made his name known, and his worship introduced among so many heathen nations, even to bring the untamed and powerful Araucano's upon their knees to him, after so many years stubborn resisting the entrance of the Gospel. I cannot defire my Reader to express any acknow. ledgements for this work of mine, because I do not judge it deserves so great a reward; but I hope he may, with indulgence, excuse its faults, and make me some allowance for the little helps I have had in writing. I have endeavoured to please all; but, particularly, to shew how the kingdom of Christ may be advanced in that new world, if the apostolical zeal of the evangelical workmen will employ itself in this great harvest of so extended a gentilism and new christianity.

To the READER.

HE first fix books being the only ones that contain the historical and natural accounts, they alone are translated; and some chapters even out of them omitted, for their tedious superstitious narratives.

BOOK I.

Of the Nature and Properties of the Kingdom of Chile.

CHAP. I.

Of the Situation, Climate, and Division of the Kingdom of CHILE.

HE kingdom of Chile, which is the uttermost bounds of South America, and has the kingdom of Peru to the north, begins at the 25th degree of fouth latitude, to-wards the Antartick Pole, and is extended in length five hundred leagues, as far as the ftreights of Magellan, and its opposite land, called La Tierra del Fuego, which reaches to the 59th degree. The breadth of Chile is various; for it may be faid to extend itfelf one hundred and fifty leagues east and west, because though that which is properly call'd Chile, is not in many places above twenty or thirty leagues broad, which is generally its extent from the fea to the famous Cordillera Nevada, or chain of mountains cover'd with fnow, (of which we shall fpeak in its proper place,) yet in the divi-fion of the bounds of the feveral governments of America, the king added to Chile those vast plains of Cuyo, which runs in length as far as Chile does, and are above twice as broad.

The opposite part of the world to this kingdom, is the meridian that passes be-tween the island Taprobana of the Antients, which is Zeilon, and cape Comorin, beginning at twenty fix degrees north of the equi-noctial line. The inhabitants are properly antipodes to those of Chile; and those who inhabit the countries that reach from thirty feven degrees to forty four of the most westerly parts of New Guinea, would be also diametrically antipodes to the inhabitants of Castille; but 'tis yet uncertain, whether that part of the world is land or water; but this is certain, that it falls out in the division of Castille, and is opposite to it, and is west from Chile one thousand seven hundred leagues.

This kingdom is comprehended in the third, fourth, and fifth climate: In that part or it which is in the third climate, the longest day is thirteen hours; and in the fourteen hours, and fomething more, quite

fifth climate, the day at longest is about

contrary to Europe, as being opposite to it, Ovalls, but not diametrically; for the longest day in Chile is St. Lucias, and the shortest St. Barnaby's; the sun is always there towards the north, and the shadows to the

This is the fituation of the kingdom of Chile, which borders upon the north with the province of Aracama, and the rich mines of filver of Potofi, where the kingdom of Peru begins; and on the fouth it has the great fea to the pole, and the islands discover d in it. Abraham Ortelius was of opinion, that there was on this fouth fide of the kingdom of Chile, a land which was contiguous with New Guinea; and this opinion lasted till we were undeceiv'd by those, who having pass'd by the streight of St. Vin-cent, otherwise call'd the streight of Le Maire, went round that fouth land call'd the Tierra del Fuego, and return'd to the north sea by the streights of Magellan; proving evidently the said land to be an island entirely separated from any other land; as I shall shew further in its proper

Chile has on the east Tucuman and Buenos Ayres, and to the north east Paraguay and Brafil; to the west it has the South-Sea, which, according to the opinion of Antonio de Herrera, is all that is comprehended between Chile and China, and begins at the Golden Cherjonesus, or the island of Sumutra; and that sea is in breadth, east and west, two thousand seven hundred leagues.

According to what has been faid, we Division may divide this kingdom into three parts: The first and principal is that which is comprehended between the Cordillera Nevada and the South-Sea, which is properly call'd The fecond contains the islands which are fow'd up and down upon its coast as far as the streights of Magellan. The third contains the province of Cuyo, which is on the other fide of the fnowy mountains, call'd the Cordillera Nevada, and run in length all along as far as the streights, and

OVALLE. in breadth extends to the confines of Tucu-1646. man.

To begin then with that part which is most properly call'd Chile: I confess I had rather the description of it had fallen to the lot of some stranger who had seen it; for then the danger of passing for too partial for one's own country (to which are expos'd all those who write of it) would have been more eafily avoided, and fuch a one might with less apprehension enlarge upon the excellent properties which God has been pleas'd to endow it with. The common opinion of all those who have come from Europe to it, is, that its foil and its climate exceed all others they have feen; though, perhaps, in that they only make a return for the kind welcome they all meet with in those parts. As for my part, all I can fay, is, that though it be like Europe in every thing, except in the opposition of the feafons, which are transpos'd, it being fpring and fummer in the one, when it is autumn and winter in the other, yet it has fome properties which do really fingularize it, and deferve the praises given it by travellers; for, first, neither the heat nor the cold are fo excessive as in Europe, particularly as far as the 45th degree of latitude, for from thence to the pole the rigorous and exceffive cold begins.

The fituation accidental of the land of ture of the Chile, must be the cause of this temperature of the vir; for being cover'd on the east by the high mountains of the Cordillera, which are all fo prodigiously elevated, it receives the fresh and cooling breezes from the fea; and the tides which penetrate as far as the foot of the mountains, joining with the coolness of the snow, with which they are cover'd, refresh the Air so, that about four a-clock in the afternoon the heat is no ways troublesome. Nay, if one is in the fhade, one may fay, that in no hour of the day the fun is insupportable, especially from thirty fix degrees or thereabouts, neither day nor night the heat can be complained of; which is the cause, that at the town of the Conception, which is in that situation, the covering for beds is the same winter and fummer, neither of those seasons

being any ways troublesome. Chile free

Another good quality of this country is, from light to be free from lightening; for though fometimes thunder is heard, 'tis at a great distance up in the mountain. Neither does there fall any hail in the fpring or fummer; or are those storms of thunder and lightening seen here, which in other parts make the bells be rung out, and the clouds to be exorcized; neither are there fo many cloudy days in winter as in other parts; but most commonly after the rain has lasted two or three days, the heavens clear up, and look

as if the sky had been wash'd, without the least cloud, in a very short time after the rain; for as foon as ever the north wind, which brings the cloudy weather, ceafes, the fouth fucceeds, and in a few hours drives away the rain; or if it be in the nighttime, the dew falls, and the fun rifes brighter than ever.

This country is yet to be valued upon and all poi-another propriety of it, which is, that it foroms creais free from poisonous creatures, such as sures. vipers and fnakes, fcorpions or toads; fo that one may venture to fit under a tree, or lie down and rowl on the ground, without fear of being bit by them. Neither are there tygers, panthers, or any other mifchievous animals; except fome lions of a fmall kind, which fometimes do harm to the flocks of fheep or goats, but never to men, whom they fly from; and this is not only in the cultivated land, where men are frequent, but in the woods and folitude, and in the thickest groves, of which there are fome fo close with trees, that one can hardly break through them afoot. I heard a friar of ours, who was an excellent Builder, fay, that having gone for three months together in woods, where there was no fign of any one's having pass'd before, to find out trees proper for the timber of the church of St. Jago, he had never met with the least poisonous creature, that could either cause a nauscous idea, or a dangerous effect.

There is another most wonderful singu- No bugs larity of this fame country, which is, that will in not only it does not breed, but will not there. fuffer any punaizes or bugs to live in it; which is the more to be admir'd, that on the other fide the mountains they fwarm. I never faw one in it alive, for fometimes there are fome in the goods and furniture of people who come from the province of Cuyo; but as foon as they feel the air of Chile they die. The experience that was made of this, by one that was either curious or malicious enough, was wonderful; for coming from Cuyo to Chile, he brought fome of those creatures with him, well put up in a Box, and fuch food provided for them as to keep them alive; but no fooner were they come to the valley of Aconcagua, which is the first valley coming down from the mountains, but they all died, not so much as

one remaining alive.

I do not fay any thing here of the mines of gold, nor of those excellent waters which, running from them, are cordial and healthy; nor of the abundance of provisions for life, nor of the phyfical plants, nor of many other rare qualities in which this country exceeds others, as well to avoid confufion, as because those things will be better fhew'd when we come to treat of each of them in particular in their proper place.

The climate and foil of Chile very like shofe of Europe.

In all other things the land of Chile is mare and fo like Europe, both in climate and foil, full felle that there is very fmall or no difference; and it is very remarkable, that in fuch variety of discoveries made in America, none is fo conformable in every thing with the European constitution, as this tract of Cbile: for in most of the places between the tropicks, as Brafil, Cartagena, Panama, Portobello, and those coasts in that situation, the heats are violent, and continual all the year; and in some other places, fuch as Potofi, and the mountains of Peru, the cold is as excessive; in some they have a winter without rain, and have their rain in fummer, when their heat is higheft; others there are, where they have neither wine, oil, nor wheat of their own product; and though in fome they may have thefe productions, yet the other fruits of Europe do not take with them; but Chile has, just as Europe, its four feafons, of fpring, fummer, autumn, and winter; it does not rain in fummer, but in winter; and all the product of Europe agrees with their foil.

One thing is much to be admir'd, and Several land in the that is, that the land of Cuyo, that of Tufame lati-cuman, and Buenos Ayres, being all in the Chile, yet fame fattude with complete from it and from much aif. To different in climate from it and from fering in Europe; for though in those parts it freezes elimate exceedingly, fo as to freeze water within from that doors, and that their cattle, if left abroad, and Euand Eudie with cold, yet there does not fall a drop of rain all the winter, and the fun fhines out fo bright and clear, that not a cloud is to be ieen: But in the spring they have fuch abundance of rain, that it would drown the whole country, if the

axle-trees, though they are very high in OVALLE. those parts, and all the country is as it were a sea: There fall likewise at that time thunder-stones, and hail as big as a hen's egg, nay, as geefe eggs, and fometimes as big as oftriches; as I myfelf have

All these storms and varieties of weather form themselves in the high mountains, that are a kind of wall to the kingdom of Chile; and they never come fo far down as to invade its territories, but stop at them like a barricado; for in Chile the weather is always fleddy and conflant, without fudden changes, all the fpring, fummer, and autumn; in winter, indeed, there are degrees of heat and cold, as there is a difference in the length and shortness of the days, according to the degrees of the lati-tude, and course of the sun, which causes the fame variation as in Europe, though in opposite months.

From hence it follows, as authors do A great observe, and experience teaches, that there blance be must be, and is, a great resemblance be-tween the animals and other productions of animals Chile and those of Europe. As a proof and other of this, I have feen feveral gentlemen that produccame to Chile from other parts of America, Chile, either as commanders, or for other employ-these of ments, which are in the king's disposal, in Europe. credibly overjoy'd at this conformity with Europe; for they think themselves, as it were, in their native country, the air and the provisions of both so like in their qualities: The meats are more nourishing than in hotter climates; and when those who have been either born or bred in those hot countries come to Chile, they are forced to abftain, and keep a watch upon their appetites, till their flom chs are used by little and little to the strength of the food of that country, and can digeft it.

CHAP. II.

Of the four Seasons of the Year, and particularly of the Winter and Spring: With a Description of some Flowers and Medicinal Plants.

The four

HE four feafons of the year, which are in Europe the spring, the summer, the autumn, and the winter, are with the fame duration of time enjoyed in Chile, though not exactly under the fame names, at the same time; for the spring begins about the middle of the European August, and lasts to the middle of November; then begins the fummer, which holds to the middle of February; which is followed by the autumn, which lasts to the middle of May; and then the winter enters, and makes all the trees bare of their leaves, and the earth cover'd with white frosts,

showers lasted as long as in Europe or in

Chile; for when the rain lasts but an hour and a half, the streets are full of streams in

the towns, and the carts are up to their

after fun-rife, except in fome cloudy days, that the ificles last from one day to another;) the winter ends again about the middle of August. 'Tis very seldom that the fnow falls in the valleys or low grounds, though fo great a quantity is upon the mountains, that it fills up fometimes all the hollow places to the height of feveral pikes, and there remains, as it were, in wells and refervatories, to provide, as it does in due time, fo many fprings and rivers with water, fo fertilizing the valleys and plains, that they produce infinite crops of all forts in the autumn, and enrich the (which nevertheless dissolve about two hours kingdom. But notwithstanding that it

Winter.

lace.

Ovalle feldom fnows in the valleys and plains, yet 1646. it is so cold in them, that few parts of Europe are colders which proceeds not only from the degree of elevation this land is in, but also from its neighbourhood to those vast mountains called the Cordillera, who fend out fuch sharp and piercing winds, that fometimes they are insupportable; therefore the sea coast is much more temperate and warm; but in return, much more exposed to vehement tempests of winds, than the inland parts, where these storms are in some measure spent before they reach them, and fo cannot whip them and torment them as they do the fea coafts.

For some protection against these sharp cold winds, God Almighty has placed several great clusters of thorn-bushes, which thrive so well, that it is the ordinary fewel of all the countries about the town of St. Jago, and the valleys near it. It is a plant not unlike an oak, though more durable; the heart of the wood is red, and incorruptible; of it they make coals for the furnace, and other shop uses. parts the true oak ferves for the same purpose; as in the territory of the city of Conreption, where there are very large woods of them, which are fo thick, that though they have already ferved for the uses of the natives fo many years, yet when they are enter'd, they can hardly be paffed in the middle; and this within half a league of the city; for further up in the country there are forests, where no man ever let his foot.

Ever greens.

Though these oaks, as also the fruittrees, lose their leaves in winter, yet there are wild trees which do not, though all covered with ice and fnow; and the cold is fo far from injuring them, that when the fun melts the frost, they look brighter and more beautiful. As foon as the first rains come, the sields begin to be cloathed in green, and the earth is covered in twenty or thirty days with grafs; amongst which nature produces a fort of yellow flower in such abundance, that the plains and valleys look like carpets of green and yellow.

Spring .

These first rains seem to prepare the earth for its ornamental dress of flowers with the fpring, which begins about the middle of August; and they last till December, that the heats come in, and that with fuch variety and abundance of fo many kinds, that the fields look as if they had been painted, producing a most de-lightful object. I remember once, as I of these flowers, some scarlet, others blue, yellow, red, straw-colour, purple, &c. that I was mov'd to tell them, and I told

in a short time two and forty forts, so admirable was their variety; and yet I do not reckon among these the cultivated ones in gardens, nor those that were brought from Europe, such as carnations, roses, stockgillyflowers, orange, lillies, poppies, lupins, &c. I only fpeak of those that grow wild, which are fo odoriferous and sweetfcented, that 'tis out of them that they distil a water call'd aqua d'angeles, or, angel's-water. The smell of these flowers is perceived fweetest at the rising and setting of the fun; which mingled with the scent emitted by the herbs, which are very aromatick, produce a most admirable perfume, and for that reason they put the sprouts and tops of them among the slowers which make the angel-water.

It is scarce possible to express the force with which the earth puts forth these plants, which is fo great, that in many places 'ris hard to diftinguish the cultivated from the uncultivated lands. One would think at first that all had been plowed and fowed. alike; and with the continuance of the rains, the grafs runs up fo strong, and grows so intricate, that a horse can hardly break through it, it coming in most places

to the faddle-girts.

Mustard-seed, turnips, mint, sennel, Plant, &c trefoil, and other plants, which I see are sowed and cultivated in Europe, for the just esteem that is made of them, do all grow wild in Cbile, without ferving to the use of life at all, otherwise than by the cattle's feeding on them, which they may do for several leagues together. The mustard plant thrives fo mightily, that it is as big as one's arm, and so high and thick, that it looks like a tree. I have travelled many leagues through mustard groves, which were taller than horse and man; and the birds build their nests in them, as the gospel mentions in these words, ita ut vo- Mat. xiii. lucres cæli veniant & habitent in ramis ejus; 31. fo that the birds of the air come and lodge in the branches thereof.

There are many plants of great virtue character in physick, and known only to the Indians, of the Macall'd Machis, who are a race of men that chis, or Inare their doctors. These plants they conceal tor. carefully, and particularly from the Spaniards, to whom if they communicate the knowledge of one or two, it is a great mark of their friendship; but the knowledge of the rest they reserve, and it pasfes from father to fon. These Machis, or doctors, are not only esteem'd by the Indians, but by the Spaniards themselves, who have recourse to them in the greatest extremities, when the difease presses most. They find wonderful effects from the application of these simples, which they use in a lesser dose with the Spaniards than with the In-

Description medicinal kerbs.

Two vemarkable cures performed by

she Ma-

dians, who are of a more robust nature, and stronger constitution.

I faw one of our order much troubled with the falling-fickness and fwooning fits, to as he was forced to have always fome body in his company, or elfe he might have fallen down stairs, or otherwise killed him-felf: he had used all the remedies that the learning of physicians and the charity of religious men could fuggest, but without any effect at all; nay, he was worfe and worfe every day. Our fathers learned at last, that about twelve leagues off from that place there lived an Indian Machi: they tent for him; and being come, and having heard the relation of his diftemper, he gave him as much of a certain herb in wine as the bigness of a nail; and it had so great an effect, that it took away the diftemper, as if he had taken it away with his hand, the perion being never troubled with it more, all the time I knew him.

I have feen many other cures performed by these Machis, particularly in cases of poilon; for in that fort of diffemper they are very eminent. I shall mention but one instance, of a gentleman who had been pining away for feveral years, and often at death's door: once, being in extream danger, he heard of a famous Machi who lived a great way off, but was a she-doctor, (for there are women amongst them eminent in the art:) he procured, by prefents, to have her fent for; and having promifed her a confiderable reward, befides what he gave her in hand, which he was well able to perform, being very rich and powerful, fhe began to apply her remedies, which were herbs; and one day, when she saw his body prepared to part with the poison, she caused a great filver voider to be set in the middle of the room, and there, in the prefence of many people, the gentleman having first been very fick in his stomach, he cast up the poifon which had been given him many years before, wrapp'd up in hair, which came up with it; and he was perfectly well after this, as he himfelf related to me.

Though, as I have faid, the *Indians* are fo close in keeping secret the herbs they use, yet many of them, persuaded by reason, and induced by friendship, do communicate something; and time and experience has discover'd so many more, that if I should mention them all, I should be fore'd to make a book on purpose of them; therefore I shall only mention three that I have more present in my memory, the effects of which are prodigious.

Description T

kerbs

The first shall be the samous plant call'd Quinchamali, which rifes not a foot above the ground, and its branches spread like a nosegay, and end in little slowers at the Vol. III.

points, which, both in colour and shape, OVALLE are not unlike the saffron call'd Romi.
They pull up the herb, and boil it entire with its root, leaves, and slowers, in fair water, which is given to the Patient to drink hot: amongst other effects it produces, one is to dissolve all coagulated blood in the body, and that very quickly; so that an Indian seeling himself wounded, takes it immediately, to hinder the blood that could not come out at the wound from congealing inwardly, and so prevents all im-

posthumation, and the corruption of the rest. There happened in our college of St. Jago an accident, which gave proof of this admirable herb; which was, That an Indian belonging to us being gone to the great place to see the bull-feast, a bull, to his great misfortune, catch'd him up, and toss'd him in the air, and left him almost dead on the ground; he was brought to our house, and the physician, being called, said he was a dead man, and nothing could fave him: but, however, he told the father that has care of the fick, that it would coft but little to give him the Quinchamali, wrap him up warm, and leave him alone fome hours. It was done accordingly; and after fome time, the father reforting to the place where they had laid him, to fee if he was dead, he was found not only alive, but out of danger, and the sheet all full of blood, which the herb had caus'd him to void through the pores of his body, so as he remain'd perfectly well in a little time.

The fecond herb is that which we Spaniards call Albaaquilla, and the Indians, Culen, because its leaves are like the leaves of sweet basil: it grows in bushes so high, that they feem to be trees; the leaves are very fragrant, and sweet like honey: being bruised, it is applied to the wound outwardly, and some drops of its juice are to be poured also into the wound; after which most admirable effects of its efficacy

are feen.

I was told by captain Sebastian Garcia Carrero, the founder of our novitiat-house of Bucalemo, that as he was travelling with a dog in his company, which he loved extremely, fome wild monkeys that live in the mountains fell upon him, and fo worried him among them by biting him, fome on one fide and fome on the other, that they left him full of wounds, and particularly with one large one in his throat: his mafter came up at laft, and found him without fign of life: he was much troubled for the lofs of his wog, and lighted to fee what he could do for him. This Albanquilla is an herb that grows every where in the fields; and the gentleman, at a venture, gathering three or four handfuls of it, bruized them between Ovalle two ftones, and poured the juice into the 1646. dog's wounds, and into the great one of his throat he thrust a handful of it, and so left him without hopes of life: but it fell out wonderfully, that after a few leagues travelling on, turning back to look at formething, he saw his dog following at a distance, who was so well cured that he

lived many years after.

The third herb, that I can remember, is like a knot of fine hair, and which is not commonly met with: this is an admirable herb in fevers and pleurifies; it is boiled in water, and drank; it purifies and cleanfes the blood, expelling that which is bad, and fo the fick body remains perfectly cured; as I my felf have had the experience

There are feveral other plants, fome of which cure the pains of the liver; others diffolve the stone in the bladder, and break it to pieces; fome are excellent for the fciatica and other infirmities; all which, if I were to relate in particular, I should make a new diofcorides, or herbal, which is not my intention. We will therefore leave the flowers and herbs of the fpring, the harmony of the finging of birds, which fo rejoices the mornings, and the ferene and quiet days of this feafon, to draw near the fummer; which will afford us matter of discourse.

CHAP. III.

Of the Summer and Autumn, and their Product.

HE Summer begins in the middle of Summer. November, and lasts to the middle of February, so that the greatest heats are at Christmas; and we are forc'd to have recourfe to our faith, to confider the Child God trembling with cold in the manger; for when we rife to fing matins, particularly in Cuyo and Tucuman, where the heats are exceffive, we are ready to melt with heat. In Chile the heats are not so exceffive, because the country is more temperate; but still the weather is not so cold as it was in Betblem. About this time the fruits begin to ripen, which are in great variety; and there are but few of those of Europe that are wanting; for as foon as any of them are brought, either in stone, feed, or plant, they take, and 'tis wonderful to fee how they thrive. I remember about thirty years ago there were no cherries; there coming by chance a little tree from Spain, from which all the curious began to multiply them in their gardens, (it being both a rarity, and a valuable fruit;) in a finall time they were fo increased, that they were banish'd from the gardens to the fields, because they produced so ma-ny young plants from their roots, that they took up all the ground about

them. Of the fruits of Peru, Mexico, and all Description of fruits, the continent of America, not one will grow in Chile; and the reason is, the opposition of the climate of Chile; nay, though they bring either plant, feed, or fetting, they never thrive; for those countries are within the tropicks, and Chile is out of them: for which reason also the fruits of Europe take so well in Chile, such as pears, abricots, figs, peaches, quinces, $\mathcal{C}c$, which bear infinitely; and if there is not care taken to lessen their number when little, it is impossible for the boughs to bear

the weight of the fruit, fo that they are fain to prop them up with forks when they grow near ripe.

The fruit that exceeds all the rest for bearing, is the apple of all kinds, of which there are prodigious orchards; and of these, though they lessen the number, yet the others increase so much in weight, that the trees are brought down to the ground; fo that there are many windfalls, filling all the ground about them, and the very rivers on which they fland, and flopping the course of the water.

All the crops of oats, wheat, maiz, and Grain. all other garden product, begin to be cut in December, and fo on to March; and they feldom produce less than twenty or thirty for one, nay, some a hundred for one, and the maiz four hundred for one; and 'tis very feldom that there is any fearcity of grain, but it is very cheap most commonly.

As for the fruit of the gardens, it is never or rarely fold, but any body may, without hinderance, step into a garden or orchard, and eat what they will; only the strawberries, which they call Frutilla, are fold; for though I have feen them grow wild for miles together, yet, being cultivated, they are fold very dear: they are very different from those I have seen here in Rome, as well in the tafte, as in the fmell; and as for their fize, they grow to be as big as pears, most commonly red, but in the territory of the Conception there are of them white and yellow.

About this time also the herbs that fatten the cattle grow ripe; and then they begin to kill them with great profit, it being the chiefest riches of the country, by reason of the tallow and hides which are fent for Peru. They kill thousands of cows, sheep, goats; and the flesh, being so cheap that it is not worth faving, they throw it away into the

sea or rivers, that it may not infect the air; only they falt the tongues and loins of the cows, which they fend for Peru as prefents to their friends, and they who are able, and understand it, send likewise some dried falt-fish for the king's forces, or keep it to feed their own flaves or fervants.

Autumn begins about the middle of February; fo lent proves the most delicious time of the year; for befides lobsters, oy flers, crabs, and other forts of shell-fish and fea-fish of all kinds, they fish in the ponds and rivers for trouts, Vagres, Pejereges, and other very choice river-fish of fiveral kinds; and at the fame time there is a great plenty of pulfe, and garden-product, as gourds, all forts of fruit, particularly quinces, which are as big as one's head, and another kind called Lucumas, of which they make fo many dishes, that the mortification of fafting is hardly perceived. In the end of Autumn they begin to ga-

Time of gather the olives and the grapes; and this lafts there the offices and the grapes, and the months of May and June. The wines grapes.

plenty is a grievance, there being no vent OVALLE. tor fuch quantities: it kills the *Indians*, because when they drink, 'tis without meafure, till they fall down; and it being very strong, it burns up their inward parts: the best kind is the Muscatel. I have seen fome that look like water; but their operation is very different in the ftomach, which they warm like brandy.

There are white wines also very much white valued; as those of the grapes called Uba wines. Torrontes, and Albilla: the red and deepcolour'd are made of the ordinary red grape, and the grape called Mollar. The bunches of grapes are fo large, that they cause admi-ration; particularly I remember one, which, because of its monstrous bigness, was by its owner (a gentleman) offer d to our lady's fhrine: it was so big as to fill a basket, and to feed the whole convent of friers for that meal, and they are pretty numerous. The branches of the vines are by confequence very big, and the trunk or body of them is in fome places as thick as a man's body, and no man can incompass with extended arms the heads of them, when they are in full bloom.

CHAP. IV.

Of the natural Riches of the Kingdom of Chile; which are its Mines of Gold, and other Metals; as also of the industrious Management of its other Product.

Two forts HE riches of Civile are of two forts: first, those which nature as beflowed on it, without the help of human industry; and, fecondly, those which have been produced and invented by the inhabitants, to improve and enjoy its fertility. To the first kind belong its mines of gold, filver, copper, tin, quick-filver, and lead, with which heaven has inriched it. Of the copper of Chile are made all the great guns for Peru and the neighbouring kingdoms, in the garrifons of which there are always flores, particularly on the coafts: all the belis of the churches, and utenfils for families, are of this metal; fo that fince the working of these mines, no copper has

can want. There is little lead work'd, because Little lead, there is little use of it; quick-silver less, because the mines are but newly discovered; and as they were going to work them, the obflacle to those of Guancabilica in Peru was removed, and fo there was no need of working those of Chile. Those of filver likewise lie unwrought, because the golden mines are of lefs charge, and fo every body has turned their industry to-

come from Spain; for the Indies are fuffi-

ciently supplied by them with all they

wards them: they are fo many, and fo rich, that from the confines of Peru to the extreamest parts of this kingdom, as far as the streights of Magellan, there is no part of the country but they discover them; which made father Gregory of Leon, in his map of Chile, fay, That this country ought rather to have been called a plate of gold, than to go about to reckon up its golden mines, which are innumerable.

All the authors who have writ of this country, do mightily enlarge upon its riches; and the fame is done by all those who have navigated me streights of Magellan: Antonio de Herrera, in his general history of the Indies, says, That in all the West-Indies, no gold is so fine as that of Valdivia in Chile, except the famous mine of Carabaya; and that when those mines were first work'd, (which was before those Indians who are now at peace with us were at war,) an Indian among them did use to get from them every day 20 or 30 pefo's of gold, which comes to near 500 reals of

plate, and was a wonderful gain.

And the already-cited John and Theodore Great de Brye fay, That when the Nodales passed flenty of the streights of St. Vincent, otherwise gold.

C 2 called

OVALLE called streights of Le Maire, there came 646. fome Indians from the country called La Tierra del Fuego, who exchanged with the Spaniards a piece of gold of a foot and a half long, and as broad, for feiffars, knives, needles, and other things of little value; for they do not value it as we do. authors fay, that most of the gold that was laid up in the *Ineas* treasure, was brought to him from *Chile*, though having never

fubiceted the Araucanos, he could not have that quantity which this rich country would else have afforded.

But what need I weary myself in citations of people abroad, when those who live in the country of Chile, and fee it every day, are the best testimony of the great riches that the Spaniards have drawn from these mines; which was so great, that I have heard the old men say, That in their feafts and entertainments they us'd to put gold-duft in their falt-fellers, inftead of falt; and that when they swept the house, the fervants would often find grains of gold in the fweepings, which they would wash out, for the Indians being the persons that brought it to their lords, they would often

let fome fall.

I have faid before, that it was much plony than more easy to get gold than filver out of the mines, because this last costs much pains; first, to dig it from the hard rock, then to beat it in the mills to powder, which mills are chargeable, as is also the quick-filver, necessary to be us'd to make the filver unite, and all the rest of the operations requifite to refine it; but the advantage of getting gold has no other trouble in it, than to carry the earth in which it is found to the water, and there wash it in mills on purpose, with a stream which carries off the earth, and the gold, as being

heaviest, goes to the bottom.

'Tis true, that fometimes they follow the gold vein through rocks and hard places, where it grows thinner and thinner, till at last the profit that arises is very small; yet they perfift to follow it, in hopes it will grow larger, and end at last in that which they call Bolfa, which is, when coming to a fofter and easier part of the rock, the vein enlarges fo, that one of these hits is enough to enrich a family for all their lives. There is now less gold found than formerly, by reason of the war the Spaniards have had with the nation of Araucanos; but still fome is found, particularly in Coquimbo, where, in the winter, when it rains much, is the great harvest of gold; for by the rain the mountains are wash'd away, and the gold is easier to come at. There is likewise some gold in the territory of the Conception; in which I was told, by a captain who enter'd into our

fociety, That there was, not above half a league from the town, a pond, or standing-water, which is not deeper than half the heighth of a man; and that when the Indians have nothing to fpend, the fend their wives to this pond; and they going in, feel out with their toes the grains of gold; and as foon as they have found them, they floop and take them up. They do this till they have got to the value of two or three pefo's of gold; and then A pool they feek no longer, but go home, and wout the do not return for any more as long as that where of lasts; for they are not a coverous people, lings. but are content to enjoy, without laying

I brought with me to Italy, one of these grains thus found, of a pretty reasonable bigness; and fending it at Seville to be touch'd, without either putting it in the fire, or using other proofs, it was allowed to be of twenty three carats, which is a very remarkable thing. Now the peace is made, and the warlike Indians quiet, the Spaniards may return to fearch for the gold of Valdivia, and other mines

thereabouts, which will extreamly increase
the riches of the country.

As for the product made by the industry Breeding of of the inhabitants, it confilts particularly cattle too in the breed of their cattle of all kinds, the pro- as I have observed above; fending the tall durl of this. low, hides, and dried flesh, for Lima; where having first retain'd the necessary proportion for themselves, which is about twenty thousand quintals of tallow every year for that city, and hides accordingly, they distribute the rest all over Peru: the hides, particularly, are carried up to Po-tofi, and all that inland tract of mines, where most of their cloathing comes from Chile; they are also carried to Panama, Cartbagena, and the rest of that continent; fome of this trade extends itself likewise to Tucuman and Buenos Aires, and from thence

Almends. several leagues of this tree. likewife, and the product of gardens, which do not grow in Peru, are carried thither with great profit, fo as to be able to fet up a young beginner. When I came to Lima, I observed that the annifeed which had been bought at Chile for two pieces of eight, was fold there for twenty; and the cummin-feed, bought at twenty, was fold for fourfcore; which makes merchants very willing to trade to those parts, as hoping to grow rich in a small Time; and this increases the riches of Cbile, by drawing every day thither men with good stocks. The gains made this way are so considerable, that a man who has about forty thousand crowns to employ in land, flocks, and flaves, to take care of them may every year have a revenue of ten or twelve thousand crowns, which is a gain of twenty five per cent, very lawful, and without any trouble to one's confcience, or fubjection to the dangers of the feas: for those who will run the hazards of that element gain Great onmuch more; for the merchants, by many commodities, get a hundred, and two merchants, hundred, nay, three hundred per cent. in a navigation of about three weeks, which is the time usually employed from Chile to Lima, without any fear of pirates, all those seas being entirely the king of Systin's, and fo free from those robbers. Belides, 'tis very seldom that any storms are felt in that voyage, or, at least, not any that endanger the loss of the ships. The greatest danger proceeds from the covetoufness of the owners and merchants, who trufting to the peaceableness of those seas, and that they fail all the way from Chile to Lima before the wind, they load up to the mid-maft. 'Tis not exaggeration; because I have feen them go out of the port with provisions for the voyage, and other neceffaries, as high as the ropes that hold the masts; and though the king's officers are prefent to hinder the ships from being overloaded, yet generally they are fo deep in the water, that they are but just above it; and with all these, there are many goods left behind in the magazines of the port; for the land is fo productive of every thing,

Almonds that the only misfortune of it, is to want a OVALLE. vent for its product, which is enough to 1646. fupply another Lima, or another Potofi,

if there were one.
'Tis upon this foundation, that 'tis affirmed generally, that no country in all America has a more folid establishment than Chile; for in proportion to the increase of inhabitants in Peru, Chile must increase too in riches, flace it is able to fupply any great confumption, and yet have enough of its own in all the kinds of corn, wine, flesh, oil, falt, fruits, pulse, wool, flax, hides, tallow, chamois, leather, ropes, wood, and timber, medicinal remedies, pitch, fifth of all kinds, metals of all forts, and amber. There wants filk; and 'tis to be wished that it may never get thither, but for ornament to the altars; for it is already the beggering of the country, by reason of the great expence in rich cloaths; particularly by the women, who are not outdone in this, even by the bravest ladies of Madrid, or other parts; but yet the land is fo proper for filk-worms, that if any one carries the feed of them there, I am perfuaded it will take with great abundance, the mulberry-trees being there already as full grown, and in as great beauty as in Spain.

The wax likewise comes from Europe, though there are bees who make both honey and wax. Pepper, and other eastindia spices, come from abroad, though there is a kind of spice which supplies the want of them very well; and the authors above cited say, That in the streights of Magellan, there is good cinnamon; and that on those coasts there grow trees of a most fragrant fmell in their bark, and which have a tafte like pepper, but of a more quick favour, as it shall be made out when we treat of that streight.

In the whole kingdom, the herbage and Herbage, the fifthing are in common; as also the fifthing, hunting; and the woods for fewel and tim-woods for ber; and the same is practised as to the salt fixed, and mines. There is no imposition on trade salt mines, through all the kingdom, every one being all in comfree to transport what goods he pleases, either within or without the kingdom.

CHAP. V.

Of the Famous Cordillera of Chile.

Description HE Cordillera, or high mountains of Chile, are a prodigy of nature, and without parallel in the world: 'Tis a chain of high mountains, which run from north to fouth from the province of Quito, and Vol. III,

above a thousand Castillan leagues, according to Antonio de Herrera, in his third tome, Decade 5. to which adding the length of the kingdom of Chile to the streights of Magellan, it will make in all little less than the new kingdom of Granada, to Chile, 1500 leagues. The remotest part of Chile OVALLE, is not above twenty or thirty leagues from the fea. These mountains are forty leagues broad; with many precipices, and intermediate valleys, which are habitable till one comes to the tropicks; but not beyond them, because of the perpetual snows with which

they are always covered.

Antonio de Herrera, already cited, puts two chains of mountains; one r covered with woods and harroves. because the air is more temp. the other much higher, which sy reason of the intense cold, has not so much as a bush on it, the mountains being fo bare, that there is neither plant nor grafs on them: but he fays, that on both these sorts of Descript on mountains there are several animals, which of fereral because of the singularity of their kinds, I shall here describe some of them.

Hogs.

One of the most remarkable, is a species of hogs, that have their navel in their back, upon the back-bone: they go in herds, and each herd has its leader, who is known from them all; because when they march, none dares go before him, all the reft ollow in great order. No hunter dares fall on these herds till he has killed this captain, or leader; for as long as they fee him, they will keep together, and shew so much courage in their own defence, that they appear invincible; but as foon as they fee him killed, they are broke, and run for it, giving up the day, till they chuse another cap-

Their way of eating is also admirable: they divide themselves into two bodies; one half of them goes to certain trees which are in a country called Los Quixos, in the Province of Quito, and are like the cinnamontrees: thefe they shake to bring down the flowers, which the other half feeds on; and when they have eat enough, they go and relieve the other half of the flock, and make the flowers fall for them; and fo return the fervice to their companions, that they have

received from them.

There are many forts of monkeys, who differ mightily in their shapes, colour, and bigness, and other Properties: some are merry; fome melancholy and fad; thefe whiftle, the others chatter; fome are nimble, others lazy; fome cowards, others frout and courageous; but yet when one threatens them, they get away as fast as they Their food is fruit and birds-eggs, and any game they can catch in the mountains: they are very much afraid of water; and if they happen to wet or dirty them-felves, they grow dejected and fad. There are also great variety of parrots.

The wild goats are numerous: they are called Vicunnas, and have fo fine hair, that it feems as foft as filk to the touch: this is used to make the fine hats so much valued

in Europe. There are likewise a fort of sheep of that country, they call Quanacos, which are like camels, but a good deal lefs, of whose wool they make waistcoats, which are woven in Peru, and are more valued than if they were of filk, for their foftnefs, and the finenefs of their colours.

The fame author fays, moreover, That Two famesu through this chain of mountains there went highways.

two highways, in which the Ingas shewed their great power; one of them goes by the mountain all paved for nine hundred leagues, from Posto to Chile: it was five and twenty foot broad, and at every four leagues were noble buildings; and to this day there are the places called Tambos, which answer our inns, where every thing necessary is to be found by travellers; and that which was most admirable, at each half-league there were couriers and posts, who were defigned for the conveniency of paffengers, that they might fend their letters and advices where they were requifite. The other way, which was also of twenty-five foot broad, went by the plain at the foot of the mountains, with the fame proportion and beauty of inns and palaces at every four leagues, which were enclosed with high walls; as also streams and rivolets running through this way, brought thither by art, for the refreshment and recreation of travellers.

This is what Antonio de Herrera, and other authors, who treat of the Indies, do tell us about this famous Cordillera: now I shall relate what I myself have seen, and

do know about it.

And first, I must suppose, that though thefe two highways run feparate and diffinct through all Peru and Quito, yet they must grow nearer each other as they rife higher in the mountain; for when they come to Chile, they are no longer two, but one. This is clearly found, by experience, in those who cross the Cordillera, to go from Chile to Cuyo, as I have done feveral times, that I have paffed this mountain, and never could fee this division, but always continual and perpetual mountains, which ferve for walls and fortifications on each fide to one which rifes in the middle infinitely higher than the rest, and is that which most properly is called the Cordillera. I am also perswaded, that the two ways above mentioned came but to the boundaries of Chile, and ended in those of Peru. I have, indeed, in passing the Cordillera, met with great old walls of stone on the top of it, which they call the Ingas; which, they fay, were encampments, (though not his, for he never came to Chile,) but of his generals and armies fent to conquer the country; and 'tis not impossible but the faid two ways might be continued on to these buildings; but it was not practicable, that it could be with that

perfec-

perfection, as in that part of the mountain contained within the tropicks; where because the hills are more tractable, such ways might be made as they describe; but not in the mountains of Chile, which are one upon another fo thick, that it is with great difficulty that a fingle mule can go in the paths of it: and the Cordillera grows rougher and rougher; the more it draws nearer the pole, fo that it appears to be above the compass of human power to open a way through it, fo curious and finely contrived as it is represented. It was not necessary that the Inga fhould use so much art and industry, to make admirable that which is already fo much fo, as this mountain is in its whole courfe through the kingdom of Chile, as it shall be flewed when we discourse in particular of its feveral parts and properties. For, first, fuppoling what we have faid of its running fifteen hundred leagues in length, and forty in diameter, its wonderful heighth makes it aftonishing: the ascent is to prodigious, that we imploy three or four days in arriving to the top of it, and as many more in the descent, that is, speaking properly, and only of the mountain, for otherwise it may be affirmed, that one begins to mount even from the fea-fide, because all the way, which is about forty leagues, is nothing but an extended fhelving coaft; for which reason the rivers run with such force, that their streams are like mill-streams, espe cially near their heads.

When we come to afcend the highest point of the mountain, we feel an air so piercing and subtile, that 'tis with much difficulty we can breath, which obliges us to fetch our breath quick and strong, and to open our mouths wider than ordinary, applying to them likewise our hankerchiefs to condense our breath, and break the extream coldness of the air, and so make it more proportionable to the temperament, which the heart requires, not to be suffocated: This I have experienced every time that I have passed this mighty mountain.

Don Antonio de Herrera lays, That those who pass it in Peru, suffer great reachings and vomitings; because no one thing produces so great an alteration at once, as a suddenchange of air; and that of the mountain being so unproportioned to common respiration, produces in those who pass over it those admirable and painful effects. He says moreover, that those who have endeavoured to dive into the causes of them, do find, That as that mountain is one of the highest intheworld, the air of it is so extream suffer and fine, that it discomposes the temperament of the animal, as has been said. "Tis true, that in that part of the Cordilera in Peru, which they call Pariacaca, there may be a concurrence of other causes."

and disposition of the climate, to which OVALLE, may be attributed some of these effects, for 1646. If they were to be attributed only to the heighth of the mountain, we that pass it in Chile ought to find those inconveniencies as much, or more, because the mountain is highest without comparison; and yet I never endured those reachings or vomitings, nor have seen any of those motions in others, but only the difficulty of breathing, which I have mentioned.

Others experience other effects, which I Exhalations have often heard them relate; for the ex-and other halations, and other meteors, (which from meteors). the earth feem so high in the air, that sometimes we take them for flars,) are there under the feet of the mules, frighting them, and buzzing about their Ears. through the mountains treading, as it were, upon clouds; fometimes we fee the earth without any opposition to our fight, and when we look up, we cannot fee the hea-vens for clouds; but when we are afcended to the highest of the mountain, we can no longer fee the earth for the clouds below, but the heavens are clear and bright, and the fun bright and fhining out, without any impediment to hinder us from feeing its light and beauty.

The Iris, or Rainbow, which upon the Rainbow, earth we fee croffing the heavens, we fee it from this heighth extended under our feet; whereas those on the lower parts see it over their heads: nor is it a less wonder, that while we travel over those hills which are dry and free from wet, we may fee, as I have done often, the clouds discharge themfelves, and overflow the earth with great force; and at the fame time that I was contemplating, at a diffance, tempefts and florms falling in the valleys and deep places, as I lifted up my eyes to heaven, I could not but admire the ferenity over my head, there being not fo much as a cloud to be feen, to trouble or discompose that beautiful p. ofpect.

The fecond thing which makes this snow. mountain admirable, is the prodigious fnow which falls upon it in winter, which is fo great, that though these mountains are fo high and broad, there is no part of them uncovered with fnow, being in many places feveral pikes deep. I am not informed how it is in the highest part of all, which is most properly called the Cordillera, because this being so very high, that it is thought to furpass the middle region of the air, its point alone may perhaps be uncovered; at leaft, when I passed it, which has been sometimes in the beginning of winter, I have not feen a crum of fnow; when a little below, both at the coming up and going down, it was fo thick, as our mules funk in without being able to go forward.

But

But that which I have observed, is, That 1646. after a glut of rain, which has lasted two or three days, and the mountain appears lers where clear, (for all the time it rains 'tis covered from top to with clouds,) it feems white from top to bettem af-ter a glist bottom, and is a most beautiful fight; for the air is so serene in those parts, that when a ftorm is over, the heavens are fo bright, even in the midft of winter, that there is not a cloud to be feen in them for many days; then the fun fhining upon that prodigious quantity of fnow, and those coasts and white fhelvings all covered with extended woods, produces a profpect which, even we that are born there, and fee it every year, cannot torbear admiring, and draws from us praifes to the great creator for the wonderful beauty of his works.

CHAP. VI.

Of the Vulcanos, and the Mines of Gold and Silver of the Cordillera.

THERE are in this Cordillera, or chain of mountains, fixteen Vulcanos which at feveral times have broke out, and caused effects no less admirable than terrible and aftonishing to all the country: amongst the rest, that which happened in the year 1640, is worthy to be remembered. It broke out in the enemy's country, in the territory of the Cacique Aliante, burning with fo much force, that the mountain cleaving in two, fent forth pieces of rock all on fire, with fo horrible a noise, that it was heard many leagues off, just like the going off of cannon. In all that territory the women mifearried for fear, as shall be related more particularly in its proper place, in the account I shall give of the subjection of all that country to our catholick king, being moved thereunto by this and other

The first of these Vulcanos is called the Vulcano of Copiapo, and is in about twenty fix degrees altitude of the pole, about the confines of Chile and Peru; in thirty degrees is that of Coquimbo; in thirty one and and a half that of La Ligua; in thirty five that of Peteroa; in thirty fix and a half that of Chilau; in thirty feven and a quarter that of Antoco: this is followed by that of Notuco in thirty eight and a half; that of Villarica is in thirty nine and three quarters; near this is another, whose name I know not, in forty and a quarter; and in forty one is that of Oforno; and near that, in less than a quarter of a degree, that of Guanabuca; and in a little more than forty two degrees that of Quebucabi : and laft of all are two more; one without a name, in forty four; and that of St. Clement, which is in forty-five and a half.

These are the known Volcanos of Chile: we have no knowledge of others, which may be as far as the Tierra del Fuego, because till this time our discoveries have not gone fo far; but there is no doubt but there are fonce, as they are to be found before one comes to Chile, in the kingdoms of Peru and Quito. Diego Ordonnes de Salvos, in the third book and eighteenth chapter of his Voyage through the whole World, mentions, among the reft, one that is near the fall of the river, in the valley of Colars and fays, it is on a mountain in the form of a fugarloaf, like that of La Plata in Potoji; and that in winter it throws out fo much finoak and afhes, that it burns up all the grafs within two leagues round about it,

He likewise mentions another in the entrance of the province of Los Quixos, near the town of Majpa; and speaks of another, which broke out near Quilo, in a mountain called the Pinta: and he affirms, that the ashes fly two leagues and a half from the mountain; and he has feen them lie on the houses above four foot deep in the nearest places to the mountain.

Laftly, he tells of that of Ariquipa, which buried the vineyards, and had almost over-whelm'd the city. To this day there are feen the effects of that defolation, which ruined many families, by deftroying their houses and possessions. At the same time he observes, that the earthquakes which before were frequent, ceafed from that time; and this perhaps may be the reason why the earthquakes in Chile have always been confiderably lefs than those of Peru, because Chile has more breathing holes for the vapours to exhale by.

There is no room for doubting of the immense riches which these mountains enclose in their bowels; for 'tis a certain argument, and proof of it, to fee only the mineral riches of Chile, which are, as it were, indixes of what may be contained in those rocks, as the rivers which fertilize the country are a proof of the unexhaufted fountains contained in the rocks and precipices.

I think there may be two causes affigned, The conwhy these riches do not manifest themselves cealing of nor appear more: the first is, that general from all state reason, and inviolable maxim among foreign nathe Indians, to conceal and not discovertions, is a them to any other nation. This they observe flate among fo punctually, that it is among them a ca-the Indians. pital crime, punishable with death, to break filence in this matter, which they make facred and indiffenfible; and if any

mines.

one among them, either out of interest, negligence, or any other motive of conveniency, discovers any thing of this kind, his death is infallible, and no power on earth can fave him.

I remember on this subject, that some able rela- gentlemen having, by prefents, infinuations, and flatteries, come to the knowledge of Journey No. fome treasure by the means of an Indian, and prevailed with him at last to guide fearch of and prevated with thin mines in a remote mountain, he begg'd earneftly of them to be fecret, or otherwise he was a dead man, let them take never fo much care of him. They promifed him accordingly, and fo they fet out, and he brought them through horrid rocks and precipices, where it look'd as if never man had fet his foot, nor fearce any living animal. Every day they met with certain marks, which the Indian had told them of beforehand: First, after fo many days they discovered a red mountain; and then at certain distance from that a black one on the left-hand; then a valley, which began from a monttrous high mountain or rock; then at to many leagues a mountain of chalk. All which figns the guide went shewing them, verifying there-by the relation he had given them beforehand, and comforting them up to endure the hardfhip, by the hopes of fulfilling at last their expectation, and feeing their labour rewarded.

Their provisions failed them, and they were forced to come back to provide more, their enterprize. The Indian to purfue their enterprize. was always in fear of being discovered, knowing that he run in that no less a hazard than that of his life. They returned then to a town; and to secure their Indian from his fright of being discovered, they locked him up in a room very fafe; but the night before they were to let out again, without ever being able to discover how it was done, (for there was no figns by the door of any body's going in that way,) as they went to call the Indian in the morning, they found him strangled; by which means, being deprived of their intent, and having loft the hopes of fatisfying their defire, they returned to their own homes, though with a refolution to try again, being encouraged by fo much as they had already discovered.

The other reason to be assign'd for not feeking after these mines, is the great plenty of every thing necessary for life; fo that hunger, which is the prompter of covetous defires, being wanting, there are few that care to run a hazard, and lofe their conveniencies at home, to go through impracticable defarts upon fearch after hidden treature; particularly finding already fo much in the valleys bottoms, rivers, Vol. III.

and fountains; nay, even these mines in the OVATTE low countries are not wrought, because the profit of other products is easier. 'Tis profit of other products is eafier. probable that people will increase; for every day there is a new addition; and there then being more confumers, the product of the land will be dearer; and provisions not being so cheap as now, men will be more ingenious and industrious to feek for fuftenance under ground, by the mines and treasures hid there by provi

These sew years last past have given beginning to a discovery of some golden mines, and filver ones, on each fide of the Cordillera: for as I paffed over it once, I remember that the fight discovers a black mountain at a diffance, whose top shines as if it were covered with filver and it is a common tradition that it contains it, and great treasures besides, in its bowels; but they are at prefent ufelefs, for the reasons alledged; and because one half of the year the mountain is covered with snow, and so not only uninhabitable, but impenetrable.

They write me word, that on the fide Diesery of the province of Cuyo, they have begun of feveral to discover other very rich mines, which mines, being below the roughest part of the mountain, may be wrought all the year round, and with great conveniency of the miners, and other necessary workmen, because carts may come to the very fituation of the mine, which is of confideration for the price of the metal. They fpeak of it with great expectation, by reason of the good proofs they have already had in the affaying of it in finall quantities.

Befides the mines of gold, and filver, and brafs, and lead, which are work'd in Coquimbo, and those of quick-filver, which have been discovered within these sew years in Lamache, which is a valley in Chile, I do not know of any others of any other fort in this Cordillera. I am verily perfuaded there are fome of chrystal; for, confidering the nature of the place, I cannot think there is one any where more proper. Being in the valley of Rancagua, I heard one of our nation tell an Indian, that upwards in the mountain he had found a great deal of chrystal: he hearing this, out of curiofity went up to fee what it was; and I heard him tell, that after having gone over feveral rocks, he faw on the top of a precipice a great opening, and that drawing near to it, he faw a profound cave, and in the bottom of it a great plank or table of chrystal, which appeared to him of the finest fort; but wanting help and instruments to get it out, he returned with only this information, and some little pieces of a chrystal stone which he found on the

CHAP. VII.

Of the Fountains, Rivers, and Brooks of the Cordillera.

HAT which contributes not a little to the admiration we have for this ber of fours. rivers.

great chain of mountains, is the vast numfprings, brooks, and ber of fountains, fprings, brooks, and rivers, which we meet with ever and anon, when we go over it: they are so numerous, that 'tis a thing rather to be feen than related, though the travellers reap but little benefit by the curious observation of them; for by them the ways are the most broken and troublesome that 'tis posfible to imagine: they last about eight days journey. One must suppose too, that the fummer is pretty well enter'd; for in winter they are absolutely impassable, and in the fpring not without evident danger of one's life; because one travels all the way on a path fo narrow, that there is but just room for a mule's feet. On one side are prodigious precipices, which have at the bottom a furious and profound river; and on the other hand huge rocks, and fome part of them standing out so, that if the mule's loading, (as it often happens, and I have feen it,) touches part of them, it throws down the mule headlong, and fends her rowling down till fhe comes to the river at the bottom, which carries her away to the fea without flopping, except it happen upon fome turning of the river to get it on shoar; where, though the la-ding may be faved, yet not the mule's life, because it is impossible almost to get her

In many places one is forced to lite; Many plares scarcely and even a man on foot is not very safe, because some of the coasts are so streight and

flippery, that it frights one to walk on them. The afcents and defcents of the hills are fo fleep, that when from below one looks at those who are above, they look like figures; and for my part I thought it a temerity, if not an impoffibility, to venture

to get up to them.

Rapid ti-

The brooks and rivers which cross the ways every step are so violent, that there is no head fo ftrong, but it turns to look on their current; which is fo fwift, that if it comes up to the mule's faddle, there is no passing without evident danger of one's life; for these streams coming from on high, have the strength of a mill-stream, carrying along with them loofe flones, which overturn a loaded mule as it were a chicken; fo that 'tis necessary fometimes to stay two or three days till the fun does not shine; for then these brooks are lower, because there is less snow melted: and for this rea-

fon 'tis always best to pass early in the

morning, they having had all the night to

It was necessary for an allay of the dan- The great gers and irksomeness of these ways, that variety of God should temper the rigour of the sufer wery. ferings, by the variety and diversion which fo many waters give in their rife and courfe : fome are to be feen breaking out from almost an imperceptible heighth, and meeting with no intermediate object, the whole mass of water, which is usually very great, disfolves itself by the way into so many drops, which make a lovely prospect, like so much pearl falling; and being mingled by the force of the air, which drives them across one upon the other, it feems a chain hanging from its first iffue to the earth; where, taking another shape, it becomes a running brook, and unites with the current of the chief river which runs in the middle.

I faw others, which, before they got to the earth, divided into two branches, forming like a thick shower in the midst of the way, or atomes in the fun-beams; but 'tis impossible to paint all the variety of objects produced by these several motions and compositions of streams and fountains. I Los ojos de cannot leave them without mentioning one agua. or called the Eyes of Water, which is very fprings. remarkable; 'tis in the last mesa but one, at the foot of the mountain. I called it meja, because providence has, for the relief of travellers, disposed, at some leagues distance, little valleys and agreeable plains, which eafe the travellers in this most te-

dious and long afcent. This valley is environed with a wall of most prodigious high rocks; it may be a mile or thereabouts in its diameter, and is all the year round full of greens, odoriferous plants and flowers, which make it a picture of paradife: in the midst of it fprings up this fountain, or fountains, be cause the tprings of water are many that rife from the ground all about, leaping with great force into the air, which in a little space all unite, and make two great bodies, each of them full of water, as clear as chrystal. These two heads begin a kind of combat a little below, and mingling in their course with one another, as if some ingenious artift had ordered it, make a great many turnings and windings, fometimes far from one another, and fometimes united through the whole valley, till at the end of it, joining together, they fall into one canal, which empties itself into the principal river, composed by many of

oning one aqua. or h is very springs.

he dan- The great ne dan- 100 general of variety of the fuf- diversing.

The waters One property of all these chrystal streams, is extream coolness, which they never lose, no, not when the fun shines out most in the heat of the day; it is fuch, that no body can drink half a cup full of it without refting, or taking breath; and though all these springs have this quality, yet none in so intense a degree as this fountain of I.os ojos de aqua; of which, though the weather be never fo hot, 'tis not possible to drink above two or three fups; and one can hardly endure to hold the water in one's hand above a minute.

Behind one of those high mountains which is to the east of this fountain, there is a great lake or pond, fo deep and clear, that it appears as if it were of azure; and there is a tradition, that the last of the Ingas, kings of Peru, caused vast quantities of treasure to be thrown into it, when he faw that he could not redeem himfelf, nor fave his life by them; though it feems hard to believe they should go so far to do a thing they might have executed much near-er home. The waters of this lake have no iffue, being environed on all fides with very high rocks, and therefore 'tis thought that it comes under ground to those fountains called the Ojos de aqua, and empties itself

by them. I cannot pass over in silence another fountain which is at the foot of the Cordillera, on the other fide towards Cuyo. There is a river called the Rio de Mendoça, which comes down from the east, not inferior to that of Aconcaqua in Chile, which runs to the west into the fouth sea. Into these two rivers are emptied most of the little streams of the mountain; that of Mendoça meeting in its way with a chalky mountain, bores it quite through, and leaves a bridge broad enough for three or four carts to pass a-breaft. Under this bridge is a great table of rock, over which run five different flreams of water, proceeding from fo many fountains; which water is extream hot, and very good for many diftempers. The stones over which it runs are of a green, like emerald. The vault of this bridge furpaffes in beauty all that human art can produce; for there hang down from it feveral ificles, in shapes of flowers, and pendants of a stone like falt; for the humidity which penetrates from above, makes it congeal like points of diamonds, and

other figures, which adorn this vault ; OVALLE through which there falls perpetually a quan tity of great drops, as big as peafe fome, and others as big as yolks of eggs; which falling upon the stone table I have mentioned, are turned into stones of several fhapes and colours, of no finall value.

There is another bridge on the other The loga' fide, call'd the Inga's bridge, either because he caus'd it to be built, or because (as is more probable) his generals were the first discoverers of it, and pass'd over it; for it is not possible that any human art could make fo bold an attempt as has been brought to pass by the author of nature in this place. This bridge is form'd by a most prodigious high rock, which is cloven in two, as if it had been fawed down, only cover'd on top: it is hollow to the very river, which is large and rapid, and yet the noise of it is no more heard on the top, than if it were a little brook; which is a strong argument of the great distance there is between the top and the bottom of the mountain; for the opening not being above eight foot over, it being eafy to leap from one fide to the other, it would be thought, that a great river being fo ftreightened as to go through it, fhould make a very great noise in passing fuch a streight place with so much force; and if the noise does not reach the ear, 'tis because of the great distance. I my felf have gone to the fide of this bridge, and look'd down, (though with great horror, for it strikes a shivering into one, to contemplate fuch a depth, than which I have not feen a more terrible one;) I not only did not hear any noise, but that great river appear'd a little brook, hardly to be discern'd.

These are the entertainments for the eye in paffing this part of the Cordillera: as for the many others which may be met with in fo vast an extent, who can relate them? I believe there are those who know much more than what I have here describ'd, which is only what I have feen; but from fo little 'tis eafy to infer more; for if only the rife of two rivers have afforded fuch matter of admiration, what may not be produced in the birth and course of so many others, as we shall describe in the follow-

CHAP. VIII.

Of the vast Number of Rivers which take their Rise in this Mountain, and empty themselves into the Sea.

founded the best part of the beauty and fecundity of the fields of Chile in this he has deposited its treasure and riches, by

Ovalle affuring the annual tribute of fo many brooks and ample rivers which are to fertilize the earth; for neither can the country maintain its fertility without fuch moisture, nor such a moisture maintain it

felf all the year without such quantities of fnow, as are laid up in the deep hollows of it in the winter, to feed in the fummer

the many rivers that are derived from it. Who can demonstrate the number of them at their rife? But one may guess at the prodigious quantity of fnow which fup-

plies them; for though it cannot be feen all in a mass, because its reservatories are impenetrable, yet its effects do manifest it; for belides the feeding of innumerable rivers which run to the east, and empty themselves into the north sea, and supplying prodigious lakes in the province of Cuyo, those which run to the west, and enter the fouth-fea, (not reckoning what may be by the streights of Magellan, and the Tierra del Fuego,) are above fifty, which may be well multiplied by four apiece more which they receive, and fo make two hundred; which arrive at the fea fo full and deep, that fome of them have water enough for the navigation of the gal-

loons and fhips of great burden; which is the more to be admir'd, because their course is fo fhort, the most extended of them not paffing thirty leagues in length.

The first river of this kingdom, begin-

ning from the confines of Peru about the 25th degree of latitude, is the river called the Salt River, which comes from the Cordillera, running through a deep valley: its waters are fo falt, that they cannot be drank; and when fometimes horses, deceived by its

pure clear colours, happen to drink of them, they are turned into falt by the heat of the fun, fo that the bodies feem of pearl, they beginning to petrify by the tail.

The next to this is the river of Copiapo, in 26 degrees; it runs twenty leagues from east to west, and makes a bay at its entrance into the fea, which ferves for a harbour for ships. In 28 degrees the river of Guasco does the same, and forms a port.

After this comes the river of Coquimbo in 30 degrees, whose port is a noble bay adorn'd on the shore with fresh and beautiful myrtles, and other trees, which continue within land as far as the town, and make a noble and pleafant grove, which out-does all the contrivances of art. There are fish'd in this coast tunny-fish, aibucores, and many forts of excellent fish, as also oyfters, and great variety of shell-fish.

Tongey and those of Tongey and Limari about 30 The next to the river of Coquimbo are degrees and a half east: and then in 31 degrees the river of Chuapa empties itself into the sea. Upon that coast there is found

a fort of delicate shell-fish, which they call

Between the one and thirtieth degree, and the two and thirtieth, the rivers Longo-Longotoma, toma and La Liga enter the fea; and about La Liga, and Acouthirty three degrees that of Aconcagua, cagua, which is the great river which comes down, as we have faid, by the way of the Cordil lera. This is a very deep river; and though it runs through the large valleys of Curimon, Aconcagua, Quilota, and Concon, which being cultivated with all kinds of products, particularly wheat, flax, hemp,

&c. and by consequence well water'd, yet this river arrives at the fea as full and deep as if they had not drained it by the way to fertilize their fields.

About thirty three and a half, follows the famous river Maypo, which I cannot Maypo. tell whether it be more famous for its good qualities, or for the danger and difficulty of paffing it, many having been drowned in it, and every day miscarrying by it. It is of fo rapid a current, and sometimes fwells fo high, that no bridge can refift its fury, but it is carried away by it; for which reason, at this day it has no other but one of many cables join'd together, and lying a-cross from one fide to the other. Its waters are ordinarily thick; and it enters the fea with fo much force, that it makes its way in it diffinct for a good while; its waters are perfectly known from those of the sea by a circle they make: they are belides very cold, and yet it quenches thirst but ill, for it is brackish, which makes the flesh of the sheep which feed near it, to be excellent in talte. There are fish'd here also most excellent fish, particularly trouts, efteem'd all over the

country. There falls into this river, among others, that of St. Jago, otherwise called the st. Jago, river of Mapocho which is divided into or Mapofeveral ftreams, to water the diffrict of the. that city; and it does it fometimes more than we could wish, when it overflows. Not far from the city, it hides itself under ground, leaving a bridge of two or three leagues over it, while it me ntains a filent course underneath; at the end of this space it comes out in bubbles among a grove of cherry trees, with its waters as clear and purified as chrystal; fo that though it feems to hide it felf, and die, it is only to fpring up again more beautiful and stately, being of a stronger current, before it is again spread and diffused to fertilize the fields. At this place of its fecond birth, there flands an ancient and illustrious convent of St. Francis, which, because it is within fight of a vast forrest of trees, is called St. Francis of the Mountain, in which there have been, from

founders in that province, and who imploy themselves in the worship of God, and help of their neighbours, with great zeal and reputation of their order.

The river of Poangue, which falls likewife into Maypo, runs also many leagues under ground: this cannot rife with more advantages than at its first fountain; for its waters are, at the very fource, fo clear, delicate, and fweet, that they cannot be mended; it has not its original like all the rest from fnow water, but from minerals of gold, through whose veins it makes its way, as if it had an aqueduct of that precious metal: its course is border'd on each fide with most beautiful trees, which contribute to make its waters wholesome: they are indeed of themselves a remedy; for they help digeftion fo vifibly, that if any one has exceeded and eat more than his ftomach can well embrace, one draught of this water will relieve him, fo that he shall be hungry again in a little time. Neither is it useless under ground; for while it is there, it communicates it felf to the whole valley by fubterranean conduits: the effect of which is vifible; for though in the fummer it does not rain a drop, and the valley has no other watering, yet it brings as teafonable a crop, and as relifhing fruit, as any other that has the help of rain and other irrigations; neither have I feen any where larger or more delicious melons, nor more abounding and well grown maiz, than in this valley.

De Colina

There are two other rivers which fall and Lam-pa, make into Maypo, which are call'd De Colina pa, make the famous, and Lampa; which uniting together about ten or twelve leagues from their first rife, Cudaguel make the famous lake of Cudaguel fo profound and deep, that great ships might fwim in it: this lake is about two leagues long, all bordered with delicate willow trees, and other greens, which keep their freshness and greenness all the year round; and, that nothing may be wanting to its agreeableness, it is full of excellent trouts and vagres, which fometimes are fo plentiful, that they are eafily catched; and this uses to be one of the greatest diverfions of the citizens of the city of St. Ja-There are other lakes, as those of Aculco, which empty themselves into this river of Maye, on the contrary side to that of the clear river: there are also bred in it, finelts of above a foot long; the very name in Spanish declaring their excel-lency, it fignifying a royal fish: fome years there are fuch plenty of them, that the whole city may keep Lent with them alone, without buying any other fish from the fea; which, though it is very good, yet it never attains to the delicacy of the Vol. III.

time to time, most holy men of the first river fish, which is so sweet and healthy, Ovalle that it is used to be given to the fick and convalefcent.

After Maypo, is the river of Rapel, not Rapel, at all inferior to the other; it enters the Cachapoal, fea about the 34th degree, and as many and Tinminutes; about four or five leagues before guirities the two famous rivers of Cachapoal and Tinguiritica join together, and are no lefs in debt to mankind for the many people they have swallowed, than that of Maypo. Among others which increase their rapid current, are the rivers Mallua and Cham-Maiina and baronigo: on the banks of this the order Chamer of the Redemption has a convent, for the in-ron struction and edification of all that country. The Jefuites have also a novitiate, who have for neighbours a monastery of St. Dominick. The lands thereabouts are extream fertile, have excellent pastures for the fattenning of cattle, and are much valued all over the country. In thirty four degrees and three quarters is the river Delora, which receives those of Teno, Delora, Peterroa, and Metaquito, whose stream is Teno, Pefo rapid, that many perish in it. These terroa, and rivers water most rich lands, and a delicious country for the breeding and feeding of all forts of cattle; and indeed there is not a foot of ground unimployed in

The great Maule appears at thirty five The Maule, degrees; and it makes the limits of the archbishoprick and jurisdiction of the city of St. Jago: all that was inclosed between this and Rapel, Cachapoal, and Tinguiritica, was called by the natural Indians Pro-Promomocaes, that is, a place of dancing and de-caes. light, to express the pleasantness of that country. They were not out in this character at all: I remember once, that travelling in this country, when I came to a farm of any *Spaniard*, he would entertain me with nothing but the praifes of it, and that with fo many particulars, that I could not imagine it could be out-done by any in the world; but when I came to another farm, the mafter of it would relate to me fuch admirable properties of his, that the first seemed but ordinary to me. I found every one fo in love with the fpot he lived on, that I could not but admire .he whole, and have a great idea of the excellency and temperament of this land, as well as of its provisions. Partridge are abounding, and all manner of game; and as for fifh, there are such quantities of finelts and trouts, that they take them when they will, being as fure almost to catch them, as if they had them in ponds at home. I have heard them often fay, that when they were fat down to table, if any one longed for a fresh trout, they had no more to do, than to fend and

frata.

Nuble.

Biobio.

OVALLE catch one, which they would have ready 1646. dreffed before they rife from the table. The river Maule receives the clear river, and that Cauquenes. Of Cauquenes; and though it be as deep again as either of them, yet it is lefs dangerous for paffengers, and fewer people are drowned in it; becaufe near the fea, by the yard for building of fhips, it fpreads itfelf, and makes a large paffage, where the king has a ferry for the conveniency of paffengers. The Auftin friars have allo a convent here, and take care of the Spaniards; and their black and Indian fervants, who people all the banks of this river, and are numerous, living in separate farms all along the coun-

try: these they call Estancias.

City of the Now we enter the jurisdiction of the city
Conception, where the governor retion. fides; and there is a garrison of the militia.

The bishoprick of the city of Imperial begins also at this river, which has for next and immediate neighbour the peaceable and noble river of Itala, three times as large, and as deep as the Maule, and enters the sea at about thirty six degrees: its course is among rocks, and so is less usful to the land, because it cannot water it: They pass it upon rafts, and there are also fords in some places. About the middle of its course, the surious torrent called Nuble joins it: this washes the walls of the city of St. Bartholomew of Chillan, an antient garrison of the Spaniards, and a singular proof

of their bravery and fidelity.

Immediately next to this river is the spacious and agreeable bay of the Conception, into which the flow and slient river of Andalien empties itself at thirty fix degrees and three quarters. There is another small river which passes through the middle of the city, having first precipitated itself from a high rock, and attording matter to the industry of the inhabitants, for all forts of water-works among pleasant groves of laurels, and myrtles, and other odoriferous plants which adorn its banks; and as it falls from so high, it invites the industrious planters to contrive mills for the sufterance of the city; of which there are already a great many.

Two leagues further from this bay, in the thirty feventh degree, the fo-much celebrated Biobio enters the fea. It is che moit powerful river of all Cbile: it nas at its entrance two or three miles in breadth, more or lefs, according as it fwells or fhrinks, which is a great deal, confidering its fhort courfe: but that is not the chief thing which makes it famous, and deferve so much praise 3 it is its wholsome waters; for (besides the particular excellency they may acquire, by passing through veins of gold, which nevertheless many other rivers of this

country have too,) it has a fingular advantage, by a fmall river which falls into it; which river, taking its rife and courfe among Sarzaparilla roots, communicates to the other its virtue and good qualities, and makes it a cure for many infirmities. There is a tradition, That at the fource of this river there were most rich mines, work'd before ever the Spaniards came into thefe parts. Upon this information, Don Alon/o de Sottomayor, prefident of the country, fent a band of foldiers to view them, as they did; though as they came back, they were laid wait for by the *Indians*, our enemies, and had a fmart engagement with them, and had much ado to escape with their live...

This Indian people do always as much as they can to hide from the Europeans the treafures and riches of their country, as it has been faid already

This river is the bounds which divides the S₁ aniards and our Indian friends from the Indian enemies: in winter the river overflows fo, that all the fords are unpaffable; and fo the foldiers may take fome repole till the fpring, at which time they are to begin their inroads again. The enemy on his fide has no garrifon, nor place of ftrength; for they truft to their mountains, to which they can retire at any time: but the Spaniards have many garrifons all along the river, with which they bridle and keep in awe the potent rage of their proud enemy, who alone has given them more trouble than all the reft of Interior.

Their chief forts, befides the cities of the Conception and Chillan, are those of Arauco and St. Philip, in which there are generally about fixteen hundred natural S niards, befides the *Indian* allies, who are numerous. The first of these is upon the fea-fide, and the other nearer the Cordiller.1. There are others between on each fide of the river, and fome pretty far into the enemies country. I can name nine of thefe forts; which are, that of St. Angol, of the Nativity, of St. Ann, of St. Rosendo, of Good Hope, of Talmacabuida, of St. Peter, of Colcuta, and that of Levo. These are all provided with great guns, and a fufficient number of toldiers; and at fuch proportionable diffances from each other, that they can foon receive notice of what is necessary to be known from the first to the last by the cannon-shot, according as it may have been concerted beforehand.

The company of Jesus has here two recidencies, one in Arauco, and the other in the fort of Good Hope; from whence they also make their attempts, not against the bodies, but to save the souls of their enemies, engaging with hell itself, and obtaining over it daily and glorious victories, as it

After Biobio follow four others much inferior to it: they are the rivers of Colcu-Lavapie, ferior to it: they are the rivers of Collu-and Levo. ra, Arauco, Lavapie, and Levo, which empties itself near the thirty eighth degree; Ralemo, or and a little further, that of Ralemo, which, a little from its fource, is called Coypo, in near thirty nine degrees. The pleafant and peaceful river of the Imperial enters the fea, having first incorporated with its stream, the river called the Ladies River, because of the delicacy of its waters and quiet current. More above, nearer its fource, it receives the two rivers of Curarava and Eyow, OVALLE. which, before they meet to enter the river Imperial, form the much-celebrated lake of Gurarava Puren, a most unconquerable fortress of the and Eyow Indians, who are more fecure in it, than the form the Spaniards in any of theirs.

About half a degree beyond the river Cauren, which is the same as the Imperial, the river Tolten pays its tribute to the sea, Tolten. and is deep enough for great ships. About eight leagues further the river Queule does Queule. the fame; which, though small, yet re ceives barks in it, and is about nine league: upon a north and fouth line from the famous river of Valdivia.

CHAP. IX.

Of the famous Port and River of Valdivia.

THE river and port of Valdivia, never enough commended by foreign writers, and no lefs admired by those who have feen it, had its name from Pedro de Valdivia, first governor and conqueror of Chile. It is, as it were, in the centre of the whole kingdom, at almost forty degrees latitude, fouth-west from Seville in Spain; upon a plain map one thousand nine hundred and leventy leagues, measured by the heavens. The fun is five hours, and a third part of an hour, in going from the meridian of Sevilla, to the meridian of Valdivia; so that when it is noon at Seville, 'tis in Valdivia fix a-clock and forty minutes in the morning. Its longest day is of fourteen hours, or thereabouts.

This river has its opening to the north; yer and because of the depth of its waters, great of Valdivia. Thips can go up to the very city, which is two or three leagues from the fea: when they are there, they can lie fo near the fhoar, as with a plank to go in and out, and take in and unlade their cargo, without the help of boats. There is just overagainft the city, a fine ifland, called the Island of Constantine, with two little ones, one before, and the other behind the island, The river is navigable on both fides the island; but because the fouth branch has more depth, the great ships come in that way, and the leffer by the north branch.

There are two high points of land, like rocks, which mark the entrance of this river; the biggeft is to the north, and is called Bonifacio's Hill; the fouth is leffer, and is called Gongalo's Hill. When one is entered fome way up the river, there is another fireighter paffage, which is the key of the port, or rather ports, because there are many harbours within. This entrance has also two hills, which come so near each other, that I have heard a captain, who was fent to found the river, relate, That in the middle he was within musket-shot of either hill; the fouth one is called Morro de los Manganos, and the opposite Morro de Niera: fo that, according to this account, there might be an iron chain laid from the one to the other, with which, and two forts raifed on each fide, the entitied would be made impenetrable.

As foon as this streight is passed, there The port. is on the fouth fide a noble port; for though all the river may be called fo, for the quietness of its water, yet this is more advanta-giously fituated, by being covered with the mountains of the land: 'tis called the port of the *Corral*: it forms a bay capable of receiving great fleets. When you have paffed this port, there appears the first island; between which and the land on the fouth-fide, there are many shoals and fands; wherefore the ships take the north-fide, and go between this island and the great one; and then follow their course up to the city, by the channel of the great island. The leffer veffels may keep the other fide of the island.

Befides all these good qualities, this port has other advantages from the land, by the fertility of the country, which produces corn, and fruits of all kinds, except grapes, which do not ripen here fo well as in other parts of Chile, from which wine is brought to these parts: but it has great plenty of beef and mutton, fowls and venifon. It has also wood for the building of shipping; and that which is above all, it has the richeft mines of the finest gold in Chile; and in all America there is none comes up to it, but the gold of Carabaya.

This is the account of Antonio de Herre-He adds, That there was an Indian, who had every day a revenue of twenty five or thirty Pefos of gold; which being obferved by the governor Valdivia, he fent the Adelantado Hyeronimo de Alderate to Spain, to inform his catholick majesty of

OVALLE the great riches of the kingdom of Chile, that his majesty might make the more efteem of it; and to invite foreigners to come and people the country, and help him to conquer it, he fent some Spaniards by land, whose stirrups, breast-plates, and all that use to be of iron about a horse, were of fine gold; and that, not fatisfied with this, he had refolved to go in person, to inform his majesty, and obtain from him the confirmation of his government: to which end he employed twenty thousand Indians to bring him gold, defigning to embark and fail

> had not prevented him. This city was founded by the governor Valdivia in the year 1552, upon a high rifing, but plain fide of a hill, and above

> through the streights of Magellan, if death

the rest of the country.

Recloma. Indian la-

1002.

The famous Indian lady Recloma was very instrumental in helping towards its conquest and foundation. The story was thus: The Spanish forces were come to this river, conquering the country all the way before them; but here the Indians not being willing to let foreigners fettle in their country, took up arms, and making the river ferve for their defence, hindred the progress of Valdivia, and gave him great trouble. But he being a man of great courage, was not daunted by this reliftance, but endeavoured to pass the river to engage the enemy.

Upon this occasion, this brave Indian lady, either inspired by heaven, or touched by compaffion of fo much blood as must be flied on both fides, in the rencounter, offered the governor, that fhe alone would gain him the victory, without any other force, than that of her eloquence and couragious mind. Stay bere, fays she, and go no further; for I will put all this province into thy hands, and will make thee this day, lord of thy bands, and was more all that thy eyes can discover. Stay for my return bere, and do not suffer any of thy soldiers to pass on a step further. The governor promifed to do fo; and, upon his word and promise of good treatment to the Indians who should submit to his god and his king, she threw herself into the water, and, in the presence of then all, fwam the river. When she was landed, she defired audience of the general of the Indians: to whom the delivered her message with so much force of cloquence, that they fubmitting to her reafons, promised to accept of what terms should be given them. With this the famous Recloma returned to the Spaniards, finging victory, laying at their feet the richeft prize they could wish; and such a one, as after much time, expence, and bloodfhed in the conquest of it, they would have thought themselves well paid to be masters of fuch a country, whose golden mines they prefently began to work: by which

means the city increased so fast, that if the devil had not troubled the peace, and caufed the rebellion of the Indians, which ruined it, it had been one of the first and best ci ties of the Indies.

The Hollanders, our enemies, are well informed of the nature of the country, and the excellency of the port, and do all they can to get possession of it; but our faviour, who by his grace has hitherto preferved those countries free from herefy and its corruption, will not permit, that this Hydra of hell hall infect that air with its venemous breath, nor breed a contagion in the purity of its faith, which is propagated to fincere and true in the hearts of those new christians.

This has been proved by the fuccess of a 1643; fleet of theirs in the year 1643, when thefe rebellious pirates paffed the ftreights of Magellan, with a defign to fettle at Validioia; for though in effect they did people the place, having first passed by the islands of Chiloe, where our company has fo many glorious miffions; in which they threw down the altars and the croffes, and committed other enormities proper to their impiety and obitinacy, yet at last they came off no laughers, but had reason to lament rather. The fame befel another of their generals, called Antonio Sivujiro, many of his fleet being taken prisoners, and thirty of them hung up by the feet, as is related by their own authors, John and Theodore de

But in this fecond occasion, they paid yet more feverely for their attempt; for in the very fame ifland, where they had committed all these disorders, God took the life of the general, punishing his unhappy soul with the due chastifement of such an undertaking. They loft the ship which carried their provisions, their ammunition, thirty pieces of artillery, all the brick and lime, and other materials for building three forts, which they had orders to raise in the river of Valdivia, and on the island of Constantine in that river; and having afterwards got to Valdivia, and begun to people, their new general, whose name was Elvis Aramans, was forced to shut up all his people in the island of Constantine, because they run from him continually, and forfook him; befides the prifoners made in the islands of Chiloe, and others destroyed by us, and the warlike Indians.

In fhort, God having espoused this cause as his own, they were tormented with hunger; and before the Spaniards, who were on their way, could come up to them, their own difeates and losses obliged them to weigh anchor, and be gone. This was their wifest course; for if they had staid till the fleet from Peru had come up to them, and the land forces from Chile had attacked

them, they had not gone off fo well; for the marquis of Manfera being fo good a foldier himfelf, and so zealous for god and his king, immediately, upon the first news of their arrival, had set out ten fail, which he provided with powder and ammunition, and dispatched them to give advice along the coast; then he prepared a navy, which was to be of 16 galloons and ships, and 4000 Spaniards, resolving to go in person, or at least to send his son.

to go in person, or at least to send his son. The governor of Chile, the marquis of Baydes, with his accustomed vigilancy and readiness in things, where the service of god and the king are concerned, and as a captain of that valour and experience, which he shewed in Flanders, was ready to enter by land, after having provided all the ports of the kingdom with the army kept on soot by his majesty; so that if the Hollander had had yet more force than he had, being so hard pressed both by sea and land, he must either have relinquished the port, or perished there for ever.

It has been feen in this occasion, that one man is as good as many in the defence of the cause of god and their country, against any invader whatsoever, every one despising all dangers on such an account; but particularly colonel de Villa Nueva Soberal signalized himself at this time; for being general of the kingdom, and governor of the country of Arauco, he ventured himself in a small bark in the midst of winter, to follicite at Lima the necessary succours, and affish the vice-roy for a more quick dispatch of all things.

He took with him father Domingo Lazaro, of the company of Jesus, that he might inform him as an eye-witness of all that had passed, he being at that time employed in Chiloe, in the apostolical missions when the Hollanders landed he, ne-

vertheless, with undaunted courage, em-Ovalle barked in the midft of the winter in a tempefluous fea, as it is at that time; and without apprehension of all those dangers, and of being made a prisoner by the Hollanders, who lay in his way, and could scarce be avoided, he arrived at the city of the Conception, where he gave an account of all that had happened; by which means the country was immediately prepared, and

in arms or their defence.

There is another action which ought not to be concealed, as well because it shews the great prudence of the marquis de Baydes, as the courage of 20 Spanish foldiers. It being uncertain whether the enemy were still at Valdivia, or whether he had abandoned it, they offered to go in a boat up the river, as they did by the governor's command; and without being terrified by the manifest danger they exposed themfelves to, they went as high as the town; and having discovered the ill condition of the enemy, and his design of leaving the place, they returned with that advice. This moved the general not to attack them, as was at first resolved; but it did not hinder his intention of peopling the place, (as I believe was done last summer;) for I have advice from Panama, that there is a garrison of 600 Spaniards left there; to which our indian friends being joined, (and the coast Indians also,) that post will be henceforward inexpugnable, and by it the fouthfea will be fecured; for it being already fo dangerous to fail through the streights, and fo eafy for us who are at home to defend this post of Valdivia, and having all the land our friends, we receive fuccours both from the Spaniards and Indians, who are fo friendly, that their caciques fent to offer their affiftance of their own accord against the Hollanders; I fay it will be very hard henceforward for any one to give us any diffurbance.

CHAP. X.

A Continuation of the Description of the Rivers of Chile, and particularly of those which run to the East; and of the Difference between the one and the other Side of the Great Cordillera.

chalbin. THE river next to that of Valdivia is that which is called Chalbin; it is deep, and capable of great veffels. From this river, to a place called the Punta de Galera, 'tis about two leagues; and from this to Rio Bueno feven; into which fall five rivers more, and one which is beyond the bounds of Valdivia.

After this is the Rio Chico, which comes from a lake at the foot of the Cordillera; in which lake are baths to cure leprofy and other infirmities, Next to this is the Rio de Vol. III.

la Ballena, which is close to the cape of that De la Balname, so call'd because of a whale of prodi-lena. gious bigness, which died upon that coast. After this, you come to the Archipelago of islands, into which falls the river call'd De los Rabudos, because of an Indian nation of that name, so call'd, because 'tis faid they are born with tails, as father Gregory of Leon describes them in his map. More on to the The river fouth is the river De los Goronados, named so De los Coby the company of a ship which put in there ronados, on the day of the forty martyrs so called.

OVALLE.

After these there are many rivers all 1646.

Books of the wishes, that one day the light of the gostpowns.

Biosis of the ministers of it. The second is called not the ministers of it. The second is called not to those parts by means of the ministers of it. The second is called not to the second of the great depth of it. The third is called the Gallegos, from a Spaniard of that name who sail'd along those coasts, and like another Learus, gave his name to one of them, by being drown'd in the sea hard by it, at a cape which has the same name. Then sollow the rivers De Delos Mar-los Martyres, and De los Apossos, and imperant of the grants.

they were begun to be feen, and they reach all along the Streights. The fapela Cam-mous river call d De la Campana, enters
at a place named El Ancon fin falida: this
name was given to the river, because its
two arms seem to form the shape of a bell.
There are two rivers more before you come
De los Pato the Streights, to wit, that of De los Pa-

xaros, or of birds, by reason of the vast quantity of them that were upon it, in that part which comes towards the Streights; and the other, of St. Vistorian, called so from the opening, to which the same saint gives its name. As for the other rivers which run among the islands, and those which empty themselves into the Streights, they are many, and shall be described in their proper places.

Hitherto we have described the rivers of most renown of this long extended kingdom, which rup from east to west, and empty themselves into the South-Sea: those which run from the opposite part of the Cordillera, towards the north-sea, are not so well known, because those parts are less inhabited, at least, by such as can give us a good account of them. The most remark-themselves able of them are those of St. John and of st. John Mendoga, which are very large rivers, and

The rivers of st. 7shm Mendoga, which are very large rivers, and and Men-empty themselves into the samous lake of doga. Guanacache.

The governor Hieronimo Lewis de Cabrera, a gentleman of great valour and merit, met with feveral great rivers in his paffage over those vast plains call'd the Pampas, where, as at sea, people are sain to travel by the compass, not to lose themselves: he was in quest of a nation call'd the Cessates, of whom we shall treat hereaster in its proper place. They were fore'd to pass many great rivers, and without doubt there are many more as far as the Pole.

Nevertheless I am perfuaded, that these rivers do not equal those which run opposite, and enter the sea on the coast of Chile; and this may be clearly gathered from the

difference which may be observed in passing the Cordillera, between each fide of the mountain, which is fo great, that they feem two different worlds, the east and west parts; and one would think heaven had put these mountains to divide them as a wall, and keep off from the west, all the ftorms and ill weather of the east, where are the provinces of Cuyo and Tucuman, not to disturb the serenity and tranquility of Chile and the western parts. Any one that travels to the top of the high chain of mountains, may experience this clearly; for there he discovers both horizons, and when he looks to the east, all is cover'd with groß vapours, which feem to hinder the light, and fladow all the country; and at the fame time looking west, the heaven is fo christ-lline and tright, that it causes pleasure and joy to look on it. The east fide is full of a cloudy, thick air, which engenders florms and hail, with horrible thunders and lightnings, which fright all the inhabitants: on the other fide, in the west, there is not a cloud to be seen, but clear and bright, as if in the heavens themselves there were such a partition as the Cordillera to divide the climates, as that upon earth does produce a difference in the trees, plants, and animals on each fide. A curious observer contemplating once, The vast

from this heighth, this fo remarkable difference difference, faid, That nature, in the fabrick of this part of the world, feem'd to the earl, and have turn'd her back upon the eaftern pro- there vinces, and look'd with her face only upon well face the Going Chile, giving bleffings with both hands to the Gotte this last, and leaving the other, as it were, and difinherited, and grieving t the pre-eminencies of its elder brother. In going down to the eaftward there are fewer fountains and rivers, and those muddy, the face of the land melancholy, without fo much as one green tree to recreate the fight, nor any pleafant verdure; and when at last there is some, as in the valley of Uspallata, the heats begin to be fo intolerable, that all things feem afflicting and unkind. On the other fide, when we go to the west, 'tis quite contrary; for as foon as we begin to descend. we meet with lovely fprings; the trees are green, the groves frequent and pleafant, and the little valleys, which are like fo many refting places in that great stair-case, where paffengers take breath, and are refresh'd with the verdure and flowers of them, the air still grows purer and purer; and the more they come down, the more they leave behind them all the inclemencies of the climate of the other fide, enjoying the advantages of the temperate Chile; for from the very foot of the mountains one feels the mildness of the fea air, and

a air, and

one is rejoic'd with the harmony of the birds, and other delightful objects, so as to forget the trouble and danger of the way one has pas'd.

way one has pass'd.

There is the same difference in the very land at the foot of the mountains; for on the east side there are few sountains; the land is barren, and little cultivated; neither are there slocks of any kind either sed or bred, so that the fields look like a use-lefs barren ground, except it be that the thinness of the people has not as yet given way to try the service of the cartes, for the plains below these are extreamly fertile, where they are cultivated; but at present there is nothing but thorns and barren dry-

nets in those parts.

'Tis not to to the west, where fountains break out continually, which in the winter are temperate, and in the summer as cold as ice, and that so much the more as the weather grows hotter and hotter. These fprings do so fertilize the fields at the soot of the mountains, that they keep the earth fresh and green all the year, though it be but a patch; for most of the ground is woody, and there is such variety of wild trees, that one would think they were arbors and groves planted by the hand of man: many of these are loaded with fruits of the country, of which the Indians make

excellent drinks, and fome of them are OVALLS very good to eat. The valleys are full of odoriferous beautiful flowers, brought forth by nature, without any human induftry: there are alfo among them most extraordinary physical plants of a beautiful aspect. The little hills and plains afford excellent pasture for all forts of cattle and flocks; there are also admirable valleys for planting of olives and almond-trees, and all forts of fruit-trees. At the lower part, about a league in the plain, there are vineyards, of which are made excellent wines, particularly museadels, which are in great efteem.

There are likewise in this descent of the Excellent mountain, admirable pastures, where great possible flocks are bred, and do increase wonderfolly; their flesh is extream favory, and the milk of the goats is so fait, that by only boiling and stirring it gently over the fire, I have seen it grow as thick as if flower had been put into it; and yet in other parts this milk is of its nature very thin. This may be said particularly of the young she-goats; and the milk thus boil'd has a sweetness and delicacy which passes ordinary milk, even with the things that are put in to mend it; all which are arguments of the great substance and nourishment of that land.

CHAP. XI.

Of the Effects produced by the great Snow of the Cordillera.

Great

WITH the first rains of the winter, which are about the middle of May, the Cordillera begins to be cover'd with snow, and to put on, as it were, a white armour, to hinder its being pass'd, not only by men, but even by animals and birds, which are so driven out of it by the rigour of that season, that there is not one remaining in it.

Intolerable

remaining in it. Even the Silguerillos and Sorfales, birds which of their own nature are fo hot, that in the very beginning of the fummer they take to the mountain, as foon as they perceive that the winter draws near, come in flocks down to avoid its rigour in the mountains; and then it is that the taking of them is eafy, and that as foon as the cold pinches, the ground being almost cover'd with them, it proves the feafon of most pleasure for the youth of the country, who going out, take fo many of them, either with glue or nets, that they carry loads of them home, referving those of the finest colours to put in cages, for their harmony is very fweet. The Cordillera is shut up five or fix months in the year; fo that till Ostober or November, it cannot be pund

without manifest danger of one's life; and in the midst of winter not at all, because all the paths and ways are cover'd with show, to the heighth of many yards; and if any one should be rash enough to attempt it, he would after a little going, sink in every where, so that he would not be able to go a step forward nor backward, as has happened to several, who either for some very pressing concern and interest, or slying from a death which threaten'd them for their crimes, have sound it in these desarrs more certainly than perhaps they would have done in the prisons where they sear'd it.

These are buried, not in sepulchres whitened on the outside, nor under cold marble, but in the very bosom of frost and show, which preserves them without being imbalm'd, and yet keeps them as incorruptible and dry, for so they have been found after many years; for such is the cold of those mountains, that it dri sup all the moisture that can cause corruption in dead bodies, and so preserves them.

This so insuperable difficulty of passing the Cordillera, is less at the entrance, than the end of the winter, because the drifts of

Ovalle. snow are not then so violent as to shut up 6. the ways entirely; fo in those seasons some do venture to país, though never but with great danger, and upon urgent occasions: if fometimes they are so lucky as to get off well, because they meet with a clear sky, yet at other times it cofts them dear; and always 'tis with infinite labour that they get thorough.

I have feen others who escaped with their lives by god's mercy, because the storm catch'd them before they were too far engaged in the mountain, and fo they could yet make a retreat to the low countries; others have been forc'd to open their mules bellies that they ride on, and hide them-felves in them; and by that warmth, and other defence of cloaths, the make a shift to get over the florm of fnow, if it does not last long; after which they gain the plains on foot, if they are not too far engag d, and fo avoid the danger, but not the long-fufferings which follow generally after fuch adventures.

In fhort, every body has some story to tell of the mountain, and complain of it; for fome lofe their toes, others their fingers; fome their fight; fome are benumm'd and lam'd, and fo remain all their life with great infirmities. And I do not wonder at all at this, because though one should pass without a florm, yet the cold is fo terrible, that it cannot but injure nature extreamly in that feafon, fince even in the midst of fummer, when we pass this mountain, and in the lower part of it sweat with heat, as foon as we come to pass the top, we are forced to put on double cloathing, and prepare the flomach with good warm things, to withstand the sharpness of the cold, and the fubtileness of the air, which penetrates the body through and through, if it be not well cover'd.

Among the feveral times that I have pass'd this mountain, one was in the beginning of April, when autumn in those parts is at an end, and the winter begins to threaten, and I must own that the cold was so intenfe, that it feem'd a different species of cold from all those I ever felt either in India or Europe; though even then it had not begun to fnow, the cold was fo fierce that it made one's hands cleave; nay, it had an effect upon the very rocks, for I remember the fun was reflected by them as by a looking-glafs. When we come to treat of the first discovery of this kingdom, I shall relate what was endur'd by the Adelantado Don Diego de Almagro with his army, and by those who afterwards followed him, and passed this mountain, in which they were fo ill handled, that fome were ftruck blind, others lame; fome loft their fingers without feeling it, because the excessive cold took away all fense; some were frozen to death, and with them fome horses, whom fix months after some other Spaniards found so fresh and well preserved, that they cat of them; and to fecure themselves from cold, made a defence of those dead bodies; nay, fome got into them. fix years after, others going that way, found a negro, who at that time was fro-zen to death, leaning against the fide of a rock, with a lead horfe, and the reins in his hand, though confumed with time. They who have a mind to know more particulars, let them read Don Antonio de Îlerrera, Decade 5. Book 10. and Chap. 5. and also Gareilasso de la Vega, in his first tome.

'Tis necessary to understand, that it is of this cold of the mountain that authors fpeak, when they fay, That the cold of Chile is so severe, that the rivers are frozen up, and men frozen to death in the fields: for this is only true of those uninhabitable mountains, where I believe at that feafon the rivers do not run, but are turned into chryftal; and if any fprings do escape, they are very few, and that in the valleys most fecur'd and shelter'd; that appears by the rivers which run in the plain country, which are almost dried up, in comparison of the quantity of water that they carry with them in the fummer.

And thus the truth of what historians relate may be faved from contradiction; for they not knowing the country, make no diffinction between the mountain and the plains, in which there never was feen any fuch effect of cold in any part of them; for the fea air, which is thick and moift, tempers the sharpness of the blasts from the Cordillera; and for this reason it is, that the colds of the Pampas of Cuyo and Tucuman are so insupportable; as also those of Buenos Aires, which being at fuch a diftance from both feas, and not enjoying the warmth of its vapours, the air in fummer is intolerably foorching, and in winter fo cold, and for want of rain fo dry, that 'tis common for animals to be found dead in the fields, as well as the men too fome-

CHAP. XII.

Of the Fountains which rife in other Parts of Chile, besides the Cordillera,

BESIDES the rivers and fprings of admirable properties. I shall mention some, the Cordillera, there are others which for 'tis impossible to rehearse them all, nor rife in the plains and valleys, which have can I remember but a few. First, that

rdillera,

on fome, all, nor rft, that which

which rifes at the foot of the high volcano of Villa Rica, fo famous in that kingdom for its terrible effects, for which God Al-mighty makes himfelf to be feared and respected by mankind a rifes, I say, at the foor of this mount with fuch force, that it fprings out of the earth in two fources, each as big as a man, and fufficient to form alone a good stream, and runs into a lake which is made by its waters,

Rio Chi-

Caren.

In another lake, out of which comes the river call'd Rio Chico, there rifes also a fountain of hot water, most efficacious for the cure of leprofies, and all contagious infirmities. There is another fprings up in the Magney, yet most admirable; for there are two fources just by one another, the one of hot, the other of cold water; the hot one is so hot, that no one can endure his hand in it; the cold one is let in to temper the bath which is made for the fick. The baths of Rancagua are also very famous, and like thefe; which, for being near St. Jago, and in the greatest intercourse of the kingdom, are very useful, and much frequented. There are others in other parts; but not remembering them distinctly, I can say little of them. Among Fountain of the fountains, that of Ramon is very famous, as well for the goodness, as abundance of its waters; which is fuch, that they alone are fufficient to water many fields: it is about two leagues eastward of St. Jago, and in that diffrict. There are many others, among which that of Caren is worth taking notice of: it fprings in a beautiful meadow, of about five or fix leagues in length, affording a delicious profpect; its water is very iweer, and enters into the meadow; the earth of which is fo porous, that whoever treads hard upon it, feels it shake under him: it is all the year green; and the grass is a kind of small trefoil, called by the inhabitants Caren, and is pleafant to eat. Neither ought I to pass over in filence another fountain between these two, very plentifully furnished with delicate fweet water, which is always for much the cooler, as the weather is hotter; Mayten, it is call'd the fountain of Mayten, by reafon of a tree of that name, which grows at the foot of a great square table of live rock, where people use to go and eat their collations, the tree sheltering them all the while from the heat; for 'tis a tree whose leaves are green all the year, fomething like a mirtle, but much larger, and without dispute of a more beautiful green: by its foot runs this fountain, whose fource is a little higher in a valley, from whence it comes murmuring upon pebble stones, and among pleafant groves full of beautiful herbs and flowers.

VOL. III.

The trees, though wild, yet bear very OVALLE. favoury fruits of that foil, and in them are great variety of birds, who, with their harmony and fweet notes, make the entertainment more delightful for those that frequent the place. 'Tis not the least part of A delighttheir enjoyment, to discover at the end of ful profest. these woods a prospect for many leagues over plains, which being of so great extent, many of them lie uncultivated; fo that among the vineyards and plowed lands, the wild uncultivated part is fo beautiful, particularly in the spring, that one would think art had help'd nature. There are in one place great fpots of yellow flowers, which cover the earth, fo that for a great space nothing else is to be seen; then you have white, blue, fillemot foots of the fame proportion; the green meadows min-gle in this with the waters of the river Mapocho, which is feen from this distance Mapocho. fometimes entire in its bed, then divided into feveral arms, and at laft drained into the fields of the neighbouring grounds, to fertilize them. The profpect is terminated with feveral farms, which are called Chacra's, with their churches; and in the midft of all, the city of St. Jago, the capital of Chile, which being not above two leagues off, and the heavens fo ferene, the towers of it are eafily diffinguished, and the bells heard fometimes.

This district is full of a great many more fprings, all within the compass of a mile of each other; and their waters are excel-

lent and healthy.

That which is to the north of the city of Conchalis, St. Jago, called Conchalli, is likewife highly commended; it fprings in a little valley, called the Salto, or Leap, because of the fall of the river Mapocho. This river comes running in a plain to a certain place; where being divided (for it is the work of induftry) into two branches, the greatest of which runs in its natural channel, the leffer is derived to water this valley; which towards the west is even; but towards the east the land is fo high, through which the river runs, that it is two or three mile from the bottom of the valley to the high grounds, from whence the river falls. It is precipitated with great noise, making lovely and various cafcades by the rencounter of the rocks and other obstacles, which by their streight paffages retard its course, till at last it comes entire to the valley, and is divided into cuts and channels for the watering it; which is not ungrateful, to make a more than ordinary return to those who cultivate it, not only in corn, most excellent wine, and most favoury fruits of all kinds, but also it ripens them above a month before any other place thereabouts; and it is very

OVALLE. remarkable, that in this valley, which is only 1646. half a league from the city of St. Jago, the figs use to be ripe, when in the gar-dens of the city, and all its neighbour-hood, they scarce begin to change colour:

therefore, as well for this as the game it affords, of partridges on the hills, and wild fowl in the waters and ponds of it, it is the greatest entertainment all those

parts afford.

I shall not dilate upon more of these fountains, which are to frequent; for if I were to mention them all, I should never have done; for fince those alone of the Conception, Arauco, and the country of the limits upon the warlike Indians, would require a large treatife, belides those of the district of St. Jago, what would it be then in the territories of the ancient cities, which are yet farther in the country? for it abounding extremely in rivers, it is to be prefumed that it must be so in fountains and forings; all which proceeds from the abundance of moitture of the Cordillera.

Of these springs, the most agreeable for their good waters are the farthest off from the Cordillera, because they are more purified by a long motion, and refin'd by the good qualities of the earth they run through, particularly the mineral impregnations are fingular: I cannot but mention one, which is in the novitiate of the company of the Jejuits of Bucalemo, whose waters are not to be match'd, at least I never met with the like; for without drinking them, one may differer by the touch their noblenefs, their foftness being like that of new butter; and they do make the hands that are wash'd in them in a few days smooth, and thereby prove their vaft difference from

This fountain fprings in a little valley, a medicavery pleafant, under fome hills, about a nal founleague from the fea; and it bubbles up be-ture tween a white fand, in which there is gold, as if it had a fire under it to make it boil. It is wonderful to observe, that if they throw any bough or flowers upon it, it feems to take it ill, and never is at reft till it has fwallow'd it up, leaping up against it feveral times, till it has made it its own, and hid it from our fight; and this it will do for a whole evening, if they continue throwing flowers or branches of trees into it, without any body's being able to tell what becomes of them all.

The effects that this water causes in the fromach are admirable: it helps to digeth the meat with more eafiness; it destroys crudities, diffolves phlegms and groß humours, and evidently prolongs life, especially to old men. This was most particularly made clear in the person of that famous captain Sebastian Garcia Caretto Chunazero, the founder of that novitiate, who lived there many years, and came to be ninety years old in good health, and fo vigerous, that he did to the last go on horseback through the woods and mountains, as if he had been a young man. I heard him fay many times, that this fountain was his life; for as foon as he found himfelf any ways out of order, he fent immediately for the water of it, and drinking it fresh from the fpring, he used to go to bed upon it; where falling affeep, he would after fome time awake well disposed: this I have often been witness of. The old Indians thereabouts experimented the fame, and did attribute their good state of health to this fpring, without using any other phyfick or remedies.

CHAP. XIII.

Of the Lakes of Chile, and the Salt that is gather'd from them.

Laker.

other waters.

F T F. R having treated of the fountains and rivers, it feems natural to treat of the lakes and flanding waters form'd out of them, and by fome inundations of the sea in winter, when it fills them, and leaves them provided for all the fummer. Those made by rivers come first in rank; and I wish my memory would ferve to place them here, with their feveral qualities. Omitting then to repeat what we have faid of those of Aculco and Pudaguel, which being near St. Jago, make the greatest diversion of its inhabitants, we will begin with the lake of Tagataguas, about fourteen leagues from that city, and which once was more in efteem; for the trouts catch'd there are of a larger fize, and the game for wild fowl fo much more diverting, that there is no comparison be-

tween these waters and others. I do not deferibe here particularly the variety of wild fowl, because I intend to do it when I treat of the variety of birds of this country. The lakes of Villa Rica are of great renown, though I confess I know little of their properties.

The lake of Puren has been famous, ha- Lake of ving been an impregnable fortrefs for the Puren. warlike Indians our enemies, by reason of the disposition and qualities of its situation; for from thence they have for many years maintain'd a war with whole armies of Spaniards, without being fubdued: their advantage lay in this, That upon any rout given them by us, they had here a most certain and fafe retreat, which when once they had recovered, they were out of all danger; for none could hurt them either by fword or fire.

The sea lakes are also many, and of great profit to their owners; for the fisheries in Sea lakes. them are much more certain than in the fea: for which reason they furnish the best part of the lenten fare, though the fea affords a great deal too. Among the reft the lake of Rapel brings a great revenue: it runs in length above two leagues within the land. In the winter time the fea is joined to it; for by its ftorms it forces an entrance, but it leaves it full of all forts of fift, which, with those that are bred there, furnish it for the whole year, and enable it to supply all the neighbouring country; and that not only with fifth, but with falt too in abundance: for, about January, the communication ceasing between it and the fea, when the fun is at its hottest in that cli-mate, the water is congealed fo, that it has a crust of a foot, or more, thick of a most excellent white falt. This, indeed, does not happen every year; for it requires an extream heat to do it, the lake being deep, and the climate there more enclining to cold: but they provide themselves in one, for many others; and the salt-pits made by hand feldom fail ; for they not being of great extent, the water that is let into them turns to falt with lefs heat, the matter to be congealed being less in itself. And fince we are mentioning falt, I cannot omit to relate what I myfelf have feen in Sait found the valley of Lampa, which is about three on as herb leagues from St. Tago, and it is this, growing in There grows an herb, not unlike to of Lampa. Sweet Bafil, only its green is upon an afhcolour, and not to gay; it rifes about a foot above ground: this plant, in the fummer, is covered over with fmall grains of falt, like pearl, which is congealed upon its leaves, either from the dew of heaven,

that earth; or elfe the nature of the herb Ovalle. itself is such, as to sweat out this humidity, which being afterwards congealed by the heat of the fun, is turned into falt. Let the cause be what it will, the effect is seen no where but in this valley, and upon that species of herb; which is therefore much valued by the Indians, the falt of it being more favoury, and of a finer flavour than

any other.

I cannot tell whether Johannes de Lact means this in his description of the new world; for having mentioned the kingdom of Chile, to which he gives the preference for its excellent properties, he fays, That in that kingdom, in some of its valleys, there falls, at certain times of the year, a dew fo thick upon the leaves of the plants, that it is like fugar, and ferves, being kept fome time, for the same use as manna. Antonio de Herrera reports the same thing, in his general history of the West Indies; and, amongit other commendations he gives this noble kingdom, he relates the fame thing of this strange and admirable dew. I fay upon this, that I know not whether they allude to what I have reported of the valley of Lampa by my own fight, and have no knowledge of that other thing they mention; though one would think, fuch authors fhould diftinguish things fo different in their effects and favour, as falt and fugar. *Tis possible, God may have done both, having been so wonderfully liberal to that country, where the fingularities are fo many and wonderful; and it would therefore be no wonder fome of them should not be known, especially, considering that we, who are there employed for the conversion of fouls, have not the time to fearch after curiofities, and fecrets of nature.

CHAP. XIV.

Wherein is treated of the Sea of the Kingdom of Chile, and of the Etimology of its Name.

Sea of Chile,

HE fountains, springs, rivers, and brooks, carry us along with them naturally to the fea, where their course ends, and where there is room for my pen to exercife itself, if the brevity of this narration did not confine my flight: I must therefore be content to fay for ething of this element, that the nature of it may not be unknown as to this new world.

or by fome vapour raifed by the fun from

nology Beginning therefore with the etimology to name of its name: 'Tis well known that all com-Etimology monly call it the South Sea, because it is towards the antartick pole, from whence generally the fouth wind blows, in opposition to the tramontana, or north, which

reigns in the ocean as far as the artick pole. But leaving these disputes to the schools, or rather to that abyss of divine wisdom, qui profert ventos de thesauris suis, 'tis a known truth, that the effects which the wind of the artick pole causes in its jurisdiction towards the opposite part, the same is caused by the fouth wind in its motions from the antartick towards these parts.

In Chile we look upon the fouth wind as The fonth a favorable wind, as in Europe the north is wind most in the same esteem. The north with us co-favourable were the heavens with clouds, causes seem as Chile. vers the heavens with clouds, causes tempefts and ftorms at fea, and makes all the land dark and fad: the fouth, on the

OVALLE contrary, clears the sky, ferenes the air, and 1646 makes the fea as calm as milk: on the contrary, this fame fouth wind, in the north

fea, is ftormy, and covers the heavens with clouds, and raifes those tempests, which do so endanger ships; whereas the north, called there tramontana, clears all again, and

makes the fine days.

From hence proceeds, that in America the fouth wind reigns in fummer, when the fea is calm, and the north in winter, when it is tempestuous: the north does most certainly, bring with it the rains, particularly from thirty fix degrees to the pole, and that fo fuddenly, that fometimes, in the moment the wind comes to the north, the rain falls, and most commonly 'tis within half an hour after its change; and when in those parts in winter the sun is clear, and the weather fair, 'tis when the south wind overpowers the north; for the fouth in those parts is cold and dry, and fo drives away the clouds, fo as it happens fometimes that the heavens are dark; and as foon as the clouds are discharged, if the fouth appears a little the stronger, 'tis an infallible fign of calm weather, which generally follows in a trice; for this wind drives all the clouds fo before it, that when it blows, it does not leave one in the sky.

The contrary of this is feen in Europe, where the fouth winds bring humidity, and the north drives it away: the fouth relaxes the body, and affects the head; but the north strengthens the body, purifies the air, and dries up superfluous humours. In short, these two winds cause quite different effects in Europe and in America, that we may call the Europeans sons of the north, and those of South America children of the

fouth.

From this there follows another very notable and well-known difference, which is, That as to go from Europe to the Indies, the north is the proper wind, and carries us before it, and by confequence is contrary to our return; fo in the South Sea, failing from the pole towards these parts, the fouth is the favourable wind, and contrary to our return: from whence it proceeds, that the voyage from Spain to Carthagena being by the North Sea, and made in thirty, forty, and fifty days, the return to Spain uses to last fourscore, and a hundred, and more days. On the contrary, in the South Sea, where the voyage from Chile to Lima is but of about a fortnight, and as much more to Panama, or thereabouts, the return only to Lima is of two months, and from thence to Chile forty days. The South Sea is also called the Pacifick Sea, to distinguish it from the North Sea, whose storms and tempests are so frequent; whereas in the South Sea they are rare: but, in my opi-

nion the difference is for another reason, which I shall alledge here.

The most frequent navigations of the Remarkson South Sea are from Peru to Panama, and the navigafrom thence to New Spain and the Phili-tion of the pinas; and those from Peru to Chile are less used: by which it appears, that the best part of the South Sea navigations are between the tropicks; and fo the fun has fo much force, as to keep the winds from being furious, and making fuch lafting ftorms as those which are raised without the tropicks, and in parts nearer the pole; for this reafon the failors in these warm climates, where there never is any winter, called this fea the Pacifick Sea, from the good effects Called alfo they experiment in it. The contrary of this fick Sea. is in the *North Sea*, where most of the navigations are out of the tropicks; where the fun having less force, the winter predominates, and raifes mighty ftorms. Now the Europeans, who first navigated the South Sea, being fuch as were used to those dangers, to which the navigators of the northern parts are most commonly exposed, when they found fo quiet a fea as that under the line, and in those which particu-

Spain, Panama, and Peru, they gave it the name of Pacifick, without examining any further the cause of the difference of the effects, which they experienced in both seas: but if they had try'd that very South Sea beyond the tropick of Capricorn, they would not so easily have named it Pacifick.

I know that this discourse will be approved by those who have had experience of

larly are the feat of commerce with New

proved by those who have had experience of the hardships which are suffered by the navigators, from the twenty fixth degree of latitude on the coast of Chile, to fifty three degrees; for there, as foon as the winter begins, the fea cannot be navigated without manifest danger, the storms being no ways inferior to the greatest in the North Sea; and though at that feafon it is not fo dangerous for ships to fail from Chile to Lima, because they every day get into a lefs latitude, and fo enjoy a quieter sea, yet from Peru to Chile it is extream dangerous, not only because they come into a greater latitude, and go out further to fea, to avoid the fouth winds opposition, but also because the vapours of the fea, and cold mifts of the earth do raife fuch fogs and dark clouds, that they cover the land fo, that when they make their port, they are in great danger of

iplitting upon the rocks.

This, I say, is only of those coasts of Chile which are in the least latitude; for from the city of the Conception, towards the pole, even in summer, they are dangerous; and the ships which are bound for the islands of Chiloe have not above two or three months in the year to go in and out

Spilberg's for observation ber of twenty nar five ports in the schefferghts the of Magel- fer, lan.

conveniently, or they neither go in nor out till the year following: this is underflood as far as forty four or forty five degrees, in which this archipelago of islands is placed; for from thence to the streights of Magellan, those may relate the dangers who have experienced them, and passed those streights: all that I know of it, is, that they all have matter enough to discourse of at their return.

So that we may fay, that the name of Pacifick does not absolutely belong to the South Sea, according to its whole extent, but only as to those parts of greatest intercourse, which, because they are within the tropicks, are the freeft from ftorms; and yet it cannot be deny'd, but that the South Sea has an advantage over the North Sea, even within the tropicks, which is, that it is free from those great fands which are fo common in the North Sea, about Carthagena, La Havana, and other islands, nay, even in the canal of Babama; which indeed are fo many, that let a florm be but moderate, they make it still greater, and more dangerous, by shortening the sea-room, and force the failors to be always heaving the lead, or elfe to fplit upon the rocks, which may be clearly feen and diftinguished from the ship's side.

I find likewise, that the South Sea may be called Pacifick for another reason, which is, because of the extream quiet it enjoys in its navigation, without disturbance from any of its enemies, who are so frequent on all the shores of the North Sea; for there be-

ing no other entrance into the South Sea, OVALLE but by the streights of Magellan and St. Vincent, which are at fuch distance, and defended by nature itself, the enemies of our quiet do not care to engage in so useless and dangerous a defign, with fo manifest a destruction, and so little advantage, as hath happened already to some hereticks who have attempted it; for having no fettlement, nor landing place in all that vaft fea, they have been forced to fail to the Philippinas: therefore the fhips of the South Sea are free from any fear of enemies, and go and come without any apprehenfion of danger on that fide. Antonio de Herrera, in the fifth Decade of his General History, folio 319. relates the motive that Magellan had to call this the Pacifick Sea, and that is, Because there is not in all that element a more specious career for the winds and tides, and because there reigns between the tropicks fo fieldy and ftrong a levant, that in many days the feamen need not hand their fails, nor the fleerfman his helm, failing through those vast seas as if it were in a canal or river. And the same author adds, That this motion of this wind proceeds from the course of the first Mobile, which is proved by its perpetual invariabili-ty, and the increase of its vehemence, as it draws nearer the Equinox. Some difpute, whether it ought to be called a wind, or an impulse which the air receives from superior orbs, communicated to them by the first sphere. So far this author.

CHAP. XV.

Of the Sea Coasts of Chile, and its Ports and Havens.

TT would be too great an excursion beyond my purpose, to mention all the ports and creeks along the coaft of Chile; for they are very numerous. George Spil-Spilberg's objevation berg, admiral of a fleet of fix fail, whole of twenty names were, the New Sun, the New Moon, five portin the Hunter, the Pole-Star, Eolus, and Luciof Magel. fer, fays, he observed twenty five ports in the streights of Magellan alone, before he entered the South Sea: he commends them mightily, but particularly he is much pleafed with the twenty fifth; for he staid in it fome time, and gave it his own name: he calls it a noble port, by reason of its fafencis for fhipping, as also for the plea-fantness of the fields, which, he says, were all covered with fruit; which I suppose were strawberries, according to the descrip-tion he makes of them. He found there likewise abundance of excellent oysters, at the mouth of a river, which beautify'd that port extremely, it falling into it from high Vol. III.

mountains. But this retreat did not ferve them long; for having feen fome very fine coloured birds, they purfued them on shore, and hunted them; which they had no fooner begun to do, but they were affault-Spilberg ed by a troop of Indians, with clubs in affaulted by their hands, and fome of them were killed, and the rest forced to retire to their ships, and fet fail in hafte; which is a great mark of the valour with which those people engaged them; for though they had fire-arms, they could not withstand the charge.

The most famous port in all the coast, Port of Cobefides that of Valdivia, which we have de-quimbo. fcribed already, is that of Coquimbo, mentioned in our feventh chapter; and it deferves all forts of commendation, as well for its lovely bay, where ships ride as safe as can be, as also for the pleasantness of the country about it; which is one of the most delicious of all Chile. The products of the country are particularly gold and

OVALLE copper, which is carried from thence to 1646. *Peru*; for the making of artillery, casting of bells, and other houshold furniture.

Copispo, Guafco, and Pacudo.

The ports also of Copiapo and Guasco are esteemed, and more deservedly that of Pacudo, which is a private hidden bay, where the ships of Peru come to load with the hides and tallow of Cbuapa; as also with tar and tackling for ships, which is made in that valley, and is whiter and better than any in Cbile, by reason of the excellent waters they make use of in its making.

Quintero.

The next good port to these, is, that of Quintero, where the general of the fix ships above named landed; and it being a place uninhabited, met with no opposition, but refreshed his men with a large fishing which they made. They do so commend the place, that they cannot sufficiently (they fay) extol the pleafantness of the land, the fweetness of the water, the security for ships, and, in short, all forts of conveniencies for human life; and after thefe many encomiums, the historian concludes thus, portus bic nulli secundus, this port yields to none; and yet this port of Quintero is none of the famous ones of Chile; by which it may be inferred, that he was but little acquainted with the rest. He could not land in them; for he found them all guarded by the militia, who expected him; and though coming to Val Paraijo, he had begun to land fome men, yet, upon advice that the horse of St. Jago were at hand to hinder the descent, he took them on board again; and failing at midnight, cast anchor at Quintero, where they watered, and cut wood, the admiral himfelf landing with many foldiers to protect his men: there they drew up a trench, with a kind of half-moon, to fecure their retreat against the Spaniards, who began to appear upon the hills; but they did not stay for them, but embarking again, followed their courfe towards Peru, not landing any where elfe; but yet they commend the land extreamly.

Coucon, or Quillora, and Vai Paraifo.

After these follows the port of Coucon, or Quillota, which ferves to embark the product of those valleys; and hard by that, the port of Val Paraijo, where are landed all the goods brought for the city of St. Jago: from whence they are distributed all over its territory, and as far as Cuyo, and Tucuman: This port is every day more and more inhabited; and there is building a convent of austin friars, which will be of great relief to the fouls of the inhabitants, and of all those who go and come, who are not a few; for this is the port of the greatest commerce with Peru: 'tis distant from St. Jago twenty four leagues, all plain and good way, fit for carriage; and so all the commodities of both kingdoms are conveyed and exchanged by it.

Near the port of Val Paraijo is that of St. Antonio, which is also very safe and good, and is at the mouth of the river Maypo. There is a mistake in authors about this; for they place the port of Val Paraijo at the mouth of a river, which they make in their maps to come from St. Jago; which is a very great error, because, at Val Paraijo there is no river of any note, but only springs and sountains, which rise out of the rocks close by the sea, which are most excellent waters. There are also others of a coarser nature, with which the ships fill their provision, because they having more body, they resist better at sea against corruption.

There are feveral other ports between that and the Conception, in the bays and mouths of rivers; but not much used, because they are not necessary; all those valleys from Maule to Quillota fending their commodities to Val Paraifo. I believe in time other ports will be imployed, because the products of that kingdom multiply apace, and fo people will be willing to feek out the nearest ports for embarking their goods. All the product from Maule upwards, is carried to the harbour of the Conception, which is the best bay in all those coasts; and it being a very large one, providence placed at its entrance the island of Quiriquina; under which, as under a mole, Islandof thips are fecured in foul weather. At the Quiriquilargest entrance of this bay is the port of na. la Herradura, or Horse-Shoe, it being in La Herrathat form; and opposite to that is that of dura, St. St. Vincent; and a little farther, that of and Carne-Carnero, called fo for the refreshment it af-ro. forded to one of the ships of the bishop of Palencia, who, by order of Charles V. paffed the streights of Magellan with fix fail, and having loft their Patache, were forced to the Moluccas.

Next to these are the ports of Tirva and Several o-Quedal, La Baia Chica, that of Puralla, ther Ports. the port of St. Cebrian, that of Sansta Clara, that of St. Domingo, St. Esteran, Los Reyes, that of Baixas, that of the Innocents, and many others less considerable, as far as the streights of Magellan.

Befides these ports which we have marked upon the terra firma, there are several others, well known in the islands of Juan Fernandes, La Mocha, Sansta Maria, in the islands of Chiloe, Alfie; where the most frequented are that of Carelmajo, and that called the English Port, because formerly an English ship landed there, and the men and ship, with all its artillery, were made prize. There are also several other ports in the archipelago of Chiloe, which I forbear mentioning, because I have not a perfect account of them.

Of the Fertility of the whole Coast of Chile:

OVALLE.

make which valleys and fields, but likewife in its whole al Pacoast, even on the rocks, where the sea ut only beats. It will be hard to make this appear t of the by particulars, because though in other oft exparts of the world the rocks produce shellers of a fish, yet I do not know that it is in such nips fill quantity, nor fo large any where as in Chile, g more nor of fo many different species. First, I nst corwill speak of that which is most common and intelligible: There grows along the between coast every where an herb not unlike to The herb ays and endive; they call it Lucbe, which they pull fed, befrom the rocks: it is gathered in the fpring, nose valwhen 'tis most grown; and being dried in ing their the fun, 'tis made into loaves, which are elieve in look'd upon as a great delicacy far from the because fea, particularly in Peru, Cuyo, and Tucu-Itiply aman; for it ferves for many fauces. It grows upon the tops of rocks, fuch as are above the water. At the foot of the rocks g to feek ing their faule upare found certain roots, which bring forth the Cona trunk as thick as one's wrift, called Ulteall those The root a trunk as thick as one's wift, can't our-Ultequefte, cuefte: this they cut, and laying it before one, prothe fire, they pare it like a lettice, or car-doon, or thiftle, but it has a much diffeisland of r a mole, Mando rent tafte. From these trunks shoot out At the Quiriquicertain long cods, of three or four yards long, and fome of about fix or eight fine port of na. being in La Herra-is that of dura, St. gers in breadth: these they call Coebauyo; and there are two forts of them, which, that of and Carnethough they refemble one another, yet the Indians make a great difference between nent it af- ro. bishop of them, referving the good, which they cut s V. paf-h fix fail, and dry, and make provision of them for Lent; the others they leave to the sea, forced to which heaps them up upon the shoar, where they lie in heaps very useless. So much for the herbs. Now let us speak of the sea shell-fish. The best of this kind are Tirva and Several o-Puralla, ther Ports. Eta Clara, oysters, both great and small, so much Los Reyes, talked of by the Hollanders with great commendations: they found them in the cents, and far as the streights of Magellan; but the greatest plenty of them is on the coast of Coquimbo, ve markwhere they are very large and delicious; re feveral the leffer fort they call Tacas, very much of Juan valued too, and taken all along that coaft.

> That which they call Choros is also a fine fort of shell-fish, and in its shell, as Antonio de Herrera fays, there are pearl very white. That fort which I have feen is

finely wrought.

But those of greatest renown are the oysters

of Chuapa; in the great ones are bred

pearls, as the Dutch fay, and, according

to John and Theodore de Brye, they bought

fome of the Indians in the streights very

HE abundance and fertility of this kingdom is not only perceived in its every where, there may be of all forts of them; for they are caught in abundance, both little, middle fize, and large ones, fome as broad as my hand. The choicest of them are those which have the fish of a yellow colour, though the black ones are

good too. There is another shell-fish, called Mane-Manegues. gues, which is in two round shells, such as ferve for models in architecture; the fish within is but coarfe meat, but of good fustenance. In one kind of these, which is the little fort, in opening the shell, which in the inside is like mother of pearl, when one takes out the meat, one may fee the impression on the shell, of a purple colour, which reprefents the image of the most holy virgin, with her mantle, and her child in her arms, which causes great devotion and comfort; and, though they all have this impression, yet some have it so perfect, that it is wonderful.

A fish they call Locos may also be rank-Locos, or ed among the shell-fish: they call them al-Afs's fo As's-Hoof, because they are of that shape: Hoof. They are very favoury, but hard and indigest. digeft; for which reason they are to be eaten sparingly, though in the dressing of them they macerate them between two stones, to soften them. I should never have done, to go through all the kinds of fhell-fish; as likewise of snails, which are alfo good to eat, and are produced on the rocks. There are some cast up by the sea, in fuch quantity, that fhip loads may be had of them, of fuch variety of figures and colours, that I doubt not but the curious in Europe would value them, and our artifts would make curiofities of them; but they, for want of fuch artificers, are good for nothing in the Indies, but to make lime of, by burning them in a furnace; yet they are in such vast quantities, that the shore is covered with them, and they make a fine shew

The ihell-fish called Picos de Papagayos, Picos de are another kind much efteemed: they are Papagayou fo called, because for their shape and bigness, they are just like parrots heads; and as these birds build their nests on shoar, in fome hollow rocks and caves, fo this fifh breeds in a kind of stone-work, hollow, like little cells, where it grows till it comes to be of the bigness of those heads. They dress them in those very nests, which serve for pots, and when they are enough, take them out. They are excellent meat.

Those

OVALLE. Those which they call Kericos, though common in other parts, yet I never faw them fo large as in those parts; and being taken in the increase of the moon, they have very large tongues, fat, and of about two fingers breadth.

Crabs, Apavico-

The Crabs, Apavicoras, and Praunes, are likewise very good, and of several forts and sizes. The Lobsters, and those of that kind, are likewife much efteemed; they breed under the rocks, and are fished for, as all the rest, not with nets, but only by the Indians going into the fea up to their middle, and knocking them from the rocks with flicks in their hands. So much for this kind of eatables. There are others which live a little more in the fea, which are of a beautiful form; fome they call feaflars; some the fun; others the moon; because they are of the form of those I lanets, as they are commonly painted. These may be eaten too; but they have one very singular propriety, which is, to cure the vice of drunkennels, being reduc'd to powder, and given in wine to drink; and this is of

fo certain an effect, that those, who before they took it had no greater delight than drinking of wine, did afterwards fo abhor it, that they would not touch it, though they were hir'd. This is a healthy remedy, as well as fure; and therefore us'd by the Negroes to avoid taking another; which, though as certain, is very dangerous; which is, drinking the fweat of a horse mingled with wine. They say, this puts those who take it, in danger of lofing fome of their fenses; though I knew one, who being exceedingly given to drunkenness, his wife gave him this remedy without his knowledge, and it did him no other hurt than to make him hate wine, fo that he could not bear the fmell of it; but, as I faid, the Negroes use the powder of the star-fish; and though I have observed, that with some it is not fo efficacious, but they long for wine again after a while, yet it is but to repeat the remedy as foon as that ill inclination prevails again: and this is commonly fo practifed upon the Negroes, who are much given to that vice.

CHAP. XVII.

Of the various Kinds of Fish which are fished on the Coast of Chile.

The whale. ET the whale appear first, since by its bigness it is a kind of king of the fea; and if where the king is, the court is, we may give that title to the fea of Chile, where there is fuch flore of whales, that I know not any place where they abound more; and they are accompanied by fuch a court of little fishes of all kinds, that those who have navigated those seas, cannot but mention it with admiration. Among the rest, William Seerten, who came with a fleet through the streights, fays, That they met with fo many whales near certain iflands, that they were forced to fail with great care and attention to avoid them, they being to many, that they were almost always in the ships way, and endangered the loss of them, being so big, that they look'd like rocks: they are all along the coast of Copiana and Guasco, and are of no fmall profit, by the ambergreece they cast on shoar. The journals of those who have paffed the streights do mention much of this amber floating on the fea, and therefore no doubt but a great deal of it is on shoar; but it is loft, for the Indians having no value for it, know it not; and 'tis but within these twelve years that the Araucana's minded it; by feeing fome Spanish foldiers look for it, they did so too, and found a great deal, and very good, on the coaft. Of the grey fort, which is the best, they found great pieces of an ath colour, with a nobler and more delicate fmell; the ordi-

nary forts are yellow and black, and it has a quicker, though not fo fweet a finell as the grey. I have heard the people of those parts say commonly, that the difference is very accidental, and that it depends only upon being more or less prepar'd by the fun-beams: and experience feems to confirm this thought; for I have observ'd that the black does in time grow white, by being expos'd to the fun in a box; but if it be laid open, fo as both fun and rain come upon it, the experiment will be more manifest; and as for the harshness of the smell, it may be remedied by infulions in rose water, exposing it first to the dews for nine days, and then to the fire, by which means it grows perfect.

Though 'tis known that amber is a thing which the whales cast from them, there is diverfity of opinion about the manner, because some think that this noble product is form'd at the bottom of the fea, or upon fome rocks; and that the whales eat it for food, and not being able to endure it in their ftomachs, because it is naturally extream hot, they get to the more to cast it up: others fay, it is the whales excrements. "Tis not my business to decide this dispute. The other great advantage which the whales are of to the country, is the oil they afford after they are dead; and it is a great deal that one whale will yield: it ferves for various uses of life. We do not know that these fishes die of a violent

The oil is made by the heat of the fun, and when the weather has confum'd the flesh, the ribs and other bones remain white; and the Indians make use of them for feats: much more conveniency and curiofity might be afforded by them to other workmen.

There are another fort of fish which are found most on the coast of Coquimbo, which are n t fo big as whales, but yet are very large, and a good fish to eat, which are

Tunny fish, the tunny-fish, and the Albacoras, which the Indians kill with great dexterity: they go into the fea a good way upon floats of feal-skins, well fowed together, and blown up like a bladder; they carry with them a kind of trident with tharp tongues; this is fastened to a long, slender, but strong rope; the Indian guides his float near the fifh he chooses, and then darts it with his trident; the tunny, as foon as wounded, goes out to fea like lightening; the *Indian* gives him rope enough, and follows him the way that he runs, till the fish has spent itself by loss of blood; and then the Indian draws in his rope, and the fish with it, either dead or dying, and lays it on his float, and he returns to port with his prey rejoicing. There are many other forts of fishes; one

plying-fish of the most extraordinary is the flyingfish, which fly with wings, and follow a ship like birds. The lion-fish is also admirable: they are found in great quantities about the Streights of Magellan, near a port, call'd Port Desire: they are very good to eat, but very hard to take; for though they wound them with shot in many places, yet if they do not hit them in the head, or the ftomach, they do not yield: they are as big as a colt, and have a lion's head, with a perfect mane; which the females of them have not, neither are

they above half as big as the males, and

have a thinner skin. Those who have fail'd

through the Streights, talk much of these

fea-lions, and do also mention many other OVALLE. forts of fifthes which they took there, forme of fixteen foot long, very favoury and good to eat. Antonio de Herrera fays, That there are fishes taken in the island of SanEta Maria, out of whose eyes they take a fort of coarfe pearl, which have a gloss like the true ones, and are worn by the women; and if, as they are foft, they were a little hard, they would be better than pearls.

The fea wolves, or feals, which are found sea-wolves, on all the coafts, are innumerable. I have or feals. feen whole rocks cover'd with them, and they lay even one upon another, fo as fome of them rolled down into the fea again, there not being room for fo many: they are as big as calves, and make a noise like

Antonio de Herrera, in the voyage of Magellan fays, That in the river of the Cross, in the Streights, they took one follarge, that without his head, skin, and fat, he waghed nineteen Castillan Arrobas. The An Arroba Indians take them for their skins, which are is eventy very hard and strong, and some eat their five pound. flesh. As to the plenty of the ordinary fish of those seas, the authors already cited fpeak very advantageoufly of their kinds, particularly William Scowten, who coming with his fleet to the island of Juan Fernandes, in thirty three degrees, and forty eight minutes, the quantity of fish they met with was so great, that in a very little time they catch'd a great quantity of Robalos, which is the best and most wholesome fish of all those parts. They did not take them with nets, because they had not time to land, but with hooks at fea, by the ship's side, and that as fast as they could throw in and pull up.

What I myfelf have feen, is in the great lake of Rapel, all the fides of it cover'd with Pejereges, by the vast quantity of Pejereges. them which came upon the coaft, as the droves of pilchards by the bay of Conception, and in Chiloe, fo that they take them with blankets. I have feen the fame droves of tunny-fish, which come leaping over one another's backs, as if there were not room for them; and, indeed, that cli nate being fo favourable to multiplication in all animals on fhoar, as shall be shewed in its proper place, it cannot well be otherwise

as to the fishes.

CHAP. XVIII.

Of the Birds of Chile.

HE birds and fishes seem to be bro- dispatch all the creatures of this country, thers of the fame venter, the author of nature having created them both out of the element of water; and therefore, to fay fomething of the others.

having treated of the first, it seems that the chain of an orderly narration obliges us to

Birds of

prey. Singing

bats.

OVALLE generally, it may be truly faid of the air of that hemisphere, that it has a great advantage over the earth, though so fertile, fo rich, and fo delicious, as we have reprefented it; for though it is true, that it now produces the animals and fruits of Europe, with fuch an increase as is wonderful, yet it cannot be denied, that before the Sniards carried thither the feeds and animals which are now fo multiplied, (for they had them not in any fort, though perhaps others which supplied the want of them,) the air, without being at all enrich'd by the acceffion of foreigners, has maintain'd always fuch an abundance of the volatile kind, that it needed no supplies from Europe, but ra-

ther has many to make up any one defect.

To begin with the king of them all, the The eagle. eagle: there are there abundance of them; those which are call'd royal or imperial have been feen there only twice; when the Spaniards first enter'd that kingdom; and the fecond time, in the year 1640. 1640. when the Araucanos submitted their untam'd necks to their God and the king, they interpreting this as one of the figns of God Almighty's will to incline them to take that resolution which they then took. As for the ordinary eagles, who do not differ much from the others, they have always been and are ftill in the country very common. There are likewise bred faul-Fanleon, Common. cons, fo large and ftrong, that for their beauty they have been carried from thence, though so far, as a present to the king of Spain; and they are commonly carried to Peru, particularly that kind which are called primas, or first, though those call'd fecond are very large too. There are befides, all other birds of rapine and prey; and of the finging-birds, there are linnets, bulfinches, nightingales, blackbirds, and ma-

The birds for game are, herons, partridges, wild pigeons, thrushes, turtles, parrots, wild ducks of a thousand forts, some of one colour, and fome of another, and Tame fowl, all very good. The domestick tame fowls are hens, ducks, geefe, turkeys; and that Swallows. nothing may be wanting, fwallows in fummer, which go away in winter, as they do owls and in Europe, to warmer climates; fcreech-owls, and other night-birds; as also bats.

ny others, who form fome a bafs, and fome

a tenor, with all the other parts of a har-

mony, beyond belief, particularly in fum-

mer, under the shades of trees.

These are the birds of the European kind, which are found in those parts, as well as I can remember; and there is hardly a bird here in Europe, that I observe in the fields, that I have not observ'd the like somewhere in Chile, with very little difference.

Who now can describe the variety of native birds of that climate? who are in fuch variety and abundance, that people are fain to guard their vineyards from them as foon as the grapes begin to ripen; and yet tis impossible to hinder them from doing a great deal of mischief, they being so nimble, and having fo fecure a retreat, though all forts of inventions, fuch as guns, crofsbows, flings, fcare-crows, are put in use; fo that if any are negligent, they may be fure to find their vintage made to their hand. And this mitchief is not only for their vineyards, but likewife for all feeds, which is fain to be watched after 'tis fowed, 'till it fprouts; and as foon as the wheat and maiz begin to ripen, the guards must be renewed; for there comes whole armies of birds to attack them, and do them as much mifchief as if they were Xernes's armies,

In particular, the parrots are fo voracious Parrots. and greedy, and have a bill that cuts like a razor; they come in flocks of fuch an extent, that when they rife they cover the air, and fill it with fuch a confusion of cries, that I cannot find any thing to compare it to. This kind of birds is bred all over Chile, in the mountains, and in the Cordillera; and 'tis wonderful to fee how exactly they come to an hour, as if they were call'd by a bell, or had fome notice where and when the fruits are ripe, and in feafon for them to enjoy them: they come down from the mountains in the evening; and the noise they make in flying, though they fly high, is fuch, that one would think them close by: they have a fhrill clear voice, and they fly all fereaming at once, fo that their noise is very loud: they are all green and yellow, and have a blue circle about their neck, and very good to eat, particularly the young-ones.

Those years which are to prove rainy, as the natives observe, as foon as the weather grows cool, before the winter begins, one may fee every evening, for many days, great quantities of crows come down from the Cordillera into the plains: they come about an hour before fun-fet in fquadrons, forming a triangle or pyramid, the point of which is led by one fingl cone, before whom none dare go: the figure they make is most regular, with great correspondency to each other, as if they were fixed in the air, and immoveable, so equal and wellconcerted is their flight.

There is likewise a bird which we call Taltales, " Taltales, or Galinasos: it is like a duck, but Galinasos. has bigger wings: they are either black or brown, and very voracious of carrion. In the time of flaughtering, which is every year in Chile of most beasts, there is a great deal of flesh lost; then these birds come, as if one had founded a charge to them, and fall upon the carrion with fo much greediness, that having caten their

fill, they cannot rife again, and are eafily it people are knock'd on the head with sticks: the bones om them as of their legs are valued to make scizers, and en; and yet their quills, which are as thick as ones finrom doing a ger, ferve for harpficals, and other curioficing to nimties. Out of this flaughtering-time they die with hunger; but among all the ways eat, though guns, croisthey have of maintaining themselves, their put in use; hey may be way of hunting young goats and lambs is admirable: they fit upon high trees, and from thence fpy the flocks of fheep and o their hand. or their vinegoats, watching till any of the young-ones is, which is ftray from the guard of its dam, as they owed, 'till it often do, either flaying behind to feed, or eat and maiz climbing some rock: this the Taltale quickbe renewed; ly feeing; and that the young-one is far s of birds to ts much mif-

from the defence either of the shepherd or OVALLE. old-one, it leaps upon it, and the first thing it does, is to peck out its eyes, and cat its brains; which it does fo quick, that though it cry, and the shepherd or mother come to its relief, 'tis too late. Very like to these are another fort of bird, both as to bigness, colour, and shape, and its disposition to prey; they call them Peuques, only they are fonie-Peuques. thing lefs, and of a nicer diet, being pleafed with nothing but hens or chickens, which they take very dexistroufly; they are fo bold and nimble, as to get into a hen-rooft, and carry away their prey, even in prefence of the owners, without being stopped or prevented.

CHAP. XIX.

The same Matter is pursued, and the Flying of Hawks treated of.

ponds, and on the fea-fide, which are of great variety, none are more remarkable than the buds called Flamencos: they are white and fearlet, bigger than turkeys, but fo long legg'd that they walk through a lake with great gravity, the water not touching their feathers by a foot or two: the Indians delight in making works of their white and scarlet feathers, for their dances and their feafts.

The Child.

There is another bird, called the Childbird, because it looks like a swadled child with its arms at liberty: I have not feen them any where but at fea; perhaps they are the fame, called *Pinguins*, of which frequent mention is made by those who pass the Streights of Magellan: They are generally painted in the maps; and they fay, there are abundance of them in those parts,

and that they are good meat.

There are other birds which furnish the tufts of feathers, called Herons-feathers, which though fo narrow, yet are fo valued, that formerly every feather was worth two rials: those which grow under their wings are larger and better, though those on their heads, which they wear as aigrettes, are ver fine. There are but few of this kind of birds; for they do not increase so much as others. There are more of that kind, Garçolas, call'd Garçolas, which ferve for foldiers feathers, and other ornament. There are many others of great variety of colours, of which the Indians use to make their ornaments, called Mallengues, which are made for the head like a garland of most fine colours of wooll, and in that they flick a plume of feathers, for their dances, and days of rejoicing

· The birds called by the Indians Voycas,

A MONGST the great number of are very famous among them, in whose birds which are bred in likes and notes at containing them, in whose great mysteries, prognosticating by them, either their own, or their children, or their friends death, or fickness, or other mistortune; and they remain with great apprehension and fear. The Spaniards call these birds Pechicolorados, that is, marked on the breaft; because there is no scarlet deeper, nor brighter, than the red on their breaft: the other feathers of their wings and body are brown. There are other very little ones, called Pinguedas, whose body is not much pingues it bigger than an almond: thefe live upon flowers; and that they may come at the honey of them, nature has given them a bill, which, when 'tis shut, is like a needle to fow with; and for this reason they feed flying, like bees, from flower to flower, without lighting but very feldom on a branch of it, and that very flightly. Thefe birds are of the greatest beauty imaginable; for if they were made of polished gold, they could not shine brighter: they have a green mingled with this gold colour. The males are diffinguished from the females, in that they have on the head a lively orange colour, which is like fire. Those on the other fide of the Cordillera are yet more beautiful, because their tail is also of the colour of their head; and though they have fo little a body, their tail is a foot long, and two inches broad.

There is likewise a very odd bird, to which the Spaniards have given the name of Wood-Pecker; because though they are but Wood Pec little, they have fo ftrong and fharp a bill, ker. that they form their nefts with it in the trees, forming a hollow place fit for them as exactly, as if they had an instrument to do it. Of these I have seen but sew; but there are great numbers of a kind of birds,

min, and of their skins they make muffs, it being of a very foft touch, and extream warm; but the bellies of the buzzards are much more fo, being admirable to make flomachers to cover the pit of the ftomach,

and help digeftion.

I have not feen fuch variety of birds on the other fide of the Cordillera; and the cause, I believe, is the dryness of the land, and the want of that shelter of woods and groves which are on Chile side; but in those plains, called the Pampas, there are Francolms to be found, which are a fort of wild hens, and as big; but much better meat, and of a higher relish. There are likewise

Offriches, who are a mighty bird, and very numerous there. They often find their nefts, and in them fuch a quantity of eggs, as one neft will feed a great company; one of them alone being beaten and fry'd, makes a pancake big enough to dine feveral people: their feathers are employ'd for umbrellos to keep off the fun, and other

good uses,

Variety of diversions in bunting, hawking, &c.

'Tis a pleafant fight to fee the taking of the Francolins: the Indian, with a string made at one end into a running knot or noofe, at the other having a little piece of fharp cane fastened to it, goes out to find them, which when he has done, he draws gently near, fo as not to fright his game; when he is at a due distance, he begins to go round the bird, making with the cane feveral circles over his head. The Francolin is of its own nature a very fearful bird, and fimple, and dares not rife, because he thinks he is encompassed round, but goes into the middle of the circle; where the Indian leffening still his rounds, follows it, fo that at last it squars down upon the ground, and lets the Indian put the noose over its head; which when he has done, touching it on the wing with the sharp end of the cane, the bird flies up, and draws the noofe close, and so is catch'd like the fishes by an angling-rod.

'Tis not so easy to catch the Ostriches; for though they do not fly, yet they have fuch large wings, that though a greyhound be very fwift, if the bird has law of him, he will hardly overtake him; but if by chance he comes up with him by furprize. or otherwise, 'tis wonderful to see the art the Oftrich uses to avoid his teeth; for when the dog is just going to seize, the O/trich lets down one of his wings, and fixes it to the ground, covering with it its whole body the greyhound thinking he has him fure, takes hold with open mouth; but he fills it only with feathers, and is cheated; for immediately the Offrich, before the dog can clear his mouth, fets a running, and gets a good length before him; and often

escapes, if the greyhound does not make extraordinary hast to overtake it.

This is a very diverting fport; but that which is used in Chile with Faulcons is much more fo: not to fly partridges, for that is a known fport every where; but with another fort of bird, which the Indians call Quulteu, from the found of its note when it fings, which founds fo. Thefe are as big as hens, and have very large wings, and upon their wings they have, in the joining place, provided by nature for their defence, certain sharp points. The Spaniards call these birds Friers, either because they always go two and two, or three and three, or because the colour and order of their seathere is fo, that one would really think they have a hood and a frock.

For this fport 'tis not enough to have

one Faulcon, but there must be two, and those very well taught, and dexterous to affift There uses to be very good one another. company to fee the engagement, as we may call it; for it is worth feeing. ing then to the place that these birds haunt, which is generally some meadow or watery ground, (for that they never forfake, their last defence being in the water, as soon as they are fprung,) one at a time, the fportfman dies one Faulcon at them, who, as if he minded not his game, endeavours to get as high as he can, and get the wind of his prey, who, at the fame time, does the fame thing, and contends for place with his enemy; fo that they both get almost out of fight; but at last the Faulcon having the better wing prevails. When he has got advantage enough over him, he comes down upon him like lightening; but the Qualten defends himfelf, either by avoiding the blow, or by opposing the armed points of his wings; upon which often the unwary hawk is wounded in the breaft. When the fportfman fees the engagement laft too long, fearing his hawk may tire, or be balked before the victory declares for him, loofes his other Faulcon to help the first, who being fresh, soon joins his companion, and both together fall upon the Qualtea, but not at the fame time, left they should hinder one another: one gives him a blow, and then the other another; and fo, though he make a good defence, he is forced to yield, which he does, by making a way for the water, where he has his laft retreat to defend his life: here he expects his enemies upon his back, with the points of his armed wings turned towards them: the Faulcon defpifing the danger, comes down with all his force, and feizing her with one foot, tears her to pieces; but 'tis not without receiving fometimes dangerous wounds. The victory does not always cost so dear; for that is according to the strength of the con-

enders.

in the fens and waters, which is nevertheless very entertaining, as are lik-wife the Indians ways with nets, noofes, arrows, nightlights; nay, the manner of catching the Faulcons themselves is as diverting: 'tis done

tenders. I omit the shooting of wild-fowl with fine nets, in which they involve them, Ovally that they may not hurt their wings.

This is sufficient about the birds; and fince we are in the region of the air, so near heaven, let us fay fomething of it before we come down to the earth again,

CHAP. XX.

Of the Heaven, and Stars, which are proper to the Kingdom and Region of Chile.

IS the common opinion of all those that have feen and dwelled in Chile, that its foil and heaven, if they have their equal, have not their fuperior in the world; and though fome fay the stars of the artick pole are larger than those of the antartick, yet as to their brightness and beauty, and the light they give, and as to their numbers, with the clearness of the heavens where they are, there is none but must own the advantage on the side of the antartick. We may give, as a natural reafon of this, the temper of the climate, both as to air and earth; for though there are in it fo many rivers, as we have observed, yet they being rapid, and fwift in their course, do not cause overmuch humidity by their stay, but afford only what is necessary for its fertility; and, of the two extreams, the country is rather dry than moift, particularly as far as thirty force or thirty five degrees, as is manifeftly made out by two experiments · first, by the facility with which all wounds are cured, which use to be much longer in wet countries; and, fecondly, 'tis proved from the habitations and houses, where the best apartments are reputed to be on the first door, they being looked upon in fummer for cooleft, and in winter for warmeft; and, though they are watered every day in the year, and the floors most commonly but of earth, not at all upon vaults, yet they are never unhealthy; and there is no need of board-flooring or mats, let the winter be never fo fharp. This is a convincing argument, that the country inclines to drynefs rather than to humidity; from whence it follows, that the fun raifes fewer vapours; and therefore the air being clearer, the brightness of the stars is more conspicuous; and for this reason the sun sets and rifes fo glorious, casting out resplendent beams of light, which is not fo on the other fide of the Cordillera; for there I have feen the fun pretty high, and its whole body vifible, and yet no ways dazzling, the vapours of the earth taking away the radiant beauty of its beams.

The experience of this is yet more admirable to those who sail from Peru for Chile; for though they keep out a great way from land, yet they know prefently by the horizon when they come to the heighth of Chile ; for they begin to fee it all difengaged from clouds and ferene, gilded and glorious, and its beauty increasing upon them every day, as they gain more heighth towards the pole. On the contrary, when they fail for the line from Chile, the nearer they grow to the tropick, that light and Chendor grows duller and duller a fo that in my voyage for Panama, I faw all the horizon muddy, fad, and clouded, which continued till I got to the Havana; where being in eighteen degrees north latitude, the horizon cleared up and grew every day better and better, till we got to Spain.

So much for the clearness and beauty of the heavens and ftars, which may be confirmed by all those who have seen the place; but 'tis not fo of the signess of the fars. The astrologers preten i, That the contemplation of them, and their measure, belongs entirely to their art, as understand-ing best the disposition of the celestial fphere; but, in my judgment, they who can best speak of this matter, are those who have feen both poles, as is well observed by John and Theodore de Brye, in the eighth and ninth part of their twelve curious books, where they relate variety of histories, observations, and voyages, which have been in the North and South America, as far as the Streights of Magellan. They report then the opinions of learned men, who, in failing on the South Sea, observed what I shall here produce, translated faithfully from their elegant Latin into our vulgar tongue, in thefe words:

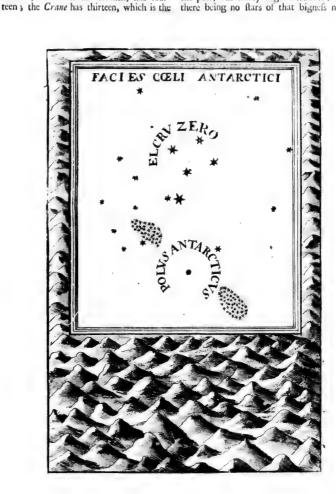

The learned of our nation, who have fail- Ichn an! Theodore things of that sky, and its stars, as well of their number, as beauty and bigness; and my opinion is, that the stars we see here, are no ways preferrable to the meridianal ones; but rather do affirm, without dispute, toat those stars which are near the antartick pole are more in number, and brighter and big-

He adds, belides, speaking of the stars of the constellation of the Cruzero, that their fplendors and beauty is extraordinary,

OVALLE and that the Via Lastea, or Milky-Way, is much brighter in these parts.
all from those authors.

Peter Theodore, a most skilful pilot and teen confiel aftronomer, relates in particular the stars of lation of that hemisphere, and the fourteen figures or miphere of ontellations they make. The first is the Cameleon, which contains ten stars the second Cameleon, which contains ten stars; the second is the Indian Aspick, made up of four stars; the third is the Flying-Fish, which is made up of feven; the fourth, called the Fish Dorado, is composed of five; the fifth is called the Hydra, and is of fifteen; the bird Toncan, which is the fixth, has eight ftars; and the Phanix, which is the feventh, has four-

eighth; in Noah's Dove, which is the ninth, there appear eleven; the Indian Sagittary, which is the tenth, has twelve; the Peacock, which is the eleventh is composed of fixteen, the Bird of Paradife, otherwise called Maaucodiata, has twelve, the thirteenth is the Triangle, and contains five; and the last is the Cruzero, in which are four, which make a cross, with a little one close by it, which makes the foot of the crofs. And though this Cruzero is the guide of those who fail in the South Sea, as the Cynofura is to those who navigate the North Sea, yet it is not immediately at the pole, but thirty degrees from it; but there being no stars of that bigness near

it,

ti. ca

> de tic

the

gai the the ninth, Sagittary, the Peanpoted of erwife calthe thirains five ; which are th a little foot of the ero is the uth Sea, as wigate the diately at om it; but

igness near

it, it is made use of for that effect, but not for the needle; for that in either sea, whether fouth or north latitude, always turns to the north; though when one is in the South Sea, the whole globe of the earth, or the best part of it, is between them and the north, according to the circle that the Cruzero makes. The fix'd point of the Cruzero makes. The fix'd point of the pole feems to be between two, as it were, great clouds, though they are not fuch, but clusters of stars, not well distinguishable, such as compose the Via Lastea; and they are always fixed, without ftirring; and when

the heavens are clear, they are brighter, and OVALLE better feen. There are other ftars nearer thefe clouds than the Cruzero; but not being fo big, there is little notice taken of them, but only of the Cruzero flurs, which are indeed very b autiful, and shine with great livelines. I suppose that those who have not feen them in their own place and fituation, would be glad to fee a draught of them; which therefore I have placed in the foregoing page, representing them as they are feen there,

CHAP. XXI.

Of the Animals, as well proper, as new Comers to the Kingdom of Chile; and also of the Bezoar-Stones.

TILL the Spaniards came to these not use to be fold in Peru at all, except American parts, there never had been feen in them either cows, horfes, fheep, hogs, house-cats, nor rablits tome or wild: nor dogs, except those called cur-dogs; but no hounds, greyhounds, nor other dogs for game, either by land or water; no maftills, nor little dogs, which we call lapdogs; no goats, nor affes: but as foon as the Spaniards were fettled in Chile, and found the land fo proper for the breed of cattle and flocks, they have increas'd them to a degree of superfluity; so that there is not only enough for the support of human life, but also for those animals who are carnivorous; or, as we have feen above, in the flaughtering time, much flesh lies waste in the fields, so that 'tis necessary to burn it, and throw it into lakes and rivers, to hinder its corrupting the air. That which in other parts is call'd a calamity and defolation of the country, which is a murrain among cattle, in Chile is thought a necessiary purge of the too great abundance of it. This may feem a paradox; but yet is founded upon experience, because the cattle increafing as it does, and the land being fo good, that it fattens them to a wonderful degree, (there being often taken out of one cow a hundred and fifty pounds weight of tallow, each pound of fixteen ounces,) there is enough to do to get a vent for it. fame may be faid of the hides; for though Peru, where the best part of the consumption is made, is fo great, yet fuch is the product of Chile, that it wants another Peru to confume it; for this reason 'tis a gain to lose the increase of the cattle, for then the profit is more, with less trouble and cost of servants. In the beginning of the fettlement in Chile, Don Antonio de Herrera fays, That horses were commonly fold for a thousand pieces of eight a horse; and Gareilaffo fays, That at first a horse did

upon the death of the owner, or upon his returning to Spain; and in that case they were fold for four, five, or fix thousand pieces of eight a horfe. He fays, he himfelf knew a foldier who had an excellent horfe, and that a negro going one day by with him in his hand, a gentleman, who faw them, fent to offer the foldier ten thoufand pieces of eight for the horse and negro, which he refused with contempt : but fince that time horses have multiplied so, that there being not people enough to feed and tend them, they are fallen extremely. The cows too have increased so as to cover the fields; and 'tis a wonderful thing to fee in those great plains of Tucuman and Buenos Aires vast herds of them feeding, without any other mafter than the first that will take them, if he can. I have feen in Chile, in the territory of St. Jago, horles already dress'd for war, fold for two crowns a-piece, to supply the army, and yet for fhape, courage, and good qualities, they yield to no Neapolitan horse I ever saw; no, nor to the Andaluzes, from whom they are defcended; for they have had no reafon to degenerate in fo good a land. The cows too, which were at first out of all price, I have seen fold for a crown a-piece, and the calves for half a crown: the sheep, fuch as I have feen bought in flocks for Cuyo and Tucuman, have been fold for three pence, or three half-pence a-piece.

Theodore and John de Brye, do mention fome author, who fays, That rats were like-wife ftrangers to Chile, and were carried thither by an Antwerp ship that passed the Streights of Magellan: they must not mean the ordinary house-rats a. I mice, but those great ones which have a large tail, and are about a foot long: they are called Pe-Pericores, ricotes, and are very mischievous. This a large fore thip, without doubt, took port in some of rasse

OVALLE of those of Chile, where it left these animals, fo prejudicial and hard to deftroy; for they refift the cats, and 'tis a flout one

that can kill them. But it is a wonderful thing to observe, that though in sea-towns the magazines, thops, and warehoufes, are full of them, yet they never go further into the land, which they might eafily do, by fo much carriage as the commerce of those parts requires. I believe the air of the Cordillera does not agree with them, and to may have killed those which have been carried by chance with goods; for I do not remember I ever faw one in St. Jago, nor

in any town far from the fea-fide. Among the animals that are proper to

Chile, the first may be reckoned those which are called the fheep of that country: they are of the fhape of camels, not fo big, nor vaft, and without the bunch that camels have: they are white, black, brown, and fome are ash-coloured. The authors above cited fay, That anciently they ferved to plow the land in some parts, before there

were oxen in it; nay, in the relation of George Stilberg and his fleet, 'tis faid, the Dutch passing by the island of Mocha, faw

the Indians use them in that work.

They are made use of at this time in fome parts, for carriage of wine, wheat, maize, and other provisions; and I remember to have feen them about thirty years ago serve to carry water at St. Jago from the river to the houses, for the use of the family; but now they are not at all employed there in this kind of labour, there being fuch quantities of mules and affes for all that fervice. These sheep have their upper lip flit, with which they do, as it were, fpit at those who vex them; and the children, who use to do it, when they see them ready to fpit, run away; for they know, and tis a common truth, that whereever their spitting falls, it causes a scab; and having a very long neck, about three foot long, they use these detensive arms the better. Their wool is extreamly valued; for of it are woven cloaks, or mantles, to fine, that they look like camlet: they govern them by a kind of bridle, which they put through holes in their ears, and fo by pulling the reins, turn them which way they will: they kneel down to be loaded, and when the loading is well fitted and failened, they rife and carry it very gravely.

There are likewise natural to that counfrail for try a fort of little rabbits, called by the In-of wild rab-dians Pegues, which they eat with much bits. pleasure: they are wild. The taking of them is very good sport: they carry water in great tubs to their holes; and though they are very deep, and have fecret iffues and correspondencies with each other under ground, to avoid being purfued by the

hunters or their dogs, yet the water over-comes them a and while they fly from it. the Indians watch for them at their other holes, and with their dogs take them as they come out to avoid the water.

There are another fort of little rabbits, small tame which are like thefe, but they are tame, and rabbits, the Indians call them Cuyes, which are also Guyes. very good meat: they are of pretty colours, and spotted: they are very common every

The fquirrels are not fo; and I do not squirrels know they are to be found any where in Chile, but in the valley of Guafco: they are grey, or afh-colour, and their skins are mightily valued for furs, for their warmth

and fineness of the touch. The animals called Guanacos, Chamois, Wild goats. or wild goats, are very like their country fheep, as well in their fhape as motions; but they are of a different colour; for they are red, of a clear colour: they never can be tam'd, but go in flocks, feeding in the fields; and 'tis as much as a very fwitt horie can do to overtake them running; and if they have the least start of them, they feem to play with them; for by an easy gallop, they make the horse strain; in which they are much help'd by their long legs, for by them they gain more ground at every reach: yet 'tis very eafy to catch the young-ones, or those who are not us'd to be hunted; because being so tall, and their bones, because of their youth, not well knit, they are eafily tir'd; fo that by following a flock of them on horseback with dogs, (and they go three or four hundred in a flock,) the youngones are forc'd to lag behind, and fome are kill'd by the dogs, some are knock'd on the head with a stick by the hunter. I have feen them bring thus three or four dead at a time. And this is not only a pleafant, but a useful sport; for the flesh of these young-ones is like kid's flesh, and is eaten fresh; but that of the old-ones is not fo, but dried and fmoak'd: 'tis the best of that kind in the world.

These creatures breed, in a bag they have The bezons under the belly, the bezoar-stones, which stone. are fo valued against poison and malignant fevers, good to rejoice the heart, and other admirable effects. The matter out of which they are made, are herbs of great virtue, which these animals eat to cure themselves of any thing they ail, and preserve themfelves from the poilon of any venomous creature, as ferpents, or poilonous plants, and other accidents.

These stones are found in the oldest guanacos; and the reason is, that their natural heat not being altogether fo ftrong as the heat of the young-ones, they cannot convert into their substance all the humour of the herb they take to remedy their indifposition;

oldest guaeir natural ong as the ot convert our of the isposition; and so nature has provided, that what remains may be deposited in that bag, and be made a stone to cure in men the same infirmities: according to this notion one may observe, that the stone is compos'd of several coats, some thicker, and some thinner, according to the quantity of matter that is gathered together at each time, just as a wax candle is made by several coats given at several times to form its bigness.

given at feveral times to form its bignefs.

'Tis likewife a thing well experienced, that in those countries, where there are most vipers, and other positionous animals, these stones are most vibers, and the cause is manifest, because thete animals, and the deer-kind, do beat so much ground for their livelihood, they are more exposed to venemous creatures, which, when trod upon, wound them forely, and they run naturally to their remedy in these herbs; and as they do this more frequently in those parts where they receive most damage, by consequence there are more of these stones engender'd.

From hence it happens, that in those parts of Cuyo, there is a greater quantity of these bezoar-stones to be had, than in that which we call properly Chile; for there are many vipers and polionous creatures, of which Chile is very free, as we have faid; and yet there are taken fome stones here, but the greatest part come from Cuyo; to which likewife it is of fome confideration, that there are bred more guanacos and flags than in Chile; for that country being not fo populou . and having fuch vaft plains, these animals have room enough for food and for increase; but it is not so towards the fea-fide of Chile, for that being very populous, and full of cattle and flocks, there is no room for the wild ones, except upon the edges of the Cordillera, from whence they come down into the plains fometimes.

The bigness of these stones is in proportion to the animal that breeds them; the most certain rule is, that if they are little,

there are many in the bag, and fewer if Ovalla, large; and fometimes, when very large, to 46. There is but one. I carried with me to Italy one that weighed thirty two ounces; and yet that was not it which made it the most valuable, but its virtues and fhape, for it was a perfect oval, as if it had been turn'd by a turner: the Indian who found it had feventy pieces of eight for it; because when a great flone is found, it is not fold by weight, but according to the eftimation of the owner, and the bigger the dearer.

The virtue of these bezoar-stones is very well known and experienced; and people of quality take them, not only in the time of their fickness, but also in health, to preferve it: the way of using them is to put them whole into the veffel that holds either the wine or water, or into the glass out of which one d inks, and the longer they flay in, the more virtue they communicate. And if a pe fon be not much indisposed, there is no reed of using them any other way a but if any one should be attack'd by any diften per of confequence, and be fick at heart or be affected with melancholy fits, it would have more virtue to grate a little of the stone to powder, and drink it : wh thoever way 'tis taken, it comforts the heart, purifies the blood; and the using of it is look'd upon as a prefervative against all infirmities

There are also bred in the Pampas, or the plains of Cayo, many hares; and one Hares; fort, call'd Chirichinehos, whose flesh tastes like that of sucking pigs. But the greatest increasers are the Guanacos, and the deer. It has been said already, that in Chile there are but few, for the reasons alledged; but there are great quantity of wild cows and Wildows wild mures, which came at first from some Wildows which went astray, by the negligence of the owners; and being once in those mountains, they have increased so wonderfully, that they are become a game, and many go to kill them, or take them for profit.

CHAP. XXII.

Of the Trees growing in Chile.

Mongft other obligations which the land of America has to Spain, one is the having enrich'd it with fo many noble plants, trees, and feeds, which it wanted; for before the Spaniards conquer'd it, there were not in all America either vines, figtrees, olive-trees, apple-trees, melicotoons, peaches, auberges, quinces, pears, pomegranates, cherries, apricots, plumbs, oranges, lemons, citrons, nor almonds. As for feeds, there was neither wheat, barley, nor oats, anifeed, coriander-feed, cumin, Vol. III.

nor oreganum, linfeed, flax, peafe, beans, nor cabbage, lettice, radifhes, cardoons, chicory, or indive, berenguenas, gourels, melons, cucumbers, parfley, garlick, or onion. But inflead of thefe trees, fruits, and plants, the author of nature had provided them with others of great use and good relish, such as maize all over America: Frifoles, Las Papas el Madi, Los Capallos, and some others, are proper only to Peru, and the land within the tropicks; the Camotes, Guayabas, Mammeyes, Plantan

Ovalle tanos, Zipitapotes, Anones, Nisperos, Aqua1646: cates, Pinnas, Guanabanas, Papayas, Pitabayas, and many others, which, though
highly commended, do not generally come
up to the relish of the European fruits.
And the bread and wine has been a fingular
addition to them, such as the Indians value more than all their product, and particularly the wine, which is their chief delight; as for bread they value it, but not

fo much. Though America is oblig'd to Europe for all this addition, yet Chile much more, as having the greatest advantage by it, and with more plenty than any other part of that new world; for though all that we have nam'd of European plants are to be found somewhere, yet not all everywhere; for in some there grows corn, and not wine; in others both those, and not oil; in others neither corn, wine, nor oil, but other fruit-trees. The fame thing may be faid of the animals to eat; fome have beef, others mutton, others pork, which on the continent is a delicacy, and is given to the fick; fo that running over all America, we may find that this communication of new creatures has reach'd fome parts for one thing, and fome for another. But as for the kingdom of Chile, it may be faid to have been totally oblig'd and enrich'd; for all the trees, feeds, plants, and all the animals, \mathfrak{Sc} . of *Europe*, are to be found there, and that almost in every part of it, for 'tis rare to see any thing take in one place, and not in another; but if it does they may eafily have it from their neighbours, if it be not fo good, or not at all

In the third chapter of this book, we have already mentioned how all these European fruits and seeds take in Cbile, but we can never enough dilate upon that subject: It will hardly be believed by most people, particularly by those who never having been out of their own country, are so in love with it, is not to imagine there can be any equal to it, much less exceed it; and we relating things so distant, of which we cannot bring ocular witnesses, we are the more liable to contradiction; but since we are writing a history, we must speak the truth as we know it, and it really is.

Some trees do not exceed in bignefs those of Europe of the same kind, as cherry-trees, quince-trees, almond, peach, and pomegranate-trees, olive, orange, lemon, and citron-trees, melicotoons, which last in Tucuman are nevertheless very large, and to that degree, that three or four men sometimes cannot embrace the body of one of those trees. I have seen some apple-trees as big as elm-trees; the pear-trees are yet bigger, and much more the mulberry-trees,

and walnut-trees, though as to their fruit, it is not fo large as that of Europe, the nuts having the shell as thick again, and by consequence less meat. This is as to the garden-trees brought from Europe.

As for the trees natural to that country, they are of two forts, the one is fruit-trees, the other not: of the first, I find only three kinds of species of those, which are likewise in Europe, which are the avellanos, or hasel-nut, the pine-tree, and the algarrabos, or cod-tree. Of those which are not properly fruit-trees, there are the laurel, the oak, the willow, the cypress, which are in great abundance, and very large; out of these they have boards very fit for boxes and trunks, which are no ways pieced, but of one plank; the doors and coverings of the churches are also of this cypress-wood.

These trees grow most commonly in the *Cypresi-* precipices of the *Cordillera*, which being tree very deep, the cypresses are extream large and tall, for they shoot up till their tops can be warm'd by the sun-beams; so that they are as streight as a wax-candle, and of so fine a smell and persume, that though it be so plential, it bears a good price, and a greater in *Peru*, to which 'tis carried, as well as the cedar, which does not fell so well, because there are more of them.

The cedar-trees are without compari-Gedar-tree. fon bigger, and have larger heads than the cyprefs-trees, and of one of them are made feveral planks; but more of this when we come to fpeak of the islands of Chilee, for there they are larger than in any other part. The colour of the wood is red when it is first work'd, but in time, and by degrees, it loses that lively colour, and comes to be of a kind of walnut-tree colour; the planks are of the fashion of cedar planks, not so subject to the worm, but more easy to work.

The oak also yields very large planks, **The Oak** for they thrive exceedingly, and grow very thick; some of them are white, and the wood of them is corruptible; others are red, and incorruptible.

The planks from the paragua-tree are paraguathe most in use, but less valuable. The tree, tree is a handsome branching tree, keeping its leaves green all the year: they are like

and the balls made of it to play at billiards, are almost as hard as the ivory ones; the tree is no large tree, and the heart of the wood is a yellow mix'd with green; the decoction of it is good for many infirmities. The fandal-tree is very odoriferous; there are great quantities of them in the islands which are nam'd from Juan Fernandes; 'tis a prefervative against the plague, and is us'd by the confessors, and others, who are bound to approach insected people. There are other trees and fhrubs of admirable virtue for feveral infirmities, of which the Indians have a particular knowledge, and perform admirable cures with them.

The fruit-trees bred in the mountains are many, and of great variety: let us first treat Palm-tree of that which indeed carries the palm, not only because of its name, but that its heighth, beauty, and abundance, and that of its most excellent fruit, challenges the

first place among all the rest.

They grow generally upon the mountains, and in precipices, fo thick together, that feeing them at a diffance, one would think they were a clump fet by hand; they are very thick and high, all the body of the tree is naked till the top or first sprout; its nature is to lose all its old branches as the new ones come out, by which means the body of the tree rifing free, and difen-cumber'd from fuch boughs as use in other trees to grow out of the fides of them, is totally employed in feeding the top, and the fruit which grows within it being, as it were, a pyramid round it, to preferve it by the admirable texture of its leaves and branches which encompass it.

These palm-trees have a wonderful property, and most certain, which is, that none of them give their fruit, except they are in fight of each other; and if it happens that one comes up alone, without a companion, though it thrive to a great largeness, yet it never bears, except another be planted by it, and this they call the female; and as foon as the female is planted, though never fo little a one, yet the great ones bear, and the fecond in its time, when it is big enough: I have feen the experience of this; and 'tis a thing well known to all. The fruit of these trees is called Cocos, and is like filberds, though bigger by half, and the meat within the shell is not folid, but hollow, and is, round the edge, about the thickness of a crown-piece, and in the rest of the hollow is a kind of milk, or water, of an excellent relifh; and fo is the flesh of it, which is white, and serves to preserve the liquor like a viol, which stays in it till it be imbibed by the Coco, which happens in fome months; and then they are not fo good to eat as when they are fresh; but then they are good to preferve, as al- Indians.

monds are, and other kernels of that na-OVALLE

Antonio de Herrera, and other authors, fay, that these Cocos are good against poifon; and nature feems to fet a value upon it, by the many covers in which it is involved; first, the kernel is cover'd with a fhell harder than that of the almond, then it has another cover of a green colour, and fometimes yellow, which is woven to close about it, and so strongly, that when it is green, 'tis easier to break it than to peal it off. The fruit grows close to a stalk, which fometimes will have above a thoufand on it; and this is environ'd by a great shell, which grows bigger and bigger with that bunch it contains, till at last the fruit makes it burft and open into two parts, which are like two boats, each of above half a yard long, and two fpans diameter in the broadest place, and the bunch within all of a fine yellow, very beautiful to look on. It hangs on the branches till it be ripe, and then falls to the ground, where it is gather'd, and great provision is made of it for Peru; for besides their being made a sweetmeat, the children rid the merchants of them for play-things, it being one of their greatest entertainments.

The palm-trees which bear dates, do not feem to be natural to this country, but brought from abroad; for I never faw them, as others, wild in the fields, but only in

gardens.

There are other fruit-trees wild, which come in the fields, and are call'd Pengue; they The Pengue. have a red fruit, fomething bigger and more oval than the filberds; these the Indians eat boil'd with other ingredients. There are also trees call'd Magues, which are very The Mague, beautiful and cooling; the leaves are admirable against a burn; the fruit is black like a myrtle-berry; 'tis very well relish'd, having a dulcepiquante very agreeable; it blackens the mouth and hands when it is eaten, and for that reason the more civiliz'd people do not use it so much. There are also fruits of which the Indians make their fermented liquors, whose names and properties I cannot call to mind; only I know there is great variety of them; and I can remember one call'd Quelu: the fruit is very fweet and fmall, between red and yellow; of this they make a drink extraordinary fweet. They make another drink of that which they call Iluigan, and the Spaniards Molle; it is of the shape and colour like pepper; the tree on which they grow is but little, but a great bearer: this drink is very agreeable, and coveted even by the greatest ladies. The most common drink of the Indians is made of maiz, which is the ordinary bread and fuftenance of the

Ant. de Herrera.

The Murof it, it deferves to be ranked in the first place. Antonio de Herrera speaks so well of this tree in the ninth Decade of his history of the Indies, Book IX. and Folio 247. that I will relate only what he says, and that in his own words, which are as follow: [There is a kind of fruit of trees that grow on the mountains, which grow from thirty seven degrees upwards, and in those countries' tis a common food; the natives call it Uni, and the Castillans Murtilla. It is red, and like a small grape, something bigger than a swolen pea; its shape and colour is like the pomegranate grains, its smell and taste agreeable, and not unlike a grape. It has little grains, like a fig, which are almost imperceptible to the tongue; its temperature is bot and dry : of this they make a wine, which exceeds all other liquors, even that of the eastindia coco, or palm-tree: neither cyder, mead, nor beer, nor all the other drinks deferibed by Andres de Laquina, are to be preferred to it. This wine is clear, fine, warm, and very agreeable to the taste, as well as profitable to the stomach. It consumes all vapours in the head, its heat warming the ears without going any further : it comforts and cherishes the stomach, increases appetite, and never takes it away. It never offends the head, or makes it heavy, or burthens the stomach; and it bears as much water again as wine will do. Those who have tasted it, commend its colour and slavour, as much as that of grapes. Its colour is golden, and mighty bright; and it is as fiveet and good as the wine of Ciudad Real. There is little of it made, and so it lasts but eight months; for which reason 'tis not known bow many years it would keep. It takes up as much labour and care as wine, in the making : if it be left to it/elf, and without fire, 'tis forty days be-

Let us end with the tree called murtilla; fore it ferments. It casts down a lee, and works out the frothy part at the top of the veffel; and for that reason care is taken to scum it as it boils, and then 'tis drawn off into another veffel. When 'tis turned to vinegar, its vinegar has a better taste and colour than wine vinegar; for it retains the colour of the fruit, which is very odoriferous and sweet.] Thus far this author: from whence it may be inferred, that this land had good wine of its own; and it had also very good oil made of a feed called Madi; it is extreamly well relished; but now 'tis not much in use, because that of olives is so common.

> It is not possible to describe particularly, one by one, all the various forts of trees that are bred in the woods and mountains of Chile; and it would take up a very large treatife, which is not my purpose; yet when we come to treat of the Streights of Magellan, we will speak of the cinnamontree, which is to be found there, and of the barks of fome other trees of that foil, which have the fame tafte as the east-india pepper. All that I can fay at prefent, is, that there are few of these trees that lose their leaves in winter, particularly those which grow wild in the woods, which are generally aromatick, and of a very fragrant fmell; and of them, all the finest of this kind are bred in the territory of the Conception. I would not have believed it, if I had not feen it; for in travelling I met with lovely groves, which bordered the highways, and caft out fo rich a fmell from their leaves, that the flowers of jafmin did not appear fweeter. There are also abundance of myrtles and laurels, which grow in great groves nates rally; and yet among them there are thes whose leaves exceed them infinitely in the perfume of their fmell; infomuch that paffing one's hand over them, one would think one had amber gloves on,

BOOK II.

Treating of the fecond and third Part of the Kingdom of CHILE.

CHAP. I.

Of the Islands of the Kingdom of Chile.

AVING, for the better description of the kingdom of Chile, divided it into three parts, we have treated of the first and principal one, which is that which is properly called *Chile*, in which many things are faid which are common to all the three parts; therefore in these two which remain, we shall take notice of that only which shall be peculiar to them, to avoid repetition.

We come now to the fecond part, which are the islands which are spread all along the coast of the South Sea, as far as the Streights of Magellan; I fay, they are many in number, and fome of them very large ones; as that of Sansta Maria, La Mocha, Juan Fernandes, and, above all, that of Chiloe, in which is founded the city of Caftro. Some make these islands fifty, some feventy leagues in length, and about fix or seven leagues in breadth. In the same sea, or archipelago, there are many more, fome of ten leagues, and others less; and in all, reckoning those that are within the Streights of Magellan, there are above two hundred difcovered.

Del Sobo-L. De Mu-which are called *Del Soboral*, *De Muxillo-*de respective of the parameter of the p against Val Paraiso, which are called the islands of Juan Fernandes; who dying, left them to the Jesuites. Then follows the iffand Quiriquina, which is in the bay of the Conception. Just over-against Arauco is the island of Sancta Maria, in the thirty seventh degree; and in thirty eighth that of La Mocha. Hard by Valdivia, about forty three degrees, comes the archipelago of Chilor, which is composed of forty islands; and hard by it is the province of Calbuco, in

which there are twelve more. Those of Los Chonos are as many, in forty five degrees; and in fifty degrees are the eighty

islands discovered by Pedro Sarmiento, as OVALLE, shall be related hereafter.

The islands of Chiloe are reputed barren; but their foil is not really fo, only the ex-Ises of ceffive rains choak the feed, and do not let Chiloe. the corn thrive; so that they are without wheat, wine, or oil, or any other plants which need much fun. The nature of the climate of this archipelago is such, that it rains almost all the year, so that only maiz, or other fuch grains can ripen, that do not want fo much fun. The nourishment or diet of the natives, is mostly of a root called Papas, well known over all the West Indies, of a good nourishment; and they grow there bigger than in any other place. They have besides some maiz, some sish, and particularly fhell-fifh, which is excellent in those seas. They have few sheep, but very good poultry, as well as hogs, and some beef; with which, and what befides is brought to them from St. Jago, and the Conception, the Spaniards, both of the garrifon and city of Castro, make a good thift This city is the capital of the chief island; in which, and in the rest, there is great quantity of honey and wax made. And Herrera and other historians say, there are mines of gold upon the shore; and they remark it as an extraordinary thing, and hardly heard of in any other place.

The manufactures of thefe islands are Manufacthe cloathing for the *Indians*, who have a ture of the kind of veft which they call Macun, and illand: it is without fleeves, because their arms are naked; and over this they put a garment called Choni, which ferves for a cloak, and is like that which painters give to the apof-tles in their pictures. They have another commodity from their woods, particularly of the plank they make of a tree, which is a cedar, and of which they have vaft woods, and in them trees of a prodigious fize; for frier Gregory of Leon, of the order of St. Francis, in his map of Chile, which he de-

dicates to the prefident Don Louis Fernandes Vol. III.

OK

CHA

OVALLE de Cordoua, Senior del Carpio, fays, that 1646. fome of these trees are so big that they cannot be hardly encompassed by a rope of fix yards long; and out of the wood of the boughs there has been made fix hundred planks, of twenty five foot long, and two foot broad; and that which is confiderable, is, that this plank is not fawed, but cut with axes; in which there is much more This author deferves belief, as well from the experience of forty two years that he lived in Chile, as from having been definitor of his order. And what I have heard from the mouth of a colonel, who was both born and bred in that country, will ferve to confirm this; which is, That if two men on horseback are on each side of the tree, when it lies along, they cannot fee one another; for the body of the trunk hinders them. These planks are carried to Chile and Peru; and in exchange they bring back provisions to live on. The iflands of Chono are yet poorer than these; because, that being nearer the pole, their fummer is shorter, and their rains more copious, infomuch that they drown the earth, and hinder it from producing.

We have little knowledge of any other islands besides these of Chiloe; because the continent being fo large, and yet not throughly peopled, there has been little occafion of inhabiting any more than some few of the islands; by which means there is but small discovery made of their qualities; though 'tis reasonable to think they refemble the land over-against which they lie,

As for the islands of Juan Fernandes, I As for the Hands of Juan Fernandes, 1 Fernandes, will relate what I find writ about them in Theodore and John de Brye, in their relation of the voyage of John Scutten: they say then, that these two islands are very high land; the least of the two, which is the westermost, appeared to them barren, as being covered with wood, and very mountainous; though not landing on it, they could make no judgment of the infide of the island. The bigger island, which is the caftermost, is likewise mountainous, but has great variety of trees, and much grafs, with which are fed great herds of twine and goats, bred from fome few which were put on shore by John Fernandes, who began to cultivate these islands as his own; but he dying, and the Spaniards finding greater advantages upon the continent, they forfook those islands, which were out of all trade, leaving their flocks of cattle behind them, which now are infinitely multiplied.

They fay befides, that coming to this, which they call the *Fine Island*, they found a port very fafe for their ships, having twenty or thirty fathom depth, the fhore all fandy and even, with a delicate valley full of trees of all forts, and wild boars, and other animals feeding in it; but they could not diftinguish them, by reason of the distance they were at. They extol particularly a most beautiful fountain, which coming down from high rocks, rowls into the fea by different canals, which form a pleafant prospect, and its water is very sweet and agreeable. They faw also great store of feals, and other fish, which they caught in great plenty. In short, they were so in love with this island, for the good qualities they discovered even at its entrance, that they were very unwilling to leave it, though preffed in point of time.

I do not doubt, but this is a very pleafant fituation; for in its temperature, and other properties, it must be very like Val Paraiso and St. Jago, because its almost in the fame degree west; and without doubt these islands will be peopled in time, when the continent grows populous, as it does every day; for then people will be feeking new habitations; but at prefent they only go thither fometimes to fish, to fend it to *Peru*, where they have it not so plentifully.

The fame authors, giving an account of the other Dutch fquadron under George Spilberg, fay, That they came to the island of Mocha, and found the north fide of it plain and low, but the fouth full of rocks: they landed; and the good reception they found from the Indians, is an argument of the fernoble fort of people, and very good natured. When they had refreshed themselves much at their ease, they made provision of great store of sheep, who are very large, and in great plenty there, as likewife of hens, eggs, fruit, and other provisions. They treated the *Indians* on board, and fhewed them their great guns, and their men in order for fighting: they prefented them also with european commodities, such as hats, cloaths, axes, and things which they valued. After this, they fet them again on fhore; and the Indians made figns to them to go back to their thips, as they did.

But they were very differently received in the island of Saneta Maria, where the viceadmiral landed with fome of his men, 'and were invited by the Indians to eat; but from the ships they saw a great army coming down upon them, as they were going to fit down to table: whereupon they made figns to them to retreat to the port; which they did, and had just time to embark. But they likewife carried off about five hundred sheep, and other refreshments, having found the island very fertile and well provided, as well as very temperate, being about thirteen leagues fouth-west from the city of the Conception, about thirty feven degrees, and not above three leagues from Arauco; which makes fome think, that formerly this island was

fastened to the main land, and that the sea had in length of time made the division which now forms the bay of *Arauco*.

There is little to be faid that is particular of all the other islands to the Streights of Magellan, fince it has not pleased God to let them be peopled by Spaniards, and so give an entrance to the gospel; by which means the product and nature of them might be known, and many souls saved which inhabit them.

All that we know now of them, is, That in the voyage of *Pedro de Sarmiento* to *Spain*, being fent by the viceroy to chaftife

Francis Drake, for his boldness for infelt-OVALLE, ing those coates, in his way, on this fide the Streights of Magellan, he discovered a great archipelago of islande, which they told to the number of eighty, which he named by several names, and took possers of them in the name of his king. He also discovered more islands in fifty one degrees, to which he did the same. 'Tis known likewise, that in the Streights themselves there are many islands, some of which we shall mention when we treat of the Streights of Magellan.

CHAP. II.

Of the Land called Tierra del Fuego.

THE land called Tierra del Fuego, (fo famous in the relations and maps we have of the Streights of Magellan,) has deceived many by its name, people believing that it had been given it for fome Volcanos, or burning mountains, or other subterraneous fires; but it is not fo, for this name had no other occasion, than that the first navigators through the Streights discovered upon it many fires and great fmoaks, made, as they supposed, by the numerous inhabitants of it; and so they called it the Land of Fire. There arose likewise another mistake from its great extent; for it was judged to be a great continent, of which in time the world was undeceived, as we shall fee hereafter.

This land, called Tierra del Fuego, is Pienation of Fierra del that which forms the fouth fide of the Streights of Magellan, extending itself the whole length of the Streights, east and west, above one hundred and thirty leagues. Formerly, before the Streights of St. Vincent, otherwise call'd the Streights of Le Maire, were difcover'd, this land was thought to be joined to fome other great continent of the Terra Auftralis, which was supposed to join to New Guinea, or the islands of Solomon; and Ortelius, in his Geography, is of this opinion; but upon the discovery of the other Streights of St. Vincent, that doubt has been cleared, feveral having gone through them to the South Sea; and among the rest, two caravels, fet out by the king's command, in the year 1618, on purpole to view these Streights, which it was faid had been difcover'd by James Le Maire, which caravels were commanded by Don Juan de More.

These two vessels set out from Liston in the month of Ostober, 1618, and being come to the east entrance of the Streights of Magellan, they passed by it, and run along all that coath, without finding any entrance, till they came to that of Le Maire, which they went through in less than one day's

time; after which they turn'd to the fouth, and afterwards to the west: they went round all the Tierra del Fuego, and failing north, came to the west entrance of the Streights of Magellan, into which they enter'd, and fail'd through them to the North Sea. Having thus made a circle clear round the Tierra del Fuego, they proved it demonstratively to be an island separate from all other land. The fame was done by Sir Kichard Haukins, an English gentleman, who having pass'd the Streight of Le Maire, sail'd for five and forty days to the fouth, without finding any land contiguous to the Tierra del Fuego, but many islands, as is related by Antonio de Herrera, Chap. 27. of the description of the West-Indies. The same has been confirm'd by feveral, who being driven by florms from their intended course, have been forc'd to run towards the fouth pole; amongst the rest by Francis Drake, who having pass'd the Streights of Magellan, the sixth of September, 1572. and being got on the feventh, a degree from the Streights, was carried by a ftorm two hundred leagues to the fouth; and coming to an anchor in fome of those islands, he there found that the fun being eight degrees from the tropick of Capricorn, the days were fo long, that there was not above two hours night; from whence he inferr'd, that when the fun came to the tropick, there must be a perpetual day of twenty four hours. The fame was experimented about two year ago by the fleet of general Henry Brum; which having pass'd the Streights in April, were by the force of ill weather carried into feventy two degrees, and cast anchor at the island of St. Bernard, to which they gave the name of Barnevelt; and it being about the entrance of winter, the days were not above three hours long, fo that they expected they would still shorten till June, when the sun being furthest off from that hemisphere, would leave them in a total night; for this

1618.

Marids of

Ovalle reason, and because of the hardness of the weather, which increas'd every day, they durft not winter in that ifland, as they had a mind, but after a fortnight's ftay in it, weigh'd anchor, and fail'd for Chile. In which voyage they made but little advance, having always the wind a-head, infomuch that they were a whole month doubling one cape, and loft in the endeavour their Tender, in which was the best part of their provision.

So much for the islands belonging to the coast of Chile; but having also mention'd the islands of Solomon and New Guinea, to which antiently it was thought that the land of Tierra del Fuego was join'd, it will be well to fay fomething of them.

The author who writes the best of them, is Antonio de Herrera, and from him is taken what John and Theodore de Brye fay of

them; which is thus:

The iflands of New Guinea run from New Gui-fomething more than one degree fouth of the pole antartick, three hundred leagues east to the fifth or fixth degree; according to which reckoning, they fall about the stands of west of Paita. The islands of Solomon fall Solomon, to the west of Peru, about eight hundred leagues from its coaft, and extend themfelves between the feventh and twelfth degree: they are diffant from Lima about fifteen hundred leagues: they are many, of a good fize: there are eighteen principal ones, which are fome three hundred, some two hundred, fome one hundred, fome fifty leagues, and lefs in compafs. Between them and Peru, inclining to the land of Chile, there is another call'd the island of St. Paul, about the latitude of fifteen degrees, and about feven hundred leagues from

The fleet of William Scoreten having run

along the coast of Chile in the year 1615. or 1616. from the Streights of Magellan, took their course to the west, when they were about the latitude of eighteen degrees, to try to find out fome new ifland, and found one in fifteen degrees; which, according to their computation, was diffant from the coasts of Pera about nine hundred leagues. After this they difcover'd two more, which they call'd the Cocoa iflands, by reason of The Cocoa the great plenty of that fruit that was islands. there, that the inhabitants did use to drink the fweet liquor that was bred within the Cocoas, but when it was at an end, they made a fhift with falt water; to which, being accustom'd from their youth, it did not hurt them. They fay more, that the inhabitants go naked, though not quite; and that their way of being civil and faluting, is to give themselves blows upon their temples, which is the fame as with us the pulling off the hat or cap. At first they laughed at the fire-arms, till they saw one fall much wounded, which undeceiv'd them, and convinced them that it was not only noife which proceeded from those arms. These islands are distant from Peru, 1510 German leagues, which are longer than the Spanish leagues, though not so long as the Indian ones. There were found also other iflends in the latitude of twenty nine deg:ees, which perhaps were those which at nrit they call'd the iflands of Solomon. Others fay, that there are others more to the west, opposite to Chile. Whosoever is curious enough to know the particulars of all those islands, their temperature, inhabitants, their good and ill qualities, may find them in the above-cited authors, who treat of them more at large; for my intention, 'tis enough to fay what I have re-

CHAP. III.

Of the two Streights of Magellan and St. Vincent.

HE Sureight of Magellan received its name from that man, who eternized his own, by being the first who discover'd and pass'd it. This was that famous Portugueje captain, Hernando de Magellanes, whose intrepid foul going almost beyond the true limits of all ordinary valour, feems to have border'd upon temerity and rashness, by engaging himself to discover a passage altogether unknown, and so narrow, that it was very dangerous for fhips, being befides in the fifty fourth degree, which makes it very cold. This bold captain begun to enter the Streight by the North Sea the twenty feventh of November, in the year 1520, and in twenty days, which was a happy paffage, he enter'd the South Sea;

from thence he fail'd to the Philippine iflands, where he was kill'd in one of those islands called Matan, to which he went from another called Zebu, to fight against the king of the first, because he refused to subject himself to one of those kings who had turn'd christian; engaging him with more courage than conduct, and fo he perifh'd by the great number of his adverfaries. His death was very much lamented, and he much miss'd in the discoveries of that new world; for, without doubt, if he had lived longer, he would have made great difcoveries in the terra firma and islands,

To give a more certain account of this Streight of Magellan, I will make use of the memoirs of those who have pass'd it, and

left relations of it, who, as eye-witneffes, were less subject to mistake. And first I will give those fworn rel tions given in Castilla by those who set fail from the Corunna, by the err eror Charles the fifth's order, in fix ships under the command of Fray Garcia Jofre de Loayfa, a knight of Malta, and born at Civedad Real.

They fay in their report, That the faid Streight is a hundred leagues in length, from the cape of the Eleven Thousand Virgins, which is at the entrance of the North Sea to the Cape of Desire, which is at the entrance of the South Sea; and they fay more, that they found in the Streight three great bays, of about feven leagues wide from land to land, but the entrances of them are not much more than half a league over; the first is about a league deep; the second about two leagues; the third, they say, is encompass'd with mountains of such a heighth, that they feem to be in competition with the ftars, and the fun does not enter within them in the whole year; which was the cause of their enduring there an extream cold; for it snows almost continually, and the fnow never melting by the fun-beams, it looked with a kind of bleuish colour. They fay, moreover, that the nights were twenty hours long; they met with good water, and trees of feveral forts, among which many cinnamon-trees; and that the leaves and boughs of the trees, though they appear'd green, yet burnt in the fire as if they were dry; that they found many good fishing-places, and faw many whales, (fome mermaids,) many of the tunny-fish, sharks, cods, great store of pilchards and anchovies, very great oysters, and other shell-fish. That there were also very good harbours, with fifteen fathom water; and in the Streights itself above five hundred fathom, and no where any fands or shoals. They observ'd several pleasant rivers and ftreams, and faw that the tides of both feas came each of them above fifty leagues up the Streight, and meet about the middle of it with a prodigious noise and formidable shock. Though a Portuguese captain, who had pais'd this Streight, told me, That these tides were only some high floods, v hich laft a month, or thereabouts, as the winds blow; which makes the fea fometimes rife to a great heighth, and at other times fall as much, leaving the shoar dry for a great way; and the ebbing is fometimes fo fast, that ships are left dry, as this captain's ship was, so that he was forc'd to dig his way out to get into deeper water. They found feveral other entrances in this Streight; but for want of provifion they could not stay to fearch them: they lot one ship off the Virgins Cape; and they had scarce enter'd the Streights, Vol. III.

when a storm blew them back to the river OVALLE. of St. Ildefonfo, and to the port of Saneta 1646 Croce, where they found ferpents of various colours, and ftones that were good for ftanching of blood; all this may be feen in Antonio de Herrera, in the second tome, Decade 3. and the ninth book, Fol. 335. and it does not difagree with the other relation of Magellan's voyage, though this makes the streightest part yet less, allowing it not above a musquet-shot over, and from one entrance to another it reckons a hundred leagues, the land on both fides

This is, in fhort, the relation given in to the king. There are fome other authors, who neither make the Streight fo long, nor do they make the narrowest part so streight; for fome allow but fourfcore and ten leagues, or lefs, to its length; but yet 'tis probable, that the first give the most credible account, because they examin'd it with fuch care and punctuality, in order to inform his majesty. All agree in one thing, which is, in the good qualities of the fea, land, and islands of the Streight, as well as of the shoar on both sides, and of the good

parts that are in it, and of fome particular-

being very rich and beautiful.

ly fo fecure, that the ships rid in them without being fastened, being as fase as it they had been in a box.

Among the rest the Hollanders celebrate much the twenty fifth port, call'd the Famous; and it is so much so, that George Spilberg, their general, gave it that name, for the excellent reception they found there they faw the whole earth about cover'd with various fruits of various colours, and of excellent tafte. To delight them the more, there was a fine brook of excellent water that fell from a high rock, and water'd all the valley entering into the port; and befides these five and twenty ports or harbours, there were many others in the remaining part of the Streight, which might be a third of it, all which were very remark-

There is a harbour call'd De la Pimienta, Harbour or the Pepper Harbour, for the fake of some De la Pitrees they found in it, whose barks had a mienta. most aromatick smell, and a taste of pep-per, something more burning and quick than that of the East-Indies. When the Nodales pass'd this way, they gather'd a great deal of this bark; and authors say, that when they brought it to Seville, it was fo valued there, that it was fold for fixteen ryals, or two crowns a pound.

The fame authors report, that they found cinnamon-trees, which bore good cinnamon; and in the fecond narrow paffage fome others, that bear a fort of black fruit. of most excellent taste and savour. In other places they faw most beautiful woods

Ovalle and groves, pleasant plains, agreeable valleys, and intervals of great beauty, with high mountains, some cover'd with fnow, from whence there defcended lovely streams; others all cloathed with greens of various forts; and in them they deferied many animals going to and fro, fuch as deer, oftriches, and others, as also great variety of most beautiful birds of all colours; and among the reft they kill'd one fo large, that measuring one of its wings, they found it above a yard long; and they were fo tame that they flew to the fhips, and fuffer'd themselves to be handled: they found also another fort of large birds, which they call'd fea-geefe, every one of which, after they had been plum'd and pull'd, weigh'd eight pounds of *Caftile*; and they were fo numerous, that the ground was cover'd with them, fo that they kill'd what quantities they pleas'd. They faw another fort of bird, much of the fhape of a pidgeon, all white, only with red bills, and red feet; all which were a great entertainment to them as they fail'd along. They com-mend also the harbour, which they call Most Beautiful, where the city of St. Philip was founded; there they faw the traces of feveral animals, which us'd to come to drink in those chrystal fountains. After the third streight place, there is to be feen a most excellent harbour, call'd the Shell-Harbour, by reason of the vast quantities of oysters and other shell-fish that they found there, which fufficed to feed the whole fleet feveral days, carrying away with them a good provision likewise for their voyage, all owning that they were better than those

ftreight feveral islands, which are as estimable as the terra firma; they are generally in the widest part, where the sea is seven or eight leagues over; the chief are those of Isles of St. St. Lawrence and St. Stephen, otherwise Lawrence called the island of Barnevelt. Before they came to these, they found other islands, which they call'd the Pinguin Islands, for the great quantity of that fort of birds that are bred there. There is another, HolyKing call'd the Holy King's Island, which is in a Island. river, which enters into the streights, and they faw in it many feals. Others of thefe Ifles of Se. islands are nam'd Sevaldo, from the name of him that difcover'd them, near which there were store of the pinguin birds, and abundance of whales. After having pass'd

the fecond streight, there are still more

There are found in the great canal of the

of Europe.

Pinguin Islands.

islands, the first is call'd of the Angels, and the of is full of the birds we have mention'd. The Angels. fecond is nam'd the island of the Patagoons, 150 of Paor gyants, because they saw there some of tagoons, them. Near the shell-port there are other and several them. eight islands; and a little before the entrance into the fouth-fea, there are feveral other islands, which must be very little, for the streights are there very narrow. Some may defire to know, whether, befides this entrance of the streight of Magellan, there are any other, by which ships may fail from the north-fea to the fouth, Touching which, the relation of George Spilberg fays, that there is one by the cape, which the called Prouvaert. Some English likewife, who have fail'd that way, are of the fame opinion; for which they cite father Acofta, of our fociety, in his Oriental History, translated by John-Hugh Linscot, Chap. 10. in the end; as may be feen in the alreadycited John and Theodore de Brye, who add, that many other authors do agree in this opinion; and that those of Spilberg's fleet, before they came to the streight, saw this opening on the north-fide, but they did not dare to go into it, because they had express orders to pass the streight of Magellan; and besides, that which added to this resolution, was the observation they made of the great force with which the waves met each other at this opening, info much that the fea fecin'd to boil.

This is all that I have met with in authors about this opinion, which even John and Theodore de Brye look upon as false; because neither the Spaniards nor Dutch ever faw this fecond canal; but rather that the whole land of Fuego is one great continued island, which they prove by the relation of the navigation made by the Nodales, who were fent to fearch for the Streight of St. Vincent, and who went round the Tierra del Fuego, without finding any fuch opening, or any other than that of Magellan and St. Vincent; and yet I am of another opinion, and hold the first for certain; and this does not contradict the opinion of Spilberg, who does not fay, that the opening he faw was on the fouth, but on the north fide, towards the land of Chile; and so, though the land of Fuego be an island, it does not follow that there may not be an entrance on the north fide. But let us leave that to time to make out, and fay fomething of the Streight of St. Vincent, which is the fecond paffage from the North to the South Sea.

CHAP. IV.

OVALLE. 1646.

The same Matter is continued, and the Usefulness of the Commerce between Chile and the Philippine Islands is made out.

1619. IN the year 1619, the king fent, in the month of October, the two caravels which I mentioned above, to fearch the Streight of St. Vincent, because about that time it was reported in Spain, that James Le Maire had discovered it. These two ships failed to the bay of St. Gregory, which is near the east entrance of the Streight of Magellan; from whence they failed along all that coaft, where they faw and converfed with a fort of giants, who were at leaft the head higher than any of the Europeans; and they exchanged for feizars and other baubles gold, which it feems is the product of that country: after which they failed fouth-west round the Tierra del Fuego, till they came to the mouth of this new Streight, which they called the Streight of St. Vincent; and before they entered it, they failed along the shore of this new difcovered land, keeping it always on the right hand, their course east-north-east, as

> They failed about thirty leagues; and not having discovered all that way, nor as far as they could fee, any opening or inlet, they returned to the opening of the Streight of St. Vincent; and entering into it, went through it in less than one day, it not being above feven leagues in length; and being emered afterwards into the South Sea, they followed the fame land to the east. and fouth-west thirty leagues more; and seeing it was one continued coast, closed up with mountains of great heighth, they durft not go any further, beginning to want provisions; and so thinking that this land might reach as far as the Cape of Good-Hope, they left it, and failed to the west entrance of the Streight of Magellan; which they entered, and went through to the North Sea, returning that way to Spain, to give an account of what they had discovered, having made a very fortunate voyage, and not loft one man, nor had any fickness, all that climate being very like that of Europe, and particularly to the cold part of it. This made the king give order for the fetting out of eight fail more, to carry this way to the Philippine islands all the relief necessary of foldiers, artillery, and tackling for ships, resolving henceforward that they should always go this way, as being shorter, easier, and of less charge and danger. This was the opinion of Michael de Cardoel, and the other pilots chosen for this expedition, who obliged themselves to fail to the Philippines (bating extraordinary accidents)

in eight or nine months; for having once passed the Streights, if they had the wind and currents favourable, they hoped to get to the Philippines in two months; because from Chile to those islands, there is no reafon, as in other navigations, to wait for certain seasons and times of the year; for all that voyage being to be made within the tropicks, there is no danger of winter; but one may sail it at any time of the

The Dutch authors already cited, treating of this fubject, add these words: [" In truth this is a great conveniency to mankind, to be able to go from Europe to "these islands in so short a time, with all the health and safety of the failors it being otherwise in going by the Car. of Good Hope, where the diverlity of winds is to be observed, some of them being fo contrary, as to hinder absolutely the voyage; fo that it lasts fometimes fif-teen or fixteen months. Besides, this course is so subject to diseases, that often they bury half their men in the fea, as happened to Girrard Reinst, who was fixteen months getting to Bantam, which is not above half way to the Philippines, and yet loft a quarter of his men: Adrian Wreuter was nineteen months getting to Bantam, and loft out of the ship, called the Flessingue, one hundred and fixty three out of two hundred: the fame " happened to the other three ships of that fquadron."] Thus far these dutch authors; who add, That the ship Concordia, going the other way, arrived at the Moluccas without losing a man. And if they fay true, and make out that it is better to fail this way to their Batavia, how much better is it for the Spaniards, who drive a trade with Peru and Chile, the distance being much lefs, and having for friends all the ports of Chile, if they won't go fo high as Peru, which the Dutch have not? Neither would it be a fmall advantage to exchange in those ports the merchandizes of Europe with their product, which is fo wanting in the Philippine Islands, and all those parts of the east. Every one may find their account in this trade; the Spaniards, without running the danger of fickness in those unhealthy climates of Carthagena, Panama, and Puerto Bello, might find as much vent for the european commodities; Chile and Peru would have all goods from Spain much cheaper than they have them now by the terra firma; the charges then would

AP.

OVALLE be three times less; and, at the same time, 1646. they would help off the product of those parts; as from Peru they might load corn, wine, and oil; and if they did not care to go fo far, they might have the fame things from Chile, and cheaper, befides copper, hides, almonds, and other commodities proper to Europe: fo that 'tis clear this would be a very advantageous intercourse for the Philippines, who want all these commodi-

ties fo much.

Neither would the trade of New Spain receive any damage at all from this 3 for those countries could not have them from Peru and Chile fo eafily as from Europe; and fo Spain would fend lefs, only fo much as is carried to the Philippines from New Spain, which cannot be much; for the charge of carrying those european commodities from Vera Cruz, to be embarked again for the Philippines, is very confiderable, it being at least one hundred and fixty leagues by land from the Vera Cruz to Acapulco, which is the port where they are to be embarked; after which they have a navigation of three months; and then there being not always conveniencies of fhipping in Acapulco, those commodities are kept so long that they are spoiled; and 'tis seen by experience how little of this trade turns to account: but it would be otherwise if these commodities were carried from Chile, fince in two or three months, always in a temperate climate, they might fail with a constant fouth wind, which blows all the fummer infallibly, and fo bring the product of Chile in a good condition to the Philippines. This commerce, though it would accommodate all parties, yet, it must be confessed, it would be most beneficial to Chile, which would thereby have more vent for its product, and acquire more people to cultivate its natural

There has been two obstacles to this project, which have hinder'd its taking: the first is, the difficulty of passing the Streight of Magellan, because it being to much elevated towards the pole, it cannot be paffed but in certain months of the year, which if those who attempt it do not hit, they are in danger of perilhing, as in effect it has happened to some squadrons of ships, as I shall relate in the next chapter; though others have paffed it very luckily in its proper feafon, the Streight itself having, as we have feen, many good harbours and shel-

ters for ships.

The fecond obstacle is the same that keeps the port of Buenos Aires from being frequented, (for else all the treasure of Peru

might be fent that way ;) and it is, That the course of trade is settled the other way, notwithstanding the great charge the crown is at to have two fleets, the one in the South, the other in the North Sea, only to fecure this paffage; and that with the loss of fo many Spaniards lives, that in the hospital of Panama only, there was buried, as they told me when I went that way in the year 1630. above fourteen thousand persons; 1630. and what must we guess then in the ports of Carthagena and Puerto Bello, which have been the fepulchre of fo many Eu-

Notwithstanding all these mischiefs, this way is continued to maintain those cities already founded in those parts; though it is most certain, that the same end of carrying the filver to Spain might be attained by one only fleet with less danger of the sea. By that course the galleons would fail always in deep water, and not run the hazards they do between Carthagena and the Havana, between which places they are fain to found all the way, and keep the lead going, to avoid the many sholes that are in those seas, and in the canal of Baba-ma afterwards: besides that, the dangers of fickness would be avoided; for the Spamiards find by experience, that at Buenos Aires they are healthy, that being in the temperate climate corresponding to that

of Europe.

And for the same reason the navigation between Chile and the Philippines is not put in use; because the course of things being once settled one way, 'tis very hard to change them, though to a better. I shall not purfue this matter any further, because it feems to touch the state and government, which is not my defign: perhaps time will bring all things to pals; and that those of Chile themselves will venture to find out this vent for their product. All confifts in trying; for the advantages on both fides would be so manifest, that the sweet of them would foon make the way eafy, and that trade would wonderfully enrich Chile and Peru, fince they might bring back to those kingdoms all the commodities of China and Japan; and that without carrying any gold or filver, which might be preserved all for Europe. Thus the greatest part of this new world being enriched by its own product, the king's revenue will be the greater, as well as the returns in gold and filver the greater; and all things thus well accommodated, the fervice of god, and the divine cult and worship would be better carried on.

OVALLE. 1646.

Of the Fleets; some of which have been lost, and some have happily passed the Streight of Magellan.

A MONG the fleets which have been lost in the Streight of Magellan, the loft in the Streight of Magellan, the Placential first was that of four ships set out by the bishop of Placentia for the Molucca islands; Chips loft in the Breight of which having got to the Streight with good Magellan, weather, and being enter'd into it about twenty leagues, there rife from the weft a ftorm, which blowing directly a-head, forced three of the ships ashoar, they not having room to turn or run before it a but all the men were faved. The fourth had better fortune ; for going before the storm, she got out of the Streight; and when the foul weather was over, came into the Streight again, where the other ships were lost, and found the men; who had faved themselves on fhoar; who prefently made figns and cries to be taken on board; but they with hearts full of grief answered them, Wb.tt would you have? We cannot relieve you, for the provisions we have on board are not sufficient for us, and so we may fear to perish all of us together. They could not say to them the other words of the gospel, Go rather to those robo sell, because they were in a defart country, where they had no remedy, but to fend fighs to heaven, accompanied with inconfolable tears and cries, capable of mo-ving the stones themselves. Thus they left them, pursuing their voyage, much afflicted to be forced to forfake them, and not be able to do any thing for them; but these are accidents and hard cases belonging to

the fea-faring men. Tis not known to this day what has become of these men; only there is a tradition, that a great way within land, on the continent of Chile, near the Streight, there The Ceffas is a nation call'd Ceffares, who were endeatal to be Luis de Cabrera, governor of Tucuman, inginally, about eight and twenty years ago, with a good army rais'd at his own charge; but his diligence was in vain, as we have marked already, and told the cause of his mis-carrying. 'Tis thought, and 'tis very probable, these Cessares may be descended from those Spaniards who were faved in this shipwreck; because it was possible, that seeing themselves without any other recourse, they might go on into the terra firma, where contracting alliance with fome Indian nation, they may have multiplied, and the fame of them may have reached the neighbouring nations, and fo on to others. This is certain, that this tradition is much kept up, that there is in those parts an European nation called Ceffares. Some fay, that VOL. III.

there has been heard the found of bells, and they have founded cities where they live; but, in fine, there is no certainty of all this. A gentleman born in Chiloe, and who has been a colonel in those parts, gave me in writing a relation of feveral traditions and informations of great numbers of people that inhabit the land within, and who have much gold. There has been made feveral attempts to difcover them, though all have mifearried for want of provisions, or by other accidents, which in time may be remedied when it pleafes God. And at this very time I have receiv'd letters, which acquaint me, That father Hieronimo de Montemayor, apostolical missionary of that archipelago of Chiloe, had enter'd into the terra firma in company of captain Navarro, a man very famous in those parts; and that they discover'd a nation, which 'tis thought are these Cessares, because they are a nation of white complexion, and fresh cherry cheeks, and who in their shape and disposition of body, seem to be men of mettle; and that they had brought some of them along with them, to endeavour to inform themselves of that which they fo much defire. This is all the father writ at that time, because the ship could not flay, and there is but one ship every year bound for those parts; fo he was forced to refer himfelf to the next conveniency, to inform me more particularly of the original and defcent of this nation; fo that this is all that at present we can fay of this nation of the Ceffares, which 'tis possible may come from these shipwreck'd men; or else they may descend from some Dutch, who may have been fhipwreck'd in the fame place, or thereabouts; and their complexion feems to fortify this conjecture; befides, that they fpeak a language which no body then present could understand; or there may be both Spaniards and Flemings. 'Tis thought we shall not be long without knowing the truth, and fo I continue my narration. The second sleet which miscar- A Spanish ried in the Streight, was that which was set fleet lost out about two and twenty years ago, under in the general Ayala, a gentleman of high birth Streight. and valour; who going from Spain to Chile, dealt with his majesty for a relief of men, which he was to carry through the Streight of Magellan, without landing any where else; but just as they were entering it, they were all cast away, so as to this day there has not been any account of them, except of the vice-admiral's ship, under the com-

OVALLE mand of Francisco de Mandujava; for ha-1646. ving loft fight of the admiral in the ftorm, fhe was carried afore the wind to the port of Buenos Aires, where he landed the men, and marched them over land to Chile. I heard fome of the men talk of this matter; and they used to blame the general very much, for having gone about to enter the Streight when the time of the year was fo far advanc'd, particularly having been advised in Brafil, where he touched to winter there, which he refuted to do, for fear his people fhould defert him, and fo he and they all

These accidents feem to have made this paffage less practicable; but yet we know that many have paffed this Streight with little danger, and fome with great felicity. Eight fleets are mentioned by John and Theodore de Brye, as well Spaniards as foreigners, who have paffed this Streight; and though fome have had bad weather, yet there is no doubt but time and good observations may make it more feafible; particularly there being fo many good harbours and bays in this Streight, where ships may shelter themselves, and let the storms blow

CHAP. VI.

Of the Province of Cuyo.

FTER having treated of the two Cuyo, the AFTER having treated of the two first parts of the kingdom of Chile, third prowe must say something now of the third, which contains those large provinces of Cuyo, which are on the other side of the Cordillera, towards the east. We have already described their situation and extent, let us treat now of the nature of them. And to begin with their ill qualities; 'Tis a wonderful thing to confider that there being nothing between them and Chile, but the high mountains of the Cordillera, yet they are fo different in their qualities. We have already mention'd fome; but we may fay, that as to their temperature, they are in every thing entirely opposite; for first the heats are excessive and intolerable in summer; and for that, as well as for the vaft quantity of bugs, or punaifes, which are there, fome very finall, and others as big as bees, one can hardly fleep a-nights in the houses, and therefore the people all sleep in their gardens and court-yards. There are almost perpetual thunders and lightenings, and many poisonous reptiles and insects, though not io many as in Tucuman and Paraguay. There are likewise a species of Mosquites, or gnats, no bigger than the points of needles, and as fharp in their fting, though themselves are almost imperceptible; they get into the hair of one's beard, and one cannot be rid of them any other way, than by killing them.

These are the evil qualities of the land of Cuyo; let us now mention the good ones. The land is fo fertile, that in many things it exceeds even the richest foil of Chile; the crops are better, the fruits larger, and of better tafte, by reason of the great heat, which ripens them more: there is good ftore of corn, wine, flesh, all forts of fruits, roots, and herbs of Europe; as also great quantities of olive-yards and almond-grounds; fo that the only effential difference between it and Chile, is the many venomous animals, and the thunders and rains in fummer;

though to make some amends, if Chile exceeds in fummer, Cuyo has the advantage in winter; for though the cold is sharp, yet it is not with fuch clouds, nor fuch fnow and rains, as in Chile; but rather the weather is ferene, and the fun beautiful and clear, without any dark weather, which makes it very temperate.

There is no fea-fifh in this province, it Cuyo, being very far from any fea; but it has inland ponds, which are called the ponds of Guanacache, where they catch great quantities of trouts, as they call them, which are very big, like the Savalos of Seville, but much better without comparison; for they have no finall bones, and are of a higher relifh, and a very healthy food.

Befides the fruits of Europe, this country has feveral very good of its own. The first is called Chanales, which are like filberts or fmall nuts; only the difference is, that that which is to be eaten is not within, but on the outfide of the shell: the other is the Algaroba, of which they make bread fo fweet, that it nauseates those who are not used to it. All Tucuman, as far as Buenos Aires and Paraguay, are provided from hence with figs, pomegranates, dried peaches, and dried grapes, apples, oil, and excellent wine, of which they have abundance, which they carry over those vast plains, called the Pampas, (where for many leagues together there is not a tree, nor a ftone to be found,) in large carts, fuch as they use here in Rome; and they are a caravan of them together, to defend themselves from certain Indians, who are enemies, and often attack them by the way.

Some years ago they began to discover here rich mines of filver, the fame of which drew people from Potofi when I left Chile, because they were reputed to be richer, and of more profit than those of *Potofi*, all provisions being more abounding and cheap er too. These mines were also said to be in a plain country, where carts might come eafily. They write me word likewife, That

'Tis true indeed, that in this matter of mines, there is a great difference between affaying of them in little parcels, or in great ones; for often the oar that promises much, yields but little, when the affay comes to be made in great. This is a common observation in mines; and if these of Caye do not prove extraordinary rich, there will hardly come any people from abroad to them, particularly from Chile, where they have already so many and good ones, of such a known profit, and yet they do not work them, the people being more profitably employed in husbandry, which these to greater account.

turns to greater account. I will give here an extract of a letter which I received in Rome this year from father Juan del Poço of our company, a person of great piety, and worthy of credit, who is at prefent in the college of Mendoca, the chief of all those of the province of Cuyo, and it is thus: ["The greatest news here, is about the mines which are begun to be " discovered, which if it holds as they re-" late, it will be the greatest thing in the " world: they are of gold, which is feen " among the filver oar: there are come very " understanding miners from Potosi, who cannot give over commending them. "There come people from St. Jago, to " work them, and captain Lorengo Soares is " named for Alcalde Mayor of these mines."] There are others who write the fame thing; and there is no doubt to be made, but that if they can have people, that country will be one of the richest of all the Indies; for its great fertility wants nothing but people to cultivate and confume its product. This will make the three cities of that province, which are that of Mendoga, that of St. Juan, and that of St. Luis of Loiola, increase mightily, which fince their first foundation have been at a stand, by reason of the neighbourhood of Chile, which has kept them down; many of the first inhabitants of Cuyo having left it to go to Chile, as being more temperate, and more abounding with the conveniencies of life; for the same reason that we see in other parts most people flock to the capitals of a kingdom, as is evident in Naples and other great cities. But if the Spanish inhabitants increase as they have done hitherto, there will be enough for all these parts; and already some of St. Jago have settled, and married at St. Juan and Mendoça; neither can it be otherwise, for the people of Chile are beginning to be fo ftreighten'd, that they cannot have all the conveniencies of being at large, and fo are forced to feek them abroad.

And 'tis most certain, that the conveniencies of this province are very great; and their not appearing so, is owing only to their neighbourhood to Chile, in comparison of

which these countries appear a place of ba-OVALLE. nithment, and is look'd upon as the most rigorous that can be given any one in Chile a because, to say truth, the difference is very great, considering the proprieties of each place; but if we consider Cuyo, without comparing it, it is not only a good place, but surpasses many others, where nevertheless the inhabitants think themselves very happy, though wanting the abundance of Cuyo, where the sless is very substantial and savoury, and great abundance of game, as also of pork, turkeys, ducks, hens, and other tame fowl.

The wines are very generous, and of fo much strength, that though they be carried three or four hundred leagues over those plains, and the intolerable heats of the Pampas, and that by oxen, yet they come good to Buenos Aires and other places, and are preferved with the same facility, as long as one pleases, without spoiling; and they are in fuch quantity, that all the provinces round are supplied with them, nay, as far as Paraguay, which is three or four hundred leagues more. The bread is excellent, fo is the oil, and all forts of pulse and gardening, the fifh better than the fea-fifh, the flax and hemp as good as that of Chile; the materials for tanning very good, and, in fhort, it has all necessaries for life, with as much advantage as any other country.

This being thus, and even more than I relate, what is there wanting to this land, or what are its blots? punaifes, thunder, lightening, bail. And what other country has not fome of these? Shall we say, because God has exempted Chile by a fingular providence from these things, that therefore Cuyo is an ill country? No; for then we must con lemn most countries where these afflicting circumstances are found. And though it must be own'd, that in the fummer the heats are great, yet they do not exceed those of Tucuman, Buenos Aires, and Paraguay; and they are interior to those of Brasil, and those of Garajas, Carthagena, Puerto Bello, and Panama, as I myself have experienced in some of those places. And these parts of Guyo have fome amends made them from the neighbourhood of the fnow; for the city of Mendoça is not above a league from the Cordillera, which is full of it; and likewise the good qualities of the air do fomething moderate the heat; for it is so healthy, that it never hurts any body by being in it, which makes them fleep in their gardens abroad, without any apprehension, except it be of some sudden shower which does often happen in fummer; for on a fudden, though the heavens be clear and bright, it grows cloudy, and falls a raining with great fury; but this may be eafily re-medied; and likewife the thunders and thunderbolts might be avoided, which are OVALLE. the things which fright those of Chile most, they being so little used to them; and therefore at the very name of Cuyo, they think the heavens are falling upon their heads, or that the punaifes, and other naufeous vermin are never to leave them; fo that no greater mortification can be propofed to an inhabitant of Chile, than to go to live in Cuyo. And besides all this, the vast fnows which fall on the mountains, thut up the paffes, and hinder all communication or intercourfe; fo that in five or fix months

one cannot receive a letter, though those two provinces are not above thirty or forty leagues afunder, that is, the breadth of that chain of mountains called the Cordil-This therefore is that which difcredits Cuyo; and if it had been further off from Chile, it would have had a better name; but it is with that, as with two loaves, which though both good, yet if one be whiter and better, no body will touch the other, the best being always most

CHAP. VII.

Of the Confines of the Province of Cuyo, and particularly of its Easterly Bounds, the Pampas, and of the River of Plata.

Cuyo.

THE confines of this province of Cuyo to the west, are Chile; and to the east, the Pampas, or vast plains of the Rio de la Plata, and part of Tucuman; which reaching as far as those of Rioca, and the mountains of St. Michael, with all the rest as far as Salta and Jujuy, make the north fide of it; and to the fouth, it has the Streights of Magellan. All that lies within these bounds are open plains, reaching fo far, that there is not fo much as any ftop to the eye; but it is like a fea, and the fun feems to rife and fet out of the earth; and at its rifing, it is fometime that it gives but little light; as also it loses some of its beams before it be quite out of fight when it fets. The Manner of way of travelling in those plains is with travelling, very high carts, which they cover over neatly with hoops, over which are cowhides, with doors to go in and out; and these are drawn by oxen: there are also windows to give a free paffage to the air, and on the bottom one makes one's bed with fo much conveniency, that often tra-vellers fleep out the whole journey, and feel not any of the inconveniencies which attend it. Generally they fet out about two hours before fun-fet, and travel all night, till it be an hour or two after fun-riling; fo that a traveller just wakes when he comes to the baiting-place. This must be owned to be a great conveniency; because one may also walk on foot sometimes, in the cool, before one lies down, and so one comes merrily and eafily to one's journey's end.

Hunting.

There is also another entertainment which helps to pass the time pleasantly, and that is hunting : and for this end fome carry horses empty, and dogs on purpose; and there is game enough both of hare and venison: for there are herds of Guanacos, of two or three hundred. The dog follows them; and the young-ones, not able to follow, are left behind, with the hunter knocks on the head with a club he carries,

without lighting from his horse, and returns to the carts loaden with venifon, which ferve for provision as well as entertainment. At other times they follow the partridges, francolins, or the bird called Quiriquincho. But to all this there are abatements and mixtures of trouble: the first is, the mighty heat in summer; for which reason, left the oxen should be stifled with it, they travel in the night; and when they come to halt, or bait in the day time, 'tis in places where there is not fo much as a tree, under whose shade one may rest; nor is there any other shade than that of the cart, and some coverlet upon it; for to go into it, is like going into an oven. But this is not all the way, there being some pleafant running streams and rivers bordered with green willow-trees, which very much mitigate the fury of the heat. The greatest inconvenience that I perceived in that . journey, was the want of water; which is so great, that we were forced to provide ourselves, when we arrived at any of these rivers, for many days journey; for there is no other, except fometimes fome plashes remaining of rain-water; and that is all green, and can ferve only for the oxen: and yet this is rare too; for these are often dried up to mud, and then one is forced to double the day's journey, and march as far again; fo that the cattle is almost dead with thirst. I have feen fometimes, on these occasions, the oxen take a run as if they were mad or poffesfed; for they know by inftinct, a league or two before they come at it, the places where it is, as if they fmelled it; fo there is no ftopping those that are loofe; and even those who are at the yoke, make what hafte they can; and when they get to the water, they raise the mud so by their hafte, that they drink as

much mud as water. When this happens, while there is any of the water left that was taken at the river.

> re is any the river, and

can; and raife the drink as

and carried in carts, the misfortune is the less; but when that water is already spent, the people fuffer extreamly: for though most commonly some one man is sent before to take up some water of the clearest, before the oxen trouble it, yet they make fuch hafte, that that prevention most commonly miscarries; and then we are fain to stop our nofes, and shut our eyes to drink, and divert even our imagination, if we can. And to all this there is no remedy, but from heaven, as it happened to me once, that it pleafed god to fend us a shower in our greatest extremity, which filled several wells, and there was enough for us and our cattle, as also to carry away; for which we thanked the divine majesty, acknowledging his great mercy to us in fo preffing circum-

This fuffering would not be fo great, if there were any towns and villages in the way; for there are little lakes, by which they might fettle, which though some years they yield no water, yet it is to be come at by a little digging, and that not very deep; and if there were people in those defarts, wells might be made, or the rain-water gathered in cifterns, as it is practited in feveral other places. But these plains are so vast, that they can hardly be peopled, being extended for several hundred leagues; and befides, there being no trade fettled of any importance in those parts, there can-not be inns nor places of shelter settled; and fo at prefent, whoever travels that way, must carry every thing; for when once one is fet out, there is no addition to be made; and

therefore all is to be provided, more or lefs, OVALLE. according to one's ability; and that must 1646. be at least a fortnight's allowance, and some times twenty or thirty days, till one comes to fome inhabited place. This is the manner of travelling in the plains of Cuyo, and Tucuman, and the Rio Plata, where in many leagues one does not fee a hill, nor a ftone, nor a tree, but continual plains; and if, to dress your victuals, you have not the forefight to carry fome wood, all the remedy is to gather the cow-dung, which ferves the turn very ill. In fome places of this province of Cuyo, there are woods near the rivers, from whence may be had materials for building; and hard by the Cordillera there is a fort of tree that breeds incense. I brought some of it to Rome, and the druggifts told me, that it was finer than the ordinary, confumed in churches. There grows there also the herb called Xarilla, which is very hot, and a good medicine, as we have faid already. There are many others, of which I cannot give fo particular an account, as not having made any stay in those parts; neither am I in a place where I can advantage myself of those relations, that others might give me; and which may ferve for larger histories than mine, I pretending only to brevity. Therefore let this fuffice for an account of the fituation, foil, heavens, proprieties, trees, plants, fruits, metals, flocks, fountains, rivers, fea-fishes, and birds, in all the three parts or divfions of the kingdom of Chile. Let us now fay a word of its inhabitants, the old Indians, who have possessed it all formerly.

Vol. III.

Q

воок

BOOK III.

Of the Inhabitants of the Kingdom of CHILE.

CHAP. I.

Of the first that peopled America, and their Antiquity.

OVALLE. HE knowledge of the first inhabitants of the kingdom of Chile, depends necessarily upon that of the first in-habitants of America, which is not easy to be made out. If we should take the opinion of the indian Guancas, near the valley of Xavia, they would certainly affirm, that which is a constant tradition among the natives of Peru, and before they had any knowledge of our faith, and is, That many years before there were Ingas, who were the kings of those parts, the country being very populous, there was a great deluge: (thus far 'tis well.) But then they add, That in the hollow rocks of the highest mountains, there remained fome alive, who returned and peopled the earth afresh; and the same tradition is received by the Indians of Quito in Collao. If this were fo, the Indians of Chile might lay claim to the new peopling of America; for if any, their mountains were most capable of resisting the deluge, they being the highest that are yet discovered. There are other indian mountaineers, who are less mistaken; for they affirm, That none could be faved in the mountains, because they were all covered with water; but that fix were faved in a float they made. If they had faid eight, they would have hit upon the number which the apostle St. Peter fays escaped with Noab in the ark which he built.

Antonio de Herrera, in the Third Tome of the General History of the Indias, excuses these errors of the *Indians*, saying, 'Tis probable there was some particular deluge in those parts, to which they might allude, because all the nations of that world are agreed in this tradition. The true and natural excuse is, that these poor wretches have not had the good fortune to fee the chapter of Exodus, where they would have been undeceived; for there 'tis faid, That out of the ark of Noah there was not left any living thing upon the earth, and that the water was fifteen cubits over the tops of the high-

est mountains. The other Indians, who talk of the fix men faved on the float, may have had fome tradition from their forefathers, who were nearer the time of Noah, about the ark; and as they are a people who have no books, because they cannot read, whatfoever they might learn from their anceftors, and retain in their memories, might by degrees be loft, or diminished; and so the defeendants came to have the tale of the float and the fix perfons, not examining how it could possibly be, that upon so slight a contrivance, which can hardly last three or four days in the water, those people should maintain themselves for so long as the deluge lafted. As for the manner and time, how and when the descendants of Noah passed to people this new world, or how their generations have been extended fo far, 'tis a most difficult thing to make out; for the Indians being without written records, as other nations have, there is no diving by their memories into their antiquities, which even when they are committed to writing, use to produce variety of opinions about the origin and beginning of things. Befides, there was in Europe, even among the most learned, so great an ignorance of all that regarded America, that it was judged fcarce inhabitable, if it was at all; and fo they could give us no light of a thing they had no notion of, or which they thought impossible; but after the difcovery of this new world, people began to reason, and every one made his guesses or reasonings as well as he could. Some have faid, with reference to what is hinted by Plato, in his Timœus, (as is related by our father Acosta, in his first book of the New World, in the twenty-fecond chapter,) that people passed from Europe and Africa, to certain islands; and so from one to another, till they came to the terra firma of Ame-

from the first man Adam, and that the propagation of the species of mankind, after the deluge, was made by those only who were faved out of the ark of Noab, 'tis not improbable, that the first inhabitants of America came to those parts, not with defign, or by their own industry, because of the little use of navigation that was in those days, and particularly through so great a fea; but that they were cast by fome from on those coasts, as it happened fince in its first discovery, as we shall see hereafter in its proper place. He brings, to prove this, the example of feveral ships, which, contrary to their course, have been driven to very remote shores. This is every day's experience, and will not furprize those who know any thing of the strength of the winds and currents in those seas; and that which the fame father Acosta alledges of himself, That he had such a passage, that in fourteen days he came within fight of the first islands of the gulph of Mexico, going from Spain.

This, though probable, has yet a ftrong objection against it, which is about the wild beafts, such as tygers, lions, wolves, and others of that nature, which could not be carried in ships, because they were of

no use to mankind, but rather mischievous:

and though fome may answer with St. Auf-Aug.de Ci-tin, in his fixteenth book De Civitate Dei, Chap. 7. when he folves the difficulty how these animals came into islands, and fays, That they might either fwim thither, or be carried by hunters, or that they might be created a-new by God Almighty, as they were in the beginning of the world; which is the best folution, if it were as probable as it is eafy to fay. But, first, there is against it the opinions of philosophers, who will not allow any great animals to be propagated any other way than by generation. And, befides, if God, as without doubt he might, had created them a-new, what neceffity was there for him to command Noab to take fo many pairs of all living creatures, all male and female? which care feems fuperfluous, if God refolved to make a fecond creation of all those species after the deluge. 'Tis more probable, these creatures might arrive at the islands swimming, and the

birds flying, particularly to the nearest islands; but this does not prove, that they could arrive to those remote parts of America, there being such a vast ocean, that 'tis not possible that either beasts or birds should have so much strength as to swim or fly over it; for this reason he concludes in the end of the one and treatists he have so

the end of the one and twentieth chapter, that the men, as well as animals, paffed either by land or water to America, near fome part where it joins to the other parts

where he says, That supposing we all came from the first man Adam, and that the propagation of the species of mankind, after the deluge, was made by those only who were saved out of the ark of Noab, 'tis not improbable, that the first inhabitants of in those ancient times.

This is the author's opinion; which, as to the Tierra de Bacalaos, carries with it only the probability of an ingenious conjecture; because as yet that part of the world has not been discovered; but if in time it proves like the conjecture about the Streights of Magellan, 'tis all without any grounds; for, as we have already related, 'tis now made plain, that America on that fide is entirely divided from the other parts of the world by a vast sea. 'Tis true, that to the east 'tis not known yet how far that land runs, which is over-against the Tierra del Fuego, and is on the east fide of the Streight of St. Vincent, otherwise called the Streight of Le Maire; for some think that it may run as far as the Cape of Good Hope, and fo be so near that part of Africa, that men might pass in small vessels from the one to the other. 'Tis likewise uncertain, that the continent of America ever was nearer than it now is to any other continent, or that the fea has fince broke away part of either, to make the feparation wider, as we have observed it did in the island of Saneta Maria, which is supposed to have formerly been all of one continued piece with the firm land of Arauco; but these are all conjectures, and he alone knows the truth who created these men, and other animals of America, and by whose providence they passed to those parts, for the great ends of his hidden fecrets; to whom, with all veneration for his councils, we must submit the enquiry, why he has been pleafed that that part of the world should remain undiscovered for so many ages, without any communication with those parts where his divine light has appeared sooner. These are confiderations for the good to make use of with thanks, for having been admitted to it; and confusion of the wicked, who at noon day are as much in the dark, as if it had never dawned.

Peter Bereius, in his geography, as John Bereius' and Theodore de Brye do relate, collects the antiquity of those nations of America, from their most ancient kings and lords, and from the ruins of ancient edifices, and other memorable things; for this argues the largeness of time, in which all this was done. Amongst other things, he mentions the report of one of their gardens belonging to some king, (which must be of Peru, who were always the richest,) in which all the herbs, and plants, and shrubs, with their trunks, leaves, and showers of the natural proportion, were of massiy gold; and in

th

OVALLE, the houses of recreation, there were all forts of animals made of precious stones, and fome of feathers of various colours. They fay befides, that the *Ingas*, who were the emperors of *Peru*, were the richest princes in the world; and that they had so much gold, that not only the plate they eat in were of that metal, but all their houshold fluff and furniture were of the fame, to their tables, benches, cupboards, nay, to the statues themselves; a great deal of which fell to the *Spaniards* share when they conquered those parts; but the best part was hid and concealed by the Indians, which to this day they keep undifcovered, being in that way of fecret intractable and extream close. Neither is it any wonder that those princes should use so much gold, since they were mafters of more of that metal than any others; being so beloved by their subjects, that whatever they had that was precious, they prefented it to them; and they were fo inclined to hoard it, that whoever fucceeded in the monarchy, made it a point of state not to touch, but rather to increase the trafure of his father; of which a great proof was the vaft fum which Atabualpa offered for his ranfom, and paid to the Spaniards for it, as we shall see hereafter.

Amongst other precious pieces of gold work, authors make particular mention, and admire with reason, that chain which the king Guaynacapa, the eleventh king of Pern, caused to be made at the birth of his fon Guasear, who was to inherit his crown; for each link of it was as big as the wrist of a man, (as is reported by Gareilasse de la Vega, who had it from an uncle of his, an Inga also, who told him, when he asked the bigness, as big as this, (shewing his wrist,) and as long as twice the length of the great place of Cuseo, which in all might

be above feven hundred foot long. And the contador, Angustin de Varate, in his first books, Chap. 14. treating of the incredible riches of that Inga, says these words: [Guaynacapa, at the birth of his son, caused a great cable of gold to be made (as is attested by several Indians yet alive) of so much weight, that two bundred Indians could but just lift it up from the ground; for memory of which they gave the name of Guastea Inga to the new born prince; for Guasta signifies a cable; and the sirname of Inga was added, as that of Augustus to the Roman emferors.] Thus far this author: but this name, or word Guasca, not being so decent in its signification for a prince, they added the r to it, and nevertheles eternized the memory of that rich chain.

The chiefest motive the king had to order this chain to be made, was, that the dances which were to be made at his birth, might be more folemn, and worthy of his royal person; because the manner of dancing of the Indians, is to take one another by the hands, and make a circle; and so moving two steps forward, and one backward, draw closer and closer to the king, to make their obeisances; and the king caused this chain to be made, for them to take hold of, instead of taking hold of one

another.

A great proof likewise of this antiquity of the empire of *Peru*, is those two highways mentioned by *Herrera*; for being of that vast length, and work'd with all those conveniencies for travellers, they could not be made but by length of time, and with a long continued labour. This is what I find of the antiquity of the first inhabitants of *America*, in which we may comprehend the *Indians* of *Chile*.

CHAP, II.

Of the great Courage and Boldness of the Indians of Chile.

HE Indians of Chile are famed by all who have writ of them, for the boldest and most valiant warriors of all the vast extent of the new world: it were to be wished by us, that this had not been confirmed by woful experience, for then the kingdom of Chile would have been one of the most flourishing kingdoms of the Indies, without the continual wars which it has maintained for about an hundred years, without ever ceafing, or laying down its arms. more confiderable, if we reflect, that the Spaniards having subjected, in so little a time, those vast empires of Mexico and Peru, have nevertheless not been able, in so great a time, to conquer the Indians of Chile, fons of the great Cordillera, from

whose rocks they feem to borrow their untameable strength and sierceness. Except we should say with fryer Gregory of Leon, That this bravery comes from the fertility of the earth, which, as he fays, and is true, does not need any thing from abroad, To which he adds, the birth of these people, who all their life tread upon fo much gold, and drink the water which runs over thefe rich minerals, by which they participate of its good and generous qualities, as it is observed of those who live at Potofi, near that vaft mountain of filver, who are fo flout and haughty, as has appeared in the many revolutions that have happened there. Let this be as it will all authors agree, that they are the top no ion of America,

though

though hitherto no one has treated purofely of this matter. There are now two his tories in the prefs, which will make out, b. articulars, all that has been faid of this Lanon. Don Alonzo de Ereilla fays enough, in his famous poem, call'd the Araucana; but because it is in verse, it seems to lessen fomething the real truth; and yet abstracting from the hyperboles and enlargings of poetry, all the historical part is very conformable to truth, he being a gentleman of great quality, and an eye-witness of what he affirms; for what he writ, was not by hearfay, but upon the very fpot where the things happened; fo that he might have had as many contradictors as he had witneffes, who were prefent as well as he at what pafs'd.

He dedicated his book to the most catholick king, his lord and mafter; and prefenting it to him with his own hand, when he came from Chile to Spain, 'tis to be prefum'd he would not have dured to fail in the exactness of truth, for fear of receiving a chastisement, instead of a reward, which he obtain'd for it. Let any read his prologue, in which, in a very good stile, and in prose, he gives a noble account of the valour of the Indians, and concludes his preface with these words: [I bave faid all this, as a proof and clear demonstration of the valour of these nations, worthy of all the enconiums I can give them in my verses; and besides, there are now in Spain several per-sons who were present at many of the actions which I here describe, and refer to them the defence of my work on that side.] Thus far this author, worthy of immortal praise for his incomparable book, which, though published above fifty years ago, and printed in Spain and Flanders, is yet continually reprinted; which shews the value the curious and the learned have for it. The Araucanos are indeed the chief subject of it; and yet what is faid of them may be extended to all the Indians of Chile, as we shall fee in its proper place, when we shall treat of the wars they had with the Spaniards.

But before ever the Spaniards fet their feet on their ground, they had given fufficient proof of their bravery, which was invincible, to the Ingas, emperors of Peru, fince with all their power they could never conquer them, though they endeavour'd it, as being extreamly inclin'd to enlarge their dominions; and they defir'd it the more, for the fame of Chile, to which they fent a powerful army, and which made fome progress at first, subjecting some nations to extraordinary tributes. But as they purfued their point, and came to the valley of Maule, they met with the Promocaes, to whose succour the Chilenos, who inhabited more within the country, were come, and

Vol. III.

forc'd the army of the *Ingas* to retire in OVALLE. hafte. Garcilaffo de la Vega relating this 1646. more particularly, fays,

That the Inga yn Pangue, the tenth king Gar. de la of Peru, came to the confines of his own Fega. kingdom, to a place call'd Atacama, to be nearer at hand to attend the conquest of Chile; and from thence first fent his scouts through the fourfcore leagues of uncultivated country, which was between his king-dom and Chile, with orders to dispatch a man, every two leagues, with an account of what they discover'd; which they did, one messenger following another, and leaving in the way certain marks, whereby they that came last might guide themselves. He first fent ten thousand men; under the command of general Sinchiruca, and two other colonels of his own kindred, not being willing to commit to any others care fo great an enterprize. They came within fight of the valley of Copiago, which is the first inhabited valley of Chile; with the inhabitants of which the Peruvians began to skirmish, because they had not admitted the embaffy which they fent them as from the Inga, to own him for their lord; and withal, having given notice of the refil tance they found to the Inga, he fent them ten thousand men more, with a new sum-mons, affuring them, That his design was not to take their country from them, but only that they should own him as fon of the fun, and lord of all that was warm'd and enlighten'd by him. Those of piapo knowing that it would not be the last, because the Inga yn Pangue was preparing another succour, and being convinced that this acknowledgment would cost them less than the blood that must be spilt in a long refistance, they agreed to own the Inga as he desir'd.

This was the first entrance of the Peruvians as far as Maule, which is one of the rivers of Chile, as has been faid already, By this time, the army of the Peruvians was fifty thousand men, and defiring to profecute their conquest, they fent their ordinary embaffy to the nation of the Promocaes, who having already been inform'd of their invading their neighbours, were in arms to defend their country. The amarms to defend their country. The am-baffadors of the Inga deliver'd their accuftom'd message, protesting, that their lord defir'd nothing more, than to be acknowledg'd as fon of the fun, and honour'd accordingly has been submission. The Pro-The Procordingly by their fubmission. mocaes, who were refolv'd to defend their liberties, made answer, That the conquerors should be the lords and masters; and so uniting all their forces, came on the fourth day, and presented battle to the Peruvians. The Inga's generals, furpriz'd at fuch a cou-

OVALLE ragious resolution, sent them new summons, defiring their friendship and peace, calling the fun and moon to witness, that they came not to spoil them of their lands or goods, but only to oblige them to own the fun for their God, and the *Inga* for his fon and their lord. To which they receiv'd answer, That they came not to spend time in talking, or vain discourses, but to fight manfully till they should conquer or die; adding, that they might prepare themfelves for battle the next day, as it happen'd; and the Promocaes overcame that powerful army of the Inga's, fo that they had no mind to try their fortune any more, but made their retreat, leaving the Promocaes in peace, and full possession of their lands, which they had so bravely defended. Antonio de Herrera, in his third tome, and fifth decade, treating of the reason why those of Chile refus'd to submit to those monarchs the Ingas, fays, That it was because of the great reverence with which they made their subjects treat them, as if they were Gods, and approach them as if they were of another species; which the Chilenians could not bear, their mind being too lofty and generous to submit to such a tyranny, which they constantly oppos'd; infomuch, that though the Ingas had conquer'd the best part of that continent, yet the Chilenians never did yield to their power. Perhaps the nearest provinces to Peru, such as those of Guasco, Coquimbo, and Copiapo, did in some measure acknowledge their power, fince they paid a tribute in gold; and for that reason, these provinces alone in all the kingdom of *Chile*, do speak the common language of Peru, which is a very strong

For the same reason that they resisted the Ingas, they did not care to have any king of their own nation, the love of their liberty prevailing against all the reasons of state, which might move them to have one monarch; neither did they fall into any popular form of government, or commonwealth; for their warlike temper did not afford patience enough for the slegmatick debates, necessary for the union of so ma-

proof of what I here fay.

ny minds. Thus every family chose one among them to govern them. From this arose the Caciques, who are the sovereigns among them, and by degrees had that power hereditary, and their children after them enjoy it, with all its rights.

them enjoy it, with all its rights.

But though every one governs independently his own diffrict or jurifdiction, yet when the occasion offers, that the fafety of all is concern'd, there is an affembly of the The Bate-Caciques, and some of the elders of the affemblies. people, who are men of experience, and are fummon'd after their way by purticular In these councils they resolve what they think most convenient; which, if it be a case of war, either desensive or offensive, they chuse the general, not one of Choice of a the most noble of the Caciques, or the most general. powerful, but he who has the fame of most valiant, and has best behav'd himself on the like occasion against their enemies; and when he is justly chosen, all the other Caciques obey him punctually. 'Tis after this manner that they have preferv'd them-felves fo many years againft all the ftrength that has been brought againft them. To make these affemblies, they chose out some very pleasant place, field, or meadow; Manuer of and thither they bring great store of pro-thise static vision, and strong drink, call'd Chieba, metrog. which is instead of wine. Being all affembled, and well warm'd with this liquor, and excited in their martial temper, there rifes up tome one of the most antient, to whose lot it falls, to propose the business of that meeting; who with great eloquence (for in that they are very famous) opens the matter, and brings all the reasons and motives of perfualion that he can. All are oblig'd to yield to the majority of opinion; and when the refult is made, 'tis publish'd with the found of drums and trumpets, and a mighty noise; but yet allowing every one the term of three days to reflect and confider on what has been refolv'd; after which, if they find no inconveniency, the execution is infallible, and they think of the means of bringing the buliness about by the most proper methods.

CHAP. III:

The fame Subjett is purfued, and the Nobility of the Indians of Chile examin'd.

A Nionio de Herrera, in the place already cited in the last chapter, says, That there are some of the Indians reputed above the rest as gentlemen; and then he adds these words, [Of this fort have been, and are still the Indians of Chile.] In which he says well; for if valour and the glory of arms makes gentlemen, as may be seen in

Andreas Tiraquello, in his book de Nobilitate & jure Primagenitorum; and if many noble families do to this day derive themfelves from fome great captain or famous foldier, the Chilean Indians having fo often fignalized their valour in fights, they may very justly be diftinguish'd from all the other Indians, and reputed more noble. fpe

Their ar-

In short, they are the untam'd Cantabri of America, who, like those of Europe, defended themselves, when all the rest of it was enslaved; and repulsed the conquering monarchs of Peru to the extream confines of their provinces.

And there is one circumftance more particular than under the Cantabrians, because they had the advantage of their mountains, and the barrenness of their country, not so inviting to a conqueror; but in Chile it was otherwise: the richness of its mines, and its foil full of delicious valleys, and a clear and rich territory, having been always well known, the only valour and bravery of its inhabitants was then the defence of the country: these were the fortresses and walls of it; for without a bit of fortification of any fort, or so much as one fire-arm, they oblig'd their powerful enemy to a shameful retreat. Indeed, this is a thing worthy of great admiration; yet not fo much to those who know how these Indians value themselves upon being good soldiers, using themselves to arms, even from their child-hood; of which it will not be amis to fpeak a little.

When a child is ftrong enough, they aim of the make it run op the rocky fide of a hill, gi-The educareward: this makes them very nimble and light; and I have seen them, in their feasts and entertainments, run two and two for wagers with wonderful fwiftness; and those who fhew little disposition to this exercise, are applied to follow day-labour, but the others they referve for war, not fuffering them to take to any other employments, but mind their arms and their horses, that they may be perfect in all their exercises. To these they assign their post upon occafion, according as each has behav'd himfelf in those which he has been in before; and they have in this no confideration of gentility, intercession of others, or other motives, but that alone of a good performance, and the many proofs given by them of their courage and conduct in war.

Their arms The arms they use, are pikes, halberts, launces, hatchets, maces of arms, bars, darts, arrows, and clubs; as also strong noofes to throw upon a horseman, and Their horse fight with launce and buckler, which they have learn'd from the Spaniards, and from them they have had their horses; for before their time, they had neither horse nor iron, but they have a hard wood, which grows yet harder by being turn'd in the fire, and is almost as useful as steel. They have hard and strong corfelets, back and breaft, and thighs, arms, bracelets, gauntlets, helmets, morions; all these of a hardened leather, so prepared when raw, that it becomes by drying as im-

penetrable as any fteel; and they are fome-'OVALLEthing better, because more manageable, and do embarrafs the body lefs, as being lighter; and fo the man is more at his cafe, and better dispos'd in fight. Among them the pikeman may not be an archer; neither. can any that uses the mace of arms, use other arms; fo every one bestirs himself with the arms he is us'd to.

In forming their battalions, every file is Their order of above an hundred men, and between of basile, every pikeman an archer, who are defended by the pikemen, who close their shoulders together; and if their first battalion is broken, the fecond relieves them with fo much readiness, that there seems not that any have fail'd; and fo by the third and fourth following each other, like waves of the fea, without any interruption; and no man forfakes his rank, but by death. They always endeavour to have fome bog or lake not far off for a retreat; for there they are more in fafety than in the ftrongest castle. Their volunteers go before the battalion, trailing their pikes with fo much state, and are themselves so haughty, that, like Goliab, they challenge their enemy to meet them body to body; and they do the fame to the Spaniards, giving themselves great airs of pride. They march to the found Their warof their drums and trumpets, having their like orna-arms garnin'd with all variety of beautiful colours, and themselves adorn'd with great plumes of rich feathers, fo that they

appear very handsome and fightly.

When they make any forts for their de-Their forts. fence, it is of great trees interwoven with each other, and leaving in the middle a place of arms; and formerly within this fort they us'd to make another of thick planks. Behind this, they make a great dirch, cover'd over with plants and flowers, but underneath them sharp stakes to lame the enemy's horses; some they make deeper, that the horses may remain there stak'd

thorough. Many of them are subject to great superstitions and auguries, observing the omens, both before and at the time of their undertaking; but many of them laugh at those observations, faying, there are no better omens than good blows, and flout laying about them, without fear of either fteel, fire, or any fort of death; and it is certainly fo, that their first encounter is terrible, and as if they fear'd no one thing in the world. When they are drawn up, and ready to engage, there is filence made, and the general raising his voice, begins an harangue, so full of spirit, fill'd with such warm incitations, and fuch a lively action, that the cowardlieft among them become like lions and tygers against their enemies. He lays before them the glory of victory,

OVALLE and the shame of being overcome, and made

Their

make.

1646. captives and flaves to their adversaries.

Total multiTake notice, says he, that there is now says exherno medium between those two extreams: are not you the fons and grandchildren of those brave men, who have fought fo many battles, and ventur'd all to defend that country and liberty, for which we now fight? Shall we own that they exceed us in bravery, or that the enemies we encounter are superior to those whom they overcame? Had they less motives than we have? or do we hope for less glory? We must all die; and in the equality of that common fate, the only difference is dying nobly for our dear country, and the liberty of our wives and children; therefore rouze up that courage which you have inherited from rour ancestors, who never could endure the shoughts of that infamous yoke of flavory upon their necks. Courage then brave nien, as brave as any the fun fees; courage, for in that lies victory.

With these, and other such words, and calling to mind some of their victories, they grow fo warm, that raifing a cry of war, they drive away all fear, and express great defire of engaging their enemies; which they do with fo much fury and refolution, that a battalion that stands their first shock is a very firm one. But we will treat further of this when we shall speak of the bat has they have had with the Spaniards, whose valour has set theirs in its lustre, obliging them to give fuch proofs as are worthy to be recorded in history. Let us purfue now the account of their natural qualities, independently from the refistance which they have made to his catholick majefty's arms.

The warlike spirit of this nation proceeds Their natural tem from their natural temper, which is chole-rick and impatient, proud, arrogant, and fierce, very cruel in their revenge, cutting their enemies (when in their power) inhumanly to pieces, and wallowing in their blood. We shall relate a case hereafter, in which fomething of this will be feen. They are ftrong and robust of body, well proportion'd, large shoulders, high chests, well fet in their members, nimble, active, vigorous, and nervous, couragious and undertaking, enduring hunger, thirst, heat, cold; despising all conveniencies of life, even their own small ones, having little value for their very lives, when 'tis necessary to hazard them, either for glory or liberty; conftant in their refolutions, and perfifting in a thing once begun with incredible fleadiness.

They are excellent horsemen, and upon a fingle faddle-cloth, or without one, they are as firm as others in war-faddles: they'll ride down the fide of a hill, or a precipice, as if they were goats, with their bodies as

streight and as firm on horseback, as if they were nail'd to the horse: they have no trouble with the baggage they want, for they carry but little with them; not but that when they march they have their little pack of flower of maiz, a little falt, some Pimientos, or Guinea Pepper, and dried flesh; and this is enough to maintain them a good They need no other kitchen utenwhile. fils than a gourd or calabash, with which, when they come to a river or fpring, they open their flower-bag, and wet a little with the water, and that ferves them for drink; and for meat, when they put more of it with a little falt and pepper, this they call Rubul; and fometimes they eat their meal dry, with flices of dried flesh,

there at their first coming, which was about 200000, more or lefs, according to the greatness of the districts or territories, and their habitations, which never were in form of a city or town; for the Indians cannot endure any formal constraint, but love to live free in the fields; and every Cacique, or lord, govern'd his own vaffals, who placed them-felves according to their conveniencies, fome in one valley, and fome in another; fome at the foot of mountains, others on the fide of rivers; fome by the sea-side, or on the top of mountains; but all under no other form of government, than the will of their lord, the Cacique, to whom they yielded a ready and prompt obedience with joy. Their houses are generally of wood, with-Their hand out any stories, not very large, nor all of a fer. piece, but each room fram'd by itself, so that when they have a mind to remove and chuse another situation, they carry away the house by pieces, or rooms, which ten or twenty men can eafily carry. When they take it up, they clear the ground about it, and then at one cry, lifting all together, they get it up, and carry it chearfully away,

wards one another. Their furniture is very mean, they being Tooir furniture a people that despise all conveniencies and memor. fuperfluities; infomuch, that that which is their natural way of living, would be high penance with any European nations: For first, as to their beds, they have neither quilts, nor sheets, nor pillows, much less do they need curtains, pavil-lions, or alcoves. The hard ground is their couch, upon which they lay fome poor

skins; and for boulfter, they lay a ftone, or a piece of wood, and double their cloaks to lay on it; and that is their highest contrivance of eafe: they have one or two very coarse coverlets, which they weave of a fort of thread as thick as one's little finger. People that use so little about their persons, may eafily be prefumed to have no hangings, nor other ornament to their walls; they have no utenfil of gold or filver, though they have so much in their country; their plate is four or five diffies, and fome fpoons of wood, or a shell from the sea side; a calabath or gourd to drink in; a leaf of a tree, or of maiz, for a faltfeller. This is all the apparatus of their table, which is the ground, or at best a little bench, without any cloth or napkins, but only a little broom, upon which they wipe their hands.

Their meats are the most simple, and easily drest, without any incitements to gluttony, as in other nations; but yet they are tasteful enough, and such as many of our Europeans like very well. They eat little sless is all before the Spaniards came among them, they had neither sheep, goats, nor cows, no, nor hens: they use these only at their great feasts. Their ordinary diet is of maiz, variety of fruits and herbs, and most commonly gourds, or a fort of beans, which we call frizoles. They did eat sish; and the game they hunted, particularly a fort of small rabbits, which they call Degus; and since the coming in of the Spaniards, they eat beef and mutton, of which there is great abundance.

Inftead of wheat bread, which they had not before the *Spaniards* brought it, they cat maiz boiled in water, just as rice in the

Eaß Indias. This maiz is, and always has OVALLE, been the general nouriflment of the Indians of America; and is not only their meat, but their drink, which they make of the fame maiz, toufted and fleeped in water, and then boiled, and fet by; and that is their Chicha, or wine, which they make al fo of the fruit of other trees.

Their way of making flower is very different from ours: they first toast their maiz bread. in great platters of earth; thefe they fer upon the fire full of fand, which when it is very hot, they take off; and putting the grains of maiz to it, stir them about very fast with a kind of broom: it is foon toast ed. When done, they take it out, and put in more, till they have done enough to make flower. This they grind between two ftones thus; They have a stone fixed in the ground, of about the fhape and bigness of a sheet of oer, and so hollowed, as another from a an wal figure may play upon it: this the indi woman takes with both The women hands, and being opon her knees, makes it make it. play upon the other, putting, from time to time. ith fer left hand, the maiz between the two thones, fo as to supply what falls away, and that the mill do not stand still. The lower falls forward into a fort of box, ses is our mills, and almost as fast, compair g the strength of a woman to that of a stream of water. She can do enough at once for the maintenance of her family; and make a provision too for a journey or a voyage of her husband or fon to the wars. This is the proper business of the women and it would be a shame for a man to employ himself in it, or in any other houshold

CHAP, IV.

Of the Same Subject.

WHEN the *Indians* are fick, they change little of their ordinary way of living, and they never have a better bed. Indian phle-Their way of letting blood is fafer than ours; for it is not with a lancet, which may either fail to draw blood, or go too deep, and lame the arm, if the furgeon be not very skilful; but with a shorp flint, fixed at the end of a little piece of wood, so fast, that there is just enough left out to cut the vein, and no more: this they apply to the vein after they have made a bandage, as we do, and striking a little stroke upon it, the blood never fails to come, in greater abundance than our bleedings are. This is all they need a furgeon or barber for, they themselves having no beards to shave, and the little hair they have, every one pulls out; and they take it for an affront to look hairy.

They have pinchers, which they make of cockle-fhells, and always have them about them, ufing them from time to time in converfation; they thinking it as honourable to be without that, which other people nourifh, comb, and take care of; which is a good conviction of the variety of opinions of mankind, about what is, and is not honourable. As for their hair, they let it grow just below their ears, and no lower, and fo need no barber to cut it, but do every one help the other to keep the ends of it even.

Their manner of cloathing themselves, Their manner (though of various, and very beautiful co-ne of lours, which they give to the wooll that cloathing they weave their cloaths of,) is very plain and simple: they have no lining to any of their cloaths, neither do they wear one un-

Vol. III.

Ovalle der another: their drawers come down to their knees, open and loofe, and it is upon their naked body 3 for they use no shirts: they have a fort of waiftcoat, which they call Macun, and it is made of about a yard and a half of fome woollen ftuff, which they leave open, fo as to put it over their heads, and then they gird it with a girdle: they have also a kind of cloak or mantle, which

they call *Chomi*, which they put on when they go abroad: they have their arms and legs naked, and on their feet they have a fort of shoe, which they call Ojota, and is like the rope thoes the Spaniards wear: they wear nothing on their heads, but a kind of circle of wooll, of various colours, with its fringes hanging down like a cap; which they stir or pull off in shew of respect, as

we do our hats.

Their fine-In their feafts, balls, and rejoicings, though they do not change the form of their cloaths, yet they have a richer fort, of finer wooll, and richer colours: they put about their necks fome chains of shells, which they gather by the fea-fide; thefe they call Nancas: others put fnail-shells, flrung upon a ftring, about their necks; and those of the streights of Magellan have pearls very well wrought, and of great artifice, as is affirmed by the authors already cited; and on their heads they put a kind of garland, not of flowers, but of wooll, dy'd of feveral beautiful colours, to which they hang fine little birds, which they efteem, and on each fide they have a plume of high feathers, either white, red, or blue,

and about half a yard high.

Their way of dancing is with little jumps, and a step or two, not rising much from ground, and without any capers, fuch as the Spaniards use: they dance all together in a ring, round a may-pole or standard, which one of them holds in the middle as an enfign; and near it are all the bottles of their wine, of which they take now and then a fup while they dance, drinking to one another; for it is a cuftom among them never to drink alone any thing that is given them: he that begins takes a fup, and then he that he drinks to pledges him, and gives the cup to another, and fo to a fourth, till it be empty; and yet one has not more than the other; for what this man does for that, that man does for this; and fo at laft they come to be fo equally fhared, that at the end of the entertainment, they are all alike drunk, and laid down; for they drink as long as they can stand. But this is not eafily brought to pass; for besides what they drink in the day-time, they will often pass all night at it, without leaving off, finging and dancing to their drums and flutes. The women, as more bashful, to not enter into these dances, except some

one or two, when the wine has got into The moment their heads, and then too they do not enter into the ring with the men, but dance feafls. by themselves. Few of them get drunk, so as to lose their judgment; fo they are up- Their care on their guard more, to mind that the of their men do not quarrel, and hurt one another in Their lates, which they play Their mid their drink. upon in these dances, are made of the bones mstrume of the Spaniards, and other energies, whom their energies they have overcome in war. This they mies bones do by way of triumph and glory for their victory: they make them likewife of bones of other animals; but the Indians of war dance only to these of their enemies.

Their way of finging is, all together raifing their voices upon the same note, without any difference of parts or measure; and at the end of every fong they play on their flutes, and a fort of trumpets, just as we do on our guittars in the Passacalles. This they repeat fo often, and fo loud, that one may hear them at a great distance; for in these feasts, they are very numerous. Those who are not engaged in dancing, fit together in feveral companies, talking together upon past occurrences, and still warming themselves with their wine; and then they begin to recollect the injuries they have received from one another, and fo refreshing the memory of old contests and enmities not revenged 3 and this makes them break out into new animolities, and fometimes kill one another upon little provocation.

The women as well as the men have The women their arms naked, but no other part about dreft. them; for though they go barefoot, yet their cloaths, which are very long, cover them from head to foot, though in fome places they wear them shorter: this is a plain fort of mantle, close to their bodies, without any linnen underneath; this they let fall to their feet, and having fastened it on their fhoulders, gather it in plaits and fwath themselves from their waste to the breafts with fome fine coloured-woollen fearf, of about four fingers broad, and fo long, that it takes fo many turns about their waste, as to keep their bodies as ftreight as any: this is all their drefs within doors.

The indian women of the better fort, that live in towns among the Spaniards, have learned the use of smocks and waistcoats under their mantles, but of no other thing; and one cannot affront an indian woman The Womes more, than to offer to put her on head-hate bead cloaths, or necklaces, or fleeves, or gloves, dreffer, or any of those ornaments which the Spanish women use; and much more if they oblige them to put any paint upon their and paint faces; nothing of this kind could ever prevail upon them, though born and bred among the Spanish women; and to talk to

ever preand bred to talk to them them of it, even to those among them who love to be fine, would be like giving them a cut over the face, so great a horror they have for any thing that is so very contrary to their antient customs. They wear nothing on their heads but their hair plaited behind their shoulders, and divided handfomely upon their forehead over their eyebrows, and have locks which cover part of their checks; so their face is handsomely and simply adorned, without any artifice. When they go abroad, they put upon their shoulders another half mantle, square, and fattened before with a bodkin, or crochet, which answers the two others on the shoulders; and thus they go abroad with their eyes fixed upon the ground; for they are naturally very modest honest women.

This manner of cloathing themselves, with fo much fimplicity and plainness, as well in the women as the men, with fo little pride and vanity in their houses, does Ten artifi not much encourage artificers, who have little to do; and by that means there are the more men of war, which is the thing in which thefe men place their honour and felicity, as other nations do in the fumptuousness of palaces and furniture, or in other riches and eminencies, either of arts or learning: of all which thefe Indians never had any notion; and yet they learn them eafily, when they are taught them, and to a great perfection. They can neihering ther read nor write among themselves; but as to their way of remembering and keeping account, they have their Quipocs, which is a fort of strings of different bigness, in which they make knots of feveral colours, by which they remember, and can give an account of the things committed to their charge. With these they will give an ac-count of a great flock, and tell which have died of fickness or other accidents, and which have been fpent in the family, and for the fhepherds; and they will tell every particular that happened in fuch and fuch occasions, and of what they did and faid. When they go to confess, these Quipoes ferve them to remember their fins, and tell them with diffinction and clearness: they have befides excellent memories of their own, and do remember thing; of very antient date, just as if they had happened but a little while before; and when they begin to talk them over, (which happens generally when they drink, and begin to be warmed with wine,) 'tis wonderful how they will repeat things pail, with all their circumstances, and particularly affronts and injuries that have been done them, or their anceftors, refreshing the memory of things that feemed to be quite forgotten. For proof of the care they take to keep the memory of remarkable paffages, I must relate

here what I learned from father Diego Torres OVALLE. Bollo, a very extraordinary man, both for holines of life, and skill in government.

This great man returning from Rome (whither he had been fent as procurator of the province of Peru) to found the province of Quito, he saw in a place where four ways met an Indian, who, to the found A fingular of a drum, was finging a great many things gring all alone in his own tongue: the father call erons. led one in his company, who understood it, and ask'd him what that Indian meant by that action; who told the father, that that Indian was, as it were, the register of that country, who, to keep up the memory of what had paffed in it from the deluge to that time, was bound every holiday to re peat it by the found of a drum, and finging, as he was then doing. He was moreover obliged to instruct others in the same way, that there might be a fucceffion of men to do the fame thing after he was gone; and that which he at this time is finging

is, That in fuch a year there had been there An addia white man called Thomas, who did great two of the wonders, preaching a new law, which in or a be of timespresse, where the manner by which the Inwe may see the manner by which the Indians supply the want of books and writings.

The women of Chile are fo bold and manly in their courage, that when it is neceffary, and that there is want of men, they take arms, and behave themselves as if they were men. They play likewife at a very active game called La Chueca, wherein the men shew their greatest agility and nimbleness, each fide striving to get a ball from the other, and carry it to the mark with crooked bandy flicks. They are about forty or fifty on a fide, who place themselves in different posts, so as to be useful one to another, and drive away the ball from the other party; and when it happens that two of different fides are at it together, 'tis a pleafure to fee them run, the one to forward it with another stroke, and the other to get before him and hinder him from ftriking it, that he may drive it back to his own fide. This is a sport much to be feen, and generally it has many spectators to see the end of the play, which often lafts a whole evening, and fometimes is forced to be put off to another day, fuch contention there is to

win these prizes they play for.

The strength and boldness of the women the hard comes from the little tenderness they are diagnostic bred with, for they avoid neither heat nor of the word old; and in the coldest winters, when men. birds are killed with cold, they wash their heads in cold water, and never dry their hair, but let it remain wet, and dry itself in the air; and as for their children, they wash them in the rivers, when they are yevery young; and when they are brought to

bed,

OVALIE in a very little time they are about the the gentleman replied, Thefe Indians are all house, as if it were not they, but some other woman that had lain in.

The Indian

If the women behave themselves thus, ment hards what may we expect from the men? 'Tis a ne/s agamst wonderful thing how little they fear weather, though in the midft of winter; and to fee an Indian, with that fimple habit we have described, his head bare, without hat, or any other covering. I have feen them in this condition endure mighty showers, which wet them all over, and came out at their breeches, and yet laugh and not value that, which to others would have been in-

fupportable.

I remember, upon this occasion, what was faid by a Spanish gentleman, of a merry humour, to one newly come from Europe, who, with great charity, was pitying thefe poor Indians for their fufferings in winter, which in that country is very fevere. The gentleman asked the good father what he had to keep his face from the cold? To which he answered, Nothing, because every body's face was used to the weather. To which

face; for from their infancy they have no defence against the cold. Who is it that pities a trout, or other fifh, for being in the water, because they are bred in that ele-ment? The same may be said of these In-dians, who are like sithes, and are bred to all that hardfhip; and fo we need not wonder at it. By these means they are so har-Boar their dened, that a wound which the braveil wound by.

Spaniard would take his bed for, does give Spaniards. them fo little trouble, that I have feen them go about without minding it. I have known them have a broken head by accident at play, and all they do is to wash it in cold water, never leaving their employment or business; and with this, and the application of their own herbs, which, indeed, are of great virtue, they are foon well; but the excellency of their own conftitution helps not a little to their cure in wounds, as well as all other diftempers, out of which they get well with a great deal less time and care than the Spaniards,

CHAI

CHAP. V.

Of other Qualities proper to the Natives of Chile.

The people of Chile dient.

A good

enflow in

Spain to

FROM this strong constitution, comes the admirable service. the admirable patience of their minds, and the little fense they shew of that which amongit us Europeans would be a great mortification. That which happened between an Indian and father Lewis of Valdivia is admirable upon this fubject. The Indian came to confess to the father; who, to make him enter into a penance for his fins, ordered him to wear a Cilice, or hair-cloth upon his skin: it was a very hard one, and fuch as would have punished one of us severely. The Indian put it on, and about a year after, there was a proceffion of the holy facrament, at which he danced, and feeing his confessor in the church, he left his danprocessions, cing, and came to him, faying, Look bere how I have preserved what thou gavest me a year ago, and shewed it him upon his naked skin. The father was aftonished to see, that what he gave him to mortify him, was turned to an ornament; and asking him how long he had worn it, was answered by him, I have never left it off one minute fince thou gavest it me; and so returned to his dancing, shewing his companions the prefent the father had made him, as pleafed with it, as if it had been a gold or filver brocade; and fo far he was from taking it for mortification, or feeling its roughness, that he wore it for a favour given him by his father-confessor.

The complexion of

These Indians of Chile are the fairest complexioned, and whitest of all America; and those of the coldest countries are the whitest, as we see in Europe 3 but the very antipodes of Flanders never come to be so white as the Flemmings; and among all the Chilenians, I do not remember a red-hair'd one; for No red they all, both men and women, have black hair. hair, and that very rough, and hard, and thick; infomuch that the mestitos, or mungrel breed of a Spanish man and Indian wo-man, are known and diftinguished by that from the children of a Spanish man and Spanish woman; and this will last to the second and third generation before it foftens. There is little difference in any thing else, either of fhape, feature, or difpolition; nor in the manner of speaking, or found of the voice : and as for the language, not only the mestitos, but the Indians bred among the Spaniards, are as ready at the phrase and turn They fresh of the Spanish tongue, as any Spaniard. I Spanish have made experience of this often in con-perfectly. feffing them; for the confessionary is so turned, as the father-confessor cannot see the woman that enters to confess. It happen'd to me often to have an Indian woman come in after a Spanish woman, and I could not find any difference, till the herfelf, finding I ufed her with that diffinction and civility due to Spanish ladies, would humbly tell me she was but an Indian.

The constitution of these people is the They bear cause that time does not make so strong antheir year impression on them, as on us; and they bear wery well their years mighty well, turning grey very late, at threefcore, or thereabouts; and till then they look like young men. When

y is so turn-see the wo-

iappen'd to ian come in

ild not find ding I ufed ility due to tell me she pple is the They bear ftrong an their yes d they bear very well. grey very s; and till When they

they are over white, or have any baldness, you may guess them at about a hundred: Live long, they all live long, and particularly the women; and when by age they lofe their julgment, they feldom falter in their memory, which lasts them to their dying day, even to remember all the particulars of their young days from their infancy. sodieth teeth and eyes are fo good, that they feldom lose eithers and, in short, all the infirmities of old men, which are the forerunners of death, come to them later than Cannet en to other nations. But yet, if they happen to go out of their own country, they lofe fave their all their vigour, as we experience daily in our prifoners of war; who being fold to Peru, as foon as they feel the heat of the tro, ick, they full fick, and most of them die; and this is no more than what happens to the Spaniards, when they come from their own climate to Porto Bello, or Pana-

> that are between the tropicks. From this experience the Indians have of the hot countries, comes the great reluctancy they shew to go out of their own, and the refentment they express against those who carry or fend them abroad; and 'tis not to be imagin'd the strange and rash contrivances they have to make their escapes from Lima; for though they have above five hundred leagues to go to their own home from *Peru*, yet they undertake it, and most commonly compass it, through a vast number of dangers and inconveniencies. For first, they are forced to go all along by the fea-fide, by which one may guess how much they go about, fince they fetch the compass of all the bays and nooks, and double all the capes.

ma; nay, the Sp. ni rds born in Chile, ven-

ture their lives that go to those countries

The next inconvenience which they meet with, is want of food; for they dare not enter any town, or inhabited place; fo they are reduc'd to feed on cockles and other fhell-fifh on the fea-fide, which is no very good nourifhment. The third difficulty is the passing of so many, and such swift

The fourth inconvenience is the want of water to drink; for 'tis not possible, that in fo great a journey, they should not some-times miss of fresh water to quench their thirst. All these difficulties, and many others, which are obvious to travellers, are overcome by these Indians by length of time and patience; and they get at last to their own country, and are out of flavery, not by the means of gold or filver, but by the bravery of their minds,

The boldness of some other Indians was of fome yet more remarkable: these were carried in Chichians a ship to be sold as slaves at Lima, by a Portuguese gentleman of the Habit of Christ, Vol. III.

who was going about things belonging to OVATER. war, at the time that I went the fame voy-age: this navigation is made commonly in fight of the coaft, more or lefs, according as the winds ferve, but still they keep a good way out at fea, for fear of the rocks. Thefe Indians refolv'd among themfelves to throw themf ly s into the fea, to avoid this flavery; and one day, when they found the fhip in a proportionable distance to the fhoar, fo as they durit venture to trult to their fwimming, they got loofe very dexteroully from their fetters, and flit, without being perceived, down by the ship's fide into the feas and when they mis'd them they were out of fight, and fo it was in vain to follow them. Among these pri- modd foners there was an old man, who either fory. because he was not trasted by the others, or b.c.use they had not the opportunity of acquinting him with the d figh, he not being that up with them, but having the liberty of the fhip as an old man, remain'd behind after they were gone. This *Indian* began to think of the thing, and to weigh with himfelf how his co apanions had undertaken and perform'd an extraordinary action; he reflected how they had arrived at their own land, and among their friends, who perhaps were enquiring about him, and that every body defpis'd him as a coward, and a man of little spirit, since he had not been able to overcome the adverse fortune which the others had conquer'd, but had submitted to it: he represented to himself the welcomes and joys which their friends express d, and the scales and entertainments made for their return, and the embraces and careffes which they receiv'd from their relations. All this, I fay, made fuch an impression in his mind, and rais'd fuch an emulation, that he could not bear the reproaches he made himfelf, particularly feeing himfelf without a remedy. At laft, after much thought and pensiveness, he came to a refolution, which was, to do fomething which should be bolder than what his companions had perform'd, and that in the manner of doing it; for he re-folv'd to do it by day, in the fight of all the Spaniards; and for a beginning, he defign'd to kill his master, not in the night, and without witnesses, as he might easily A delpehave done, but upon the deck, in the fight rate old of all the fight the fight Indian. of all those in the ship, to get himself a greater name of bravery. To this end, he took one day, a great knife in his hand, and fell upon the captain; and having wounded him in feveral places, with as much precipitation as he could, leap'd cor-

board with fo much fuddenness, the he flipp'd away from those who endeavour d to seize him. "Time be imagin'd, they were

all wonderfully furpriz'd at the resoluteness

OVALLE of the action: they immediately brought the ship too, and put out the boat in all the haste that could be to follow the Indian, who fwimming like a fish, was already almost out of fight; but they overtook him, and bid him yield himself a prisoner, since he could not escape; and finding him still endeavour to get away, they struck at him with their launces, but he dexterously avoided all their strokes with great presence of mind, diving and appearing again where they leaft expected him. Upon this they fir'd upon him, and wounded him in feveral places; but neither then did he yield, nor would ever had a thought of it, but the lofs of blood taking away his strength, had made him unable to get away, fo they brought him almost expiring to the ship, having more valued death with the reputation of a brave man, than life with the infamy of a coward, and the loss of reputation among his own people. This fact does not only shew the bravery of the nation, but likewise their great aversion to go out of their own country, and how heavy a yoke they think subjection to be; and we shall see hereaster how much they have done to defend their beloved liberty.

Now let us speak of some other customs

Their mar- these Indians have. They solemnize their
marriages their own way, and in a very
contrary manner to that of the Europeans;
for as to the portion, the woman does not
provide it, but the man; and neither of
them enjoy it, but it passes to the propriety and use of the father of the young
woman; so that the husband has a charge
upon him of maintaining his wise without
Daughters any help; nay, rather with less ability, for
are no bur- he parts with some of his substance to pur-

then, but chase her; so that in this country 'tis no

thes to a charge at all to have many daughters, but

rather a part of their estate and substance.

They take many wives; and the greatest obstacle they have to be converted to our religion, is this vice of Poligamy, which they embrace with great sensuality, though it is chargeable, because at the same time it is a figure of power and riches. The first wife has some preheminence over the others, and has the ordering of them, yet they all look upon themselves as lawful wives, and their children as legitimate; yet the son of the first inherits the state and the honour of Cacique, and has a power over his other brothers.

Natural obedience so their Cacique. The fubjects obey their lord with great punctuality, love, and refpect; and for this reason they have no prisons nor strong places to hold them in; for their natural love and respect they bear their Cacique, is a law inviolable in their hearts, and a reward of their obedience, which they shew in all regards that may please him.

When a Cacique has a mind to make war, Their wan he need not make provision of money for voluntary, without without pay, without which, amongst us, men will pay, not fight, even for their king: he need only give out his orders, and they all come with arms and horses, bearing their own charges during the enterprize; and this is the reafon that they can affemble fo powerful an army in fo little time, they all looking upon the common cause as their own; and as they make the good of their country the motive of their arms, every one thinks himfelf fufficiently rewarded if they can defend that from their enemies. The found of the drum and trumpet is only to fliew them the necessity of their meeting in arms; at which they immediately ! ave wife and children, and all that is dear to them, with the hazard of never feeing them more, as it often happens.

In the distribution of the booty and flaves taken in war, there is no other method, than that every one has what he can get, so that the bravest and most diligent are the best provided, without any obligation of giving any part of it to their captains or general; for in this they are all equal, and valour alone makes the diffine-Very brane tion, which they shew in an eminent degree, being very defirous to recover fome of our arms, fuch as guns, fwords, launces; for they have no iron of their own. Want iron When they return from war, and find what men they have loft, 'tis incredible what lamentations, cries, and tears, proceed from the widows and children of those who are dead; and though this be a common fentiment of humanity, practifed amongst all nations who value fociety and proximity of blood, which are the foundation of friendfhip, yet the Indian women feem to furpafs all others; for they do not cry in fecret, but fet up their notes, fo that when any one hears them at a diftance, it provokes more to laughter than moves to compassion. When a man dies at home, the manner of The wo their expressing their forrow is more remark-mens n able; for the women all get about the dead mourning body, and the eldest beginning, the others follow all in the fame tone; and thus they continue a great while, fo that they never give over as long as they can hold out; and this custom they preserve, even after they are baptiz'd, and live among christians; but not that which they had of opening the dead bodies, to know of what difeafe they died, and to put meat, and drink, and cloaths in their graves with them, as also jewels and things of value; neither do they cover their graves with pyramids of flones, nor use other ceremonies practifed by the gentiles of those parts.

CHAP. VI.

OVALLE.

Of the Chilenian Indians, who inhabit the Islands of Chile:

W E divided the kingdom of Cbile into three parts, and the Islands made one: these are very well peopled: those who live in the service Islands, which are capable of producing corn, and feeding slocks, pass their lives as the Indians of terra firma do, eating sless as the Indians of terra firma do, eating sless and several fruits, the product of their Islands. Those who inhabit the barren or less fertile Islands, eat fish of the sea, and shell-slish, as also Potatoes; and some, who cannot have any wooll, cloath themselves with the barks of trees. Some go stark-naked, though their climate is mighty cold, and by custom do not feel

the hardness of the weather overmuch. Others have a strange way of cloathing themselves, which is to gather a certain earth with roots about it, to give it a confiftency; and others cloath themselves with feathers, as brother Gregory of Leon reports in his map. They are all tall men, and in fome places there are giants, as the Dutch relate, who fay, they found skuls that would contain within them some of their heads; for they us'd to put them on like helmets: they found also dead mens bones of ten and eleven foot long, whose bodies by confequence must have been thirty foot high, which is a prodigious thing. Those whom they saw alive, were generally taller by the head and shoulders than the Dutch. This appears by the relation of general Schewten; and from that of George Spilberg we learn, that when they were in the Streights of Magellan, they came to an Island, which they call'd the Island of Pa-tagoons, or giants, because of some they faw there, and on the Tierra del Fuego. Among the rest, they faw one who was upon a rock, to see the ships go by, and they fay of him, that he was immanis admodum, & horrendæ longitudinis.

manded by Don Fray Gareia, Jofre de Loaifa, a knight of St. John's order, that at
the cape of the Eleven thousand Virgins they
found the footsteps of men of a large stature, and met two canoos of savages, whom,
because of their strength and stature, they
call'd giants: they came near the ships,
and seem'd to threaten them; but those of
the ship endeavouring to follow them, they
could not come up with them, for they
rowed so swiftly, they seem'd to fly. "Tis

Canoos of probable these canoos were made of the
"valubone. ribs of whales, which are there in abun-

Likewise we know, from the sleet com-

dance; and they found one before with the fides and fteerage of whalebone.

In another voyage, made by Thomas

Candish, an English gentleman, they found in a port, (in a very inacceffible place,) a company of *Indians*, very lufty men, who notwithstanding the prodigious cold of that country, lived in the woods like fityrs, and shewed so much strength, that they would throw stones of three or four pound weight We read likewife in the rea great way. lation of the voyage of Magellan, that as he winter'd in the bay and river of St. John, there came to the ship six Indians so tall, that the lowest of them was taller than the tallest Spaniard aboard; that having made a great kettle of the sweepings of the bifket for them, enough for twenty men, those fix eat it up entirely, without leaving a crum of it. Magellan gave them a fort of coats of red wooll, with which they were much pleas'd, never having feen any before; their ordinary wear being deer skins. They learn'd from them, that in the fummer they us'd to come down to the fea-fide to live, but in the winter they withdrew more into the heart of the country. We know likewife by these same authors, that the number of the Indians that inhabit those coasts, is confiderable, particularly in the port cal-led the port of Shell fish; where as foon as they landed great numbers of Indians, with their wives and children, came to them, and exchanged with them great quantities of pearl, ready wrought in points, like diamonds, very artfully, for scissars, knives, and other baubles; as also for Spanish wine, which pleas'd them extreamly; but they came no more, for they were frighted with feeing the Spaniards shoot some game.

The fleet of George Spilberg found also great numbers of inhabitants in the land, on the other fide of the Streight; and when the captains, call'd the Nodales, were by the king's order to view the Streight of St. Vincent, they found, upon a point of land of that Streight, great store of people. The that Streight, great store of people. fame is faid by the Saballas, and others, who went from Peru to fearch the Tierra del Fuego; and all those who have pass'd the Streights, have conftantly feen men and inhabitants on the shoars in several places; and at one place some of Spilberg's men landing to purfue fome birds of a very fine colour, which they faw on shoar, had fcarce begun to fhoot them, but they were environed with Indians, who attacked them fo furioufly with clubs, that happy was he that could make his escape to the ship; and many of them were knocked on the

head.

ed by the

OVALLE. The Nodales likewise saw in the bay of 1646. St. Gregory great numbers of inhabitants, with whom the feamen drove a trade, by

exchanging fome Spanish trifles for gold. The Islands By all which 'tis apparent how well peopled and Streights all that coast and the Islands are; yet we do not know what fort of people inhabit the fourfcore Illands discovered by Pedro Sarmiento, for no body landed out of that fleet; but we know that the Islanders of Mecha, are a peaceable civil nation, feveral thips having touch'd there, and at Sansta Maria. As for the nation call'd the Chonos, they are a poor people, but good natur'd, as has been feen by the *Chilenians*, in whom the Staniards have found great docility, and a good understanding. In the Islands discovered by Francis Drake,

in about five and fifty degrees, of which we have already made mention, they met with Naked pec-canoos of men and women flark naked, ple in a ve. which is the more remarkable, because of the exceffive cold of those parts, where there is a continual night, without any appearance of day, when the fun coming to the tropick of Cancer, makes our fummer; and on the contrary, when he draws near the tropick of Capricorn, there is continual day, without any fhadow of night.

And now lately, in the year forty three, the Dutch having fent a fleet under the command of Anthony Brun, which pass'd the Streights with a design to fettle at Valdivia, as they endeavour'd; they fail'd afterward's into feventy degrees, where they discover'd an Island, which they call'd Barnevelt, in which they faw the footsteps of men of large stature, and observ'd great smoaks: this place was fo cold, that the Dutch could not endure the rigour of the weather, which was nothing but frost and snow, it being then June or July, which is the depth of their winter; and a perpetual night, with-out feeing the fun one hour in a day. 'Tis a wonder how those Islanders pass their time in so much cold and darkness, without any thing to cover their nakedness; for wanting commerce with Chile, or other parts in Europe, they have neither sheep, nor goats.

nor any thing that produces wooll fit to make them garments. It must be own'd, Mankind that men are quite other creatures than the naturally nice imagination of fome eneminate nations hardly takes them to be; and human nature by cuftom accommodates itself to the place where 'tis bred, fo that very often men will not leave that place for any other more full of conveniency. 'Tis for tals that thefe Indians flew fach an averfine to leave their country where they were porn and breds and though it be a miferable one, and those they go to more delicious, yet there is no fweetness in any one like that of their own country.

There is a report likewife, that in the A report of Streights of Magellan there are pignies, but Pigmies, I know not upon what it is founded; for all the authors that relate the voyages made into those parts, speak always of giants, or men of a gigantick form, who exceed us in ftrength and flature; and 'tis faid in one of these relations, That the ship's men, in a certain place, beginning to fight with these Indians, they pull'd up great trees by the roots, to use them as a retrenchment, as we may see in a picture in Theedore and Jean de Brie; but I cannot imagine how this report of pigmies was invented; and it feems to me a jeft or irony, or, perhaps, among these giants there are some dwarrs,

That which was feen by the vice-admiral of George Spillberg's fleet, was a body of about two foot and a half high, which was buried with another of an ordinary stature in a grave of very little depth, and cover'd after the Indian way, with a pyramid of flones, in an Island call of the Great Island, about the fecond mouth of the Streights: and from hence, perhaps, or from having feen fome of that littleness alive, this report of Pigmies took its rife.

This is all the account I can give of the inhabitants of the Streights, and Islands about it. Time will, perhaps, enable us to be more particular, when by commerce we are better acquainted with them; and then without doubt there will not be wanting authors to write about them.

CHAP. VII.

Of the Indians of Cuyo, who are on the other Side of the Cordillera, to the East of Chile.

THE Indians of the province of Cuyo, though in many things they are like the inhabitants of Civile, yet in many others The Indians they are not fo. For first, they are not fo white, but more copper-coloured, which are copper attributed to the great heat they endure in fummer. Secondly, they are not fo cleanly, nor do not build fuch neat houses

to live in; but their habitations are wretched; nay, fome, who live in the marthes, make themselves holes in the fand, into which they go like wild beafts. Thirdly. they are not so laborious to cultivate their land, and so have not such variety of product as those of Chile. Fourthly, they are not fo brave, nor warlike as the India

Lians

of Chile: their language is likewife different, and so different, that I do not know one word of the one, that is in the other; but yet the language of Chile being fo univerfal, that it is the same all over the kingdom, to the foot of the Cordillera; those of Cuyo learn'd it too, and that very perfectly; but I never observ'd that a Chile Indian fooke the language of Cuvo, which flews the advantage that the language of Chile has over the other.

In return of these advantages which the Chilenians have, those at Cuyo have some over them. And the first is in the stature, which is taller, but not fo ftrong and wellfet as the Chilenians, but rather raw-bon'd. without flesh. I do not remember I ever faw a fat Cuyian among fo many as I have feen. They are likewife better workmen in fome things which require patience and length of time, fuch as basket-work of fework that veral figures, all of ftraw; and yet to close work'd, that they will hold water; for which reason they make their drinking veffels of them; and as they cannot break by a fall upon the ground, they are very lafting, and the curiofi is of this kind, which they make, very much valued for their work and colours.

Likewife they prepare feveral firs of anirians, which they hunt; and they are very foft and warm for winter: they hunt and catch offriches likewife, and make many works of their feathers, with which they adorn themfelves on their festivals, mingled with the feathers of other birds. They likewife hunt the wild goats and deer, and are the mafters of all the Bezoar-Stones, which they fell to the Spaniards fo dear, that any one who should buy them to get by them, would make but a finall profit in Europe.

These Cuyians are also more hairy, and have there they pull their hair as the others do, but have more beard than the Chilenians, though with more trouble; and they never look fo fmooth as those of Chile. They are all well-shap'd, and nimble, and have a good air: they have also good understandings. The women are tall and flender, and I do not know that I ever faw taller: they paint The women their faces green, which is fo well fettled in pant their skin, that there is no getting it out: most commonly they paint only their nostrils, fome their whole faces, and the men their beards and lips. Their habit is decent in both fexes: the women let their hair grow as long as they can, but the men only below their cars. In all other things are like the Chilenians.

They are very nimble, and good travellers, without tiring. I have feen them run up the stiffest and streightest hills of the great Cordillera, like fo many goats; and this the women will do as well as the men ; Vol. III.

nay, the little children too. The women OVALLE. will run with their children in a cradle faftened to their backs by a strap that comes over their forehead; and with all this weight they follow their husbands with fo much ease and agility, that 'tis wonderful,

For a proof of the admirable disposition A proof of of these people, in walking and running, their agiles a corrigidor and captain-general of that "yo province told me a ftory about their hunting their venison, which is very singular: He told me, That as foon as they find their game out, they draw near them, and follow them upon a half trot, keeping them still in fight, without leaving them fo much as to eat; and in a day or two they begin to tire them fo as they can come up with them, and kill them, and return home loaded with them, where they feaft upon them, with their families, till they have made an end: for these Indians are such gluttons naturally, that a few of them will eat up a calf, or a young heifer in a meeting: but they are as good at falling, when they have nothing to eat; for they will pass several days with a little maize and fome roots, which grow will: they are also very dexterous archers, and often kill with their arrows the game they fee.

I shall not omit a particular favour be-They preflowed on thef: Indians by Gol Almighty, and to an which is a fingular instinct of tracing and finding lost following any lost thing. Of which I shall things. give two examples which happened in the city of St. Jago.

Our college had a cart belonging to it, which stood at the gate of a garden, to which our Seminarists di l use to go to refresh themselves: it was stole one night, and being miss'd in the morning by one of our lay-brothers, he immediately went to find out a Guarpe, (for that is the name they give those finding Indians;) he presently fell upon the fcent or pitte, and followed it, taking with him the lay brother, till he came to a river, where it fail'd him: but he loft not the hopes of finding it; he croffed the river, and recrofs'd it again, once and twice, by fo many different fords, (the man that stole it, as he fince confess'd, had cross'd so many times to break the piste to the follower.) After this he went four leagues outright, and there he found it, when the man that had it, believ'd himself most fafe from being difcover'd.

Another time, a certain person having loft a parcel of oranges, he employed a Guarpe, who having led him through many streets and turnings, brought him at last to a house; where finding the door shut, he bid him knock, and go in, for there, faid he, are thy oranges: he did fo, and found them. There are every day experiments of this kind made by them to admiration:

the .

of

OVALLE, they are likewise stout workers, very strong, 1646. and lafting in labour.

Next to these Indians of Cuyo, are the Indians Pampas, call'd fo because they inhabit those vast plains, which are extended for about four hundred leagues to the east, and reach to the north fea. Those of the point of Los Venados are the nearest the kingdom of Chile, and are much of the fame kind, These Pampas have no houses, in which they differ from all mankind; for the first thing men generally do, is to cover themfelves from the inclemency of the air: and this is the thing which these Pampas do the leaft care for; perhaps, they are of opinion, that 'tis an injury to the author of mankind, to look for more shelter than he afforded men at first, which is the earth, with the heavens for vault or cover; and that to defend themselves from rain, it was enough to make any little cover, which might ea-fily be taken away, and fet up in another place.

This they observe; and look upon it as a fort of prison or captivity, to be tied to one place: for this reason they will neither have house, nor gardens, nor plantations, or possessions, which are like chains to himder their removal to other places; for they Love inde-judge that the greatest of all earthly feligendency. cities is to have the absolute, entire, and independent use of their own free will; to live to day in one place, to morrow in another. Sometimes, fay they, I have a mind to enjoy the freshness of a river side; and being weary of that, I pass to another.

Otherwhile I have a mind to live in woods and folitudes; and when I am weary of their shades, I go to the open air of plains and meadows. In one place I hunt, in another I fish: here I enjoy the finits of one territory; and when they fail, I feek out another, where they are Liginning to ripen. In fhort, I go where I will, without leaving behind me any thing I regret or defire, which uses to be the torment of those who are fixed. I fear no ill news, for I forfake nothing I can lofe; and with the company of my wife and children, which I always have, I want for nothing.

This is the account that these people give of themselves; and thus they pass a life with-Out cares; here to day, to morrow in another place; making in an instant, with four little posts, a hut cover'd with boughs, or fome hide of a beast. Their incomes are their bow and arrows, with which they provide them with flesh, with which they drink waters only fometimes they make their drink, call'd Chicha, of fruits of the trees, they do in Chile. Their cloaths are some leaves for decency, and a skin, which is like a cloak, to cover them in other parts. They make holes in their lips, and put some glass or brass pendant in them, and sometimes filver ones. The men let their hair grow to their fhoulders, and the women as long as it will. There feems to be one thing wanting to this nation, which all other Indian nations have, which is the broad they make of maiz, or wheat, and fome of rice; but yet they do not want a fundy of this kind; for because they have not taste grains, they make bread of the cods of a tree, which we in Spain call Algaroba; and because that does not last long, they have invented a strange fort of bread made of locusts, (nay, Bread of locusts) I have heard of Mosquites;) but the locusts custise use to be in such vast quantities in those great plains call'd the Pampas, that as I travell'd over them, I often faw the fun intercepted, and the air darkened with flights of them.

The Indians observe where they lite to refl; and those plains being here and there full of thickets, they reft in them, and chuse the highest for shelter. This the Indians know; and approaching foftly in the night. they fet fire to the thicket, which, with the high winds that reign in those plains, is foon reduc'd to affies, and the locusts with them. Of these they make great heaps; and as they are ready roafted, they have nothing more to do, but to grind them to powder; of the flower of which they make a fort of bread, which maintains them. To the fame end they uf an herb call'd Cibil, which, The Ini either by pact with the devil, or by natural Cibi virtue, affords them a fustenance for feveral virtue. days, only by keeping it in their mouths. where it makes a white foam, which appears upon their lips: it is a very difagree. able fight, and made me very fick to fee it.

Though these people are not so warlike as the Chile Indians, yet they are couragious, and have shewed it upon several occafions. They are very dexterous at their bows and arrows, with which they make incredible shots. But besides these, they have a very extraordinary fort of weapon A france of a new kind, which is made up of two fort of an bowls; the one bigger, and is a stone per-foufeetly well rounded, about the bigness of an ordinary orange; the other is of a bludder or hard leather, which they fill with fome matter of less weight than the stone: these two balls are tied flrongly to each end of a strong whipcord, which they twist of a bull's pizzle: the Indian standing on a high ground, takes the leffer ball in his hand. and lets the other fly, holding it like a fling over his head to take aim, and hit his adverfary with the heavy ball, which they direct to the head, or legs of their enemy; and thus they entangle him fo, as to bring him to the ground, and then the Indian leaps from the height where he was, and without giving him time to dijembara

1 fomeeir hair men as he one Il other id they of rice a of this egrains, e, which unfe that onred a its, (nay, Bread of is ie locults enits in those hat as I

fo warlike are courafeveral ocous at their hey make hefe, they of weapon A fram ip of two fort of no itone per- fone znefs of an a blidder with force one: thefe h end of a wift of a on a high his hand. it like a an I hit ill, which hi i lo, as I then the ie he was,

himtely,

himfelf, they kill him; and this inftrument is fo powerful in their hands, that it not only brings a man to the ground, but a horfe or a wild bull, which are very frequent in those parts, fince the coming of the Spaniards among them.

At this time they have no wars with any; for though they do not own a fubjection, yet they carry themfelves to the *Spaniards* very friendly; and the reason is, because they see their towns so potalous and strong, that it would be in vain for them to stir, or make any attempt against them: they have the liberty of going in and out as they please; and when they have taken a kindens for a *Spaniard*, there will come a troop

of them in harvest time to help him to get Ova it in, and when it is over, they return to their own way of living: but there are others who come in troops to the high-way, and if the Spaniards are not well at med, attack them in their waggons; which reason they seldom set out bu great many together, and well provided over an encounter; but most commonly they are well pleas'd with some little present, which they ask very boldly, as if they were matters of all the goods in the waggons they generally are content with a little bishet or wine; but if the travellers are too niggardly, they are in danger all the way, and must owe their fafety to their fire-arms,

BOOK IV.

Of the first Entrance of the Spaniards into the Kingdom of Chile.

CHAP. L

The Introduction to this Book.

three parts, into which at first we divided the kingdom of Chile; of its foil and climate; of its temperature and properties; of its inhabitants, and their antiquity, nobility, and customs; the order of this history requires we should now treat of the entrance of the Spaniards into their country; fince by that it has been changed much for the better in many things; and although what we have already mentioned about the flocks, fruit, bread, wine, oil, &c. of which they had no idea before the Spaniards came among them; yet this is nothing in comparifon with the advantages they receive by the light of the goffel, which by the means of the fame *Spaniards*, was, and is communicated to them. Upon this confideration, we may well excuse some military excesses of covetousness in some of the first difcoverers and their foldiers, who as fuch, and men who are bred in diforder and confusion, and used to imbrue their hands in blood where they find refiftance, had lefs regard to the strict rules of justice towards the Indians. But this was against all the orders of their catholick majefties, who from

AVING hitherto treated of those three parts, into which at first the preservation of the privileges of those we divided the kingdom of Coile; of its foil and climate; of its temperature and properties; of ints, and their antiquity, nobiliforms; the order of this history is should now treat of the entrance miards into their country; fince has been changed much for the any things: and although what ready mentioned about the flocks,

But how is it poffible, morally speaking, that human actions, though never so well design'd upon high motives, should not have a mixture of the incoveniencies which passion, not overcome by reason, produces? And so 'ris no wonder, that in the beginning of those discoveries some disorders should happen, though they never were so exorbitant as some authors make them; and particularly in Chile they were much less, because the inhabitants of those parts made the Spaniards seel their valour at their very first entracte, where they sound their progress opposed with greater vigour than they imagined.

But

BOOK IV.

out ince this kingdom is one of the confiderable parts of *America*, it will be neces-OVALLE. But fince this kingdom is one of the confary first to fay something of the discovery of the new world; for this being the remotest part of it towards the fouth, it was necessary to pass all the rest before it could be discovered; and therefore, though I have not a defign to make any relation but of the kingdom of Chile, I shall nevertheles

touch upon the other discoveries, and follow the fleps of the conquerors in order, as the histories of them do relate; fo the fubject of this book will be better understood. by opening the manner of the finding them. and the order of time in which this progrets was made; and fo place each kingdom according to its antiquity.

CHAP. II.

Of America in general, and what Light may be found of it among the Antient Philosophers.

MERICA, called otherwise the A New World, because of its late discovery, is now as well known as it was formerly hid for fo many paffed ages, not only to the vulgar, but to those piercing wits among the pagans, Ariftotle, Parmenides, Pliny; and among the christian philosophers, to St. Austin, Lastantius, and others, who judged all that climate to be inhabitable that lay between the tropicks, founding their opinion upon a point of their philo-fophy, which was, That the prefervation of the animal demanded by its temper the just proportion of the first four qualities, which they supposed could not be found under the torrid zone; for fo they called it, because of the force of the fun upon it, it being all the year almost perpendicular to it; and having observed its effect on this fide the tropicks, how it dries the earth in fummer, confumes the fountains, thinking that if it did not withdraw to the other tropick, it would have entirely fired the earth, though refreshed by the nights, 'tis no wonder, if they were perfuaded that where its beams were continual there could be no habitation for man.

But experience, which is the touch-stone of all philosophical discourses, has discovered that not only there is a plain paffage, though troublesome, from one pole to the other, but also that those regions contained under the Zodiack have been, and are inhabited by innumerable nations; and that there are even under the equinoEtial line, in tem fome places, as that of Quito, fo temperate gran and healthful, that they are manifestly preand healthful, that they are mannered, pro-though une ferrable to feveral in the temperate Zone. deribe live. This new world has, by common confent, been called America unjustly enough, as Herrera complains in the first book of his fifth Decade, by the crafty usurpation of this discovery appropriated to Americo Vespufio, instead of Columbus, who by this means is deprived of his true glory.

It is not eafy to make out what knowledge the antients have had of this new world: Marinco Siculo pretends, in his Spanish Chronicles, that the Romans had known it, and made some conquests in it; and his

foundation is, That in one of the gold mines of America, there was found a medal, or antient coin, with the figure of Aigustus Cæsar; which, he says, was fent to the pope by Joannes Rufo, archbishop of Gozen/a ? but this is refuted, as ridiculous, by Pedro Bercio in his Geografby; and 'tis not very probable, that that coin alone, and no other, should have been found in all this length of time, fince the mines are working in the West Indies. But, besides, if the Romans had been once in posterion of those parts, it would not have been easy to have lott all commerce with them, confidering the great riches that communication produces; for the nations would have called in one another, as we fee they have done fince the discovery made by their catholick majesties, and their possessing of those parts, to which there goes every year io much people from Europe

As to the Roman coin, 'tis probable, that fome who paffed from Europe with the first conquerors of the Indies, and out of a humour of fpreading novelties, (which though little worth, are generally applauded by the vulgar,) teign'd he had found it in the mines; or it might fall from him, and be found by another, who carried it as a rarity to the bishop, who is said to have sent it to the pope. I am not ignorant that there are many arguments and conjectures, and those not contemptible, of fome knowledge that the antients had of this fo principal a part of our globe, which are related by Abrabam Ortelius Gorofio, father Acosta of our company, in his first book of the History of the Indies, Chap. 11, 12, & 13. Thomas Bosius, Book XX. Chap. 3. Malvenda, frier Gregory Garcia, in the first book of the Origin of the Indians, taking their hints from Plato, Seneca, Lucian, Arrian, Clemens, Romanus, Origen, St. Jerom, and others, who feem to have had fome knowledge of this new world. There may be feen in fa-ther *Pineda*, of our fociety, in the fourth book about Solomon's Court, Chap. 16. the words of Abraham Ortelius, which make very much to this purpofe.

CHAP. III.

What Light may be had from Scripture about this New Region.

THERE is another question which feems to be better founded, than the first; and that is, What light may be had from fcripture about these remote regions? because there are many authors, who from these words of the second of Chronicles, Chap. iv. The fervants of Hiram brought, with the servants of Solomon, gold from Ophir, infer, that the scripture here speaks of the West Indies, and interpret Ophir to be Peru, or all America; and as the most famous Christopher Columbus was the first who difcovered it, so he seems to have been the first that used that expression; for they say, that when he was in the island of Hispaniola, he often faid, that at last he was come to the defired land of Ophir, as is related by Peter Martyr, in his fifft book of the Decade of the Ocean. But he who first set out this opinion in form, was Francis Vatable, who upon the third book of Kings, in the ninth Ophir faid chapter, and so on, makes Of bir to be the ro bo Hifisland of Hispaniola, and the continents of
paniola.

Peru and Mexico. He was seconded in his opinion by Postel Goropio, Arias Montano, Ansonio Poffevino, Rodrigo Yepes, Bosius, Manuel de Sa, and other authors, reported by Pineda, in his treaty de rebus Solomonis; which makes father Martin del Rio, of the company of Jesus, say, that this opinion is not without good grounds; but he who defends it most vigourously, is father Gregory

nion from all objections and opposition. The things faid by thefe authors are not of fmall weight, though those who would make an inference from the word Peru's having a nearness to Pharvim, which is used by the septuagint in 2 Chron. iii. where speaking of the gold with which Solomon adorned his temple, they fay, that it was of gold of Pharvim, which in the vulgate is translated Aurum Probatissimum, or most pure gold, have against them a powerful adversary, to wit, Gareilasso de la Vega, who affirms, that the name Peru is not the name of the land, but that the Spamiards, endeavouring to inform themselves of the country, took an *Indian*, whose name Peru how was Beru; and that asking him what country they were in, and he imagining they asked him his name, he answered Beru; and the Spaniards thought he had faid Peru, and that that was the name of the country, which ever after was called fo. That which, ir my opinion, confirms most the belief of Opbir, is, that which Solomon fays of him-

Garcia, of the order of St. Dominick, in his

book De Indorum Occidentalium Origine,

where he strives mightily to clear this opi-

felf in the book of Wisdom, That he knew the disposition of the earth; with which it feems that ignorance was incompatible; and that he could not but be informed of that great and principal part of the world; fo that we may conclude he knew how to fend his fleets thither, and bring home the riches of those parts: and this may be more probable, if we confider the great defire he had of gathering together all the precious things from feveral parts of the earth, and the pureft gold, for the ornament of the temple and house of God; for the gold of Valdivia and Carabay being the purest in the world, and the precious woods of odours that are in those kingdoms, and Paraguay and Brafil the finest, it appears hard he should not use all diligence to have them, they making fo much to his end, which was to gather treasure and precious things.

That he could do it, there feems no rea-Reasons for fon to doubt, fince we know he had a great knowing and powerful fleet; and if this fleet spent the land of always three years from the time of its fet-America. ting out in the Red Sea, to the time of its return, as the interpreters of the scripture all fay, in what could they spend so much time, but in going to the utmost bounds of the east and west? and, 'tis possible, went round the world, as the ship Victory did fince, in the fame time; in which, the great Captain Magellan discovered and passed the Streights of his name; and fince we know, that the fleets of the catholick kings do. in our days, penetrate to the utmost parts of the east and west in less than a year's time, why could not the fame be done by those of so powerful and so wise a king as Solomon, who may be supposed to have understood himself, and instructed his captains and pilots in the art of navigation? Neither is it improbable, but he might know the use of the loadstone, and the sea compass, as some authors do affirm he did. This is yet more confirmed by what we have observed already about the knowledge and conjectures which the ancients had of this new world, of which he likewife could not be ignorant, but rather have a more particular infight into them, being himfelf fo perfect in the sciences of cosmography and geography, as well as hydrography; all which he had by infusion from God Almighty, that he might fee into the errors of those who believed there were no antipodes, nor that the torrid zone could be inhabited, denying the roundness of the earth, and other fuch miftakes.

named.

VOL. III.

 \mathbf{X}

Laftly,

OVALLE. The course of Solo-

Laftly, we know, that his fleets came to Syria, Phanicia, Africa, and Europa; and to come to those coasts, 'tis certain, that if they set out at the Red Sea, it was necesfary for them to fail fouthward to double the cape of Good Hope, and then north, and pass the equinoctial line a second time, as the Portuguese do now in their voyages from India to Portugal. This being supfrom India to Portugal. poted, and that Solomon had the knowledge of America, 'tis probable he was not unacquainted with the communication of the North and South Seas by the Streights of Magellan and St. Vincent; for Solomon being so powerful, both by sea and land; and so well instructed in all things, 'tis probable he caused those shores to be searched, to find the communication of both feas, as it was fince done by men much inferior to him in every thing, which were Magellan, and Jacob le Maire; or, it might be discovered by fome ships driven by storms into those parts, as some say it befel the first discoverers of America.

This once supposed, those who understand any thing of navigation, and the art of the fea, cannot but know how much more eafily a fleet, being placed at the cape of Good Hope in thirty fix, may fail fouth to the fifty fourth degree, where the Streights of Magellan lie, than to fail to the north above feventy two degrees, which it must do from the cape to Europe: from whence may be inferred what I fay, that if it was true that his fleet came to Africa and Eurose, and entered the mediterranean sea, it was much easier to go to Chile and Peru; for from the Streights it might run before the wind all'along that coaft; and having taken in the gold, precious woods, filver, and other commodities, it might return by the same Streights, as Pedro Sarmiento, and others, have done to the North Sea, and fc to the cape of Good Hope and the Red Sea: or, the fleet being in the South Sea, might fail west to the Philippine islands; and from thence coasting along those parts we call the East Indies, it might take in all the eaftern commodities; and fo having gone round the world, return loaden with all the riches of east and west, with pearls, diamonds, rubies, and other fine ftones, as alfo musk, amber, ivory, and other valuable eaftern commodities; and from the weft, with gold, filver, odoriferous woods, pearls, emeralds, fine dyes, rich and fine woolls, amber, and other riches, which were wanting to make up the opulency of

Neither ought this to be thought impracticable, fince 'tis made out already in these books, how easy the navigation would be from Chile to the Philippine islands in two or three months: the conveniencies of which navigation have been fet out in the fourth chapter of the fecond book; and we do know how the thip Victory did return that way, and fo have many others fince : by all which the poffibility of Solomon's navigation is made out, and that within the compass of the three years, in which they used to return to their port in the Red Seas and if it did not do this, it can hardly be imagined, how it could employ fuch a space

For these, and many more reasons of this nature, our most learned Pineda retracts the contrary opinion, which he had published in his commentaries upon Job; because, when he writ them, he had not fo well examined, the grounds of the laft opinion, nor weighed all the authority and strength of conjectures that attend it; and, indeed, fo far every prudent man would go, as not to despise and contemn an opinion of which he believed the contrary, if it were maintained with probability, and by per-fons worthy to be hearkened to. Though, Reasons a to fay truth, if I must speak what I think, gams Soo mon's ha that one reason which I gave above against wing distance the Romans having had knowledge of those vered Ame parts, [which is, That it appears incredible, rica. that having once made the difcovery, and enjoy'd those mines, not only the communication with them, but the very memory of them should be lost,] seems, in my opinion, to be as strong an argument against Solomon's fleet; for if that did once overcome all the difficulties of that navigation, what cause could interrupt that commerce in fuch a manner, as that the total remembrance of it should be abolished? 'T is true, that as to the Jews, they were a people who did not care to live in foreign parts. nor fettle among other nations, nor inhabit the fea coasts; for God Almighty was unwilling, that by the communication with the gentiles, they should contract any of their customs; and therefore we do not know, that of all the race of their kings, any more than three went about any fuch thing, which were Solomon, who compaffed it, and Josophat and Ochosias, whose undertakings had no fuccefs. By which it may be inferr'd, that when Solomon died, and the temple was finished, this navigation was neglected, till at last it was quite forgot; befides, that it appears from the Chronicles, and other places of fcripture, that in those times filver and gold were but little valued, the covetoufness of mankind not being arrived to the heighth it is at now a days: they did not think it worth leaving their houses, to endure labour in the fearch of them, and run all those hazards which the voyagers to those parts do undergo. This therefore might take off the edge and defire which we see in the Euro-

of filver brought calcula from Ame-deritoo

rica.

peans,

peans, of continuing those voyages; neither would they defire to fettle in those parts ; or if they did, the memory of them might be loft. See Padre Pineda, particularly in the fifth fection of the fixteenth chapter, where he answers the arguments of the negative opinion; to which he gives very handsome solutions; and in particular, to those who say, that Solomon's sleet could bring nothing but gold and filver, as if this were nothing, or like ballaft; and that this were not motive enough for him to fend his fleets, for a thing of which it appears he made fuch use, both for the temple and his own palaces; so that it does not seem OVALLE, possible he could have it all from the east, but must have recourse to the west, where there was fuch a mass of it, as is made out by what we have faid of the mines of Chile, and those of the Inga, with those trees, fruits, and plants of maffy gold, and ftatues of the fame metal in his gardens; befides what they call Guascas, where to this day they keep concealed a vast store of those riches gathered together for the liberty of the Inga, when the Spaniards had him prinfoner; all which may be feen in what has been faid already in feveral chapters.

CHAP. IV.

Of the Discovery of America ? And by what means it was performed.

MONG the hidden and wonderful fecrets of nature, we may reckon the fingular virtue of the loadstone, which has produced fuch wonderful effects, as they feem more the object of our eyes than of our faith, as men; for who, if they did not fee it, could believe the experiments made every day, which furpass all imagination? See the curious and elaborate treatife of father Athanasius, Kirker, of our company, de arte magnetica; for there the most aspiring mind after curiofities will find all he can wish about this matter, as well what is ancient, as what is modern, the whole treated with fo much erudition and clearness, that the study of it is not less delight-ful than profitable. The same subject is also treated of excellently by father Nicholas Cabeo, of our company, in his book of mag-

netical philosophy.

Among all the virtues of this rare stone, I think that its quality of taking up iron is not fo admirable as that which it has had of drawing gold and filver to Europe from India; the mass of which has been so great, that fome curious perfons having made a calculation in this matter, which they unfrom Ame-derstood very well, and reckoning the millions brought by the galleons and flotas, from the discovery of the Indies to their time; and having also computed the diftance between Europe and those parts, have found that there might have been made, from the one to the other, of bars of filver, a bridge of a yard and a half wide; fo that if all that metal could be found now a-days in any one place, it would make a mountain like that of Potofi, from which the greatest quantity has been fetched; and for that reason it appears hollow, and bored through in fo many places. We may therefore fay of the loadstone, that gold has given it a virtue like that of faith, to transport mountains, not only from one place to another, but from one world to

another, through those immense seas which feparate them.

Who the first man was that applied this virtue to facilitate navigation, it is hard to prove by authors; for though we know that this flone was known to the Jews, and to the Egyptians, yet who first made use of the fea-needle and compafs, is very hard to find out. Some fay it came from China to Europe: others, that it was found by the inhabitants of the cape of Good-Hope; and that Vasca de Gama, met with some of their veffels, when he made the discovery of the cape, who used this instrument: others give the glory of it to the Spaniards and Portuguese: others to a man of the king-The inven dom of Naples, called John Goyas, of the tor of the city of Amalfi, who was rather the man that fee. perfected this invention, being himfelf an experienced feaman. But let every one have his opinion, it is not my business to decide, I only fay, that to this admirable virtue of the loadstone we owe the discovery of America: for though fome authors fay, that Solomon's fleet failed by the observation of the stars, the winds, the flight of birds, and other figns, with which they fupplied the want of this useful invention, not then known according to the common opinion, (though the contrary is not altogether improbable,) yet it must be owned that the use of this sea-needle has been the thing that has facilitated the navigation, fo as the first discoverers, trusting to this, durst venture into vaft feas, and pass the gulph which leads to that remote and unknown world, so as to land in it; which was a performance worthy of immortal memory to the man who undertook and executed it.

This man was the most famous captain Don Christopher Columbus, a Genoese, whom the Spaniards in their language call Colon, who, though he were not, as he was, nobly descended, might have given by himself nobility and fame to his defcendants, and

The mals of filver brought rica.

OVALLE to his noble and illustrious country; for if 1646. this commonwealth had had only this fon, it might draw fame enough from him alone, fince his generous and bold mind was ca-pable of overcoming all the difficulties which he met with in the project and execution of this enterprize, the more to be efteemed by the great advantages procured by it to both worlds: to this, by that vaft increase of riches, of which a great deal is confecrated upon the altars in churches, befides what is employed in the furniture of princes and great men a and to the other

> pel, by which it is fo much more polithed and meliorated in all fenses

> Neither does that which Gareilasso de la Vega, and others, do relate, any ways affect the glory of this great man, when they fay, that he undertook this delign upon the knowledge communicated to him by a man whom he entertained, and who died in his house as his guest; for we must own that his chief praise does not come from what he knew of this new world before he undertook to find and conquer it, but from his generous mind and constancy in pursuing his enterprize; and this is all his own, which puts justly the laurels upon his head, and makes his memory immortal in spite of time and envy, though one would think no body should have any for the common benefactor of two worlds. That which these

world, the benefit of the light of the gof-

The flory of authors relate about this history, is, That a she pilot, an inhabitant and native of the town the house of of Guelva, in the county of Niebla, in An-Columbus dalufia, called Alonfo Sanches de Hualva, or as others fay, Buxula, used to trade with a fmall veffel to the Canaries; and that one time, in his return to Spain, he met with a mighty strong Levant, which was so powerful, that in twenty days he found himfelf in one of the islands of the West-Indies, one of those which we call the Islands of Barlovento, or the Windward Islands, and tis judged it was Hispaniola; from whence, fearing to perish for want of provision, he returned to the Island of Madera, having endured fo much, that almost all his company died, and himfelf came in fuch a condition, that though Columbus, who loved fea-faring men, and for that reason had choyet he died; but before he died, being willing to make fome return for the kindnets received, he called Columbus to him, and left him, as an inheritance, the journal he had made, with the rhumbs of wind both going and coming, and all others his obfervations in the voyage, and about the place where he landed.

This is thus related by Garcilaffo de la Vega, and father Joseph d' Acosta, who fays, he does not know the name of this pilot who left this legacy to Columbus: and this he attributes to the particular providence of God, who would not have the honour of this difcovery be owing to any human induftry, but immediately and entirely to the divine majefty, to whose disposition we ought to attribute, fo much as appears contingent and cafual in this ship's miscarriage, from its course and all the other accidents attending that florm, till the pilot was brought to die in the house of him whom God had chosen for a second cause and chief instrument of this enterprize; who being of himfelf a great philosopher and cosmographer, compared these notions which he had from his dying guest, with his own speculations which he had long had upon the fame fubject; and this made him refolve to undertake what he afterwards accomplished. In order to this he began to confider of those who were likelieft to affift him; and first Columbus of all, he offered it to his own country, who offers his took it for a dream; after this, to the kings discours is of Portugal, France, and England; and at Genoa, lath he addressed this rich offer to their co. France, last he addressed this rich offer to their ca-Portugal, tholick majesties, for whom it was defign-and Enged, from the beginning, by him who had re- ind. who refolved, in his providence, to amplify their monarchy by the addition of so many rich and powerful kingdoms, as they have ac-

from Ferdinand and Ifabella, of admiral of the leas of all those countries he should difcover and conquer; fo leaving behind him the famous berculean Streights, as difidaining their Non-plus-ultra, and laughing at their pillars, he launch'd into the vast ocean, and begun his navigation with no lefs confidence than admiration of those who faw him leave the shore and steer a course never before attempted, by new rhumbs of winds. Having touch'd at the island of Gran Canaria, he again failed from thence the first Co'umbus of September, with ninety in company and provisions for a year. After some days of navigation he began to find himfelf near the tropick of cancer, and under the torrid zone; whereupon his men who had been bred in the temperate climates of Europe, being impatient of heats, which they never before had experienced, and wearied with feeing nothing but a vait ocean without land, began to enter into diffruit of discovering any. At first they murmured only between their teeth; but at laft, speaking out boldly, they came to their captain Columbus, and endeavoured by all means to diffuade him from purfuing his difcovery, as vain and without hopes of fuccess; and that it would be much better to return back to Spain; but he with a generous mind being deaf to all their perfuafions, purfued his voyage with constancy. His men perceiving still how he went further from Spain, and that they had almost worn out their eyes with looking out from the topmost-head of the ship, without finding any appearance of land, renewed their inflances and reasons; and that the more earnestly, by how much they perceived every day the confumption of their water and provisions; calling now that temerity, which before they faid might be constancy: for they alledged that the time was increased, their provisions lessened, the winds scarce, and calms to be feared; no land in view, its diftance not to be known nor gueffed at; that the danger was certain, and no avoiding to perifh, if they staid any longer; therefore, faid they, let us fecure our lives, except we intend to be a fable and laughingflock to all mankind, and looked upon as our own murderers.

To fay truth, it cannot be denied but this was an urgent danger, and greater perhaps than can be imagined by those who never were in the like trials; for when no less then life is at stake, all dangers appear great, and particularly at fea: befides, thefe allegations were of themselves of great confideration, and capable of fhaking the greateft conftancy and valour; yet the courage of the great Columbus was fuch, and fo fingular his prudence, that fometimes diffembling, and fometimes taking no notice of

what he heard, but talking to this man OVALLE! and the other in private, and then comforting them all up in general, and giving them fome account of his well-grounded speculations, he fo fed them with hopes and expectations, (he himfelf flewing no diffruit of fuccess,) that he brought at last his project to a happy iffue. They were following their voyage thus, through all the inconveniencies of heat, ready to stifle them, when on a fudden a voice was heard crying Land, Land: they all flew to the prow and fides of the ship, and fixed their eyes on the horizon like fo many Argus's, to find out the land which feemed to appear like a cloud upon the fea. The defire of getting to it made fome doubt, if it were land or clouds; but others were more confident: fome alfure it to be low land; others think they fee rocks, and a large extended shore; and all was but guefs, occasioned by the great diffance they were at fea from any land; for in truth it was not land but clouds. And this was an invention of Columbus, their admiral, who feeing them almost ready to mutiny, made use of this artifice to prevent the ill effects of their defpair, caufing this voice to be heard to give them a short joy,

and amuse them.

This fucceeded well for that time: he fleered his course towards this pretended and till night; and when they were afleep he fet his prow to the west, in search of the true land: but in the morning when it was day, feeing those clouds, which they took for land, vanished as it often happens in long navigations, they began to afflict themselves a-new, and remonstrate to the admiral boldly to his face which I do not wender at; for befides the danger of perishing with hunger, they found themfelves in a climate fo fcorching and fiery, that in the third voyage that the admiral made, they being becalmed eight days, about the fame place, were afraid the fun would have fet fire to their ships; for all his casks flew under decks, the hoops imoaking as if they had been fet on fire, and the wheat was all in a ferment; and the falt flesh was, as it were, boiled again, and flunk fo, that, to avoid infection, they were forced to throw it over-

board. The admiral was thus purfuing his

and the confidence he had in him, first, by Signs of manifest figns of land, which in such oc-land.

with forgetting all past sufferings.

voyage, in which patience was his most neceffary habit, to endure the terrible perfecution of his own people; when on the 11th day of October, of the same year, it pleased God to crown all his invincible fufferings, casions do generally put a stop to all complaints and afflictions, and are the beginning of joy and content, which is followed

Ovalle first thing they saw was a bough of a tree new cut, with its fruit on it, which though a kind of thorn, was a branch of olive to

a kind of thorn, was a branch of olive to the inhabitants of this new ark; another had feen green fifh, and fome pieces of wood floating; all which were clear marks of land not far off, as to the navigators from India are the quantity of fea-weeds which meet them about ten leagues from the coast of Spain. The joys which failors and paffengers shew generally at the figns of land, the capers they cut, and embraces they make each other, with their congratulations to the pilot, their thanks to heaven, nay, the tears they fhed, and devout prayers they make to God and the virgin Mary, in acknowledgment of their protection; all these are not so much matter for my pen, as for fight and fense. All this happened to the admiral's company, which not only forgot their fufferings, and the hatred they bore to the author of them, but they run and threw themselves at his feet, as admiring and congratulating his constancy, and begging his pardon for fo many hard thoughts, and as hard words, they had entertained, and let fly against him: he received them all with embraces and marks of benignity, affuring them that by the end of that day they should be within fight of land, and having faid this, he went upon the highest part of the ship's stern, as being desirous to be the first, that should give them the good news of discovering land.

There was a rent of ten thousand Maravedies a year for the first discoverer, which made them all look out with great attention; fome on one fide, and fome on the other fide of the ship, fixing their eyes where they thought it was most probable to find land; but it was about two hours before midnight, when admiral Columbus discover'd a light, and calling to two officers, shewed it them; and presently he perceiv'd that the light chang'd place, for it was a light carried from one house to another, as was known afterwards when they landed: they fail'd on towards that light, and about two hours after midnight they discover'd land, which was at the same time made by the other ships in company, whereupon there were many claims for the Albricias; but at last they agreed that the Albricias belong'd to the admiral, because he first discovered the light: this was confirmed by Ferdinand and Isabella, king and queen of Spain, and fettled upon the shambles of Seville, as the best fund for the admiral.

Herrera, the cbronologist, makes his reslections upon this light, and moralizes upon it, that it fignified the fpiritual light, which those nations wanted, and which was now brought to them from Europe by these discoverers; as a proof likewise of the piety of the catholick kings, who having made war upon the Moors for three hundred and twenty years, had hardly finish'd it; but they put their shoulders to this new conquest, to spread by their means the glory of the gospel, and make the voice of it to be heard to the utmost limits of the earth, making out by this manifest proof, how firm supports they were to the faith, since they were constantly employed in propagating of it. Thus far Herrera: to which I may add, that the light Columbus faw in the middle of the night, was the tacit working of reason, which being buried in profound errors, did yet throw out fome sparks from under those ashes, and cry to heaven for the enlivening spirit to deliver it, and by the means of Christ revive it, so as to enlighten that gentilism, so long overwhelm'd in darkness, and for so many ages past buried, as it were, in the shadow of

Thus it was; and as foon as day broke Columbus they landed: the admiral carried with him fands, and the royal standard spread, the other captains stake perhaving in theirs the banners of this conquest, which were prepared, and had in them a green cross crown'd, and round about the names of Fernando and Ifabella, to signify the hopes that those princes had entertain'd to make subject, and lay at the feet of the crucified Jesus, the crowns and september of those powerful monarchs of that new world; they themselves having sirst submitted their own, that there might be no crown, command, nor lordship, but that of the exaltation of the cross.

To this end, as foon as the admiral landed, kneeling down with all his company, he kiffed it once, and twice; and lifting up his eyes to heaven, all in tears, he ador'd our Lord God of all things, who had brought him thither, thanking him for his favour, and doing homage to him in the name of those people, who were to be brought to his knowledge; in fign of all which, and the possession he then took, he call'd that island Saint Salvadar: he raised also a most One of the beautiful cross, which was a declaring war last twee to hell, to make it renounce the possession ick.

tyranniz'd over.

The admiral being rose up, they all approach'd, and not only embrac'd him, but carried him upon their shoulders in triumph, ashaving perform'd the greatest work that ever man attempted, or brought to pass. Immediately after this, the admiral, in presence of a notary, took possession of that land in the name of their catholick majesties, and caus'd himself to be own'd as viceroy, and as such they began to own him, and obey him in all things.

Cuba dif-

This ifland, which we shall call Saint Salvador, was about fifteen leagues in length, very woody, and having good water, with a lake of fresh water in the middle of it, and well inhabited by the Indians, who

call'd it in their tongue Guanaani; and it OVALLE. is one of those which fince have been call'd the Lucaicks. It is nine hundred and fifty leagues from the Canaries.

CHAP. VI.

WHEN the Indians faw fuch great bulks in the fea, with great fails, and the whole unlike their canoos, and they were drawn near the shore, they remain'd aftonish'd and beside themselves, because tho' by their motion they guess'd them to be living things, yet for their bigness they took them for some strange sea-monsters, never seen before on those coasts. The ships came to an anchor close by the shore, and the admiration of the Indians increas'd still fo much the more, feeing white men come out of them with beards and cloaths; yet they did not run away, but drew near without fear, the rather when they faw that the Spaniards began to prefent them with bells, needles, and other things of Europe, which pleas'd them extremely, as being new to them: in return they gave the Spaniards Gold, Provisions, and other things of their country: they came fome in their canoos, and some swimming to the ships, where it was wonderful to fee how they valued every thing, even to the bits of glazed diffies, or broken earthen ware, that lay about the fhips, which they gather'd up as jewels which they had never feen. And to fay truth, most things borrow their value from their rarity; and for this reason they had as little value for gold and pearls, which were things very common among them, they exchanging whole strings of pearls, and some of them as big as peafe and *small nuts*, for needles and bells, as happened in the *Islands* of the Margarita; so great is the difference in the estimation of things common, or rare ones. The admiral having here got an account of some other Islands, went out to discover them; and the second he found he nam'd Santa Maria de la Conception, dedicating it to the queen of heaven: the third he call'd Fernandina, of the king Don Fernando: the fourth he nam'd Isabella, in confideration of his miftrefs queen Ifabella. Of all these he took possession in the name of their majesties, by setting up their royal flandard before a publick notary, with the fame folemnity and ceremonies observ'd in the taking possession of the first Island.

On a Saturday, the 29th of October, they discover'd the famous Island of Cuba, where the Havana is: there the Indians, frighted to see the Spaniards, whom they thought descended from heaven, went to them kissing their hands and seet. The admiral's last discovery was of the Island call'd Hissian

paniola, where he met with a great deal of gold, and fome birds and fifthes, like those of Castile. Here the cacique Guacanagari received him with much humanity; and in his land he made the first Colony, or settlement of Spaniards, which he nam'd the city of the Nativity.

The Spaniards generally were receiv'd in these and other the Barlovento Islands, and on the coasts of terra firma, with much love and kindness, very few of the *Indians* offering to resist them. On the contrary, they all were pleafed with their coming upon their lands, furnishing them with all that the country afforded, and prefenting them with gold, pearls, parrots; contenting themselves with a return of a very small value. Of the European things, those they feem'd most to mind, were needles; and at first they could not imagine what they were good for; but being told they were to few, they answered they had nothing to The simplifew; but yet they kept them, because they indiane, had never seen any thing of iron or steel. They were much furprized at the use of fwords, and particularly when they had ex-

had never feen any thing of fron or feed. They were much furprized at the use of fwords, and particularly when they had experienced their sharpness; for at first they us'd to take hold of them by the edge with great simplicity.

great fimplicity.

The admiral, as viceroy of those new kingdoms, began to govern, as he discover'd them; and that he might regulate them the better, by confulting their majefties in his doubts and difficulties, he made two voyages backwards and forwards to Spain, still making in his returns discovery of fome new Islands, and amplifying the monarchy, as historians do relate at large, to whom I refer myfelf, not to engage in matters which are far from my subject: but I cannot but make some reflection upon what happen'd to this great man. Who would not have thought, confidering the happiness with which he had executed all that he delign'd, in the most difficult subject in the world, that he was eternizing his felicity, and putting fortune under his feet? But that no one may strive to do it, but that all may know how constant is her volubility, and how perpetual the motion of her wheel, and that there is no human power, nor star, can fix it, I will relate here briefly what befel him.

Let him who governs be undeceiv'd once for all, and know, That to fit upon a throne, and take possession of power, is to be a

OVALLE mark for the censure of the good and bad to aim at; 'tis just putting himself into the hands of anatomists, to be taken in pieces, and examin'd to the very bones; and very often envy oppresses innocence by seigned accufations: this is not the place to examine that of the admiral; I only know that there were fo many complaints, and fuch appearances of misdemeanors alledg'd at court against him; as, that he did not advance the conversion of the Indians, but make them work to get gold, defiring more to make them flaves than christians; and taking no care to maintain them, and fuch other imputations, as mov'd their catholick majeffies to fend the commander De Bobadilla to examine the truth of what was alledg'd, and to do justice in requisite cases; writing at the fame time a kind letter to the admiral, that he should let the commander execute their orders.

> But he exceeding his commission, and the intention of their majesties, took all the informations against the admiral and his br thers, and without hearing them, made himself be own'd for judge and governor, giving rewards, and publishing, that he came to relieve the oppressed, and to pay their falaries, and put all things in good order. This drew over to him all those who had any grudge to the admiral, and most of the common fort fided with him; fo he entered into the houses of the admiral and his brothers, seized their goods and their papers; all which he might fafely do, without any refiftance, for the admiral was away: he fent to feize him and his brothers, putting irons upon their feet, and fo shipping them into a veffel, call'd a Caravel, he fent them away for Spain, to give an account of themselves.

When they came to put irons upon the admiral, there was none fo bold as to do it, Columbus out of the respect that all had for him; and if he had not had in his family a rogue of a cook, who was villain enough to do it, they had not found any one to execute fo When Columbus barbarous a command. faw himself put in chains by his own ser-vant, 'tis faid, that shaking his head, he pronounced these words, full of resentment for his usage; [Thus the world rewards those

who ferve it; this is the recompence that men give to those who trust in them. utmost endeavours of my services ended in this? His siagn. Have all my dangers and sufferings deserved lar expresno more? Let me be buried with these irons, sions for it to shew that God alone knows how to reward and bestow favours, of which he does never repent; for the world pays in words and promises, and at last deceives and lies.]

Having faid this, the ship fet fail; and as foon as he came to Spain, their majesties, when they were inform'd of the prifon of the admiral, were much concern'd; for by no means, had that been their intention. They fent for him to come before them; but his tears and fighs were fuch, that in a great while he could not fpeak; at last he said, affuring their majesties of his great zeal for their royal fervice, which had always been his guide, that if he had fail'd in any thing, it was not out of malice, nor on purpose, but because he knew no better.

Their majesties comforted him, and particularly the queen, who favour'd him most; and after some time, in which the truth of the matter was made out, they order'd. That all that the commander Bobadilla had confiscated of the estate of the admiral and his brothers, should be restor'd to them; as also, that the capitulation with them fhould be observed, as to their privi-leges and exemptions. After this, the admiral return'd a fourth time to the Indies, in an honourable way; and employing himfelf in new discoveries, he arriv'd upon the coast of the terra firma of America, the second of November, 1502, and coasting along by Cubija, arriv'd at the port; which, because it appear'd so good a one, and the country so beautiful, well cultivated, and full of houses, that it look'd like a garden, he call'd Puerto Bello, or the Fine Port, having discover'd other islands in the way, and endur'd very bad ftorms. At last returning back by fome of those places which he had discover'd, taking, as it were, his leave of them, and returning to Spain, to order there a better fettlement of affairs, he died at Valladolid, where the court was, Columbus making a very christian end, and giving det at Valgreat figns of his predeffination.

CHAP. VII.

After the Death of Columbus, the Castillians pursue the Discovery and Conquest of the new World.

A MONG those who accompanied the admiral in his first discovery, there was one Vincent Yanes Pinzon, who being a rich man, fet out four vessels at his own charge. He, at his return to Spain, fet fail from the same port of Balos upon new

discoveries: he first came to the island of St. Jago, which is one of the Cape Verd islands: he fet fail from thence the thirteenth of January, in the year 1500. and was the first who pass'd the equinoctial line, by the north sea, and discover'd Cape St.

Augustin, which he call'd the Cape of Confolation, taking possession of it for the crown of Castile; from thence he found the river Maragnon, which is thirty leagues over, and fome fay more at its entrance, the fresh water running forty leagues into the fea; then coasting towards Paria, he found another river very large, though not fo broad as Maragnon: they took up fresh water out of it, twenty leagues at sea. He discover'd in all a coast of fix hundred leagues to Paria, and lost two ships in a terrible storm that he endur'd. We have feen also in the last chapter, that *Columbus* had discover'd the island of *Cuba*, though he could never sail round it, being hinder'd by the storms and ill weather; fo he died without knowing whether it was an ifland, or no, for he judged it to be rather a point of fome continent; but it is a very large island, with many fair ports, and mountains full of precious odoriferous woods of cedar, ebony, and many others; and there are in it feveral cities of Spaniards, and among the rest

The Hava-the strong fortress of the Havana, which is a Scala or rendezvous for the galleons and flotas, loaded with filver from the West Indies: this is one of the best fortifications the king of Spain has in all his dominions. But, in my opinion, that which makes this island most valuable, is, the good nature and docility of those who are born in it; which was a product of that foil before ever the Spaniards trod it, as they shewed to Columbus, and those who came after him, receiving them with all kindness and

humanity.

To further what the admiral Columbus had begun, God raifed an inflrument in the person of Vasco Numes de Balboa, one of the first discoverers of this new world; a man of a good understanding, as he shewed up-on the occasion which I shall now relate. He was, with others, upon the discovery with general *Encifo*, the governor: they came to a place call'd *Uraba*, and as they enter'd the port, by negligence of the steersman, the governor's fhip struck upon a fand, and was loft, nothing being faved out of her but the lives of the men, who got into the boats, but naked, and in danger of perifhing for want of provision. Vasco de Nunnes faid, That he remember'd there was not far off a river, the banks of which were inhabited by much people: he guided them thither; and the thing being found to be as he had faid, he gain'd great reputation among them all. They came thither, and found the Indians in arms against the Castilians, whole name was already become odious to those nations: they made a vow to our lady, to dedicate to her the first settlement and church to the bonour of her image, under the title of Sansta Maria la Antigua, or the Vol. III.

ancient St. Mary, which to this day is ve-Ovalle, nerated in Seville; and to fend her many rich gifts of gold and filver, which one or them, as a pilgrim, should carry in the name of the rest. Being encouraged by this vow, they fell upon the Indians, and obtain'd the victory.

Prefently they made a fettlement, and built a town, dedicated to the virgin, calling it Sansta Maria el Antigua of Dairen, because that was the name of that river. After this, to accomplish their vow, they fent the promis'd prefents to the devout image of the virgin.

The good opinion of Vasco de Nunnes increafing thus daily, and having cunningly order'd it fo, that Encifo refign'd his government, they chose Vasco Nunnes in his room: at first, with an affociate; but he found means in time to be alone, as it was necessary he should, in point of command, being to overcome fuch difficulties as were to be met with at every turn: and, indeed, he knew how to make himself be both fear'd and belov'd, having a very good fpirit of government. In the new discoveries he undertook, he came first to the lands of the Cacique Ponea, and not finding him at home, he deftroy'd them: he pass'd on to the lands of the Cacique Careta, who not caring to enter into war, receiv'd him peace. fully, and treated him as a friend. This Cacique Careta had a kinfman, who was a lord, that liv'd further in the country, and his name was Suran; who perfuaded another neighbouring prince, call'd Comagre, to make a friendship with the Castilians: this prince had a very fine palace, which aftonish'd them; and particularly when they faw, in a kind of chapel or oratory, fome dead bodies lying cover'd with rich mantles, and many jewels of gold and pearls; and being ask'd whose bodies those were, they answer'd, of their predecessors; and that to preserve them from corruption, they had dried them with fire. The king caress'd the Castilians, and gave them great prefents: he had feven fons, and one of them, more liberal, gave the Spaniards a present of near four thousand Pesos of fine gold, and fome pieces of rare workmanthip: they weigh'd it, and taking the king's fifths, they began to divide the remainder. In the division, two soldiers fell out about their share: the Cacique's son, who had made the present, hearing the noise, could not bear it, but coming to them struck the balance where the gold was weighing, and threw it all upon the ground, faying, "Is A noble re-

OVALLE. "who live quiet in their own country? 1646. "Have fome shame, christians, and do not value effe things: but if you are refol-" try where you may fatisfy yourselves." And pointing with his finger to the fouth, he told them they should see there another fea, when they had pass'd over certain high mountains, where they should see other people who could go with fails and oars as they did; and that paffing that fea, they should meet with vast quantities of gold, whereof the natives made all their utenfils; and that he would be their guide, and conduct them with his father's vaffals; but that it would be requifite they should be more in number, because there were powerful kings, who could hinder their passage: giving them by

this the first notice of Peru and its riches. This was the first knowledge and light the South of the gold and riches of its coafts, which gave them all great joy; fo that they were impatient to see the hour of breaking thorough all obstacles, to see that sea never before heard of, and enjoy the riches of it. Vafco Nunnes immediately disposed all things, and went out of Dairen, in the beginning of September, in the year 1513, and going along the fea-fide, to the habitation of the friendly Cacique Careta, he went towards the mountains by the lands of the Cacique Ponea; who, though at first he endeavour'd to oppose their passage, yet being advis'd by the Indians of Careta, who accompanied the Castilians, he presented them with gold and provisions, and gave them guides; they, in return, giving him looking-glasses, needles, knives, and other baubles, which they va-lued very much. Then they began to lued very much. mount the mountain through the country of a Cacique, call'd Quareca, who appear'd in arms, and attack'd the Spaniards: he had a long robe of cotton, but all his men were naked. They began to skirmish, and threaten by their actions, to hinder the paffage; but no fooner did they hear the noise, and feel the effects of the muskets, and find fome to fall, but they turn'd their backs, flying like a herd of deer, frighted to fee the fire, and hear the found of the vollies, which appear'd thunder to them, and thought the Spaniards had thunderbolts at their command; fo they left the passage free for them. The Indians of Careta had faid, that from their country to the top of the highest mountain, there was the time of six funs; for by that they meant fo many days journey; but the ways were fo bad, that they employed five and twenty days to get to the top. A little before they were at the highest, Vasco Nunnes de Balboa caus d a halt to be made, defiring to have the glory of having himself been the first man that

ever faw the South Sea. And fo it was: he Vasco goes alone, difcovers that vaft ocean, and Numes the large bays of the South Sea, call'd Pa-fight of the cifick; and upon his knees, with tears in his South See, eyes, lifts up his eyes to heaven, giving thanks to the great creator of all things, for having brought him from fuch remote parts to contemplate that which none of his anceftors had ever feen: he made a fign after this to his companions to come up, and fo they all run in hafte, pushing one another on; and when they were on the top, where there is a full profpect of the fea, 'tis not there is a full prospect of the sea, "tis not to be imagin'd the content they all receiv'd in admiring that vaft and fmooth liquid chrystal, which not being animated, did not on its fide give leaps of joy, nor go out of its bed to the tops of the mountains to welcome those who came to deliver it from the tyranny the devil exercis'd over it, by infefting it with florms and tempefts, and infecting the air with the breath of idolatry, which was breath'd in all those parts, both east, west, north, and south. Oh! if all the creatures of that world could have come one by one to fee the good that was coming to them by means of the gofpel, which dawned in those mountains; or, if the predeftinated of that new world could have viewed from their cottages, and poor habitations, or rather from the deep night of their errors and fins, the fun that was beginning to enlighten them from that high mountain, and the virtue and efficacy of grace, which then began to appear to reconcile them with God, and the blood of Chrift, which like a great river was falling through those precipices, till it should bath the utmost parts of the earth, and give life to those, who, being fallen and cover'd with the dark fhadow, did not only not hope for life, but not fo much as know it; how would the children have leap'd out of their cradles, who, to go into paradife, expected nothing but baptism, as has happened to great numbers, who just expired when they were made an end of baptizing? and the old men, who wanted only the knowledge of the gospel to shut their eyes, and being reconciled to God, fly into his glory, how they would open them, and lying upon the ground, fly, at leaft, with their spirit if they could not with their body, to receive the preachers of the gospel, who brought peace and a general pardon for their fins? All the other predeftinated, every one according to his flate, who have by this means been faved, (which are infinite,) how they would melt and cry with joy, to hear this news, which is as welcome to them, as that of the coming of Christ to the holy fathers in limbo, who were expecting it with fuch languishing defires,

CHAP. VIII.

OVALLE.

Basco Nunnes de Balboa pursues the Discovery of the South Sea, and dies.

B Asco Nunnes de Balboa, having performed his devotion, and thanked our Lord, with all his companions, for fo great a favour done them, as to bring them to that place, and for the favour he was about to fhew to that new world, by the means of the preachers of the gospel, to whom he thus opened a way to publish it; he then bethought himfelf of his fecond obligation, which was to his king; in conformity to which, he took possession, in his majesty's name, for the crowns of Caftile and Leon, of the place where he was, and of the fea which he discover'd from thence; cutting for this purpose many trees, and making great croffes, which he fet up, and writ upon them the names of their majesties.

After this they began to go down from the mountain, marching always prepar'd for any encounter that they might have with the Caciques in their way; fo, though the Cacique Chiapes oppos'd them with his people, who were flout and many, yet by fetting the dogs at them, and beginning to fire their muskets, they were foon routed. This made the Cacique offer terms of peace, and receive and make much of the Caftilians, prefenting them with gold; and he prov'd fo good a friend, that he pacified many other Caciques, who were in arms, to hinder the paffage, who likewife made their prefents of gold.

From the town of Chiapes, Basco Nunnes fent out, to discover the coasts of the South Sea, the captains Francisco Pizarro, Juan de Escara, and Alonso Martin, each to a different place: this last found two canoes dry on the shoar, and the sea below them above half a league: he wonder'd to fee them fo far from the fea; and as he was confidering it, he perceiv'd the fea coming very fast in, and did not stay long before it fet the cances on float: he enter'd into one of them, and took witness that he was the first European that had ever been upon The tides that sea. The tides on that coast ebb and very rapid flow every six hours, so as great ships will be left on shoar, the water retiring so fast, that it gives great admiration when it returns, to see so great a space cover'd so fast, that it appears an inundation.

Basco Nunnes having advice of this, came down also to the coast; and going into the fea up to the mid-leg, with a naked fword in his hand, faid, That he took poffession of it, and all the coasts and bays of it, for the crowns of Castile and Leon; and that he was ready with that fword, as often as it should be necessary, to make good that claim, against all that should oppose him. The Indians were in great amaze at

this new ceremony; and they were more furpriz'd, when they faw him, against their advice, and that of the Caciques, venture to cross the gulph of *Pearls*, to discover the riches of it in that commodity; though it had like to have cost him dear, for he was near perishing in croffing that arm of the fea. Now let us fee (in order to undeceive those who shall read this,) how little this courage and boldness avail'd this generous conqueror of the new world, and the great things his invincible mind had brought to pass. All his military prudence and cunning, by which he made himfelf be respected by unknown nations, avail'd him little; for this fo fortunate a great captain had a tragical end: he lost his life in Dairen at his return, finding there the governor Pedrarias, who came to fucceed him. The king in fending this man had recommended to him the person of Basco Nunnes de Balboa, and order'd him to make use of his council, as of one who had honour'd him The barba: by his bold undertakings, and to whom for spaniards a reward he order'd the governments of Pa- or nama and Coiba, and the admiralthip of the other. South Sea, which he had difcover'd, and on which he had already built four ships, and got together three hundred men to go upon the discovery of I rn. But the faid Pedrarias commanded him on shoar, and there fizing him, caus'd him to be behead-Vasco ed publickly as a traytor. The crier went Nunnes bebefore him, crying, as is customary, that he was a traytor; which, when Vasco Nunnes heard, he faid it was a lie, and that no man had ferv'd the king with more zeal, nor more fidelity than he, nor more defir'd to extend his monarchy; but all his complaints were like voices in the defart, which were of no force against envy and emulation, which had prevail'd in his enemies, and which can never fail against those who govern. His death was much refented, and appear'd very unjust in Spain, because, indeed, the king lost one of his bravest captains, and one who would have discovered Peru with more facility, and without all those tumults, which fince happened; for

the ordinary fize. It cannot be denied, but that the fentence may be justified according to the depositions of witnesses; but yet it was a great argument of his innocency, that which he himself said to the governor Pedrarias, which was, That if he had in his heart to make himfelf mafter, and independent, as they accus'd him, he would not have obeyed his call as he did, and leave his ship without any difficulty; for he had then

his prudence, valour, and zeal, were above

Ovalle, three hundred men all at his devotion, and 1646. four veffels, with which he might have been fafe, and gone upon new difcoveries, if his confcience had accused him. They add here, That an aftrologer had told him, That that year he should see something extraordinary in the heavens, he should be in guard

against some great misfortune that threatened him; and that if he escap'd from it, he should be the most powerful and happy man in the whole Indias. And that accordingly he did fee this fign, but laughed at it, as thinking himfelf in fo high a state.

CHAP. IX.

The Discovery of the South Sea; its Ports and Islands is continued.

T is a common paffion in those who govern, either to oppose the defigns of their predecessors, or at least not to execute them by their means, nor by their creatures, that their affiftance may not leffen the glory, which they pretend by making themfelves the authors of the enterprizes. As we have already faid, Pedrarias fucceeded Valeo Nunnes de Balbea in the government, just as he had made the discovery of the South Sea; and though the king had recommended the person of Nunnes to him, yet he could not be brought to grant him leave to follow his difcovery, though the bifhop of Dairen advised it very earnestly; but he had refolved to give this good morfel to a creature of his, called captain Gaspar Morales; to whom he added, as companies captain Francisco Pizarro, because of experience he had, having been already

ployed in the difcovery.

They fet out from Dairen, and got to the South Sea, and embarking there in canoes, they came to the Isle of Pearls, which the Indians called Tarargui. These by this time began to endeavour to hinder the Spariards from fettling in their lands; but they were not able to do it, their forces being to much inferior to those of the Caffilians, who, passing from one island to another, came at last to the largest, where was the king of almost all those nations, who took arms against the Spaniards, having a brave numher of men, and well chosen; but they not being used to fire-arms, they soon yielded and came to composition: to which they were brought also by the fear of a famous dog, that was in the christian camp, who dog frights trong, that was in the christian camp, who they having never feen an animal of that fort, did flee him as a devil, because of the mitchief he did amongst them; for they being naked, he could fasten any where without danger. The Chiapeles, our friends, prefently interpofed; and telling the king what dangerous enemies the Spaniards were, and of what importance their friendship was, they being invincible, he at laft was prevailed upon to grant them peace. They came to his palace, which was very fumptuous, and, as they judged, better than any they had feen yet. The king received them

with marks of friendship; and, as a token Pearls of a of it, 'caufed a basket of ruftes full of pearls, biguess. which weigh'd five marks, to be given them; amongst which, there was one which had but few fellows in the world, (for it weighed fix and twenty carats, and was as big as a finall walnut,) and another as big as a mufcat-pear, perfect and oriental, and of a fine colour, weighing ten half feruples. The first came from hand to hand, till it was in the empress's, who valued it as it deferved, as is told by Antonio de Herrera and others. They prefented the king, in return, with the afual prefents of pins and needles, bells, knives, and other baubles of Europe, which the Indians valued much. The Staniards not being able to forbear laughing, to see the value they put upon hem, the king said to them, What do you A wife in at? And having heard what it was, partee of a e faid, We might more justly laugh at you, for valuing things fo much which are of no use in life, and for subich you gass so many Jeas. As for theje knives and hatchets you give us, they are very useful instruments to men, This was not the only return the king had for his pearls; for he had the precious pearl of faith by their means: for growing very fond of them, and being by them inftructed, he and all his family received the chriftian religion, which was the principal end to which the Castilians directed all their enterprizes. They made a folemn christening; and the king, to treat his spiritual fathers, who had engendered him in the gospel, carried them to fice the pearl-fishing, which was in this manner: The Indians dived The period to the bottom, having about their necks filling a bag full of ftones, that they may fink the faster; and it served them for a ballast to keep them fleady while they gathered the oysters, that the water might not buoy them up. The greatest oysters are about ten fathom deep; for when they do not go to feed, they keep as low as they can, and flick fo faft to the rocks, and to one another, that it is very hard to loofen them; nay, it happens fometimes, that while they fpend too much time in doing it, their breath fails them, and they are drowned: but, generally speaking, they are not in

danger, because, as they gather the oysters,

CHAP. X.

Of the Discovery of the River of Plata, and the Coasts of Chile, by the Streights of Magellan.

W E have hitherto gone by the north fea to the terra firma, and the difcovery of the South Sea, with intent to follow the discoveries of this new world to its utmost bounds, which is the kingdom of Chile, to which all this narrative is directed. We shall follow this order by the same fleps that the first conquerors went; but while they are disposing all things for this great enterprize, it will not be amiss to leave the South Sea, and follow those who endeavoured to discover the coasts of Chile by the North Sea. The first we shall follow is captain Juan Dias de Solis, who failing from Spain the eighth of October, 1515. run along the coasts of Brafil, till he discovered the The Rio de famous river of Plata, which was fo nam'd, he Plata alf not from any filver that is found near it, or swerd on its banks, but from some plates of that metal which the Indians gave the Spaniards; which filver they had brought from the country about Potofi, with which they had communication by the means of the Tucuman Indians, who are the nearest on that fide to Peru. Solis entered that mighty river, which, if I am not mistaken, is threefcore or feventy leagues over at its first entrance, and is known at fea by its fresh water, at first, till being further in, they can fee the mountains and lands that bound This river is one of the most famous in the world, of fweet and excellent watringe ter, being observed to clear the voice and the wa- lungs, and is good against all rheums and defluctions; and all the nations of the Paraguays, who drink this water, have admirable voices, fo tunable, that when they fing they appear organs; and therefore they are all inclined to mufick; and those who come from abroad mend their voices by living there. I knew one who was born in Chile, and had naturally a good voice, which he mended extremely by living in Paraguay; but when he left that country, and came to Tucuman, he loft his improvement, as he himself told me. This river has another property, which is, that it petrifies the branches of trees which fall into it. The governor Hernan Darias, born

in Paraguay, a gentleman of a fingular ta-

Vot. III.

lent for government, had in his house a whole tree all of stone, which had been ta-ken out of this river. Likewise there are formed naturally of the fand of this river. certain veffels of various figures, which have the property of cooling water. There are alfo certain cocos de terra, which contain flones in them, which at a certain time are, as it were, ripe, and burft, discovering amethysts within them; they burst open

with a great noise.

There are also bred upon its banks most beautiful birds of feveral kinds; and in its streams great variety of fishes, very dainty, and in great quantity. The river is navigable every where in canoes, but not with the fame canoes, because of the prodigious fall that is in the midft of it, the whole Its fall. river precipitating itself into a deep gulph, from whence it runs many leagues, till it empties itself into the sea. The noise that empties itself into the sea. this fall makes, the foam that it raifes, the whirlpools it causes, by the rencounter of its waters, is not to be imagin'd. The land on both fides this river is very fertile: on the west side, which is the Tucuman fide, corresponding to Buenos Ayres, there are several cities, as St. Jago de Estero Cordona, St. Michael la Rioga, and Esteco Juzuy and Salta, which border upon Peru: thefe cities are not very populous, because they are in the midst of the land, and far from commerce with both feas; but they do increase very much, particularly Cordona, which, amongst other properties, has that of producing rare wits in the university govern- An univered by the Jefuits, who may match their pro-fity, and fessions and scholars with those of any other the wist part, as I myself have experienced. There indian are likewise in this district many houses and Cordous. families of men of quality and antient nobility. Higher up the river to the west, are also the cities of the Assumption, Santa Fee de las Corrientes del Guayta, and others. The city of the Affumption is the chief, and was peopled by gentlemen that came first to the *Indies*, and is fince much increased in people, but not in riches; because it being so far within the land, cannot have fufficient vent for its commodities,

Ovalle, which are chiefly Sugar, and preferved 1646. fruits; among the reft diey are famous for a dried fweat-meat, called Ladvillos, which are flices of cetron, done up in Sugar, in the form of a tile: but the best fweet-meat they have they will give in great abundance for an apple, or any European fruit. In all this tract of land there are three governments, which are also bishopricks, to wit,

Paraguay, Rio de la Plata, and Tucuman.
Higher yet on the eaft fide are many heathen nations, who have others that answer them on the weil; and among these are distributed those famous missions which our fathers of the fociety of Jesus have

founded.

A relicious I am forry I am infentibly engaged in acceptant of this matter; and I must own I have mentional tioned that which I cannot well explain.

This is not a place for panegyricks, nor does the thread of my hiftory admit of fuch large digreffions; yet I cannot but ftop a little, and give fome confideration to that we may call miracles of grace, which are perform'd in those defarts, of which I myfelf have been an eye-witness, having lived some time in that holy province, to which I owe all that I am. But who can explain what those apostolical men deserve in the fight of God, who seem to have nothing of man but what is necessary to make their life more admirable, which they lead like angels in human bodies?

Who would not wonder to fee in those mountains and folitudes men ill fed, worfe lodged, naked, painful, and in anguish for the fouls of others, when they might fave their own with lefs trouble, enjoying the good morfels and merry days, which, without fin, and fometime, meritorioufly, they might have in their own country among their friends, and in the best of Europe? Who can but admire to fee fo many youths banish themselves, and renouncing all preferment, refolve to pais all their lives like hermits, for the love of God, and zeal of the falvation of fouls? Is this a work of nature? and can human force arrive to this of itself? Let us go out from this confideration, left it be like a load-stone to draw us in further; and yet let me fly as far as I will, I cannot hinder my heart from being with them, and defiring to end my days in this imployment. They who defire to fee the fruit of these missions of our company, the numbers of the gentiles which they have brought from folitudes to live in cities, the great progress of the faith, and the numbers of martyrs they have confecrated to God, let him read the book made of all this by that apostolical man Antonio Ruiz de Montoya; and then he will be extremely edified, and admire the work, as well as the author. And fo I return to the thread of my history.

Juan de Selis being landed here, found little refiftance from the Indiana, who are not fo cruel nor warlike as in other parts; fo he took poffeffion of all that tract, in the name of their majetties, for the crowns of Capitle and Leon, as was always the attom of the first discoverers. And he for himfelt took possession of those seven soon of earth which death allows to those he seizes, let them be never so ambitious, though while they are alive a whole world will not suffice them. He lies builed there; and an end was put to his discoverie.

Much about the fame time, there were

at his catholick majefty's court the two fa-mous captains Ferdinand Megellan and Megellan Ruy Falero, offering their perfons, valour, offering and industry, for to find out, either towards discountered. the fouth or west, an end to America, or some freight. canal or ftreight by which both feas might communicate with each other a and fo the navigation from Europe might be made in the same ships, in which they might go round all its coafts. They were treating upon this fubject; and the Portugal embaffador made it his bufinefs to oppose Magellan, because being fallen out with his king about this discovery, he defired he might not make it for the crown of Castile; but at last the king having heard at Saragoga, in presence of his council, the reasons and grounds that Magellan and Falero went upon, he accepted their fervice, and honoured them with the habits of St. Jago; and having fettled the capitulation with them, his majefty commanded the fquadron to be made ready, and named the captains and officers of it; and having heard that there was a difpute rifen between Alageilan and Faliro, about who should carry the royal flandard or flag, and the like, he ordered Falero, as not yet well recovered of a diftemper he lay under, to flay at home, and mind his health; and, in the mean time, that another fquadron fhould be got ready, in which Falero should follow.

The first squadron being ready, his majefty commanded the affiftant of Seville, that he should deliver the royal standard to Magellan in the great church of Santa Maria, of victory of Triana, taking at the fame time from him an oath of fidelity, or homage, according to the cuftom of Caffile, that he should perform the voyage with all fidelity, as a good and loyal vaffal of his majesty. The captains took likewise an oath to obey Magellan in all things. He, after many vows, having recommended himself and his voyage to our lord, went on board the ship called the Trially, and the treasurer-general in the Victory, (to famous for being the first that went round the world.) The other ships were the Conception, St. Jago, and St. Antony.

They

ere the Con-

They fet fail the tenth of August, in the Magelian year 1519. They took the ifle of Tenerif, then made the coast of Guinea, and arrived at Rio Genneiro; from whence they failed on St. Stepben's day, and having had a great florm, they entered into the river of Plata: here they flay'd eight days; and then following their voyage, they had another terrible tempeft, which carried away their forecaftle, and forced them to cut away their poop. They made vows to our lady of Guadalupe and Monferrat, and to St. Jago of Gallicia. It pleased God to hear them, and they took shelter in the river of St. Julian, but not all; for one of their fhips was loft: the men got on fhore, but endured to much by land to port St. Julian by hunger, that they feemed skeletons when they came to their companions.

While they were wintering in this river, Minedan's p co muti. either idleness, or the great fufferings they had undergone, and those which they feared, made them mutiny against Ferdinand Magellan. There were some of his ships that revolted; but he with great boldness, and no less art, made himself matter of them, punishing some of the guilty, and pardening others; and for Juan de Caribagena and his companion in rebellion, he ict them afhore when he fet fail, leaving them a good provision of bread and wine. It was never known whether this were fufficient to fullain them, till they fhould meet with fome of those giants which had been with the ships, and had been treated by Magelian, who perhaps received them.

Magellan feeing the winter over, as he Pafes the bu hane 19 which is when the furnmer begins in those more distributions of November, parts; and having by land observed what he ould of the Streight, they paffed with great good fortune in twenty days, and then fteering north, they coafted along Chile, which they left fomething at large, as having no knowledge of that land, Peru being not yet discovered. After this, they came to the Philippine Islands, in one of which this most couragious captain, and famous Portuguese, Magellan, died by the My relian hands of the natives, or to fay better, by his own rafhness and overboldness.

Some years after, which was that of 1534. Simon of Alcazora, a Portingueje gentleman of the habit of St. Jago, and gentleman of the chamber of the king, a great cosmographer, and one very expert in navigation, having been employ'd many years for the crown of Caftile, made an agreement with the king to discover and people two hundred leagues from the place where Almagro's government thould end, which was in Chile. He failed from St. Lucar on the 21st of September, 1534, with five good fhips, and two hundred and fifty men; and without

feeing land from the Gomera to the Streig! OVALIE. of Migellan, only having touched at care Abre Ojes, and the Rio de Gallegos, about twenty five leagues from the Streig mouth, he entered them on the 17th of January, 1535, having endured to much thirft, that the cats and dogs were come to drink wine, and the people were ready to periffi. They found a great cross erected by Magellan, and the wreck of the ship which he loft there. There appeared about twenty Indians, who gave figns of much joy to fe the Spaniards. They followed their course, keeping ftill the right hand, as the fafeft; but yet they had to furious a ftorm, that it carried away half their fails: it blew to, that they thought the fhips would have been carried away through the air. They took fhelter into a port; and because the season was to far advanced, they perfuaded their general Alcazova to go out of the Streights, which he did, and return to the port of

Lions, or of Wolves, which was a very good one. While they were wintering in those parts, they refolved to enter further into the coun-

try, and make difcovery of those riches which the Indians told them were there; fo having celebrated mass, they bleffed the banners, and the captains took a new oath of fidelity and obedience; and with this they fet out about 225 men, having fifty arcabuses, seventy cross-bows, four charges of powder and ball, which every one carried with his bread, which was about twenty fix pound weight. Thus they marched about fourteen leagues; and there Alcazova, being a heavy man, could go no further, which was his ruin : he named a licutenant, against whom the men mutined; for having gone ninety leagues, and their provifion failing, they refolved to go back, as they did, though they had met with a river full of fift; and that their guides told them that a little further they should come to a great town, where there was a great deal of gold; for the inhabitants wore plates of it in their ears, and upon their arms: but nothing could move them; and as one mifchief feldom comes alone, they refolved to make themselves matters of the ships at their return, and to kill all that should oppose them; and fo they executed it. But God Almighty punished them immediately; for as they were going out of port, they loft their admiral; and then having but one fhip, durft not venture for Spain, but put in at Hispaniola, where doctor Saravia, of the audience of St. Domingo, chaftiz'd the most guilty. And thus the discovery of Chile, for that time, and that way, was difappointed; for God referved that honour for another.

CHAP. XI.

Of the Discovery of other Parts of America before that of Chile.

HILE the ships are making ready to go to the discovery of Peru, will not be amifs to touch upon the difcovery of fome other parts of America bythe-by, that at least the order of time, with which the difcoveries proceeded each other, may be understood; and what we are to fay afterwards about Chile will be made plainer, that being our chief defign.

It has been faid already, in its proper place, how the admiral Columbus discover'd the terra firma, or continent of America, in his fourth voyage from Spain to the Indies, and found the port of Puerto Bello the second of November, 1502. We have also faid how Vasco Nunnes de Balboa having founded Santta Maria la Antigua of Dairen, discover'd the South Sea, and took posteffion of it in the month of September or Ottober, in the year 1513. as also that in the year 1515. Juan Dias de Solis discover'd the river of Plata the first of all dis-

Now we will add what is known about the discovery of other lands; amongst the which, one of the first was that of Jucatan, which was undertaken by captain Francisco 1517. Hernandes de Cordona, in the year 1517. and the Adelantado of it is at this day Don Christoval Soares de Solis, a gentleman of an antient and noble family in Salamanca. This fame year other Castilians discover'd the land of Campeche, where, in a chapel of the Indians, full of their idols, they found painted croffes, of which they were not lefs aftonish'd than rejoiced, seeing light indarkness, and the trophies of Christ by the side of Belial; which, at last, by the Spaniards arrival in those parts, were better known to those barbarous people. In the year 1518, the licentiado Ejpinofa, who was nam'd deputy to the governor Pedrarias, founded the city of Panama, which is the canal by which all the treasure of Peru passes to Spain in the galleons. This city has not increased so much as many others of the Indies, because being situated near the equinoctial line, its temperature does not agree with those born in Europe; but yet there are many conflitutions that do very well there, because of the great riches that are eafily acquir'd there; and those who seek them, think no air bad. There are a great many people of quality; for there is a bishoprick, a royal Audiencia, or court of judicature; a tribunal of royal officers, and a chapter of canons, feculars and regulars. But that which in my judgment is most

commendable in it, is the piety, mercy, and liberality of its inhabitants. I have this year receiv'd advice, that by the negligence of a female flave, the greatest part of the city was burnt; for the houses being of wood, if one take fire, tis hard to stop the flames: there was loft in this a great mafs of riches, a great part of the lofs falling on the cathedral; and a little after, there being a gathering made, though this miffortune had concern'd almost every body, who for that reason were less in a condition to contribute by way of alms, which fome of them wanted, yet they gave above twenty thousand pieces of eight, and went on contributing. This was an extraordinary mark of their charity; but the ordinary ones, in which they constantly shew their generofity, are to ftrangers and paffengers who pais from Spain to the Indies, who most of them are at a lofs till they meet with fome patron, or friend, or countryman, to affift them; and they would often be reduced to great extremity, if this were not, as it is, a common inn for all those people; for in the col-lege of our company alone, though it is not yet founded, but lives upon alms, I faw, when I was there, a cloth laid at the porters chambers, where every day they provided for, and fed about fifty or fixty paffengers, with bread and flesh in abundance. The same is done by other convents; and the feculars, I faw, gave them money and other necessaries. This, as to the city of Panama, founded in the year 1518, in which year the religious friers of St. Dominick and St. Francis pass'd from the island of Hispaniola, and began to found convents in terra firma, and the Pearl coast; from whence these two holy orders pursued their mission through all the land, enlightening it with their doctrine and holy examples a by which they have made fuch a progrefs among the Indians, that the present flourishing of the faith is owing to them, to the great faving of the Indian fouls. The year 1519. Ferdinand Magellan made the difeovery of the coast of Chile; and the same year Hernando Cortes went from the point of St. Antonne la Havana to Corocha, which is the first point of Yucatan east, to begin the conquest of the great empire of Mexico; of which, and the noble actions of that great man, 'tis better to be filent than to touch upon them, only by-the-by, as we fhould be forc'd to do; this being not a place to explain the state and grandeur of that migney monarch Montesuma, who was

Buenos Aires founded in 1518.

fovereignly obeyed in fo many and fuch great Who can express in few words all this, and the felicity that accompanied Cortes in all his undertakings, which were fuch as they appeared possible only after they were done, feeming otherwife fo high and difficult, as to be inaccessible to the ex-treamest boldness? Indeed, it cannot be denied, but that he was affitted by heaven, whose instrument he was in planting the christian faith among those gentiles, and shewing fuch reverence to the preachers of it, as might ferve the Indians for an example; a quality which will always give reputation to princes, both before God and men. In the year 1528, the king fent a colony

to the Rio de la Plata, having agreed with founded in the merchants of Seville for that purpole. The city they founded was that of Buenos Aires, which is on the fide of that river, in that part of it where it grows narrow from its large entrance at fea; and the ri-Cathagena In the year 1532. Cedro de Heredia of Ma-founded in drid fail'd from Spain, and founded the civer there is not above nine leagues over.

ty of Carthagena, which is the first Scala which the Spanish galleons make coming from Spain for the Indies, to fetch filver. It was fo call'd, because its port was like that of Cartbagena in Spain; for the old name of the Indians was Calamari. He had at first an engagement with the Indians; and though they shewed themselves very brave, yet he beat them, and founded the city, which is at present one of the best of the Indies, being wall'd with stone, and so flrong, that we may name it as an impreg-

nable fortrefs.

It is fituated in an island, divided from The Grunthe continent by a finall arm of the fea, which cbbs and flows, and comes to the bog of Canapote: there is a bridge or caufeway there, that goes to the terra firma. The port is very fafe, and good fhips go into it by two mouths or entrances, a greater and a less; the great is fandy; and the year that I was there, they told me it was almost shut up by the fand which a river cafts up against it; and now they write me word, that it is quite fill'd up, fo that there is no going in, but by the leffer entrance, which makes it fo much the flronger, and it is defended by a good caftle; befides which, the city is well garnished with artillery, fo as not to fear an invafion. The ftreets being handfomely difpos'd, the houses of free-ftone, high and noble; fo are the churches and convents, particularly that of the jefuits, which makes a beautiful prospect to the sea. Here is a custom-house for the king, and a house call'd of the Rigimiento, with other publick buildings: it is very populous, and of a great trade, by reason of VOL. III.

the coming of the gallcons; and from them OVALLE, they have wine and oil; corn they have in 10 their own territory: there relides a billiop, and there is a tribunal of the holy inqui-The governor hath both the civil fition. and military command: it increases every day in riches, being fo fituated, that it shares all the riches of Pern, Mexico, and

In the year 1540, captain Francisco de The river Orellana discover d the great river of the of the Amazones, which is call'd also Orellana, and somes discovered by by a common miftake Maragnen; and went esprant from it to Spain, where, upon the relation Orellana, he gave of its greatness, the emperor is 1540.

Charles V. order d him three ships, with people, and all things necessary to make a fettlement. But this had no effect, because having loft half his men at the Canaries and Cape Vert, he was too weak when he got thither; yet he attempted to go up the river in two large boats, to which his fleet was reduc'd; but finding his wants of every thing, he came out again, and went by the coast of Caracos to the Margarita, where he and his people are faid to have died, About twenty years after, the viceroy of Peru sent a good fleet under Pedro de Orfua; but this miscarried also, because he was killed teracheroufly by Lopes de Aguirre, who rebell'd with the fleet 3 but having mis'd the entrance of the river, he landed on the continent, near the island of Trinidado, where he was executed by order from court. Some years after this the ferjeant general, Vincente de los Reyes Villalobos, Alonfo de Miranda, and the general Joseph de Villa Mayor Maldonado, undertook the fame defign, but with the fame fortune, death taking them away; fo that they gave over at that time all attempts on Peru and Quito fide. But still the fame of this river continuing, Benito Maciel, general of Paria, and fince that governor of Maragnon, and Francisco Coello de Caravallo, governor likewife of Maragnon and Paria, attempted its discovery up the river; and though they were back'd by the king's royal commands, yet there were many crofs accidents as to hinder the execution of their enterprize.

The fathers of our company of Jefies at-In the year tempted likewise this discovery, by the mo-1507. tive of faving fo many fouls; but beginning with a nation call'd the Cofanes, their progress was stopp'd by the cruel death given to father Raphael Fernandes, who was preaching the faith to them. Thirty years after, which was 1537. fome friers of the order of St. Francis, mov'd by the zeal of amplifying the glory of the gospel, and by order of their superiors, went from Quito, in company of captain Juan de Palacios, and fome foldiers: they began to fail down this river, and came to the Encabellados, or

Вh

OVALLE people with long hair; but not finding the 1646. harvest ready, they return'd to Quito, except only two of their lay-brethren, which were Domingo de Brieva, and frier Andres de Toledo, who with fix foldiers more fail'd down as far as the city of Paria, a fettle-ment of the Portuguese, about forty leagues from the fea. They pass'd by the city of St. Luis de Maragnon, where the governor Jacomo Reymondo de Moronna, by the information he had from these friers, caus'd feven and forty canoes to be got ready, and embark'd upon them feventy Spaniards, with 1200 Indians, some of war, and some to help to row, under the command of captain Pedro Texeira, who having spent a whole year in his voyage, came at last to The river the city of Quito, having discover'd and of Ovella-navigated the whole river of the Amazones, ted from its entrance into the fea to its fource the fea to or rife.

The viceroy of Peru, who at that time was the count de Chinchon, being inform'd of this voyage of carain Pedro Texeira, refolv'd to fend two perfons back with him for the crown of Castile, who might give a perfect relation of the discovery.

At this time the city of Quito was govern'd by Don Juan Vasques de Acunna, as corregidor for his majesty over both Spahiards and Indians, and who at prefent is corregidor of *Potofi*, who very zealoufly offer'd his person for one, and his fortune to raise people at his own charges, and provide them with all necessaries; but the royal Audientia, confidering how much he would be wanted in his office, where his prudence, experience, and zeal, had shewed themselves, refus'd to let him go, and chose a brother of his, that they might not totally deprive his illustrious family of that glory. This brother was a father of our company of Jesus, and nam'd father Chris-

toval de Acunna, who was rector of the college of Cuença, and gave him for companion, father Andres de Arrieda of the fame company, who was professor of divinity in the fame college.

They fet out from Quito, in the year And back 1539. and having navigated the whole ri- again to ver, which, according to their account, is the feat. thirteen hundred and fifty fix leagues long, (though Orellana makes it eighteen hundred leagues,) observ'd exactly the rise of this great river, its situation, its course, latitude, and depth, the islands it makes, the arms into which it is divided, the rivers it receives, the riches, quantities, temperature, and climate of its shores, the customs and manners of that multitude of people that inhabit it, and particularly of those famous Amazones. All which may be feen in a treatise made of it by father Christoval de Acunna, printed in Madrid; and it is a relation that deferves credit, he being an eye-witness, and having examin'd various nations as he went.

These informations were well receiv'd in Madrid; but the revolutions which fucceeded in those kingdoms, hinder'd all further progress, and prevented those holy designs for the conversion of that great part of America. There are infinite numbers of Indians that inhabit the islands, and other parts of this river. 'Tis faid they have one fettlement, that is, a town above a league in length. And now omitting many other conquelts, made much about the fame time in the islands and coasts of the North Sea, and that which was made in the South Sea by Xil Gonçales de Avila, in the land of Nicaragua, in the year 1522. let us attend (for it is high time) to the discovery of Peru, of which we shall treat more at large, because it has a connexion to that of Chile.

CHAP. XII.

The Discovery of Peru is given to Don Francisco Pisarro, and Don Diego d'Almagro, and Hernando Loque; and how much they endur'd in it.

HE captains Don Francisco Pisarro, and Don Diego Almagro, in company with the scholastick of the cathedral church of Dairen, call'd Hernando de Loque, came to the governor Pedrarias, and defir'd of him, as friends, the favour of being employed in the discovery and conof Peruar-quests of those coasts which run south from Panama, where lies the powerful kingdom of Peru, of which at that time there was little light; and for this they propos'd their reasons, among which, that which was of leaft value, they relied most

upon, and that was their experience they had attain'd under their general Vasco Nunnes de Balboa. They met with little difficulty with the governor; for fo long as they did not defire any affiftance of the king's treasure, but ventur'd their own and their lives, they eafily obtain'd leave to undertake what they would. They presently bought one of the ships which Balboa had built for that defign; and having got together threefcore men, and four horses, (for at that time horses were a great rarity,) Hernando de Loque faid

tempted.

They the ships which design; and habre men, and sour ne horses were a o de Loque said mass. mass; and when he came to confectation, he divided the *Hoftia*, or facrament of the body of Christ, into three parts, of which he took one, and gave the other two to his two companions, offering themselves to God, with intention to propagate among those people his glorious name, and plant the christian faith amongst them by the predication of the gospel. Those who were present shed tears out of devotion, and at the same time pitied these undertakers, looking upon their enterprize as a mad one.

mad one. About the middle of November 1524. Don Francisco Pisarro having left Don Diego Almagro behind him, to get more peo-ple together, fail'd from Panama to the ifle of Pearls, to the port of Pinnas, (the last discovered by Balboa, and after him by Pasqual de Andagoya,) and went up the river of the Cacique Biru, or Biruquete, to the country of Chocama, where he stopped to wait for his companion Almagro. hardships that the Castilians endured of hunger and other inconveniencies are not eafily to be told: twenty died starved, and the rest were fick, having no other sustenance than the bitter palmetos; yet cap-tain Pifarro, without shewing the least weakness, took care of them all with great affection, which made them all love him. At that time Don Diego de Almagro, his companion in the undertaking, came to him: he was received like an angel, for the relief he brought: he had loft one of his eyes by the shot of an arrow, in a rencounter he had with the *Indians*. They both together purfued their conqueft; but provifion failing them once more, and their foldiers being almost naked, and so persecuted with mosquitos, which are infinite there, that they could not live, they began to talk of returning to Panama, to which Pifarro himfelf was well enough inclined; but Almagro exhorted them rather to die than lose patience, offering to return to Panama for new fuccour, while he should leave his companion in the island of

The effect that this had, was, That he found the government altered in Panama, and Pedrarias fucceeded by Pedro de los Rios, who hearing of the miferable condition of those Cashilans, would not fuffer Almagro to return to them, being desirous they thould give over the enterprize as impracticable. He sent for this end a gentleman of Cordona, call'd Juan Tasur, a man of excellent parts, equal to his noble descent, with a commission to bring those people back, that they might not all perish. He came, and signified his order to Pisarro, at which he was out of all patience, seeing it would be the ruin of his project. Tasur seeing

this, took a prudent medium, which was, OVALLE. That he should draw a line between him and Pijarro, who should be at the head of his men: and Tafur told them, That all those who resolved to return to Panama, should pass the line, and come on his side. Having said this, they began to pass the Psiarro reline, all to thirteen and a Mulatio, who main with faid they would die with Pijarro: and so Mulatio Tafur returned with all the rest to Panama. In the sise

Captain Francis Pifarro remained with Gorgona. his thirteen companions in an island, which, for the greater proof of his courage and conflancy, happened to be the Gorgona, which is a picture of hell for the closeness of its woods, the afperity of its mountains, the infinity of its mosquitos: the fun is scarce ever seen in it for the continual rains that fall.

When Tafur came to Panama, and his two friends Almagro and Loque found that Pifarro stay'd behind with so few companions, 'tis not credible how much affliction they fhewed: they follicited the prefident, that at least another vessel might be fent to bring them away, in case they found them alive; and after many difficulties, at last a saip was ordered after them, but upon condition to be back at Panama in fix months: A Bip the fhip fail'd, and came to the place where comes to Pifarro and his companions were left. Who them from Panama. can express the joy and surprize of those poor abandon'd wretches, when they descried at a distance the fails of the ship? At first they could not believe their own eyes; for the defire and longing for a thing makes it appear less probable to come to pass: but at last it arriv'd; and Pifarro seeing himfelf mafter of a good veffel, could not forbear attempting fome discovery.

They fail'd as far as the country of Tum-Tumbele befe, which is very rich; though the Tum-discovered. befe Indians faid, That their riches were nothing in comparison of what they might fee further. The lord of that country having heard of the arrival of the Castilians, he fent prefently to visit them at their ship with twelve baskets of provisions, and among the rest a sheep of that country, which was prefented to them by the virgins of the temple, as to men who feemed defcended from heaven, and fent by God for fome great thing. The ambaffadors came; and wondering to fee the ship with white men who had beards, they asked them who they were, whence they came, and what they pretended. They answer'd them, That they were Castilians, vassals of a powerful monarch, who, though fo great, had yet a greater over him, whom he owned, with all other kings, and who is in heaven, and is call'd Jesus Christ, in whose name they came to undeceive them of their errors in worshipping gods of stone and wood, there being but one God, creator of all things,

Ovalle whom we all ought to worship. They explained to them, That there was a heaven and hell, the immortality of the foul, and the other mysteries of our faith.

The Indians stood staring and gaping, hearing this doctrine, which had never been heard of before in their country; for they believ'd, that there was no other king in the world but their king Guayanacapa, nor other gods but their idols. Among all the things they admir'd, there were two chiefly: the one was a negro; for they never had feen one, and did believe that his colour was fome ftrong dye; for which reason they bestowed much pains in washing his face to get it off; but when they faw that he was rather blacker, and that he shewed at the same time white teeth, for he could not hold laughing to fee their fimplicity, they fell a laughing too, and could They won- not but admire such a fort of men. The der at the other thing was the crowing of a cock,

which the captain fent them with a hen of

Callille: every time he crowed, they ask'd what he faid; for they thought his voice articulate, like the human voice; which is an argument that they had not that kind of fowl: and Garcilasso de la Vega is of that opinion, answering the objection of the indian name they give a hen, that is, Atagualpa, which, he fays, was a name given by the Indians after the coming of the Spaniards. The Spaniards having refresh'd themfelves well on shore, began to defire of Pifarro to return to Panama, and gather a greater force, that which he then had being very difproportioned to his undertaking: he yielded to their perswasions, having, for this time, made discovery only as far as a place called Santa, which is very near the equinoctial line; and having had a more certain account of Cusco, its riches, and the mighty empire it was head of. So taking with him fome Indians, and fome patterns of the gold, as a testimony of the discovery, he return'd to Panama.

CHAP, XIII,

Captain Francisco Pisarro returns to Panama, goes from thence to Spain, and purfues his Conquest.

PISARRO being come to Panama, went with his two companions to the governor Don Pedro de los Rios, to reprefent to him their reasons for continuing their discovery, upon the account of the riches of the country, as well as the planting the faith in the capital of fo great a monarchy, and fo in all its dominions: but the governor would not agree to it; and fo they refolved that Pifarro should go to Spain, to propose it to the king himself. He undertook the voyage; and to give more credit to what he should fay, he took along with him feveral things proper to the country he had difcovered, as pieces of gold and filver, fome of those theep we have mentioned, and fome of the *Indians* themselves clothed after the manner of their country. The king was much pleas'd with them; and Pisarro, in his first audience, began to propose the intent of his discovery, the great hardships he had endured, he and his companions going naked, and almost starved, exposed to the mosquitos and poifon'd arrows of the Indians; and all this, having fpent three years in this fort of life, for the increase of the gospel and his majesty's royal dominions. His majesty heard him with much attention and goodness, shewing great compaffion for his fufferings, and ordering a gratification for himfelf, and his two companions, as also the thirteen who would not forfake him : he receiv'c all his memorials, and order'd them to be difpatch-

ed to his mind, having first made an agreement with him proportionably to his great merits. They did not believe in Spain (and The rice that is an old disease every where) all that of Peru Pisarro said of the riches of Peru, and of the motorial in Space. palaces and houses of stone which he had m Spain. icen, till he shewed them the pieces of gold and filver which he had brought with him; and then the fame of that land began to fpread its felf, and with it the covetoufnefs of fharing those treasures, every one blaming the governor of Panama for not having given the necessary assistance to the discovery.

Pifarro being difpatched with the title of Adelantado of the first two hundred leagues he should conquer, having also a new coat of arms, and other privileges granted to him; and taking with him four flout brothers that he had, he embark'd for the Indies with one hundred and twenty five Cafillians more. He lest Sanlucar in January 1530. and arriv'd at Puerto Bello, where he was and arrived at Pacco Bus, since a superior received with great joy by his companions and friends, who were all pleafed with the favours the king had beflow d upon them by his means: only *Don Diego de Almagro* was not fo well pleas'd that *Pifarro* had made a better bargain for himfelf than for him, his partner in all the undertaking; he made his complaint to him, and refolved to part company, and discover and conquer by himfelf: but being affured that as foon as the first two hundred leagues should be con-

quered, he would use his interest to have him made Adelantado of two hundred more before any of his brothers; and fo fuffering himself to be perfuaded, they agreed anew, and fell to preparing every thing for their enterprize. He remain'd at Panama; and the Adelantado, with his brothers, went from thence with a good crew of men, being to be followed by *Almagro*, as before. To make fhort about the things performed by this great conqueror, the great riches he got, and among the rest an emerald as big as an egg, which was prefented to him, we will suppose him at the island of Pura in war with the Tombezinos; and there he came to a clearer information of the riches of Cufco, and the state in which that monarchy was at prefent: and because he had receiv'd a special command, and was himself inclin'd to propagate our facred religion, as the best means of furthering his own design, the first thing he did, in landing upon the verid, and God, to give a beginning to the spiritual switt. at Pura, where was built the first church that was ever erected in those kingdoms. While he was employ'd in this, he fent out to discover more lands, to know more of the state of the country. There he learnt the division that was between the two brothers Guascar and Atagualpa, which was occasion'd by the death of their father Guayanacapa, who was a most powerful monarch, and among other fons had these two, which were now in war, and some of his subjects follow'd the one, and some the other. Guascar was the lawful heir, but not so

> brother, with hopes to prevail.
>
> The Adelantado Don Francisco Pisarro refolved to have as, interview with Atagualpa, who was the nearest to the place where he was. So putting his trust in God, he set out with his fmall army, more to be valued for its bravery than its number, which nevertheless was feared and respected in its march. He came near the place where Atagualpa had his camp, which was near fifty thousand men, and sent him his ambassadors on horseback, which was a new thing in that country, to give him advice of his arrival, and the reason of it, which was, To perfuade his majefty, and his vaffals, to give obedience to the true king of glory, from whom is derived all the power and command that princes have on earth. Atagualpa receiv'd the ambaffadors in a stately tent, shewing in all his behaviour a fovereign majesty; and though his courtiers

He look'd dians for upon them with some pleasure, and not as priz'd at the on a strange thing he had never seen; for sight of she the horses beginning to corvet, some of his Indians run away, whom he prefently cau-fed to be put to death, for having shewed cowardice in his royal prefence. He answered the ambaffadors courteoufly, fhewing the pleafure he fhould have to fee and hear their general; and fet a day for it, telling them, That they should not be disturbed, nor asraid to find him and his people in arms, for it was his cuftom to use them to

The day came; and Atagualpa marching Atagualpa in order with his army to the place where designs to the Spaniards were drawn up, he discover'd defroy the to his captains the mind he had to make an Spaniards. end with those strangers, who had been so bold as to enter into his country, and come fo near him without having any respect to his royal power: but he order'd them not to kill them, but to take them alive, because he would use them as his flaves; and as for the dogs and horses, he resolv'd to offer them in facrifice to his gods. The Castilians, who were not totally ignorant of this false appearance of peace and friendship, though they were fo few that the Indians were four hundred to one, yet they did not lose courage; but with confidence in God expected the encounter, taking their posts, and pre-paring every thing for it, though secretly, that they might not be thought the Aggres Therefore he drawing near, the Adelantado stay'd for him with only fifteen men, the rest being retir'd and hid, and Aragualpa senc him an embassy by a frier, who car-summoned ried the gospel, and told him, That in those by a frier. books were contained the faith, by which he and his people might be faved, and they brought it bin from God Almighty.

The king heard the frier, and took the mass-book out of his hands, looking earneftly upon it: but not knowing how to read it, and taking it all for a jest and a fiction, he threw the book up into the air, making a fign at the fame time to his people to fall on; which they did: and then the Adelantado lifting up a hankerchief, which was the fignal to our men, they play'd upon them with their muskets on one hand, and the dogs and horfemen attacked them on the other, fo that the victory foon appear'd for the Castilians; God Almighty having refolved to destroy that monarchy of the Ingas, and to remove that obstacle to the propagating of the faith, and to put that land into hands that should increase it, as their catholick majefties have done. They He is taken took the king Atagualpa prisoner; but treat-prisoner,

OVALLE ed him with all respect due to his royal per1646.

While this happen'd, which was on a friday, a day dedicated to the cross, in the month of May, in the year 1533. the army which Atagualpa had sent against his brother Guaf-

car, near Cufco, overcame him and took him Gusfear ta-prifoner, and were bringing him to Alakon prifoner gualpa, without knowing any thing of what alfo. had happened between him and the Caftilians; but on the way Gusfear learned that his enemy was a prifoner too; and Atagualpa was at the fame time informed of the victory he had obtained; he hearing it, shook his head, and cried, O forture! what is this, that I am this day a conqueror, and conquered? Gusfear moderated his grief with the news of his enemy's misfortune, thinking that the Castilians would revenge him on the tyrant, who pretended to take from him his lawful inheri-

Atagualpa, though a prisoner, began to make reflections in this manner: If I cause my brother to be put to death, how do I know how the Castilians will take it? and whether they will not put me to death for this, and remain lords of the land. If I let him come on, and he speaks with them, the justice of his cause will speak for him, and I must perish; for I cannot expect mercy from any. What remedy? He found it cunningly, as he thought: he feigned a great fadness, with a defign that the Pilarros, who vifited him every day, fhould ask him what was the matter. They did accordingly; and feeing him fo afflicted, defired to know the cause of that extraordinary grief. He answer'd deceitfully, That having received the news that his generals had put to death his brother Guafear, it gave him an exceeding grief, of which he was not to be comforted 3 because though they were enemies, yet he was his brother; and he could not but be much concerned at his death. All this was feigned, to fee how the Spamards would take it; and finding they did not feem offended at the thing, he fent orders immediately to his generals, who were coming on with his brother, that they Guifear put should put him to death presently by the to death by way; which they did, by drowning of him the order of in a river, which amongst them is an in-Atagualpa, famous death, His cries to heaven to revenge his unjust death were useless at that

But let no man give it to another to fave his own life; for there is not a fhorter, nor a more certain way for him to lofe it: let him not ftrive by politick maxims, which an unjust and ambitious paffion fuggetts; for though that may be an appearance of stability, yet divine justice breaks thorough it all like cobwebs, and at length leaves no

crime without its chastifement. Augualpa proved himself a great example of this truth, all his artifices ferving only to afford his enemies a pretext to take away his life, He had promifed to fill the room where A trodgethey kept him prifoner, which was a very our ranfom large one, with gold and filver, befides ten thousand bars of gold, and some heaps of jewels, as an earnest, for his ransom. And though this was accepted; and that he performed it according to his promife, yet he did not obtain what he pretended; for inflead of his liberty they pronounced to him a fentence of death, which he justly defery- The Spied for having put his brother to it, and ty-niards take ranniz'd over that which was none of his the ranfom, own; and because of the advice the Sra-onsty put miards had every day of the army that was Ataguajpa gathering together, which if it were true, to death, and Atagualpa, at liberty at the head of them, there would have been good reason to fear from his fubtilty, great and irremediable inconveniences; which they thought they could no ways avoid fo well as by taking his life, though with some hopes of his exchanging it for a better and eternal one, if it be true, that before he died he was instructed, and received baptism, as some fay he did.

About this time, which was in the year 1533. Don Diego d'Almagro being made marshal, came from Panama to Tombez with a good body of men and arms; and from thence he went on to help his good friend, the Adelantado Pifarro in his conquests, not letting his men do any injury to his Indians as he went. There were a hundred thousand pieces of eight given them upon their arrival; for though they were not at the battel, yet their prefence confirmed the victory, and helped to keep Atagualpa prisoner. The remainder of the treafure, which was above a million, was divided among Pijarro's men; and they being few, were all made rich, and in a condition to make discoveries of their own. The Adelantado fent his brother Hernando Pifarro to Castile, with the news of this happy progress of their discoveries, and of the propagating the christian faith in the conversion of the Indians; and he also carried with him the claim of Don Diego d' Almagre to two hundred leagues of land beyond his brother's, of which he was like-wife to be Adelantado. All this he negotiated very much to the content of all; and in the year 1534, there was granted, in Toledo, to Don Diego d'Almagro the government of that which they called the new kingdom of Toledo, which began at a place called Las Chinchas, where the terricory of Pifarro ended, and extended itself to the Streights of Magellan.

CHAP. XIV.

OVALLE. 1646.

The News of the Government of Don Diego de Almagro is brought to him; and he goes upon the Discovery of that of Chile.

ON Francisco Pisarro had given commission to Don Diego d'Almagro, to to take possession of Cusco, when the news came of the government of two hundred leagues given him by his majefty, to begin from the Chinchas. This caused great difturbance; for it was believed that Cufco would fall into this division; and the friends of Don Francisco Pisarro, judging this of great prejudice to Pisarro, that the marshal, Almagro Pitareven by his commission, should find himfallout, felt in possession of Cusco, they advised him immediately to revoke the powers he had given, which he did; and this was the first cause of the disturbance in Peru, which made afterwards fo great a noise, and for which they both lost their lives. But I being to write the history of Chile, and not of Peru, shall leave the reader to those historians who treat of it at large. This news being known in Truxillo, one Diego de Aguero set out to carry it to Almagro, who was upon his march to take possession of Cusco. He overtook him at the bridge of Acambay; and he having received it with great moderation, shewed himself above the greatness of his fortune, and gave him as an albricias, or prefent for his good news, fe-ven thousand Castilians, which are near twenty thousand ducats; and by this news he was moved to change his defign of conquering a people called the Chiriquanaes, and treated of that of Chile; for he fupposed it would fall into the government he was to have, and (as Herrera fays) moved by the informations he had of the great riches of Chile.

To prepare himself for this enterprize, which was like to be very chargeable, he caused a great deal of silver to be melted in Cufco, to draw out the king's fifths. Amongst other things, there was a man's burden of gold rings to be melted down; and one Juan de Lefe being by, and taking a fancy for one of them, begged it of mar-shal Almagro, who shewed himself so much a gentleman, and fo liberal, that he faid prefently, that he should not only take that ring, but that he should open both his hands, and take as many as could lie in them; and hearing he was married, he ordered him befides four hundred crowns as a prefent for his wife. He shewed another piece of liberality to one Bartholomew Peres, for having prefented him with a fhield, which was, to order him likewife four hundred pieces of eight, and a filver pot weigh-

ing forty marks of filver, and had for handles two lions of gold, which weighed three hundred and forty pieces of eight; and to one Montenegro, who prefented him with the first Spanish cat that ever came to the L:dies, he ordered fix hundred pieces of eight. Indian Acid no There are a great many ftories more of his mal, liberality and charity too, he being very generous and noble minded. Having difposed all for his enterprize of Chile, he caused proclamation to be made, That all those who had not some particular employment to flay them at Cufco, should make themselves ready to go along with him. They were all overjoy'd at this, he being extreamly beloved for his liberality and courtefy; and that they might furnish themselves with arms and horses, he caused one hundred and eighty load of filver to The vaft be brought out of his house, (in those days riches a load of filver was as much as a man could the first concarry,) and twenty more of gold: this he india. distributed among them all. Those who were willing, gave him bonds to pay him out of what they should conquer in the land they were to difcover; for this was the way of these conquerors in gaining to his majefty this new world, having no other

pay but what they could purchase.

The Inga Mango, who was brother to Guafear and Atagualpa, had fucceeded them in the government, as the fon of Guayanacapa, who had also many others. This Inga had taken a great kindness for marshal Almagro; fo he gave him, as a companion in his entrprize, a brother of his, called the Inga Paullo Topo, and the high priest Villacumu; the Spaniards call him Villaoma, or Vileboma, that they might by their authority not only keep all his vaffals from falling upon them in the way, but rather should receive him, and make him prefents. The marshal defired these two persons to go before, in company with three Castilians, and make a fettlement or habitation at the end of two hundred leagues. The other people, and Juan de Savedra, went by another way; and when they had gone one hundred and thirty leagues from Cusco, they founded the town of Paria. Here the marshal overtook them; and he was likewife affured of the title of Adelantado granted him by his majesty, with the government of the new kingdom of Toledo, which was to begin from the borders of new Castile; for fo they called Pifarro's government. His friends advis'd him to return imme-

CHAP.

OVALLE diately, wherever this express overtook him, because there was one come to the city of Los Reyes, with a commission from the king to regulate limits of both governments to each of the Adelantadoes : but Almagro was fo poffess'd with the ambition of conquering fo great and rich a kingdom as that of Chile, that he did not value the land he had discovered, in comparison of what he was to discover, out of which he defign'd to reward his friends, and the many gentlemen that accompanied him; fo he purfued his journey; where it will not be amifs to leave him engaged with the fnows, and ill paffages of the Cordillera, while we give a vifit to the great city of Lima, called otherwise de los Reyes, because it being the head of those kingdoms, we cannot well pass it by.

This city was founded by the Adelantado ed by Fran Don Francisco Pisarro in the year 1555. cisco Pisar in a very pleasant plain, about two leagues year 1555. from the fea, upon a fine quiet river; which being derived by drains and cuts all over the plain, fertilize it so copiously, that it is all covered with feveral forts of products, as vineyards, fugar-works, flax, garden product, and other delightful plants: and if there be any thing they want from abroad, 'tis brought them so punctually, that all their markets are supplied with all manner

of delicacies that can be wished for. A delicious For this and many other delights of this place.

city, it happens to most people who live there, that they cannot endure to think of leaving it for any other place; fo that it feems an enchanted place, where the entrance is eafy, and the getting out difficult. I myself heard the Spanish merchants, who, the year I was there, had fold their goods themfelves at Lima, whereas they used to fell them at Puerto Bello, fo enamoured of it, though they flay'd but a little while there, that during our whole navigation, they could talk of nothing else; and to say truth, it deserves their praises; for though it cannot be denied, that fome cities I have feen in Europe do out-do it in fome things, yet few come near it, take it altogether: and, first, for riches, it is the fountain from whence all the rest of the world drinks; its bravery in cloaths, and magnificency of the court, out-does all others: 'tis extraordinary populous; for a father of our company, who had the care of catechifing the negroes, told me, they were at least fixty thousand, and more, that came to confes-They have fumptuous buildings, though outwardly they make no fhew, having no tiles; for it never rains all the year round: all the furniture, as pictures, beds, \mathcal{C}_c are mighty rich. There are great numbers of coaches, and abundance of gentry; all the inhabitants very rich, merchants of great stocks, tradefmen and han-

Its macnificence.

It never Lima.

dicraftimen of all professions. which is to me most considerable, is, what belongs to the worship of God, and cult of religion; for the cathedral church, and all the parish churches are very sumptuous, and provided of admirable learned men, which come out of that univerfity; of which those of the country are not the least to be valued, having furnished so many preachers and other fubjects for all other dignities, even to the highest government. What shall I say of the orders of friers and nuns? I fcarce know one order that has not two or three convents in the city, beautiful cloifters, great buildings, and yet greater churches; fome after the old fathion; all with burnished gold from top to bottom, as are those of St. Augustin, and St. Dominick: others after the modern way, with curious well-wrought ceilings; as is that of the Jesuits, and of our lady of Mercedes, which are of a very fine architecture. There are eight nunneries, fome of which have above two hundred nuns in them. There are belides many oratories, confraternities, hospitals, and congregations. In our convent alone of the jesuits, I remember there were eight foundations of several kinds, and for people of as many different ranks and estates in the world. The great congregation has few in the world equal to it: the chappel of it is very large, and of a very rich material, covered with filk and gold, and rare pictures, with other rich ornaments belonging to it. There is here great frequentation of the facraments by monthly communions: the body of Christ is exposed, and the church fo adorned with mufick and fweet fmells, that it is a paradife upon earth. And amongst other pieces of devotion performed by this congregation, there is a great entertainment or treat given once a year at an hospital, which is so magnificent, that it is worth feeing: the fame is done in proportion by the other congregations.

This city is the feat of a viceroy, who indeed is a king in greatness and authority, difpoling of a vaft number of places, commands, and posts of honour and profit. There is likewise a rich archbishoprick of great authority; three courts, or royal audiencias; a merchant court, which decides all matters of trade; a famous university, in which are professors very learned in their professions; three colleges or schools for youth, under the care of the fathers of our company of Jesus, in which are about one hundred and thirty professors or masters: there are every day new foundations for orphans, widows, and to retire women from lewdness: there is the famous hospital of St. Andrew for the Spaniards, and St. Anne for the Indians; all which would require a

relation by themfelves.

This is what I could not avoid faying about this great capital of Peru; and if it continues increasing as it has done for this first age, it will not have its sellow in the first world. The same may be said of Cusco, the Peru Arequipa, Chuquizaga, and the great town of Potosi, which increase so, that he who lima. is absent a few years, does not know them when he fees them again; and the reason is,

that the veins and mines of gold and filver, OVALLE which like a loadstone, have drawn so many people thither, are fo far from leffening, that new ones are discover'd every day, and those richer than the old ones; for which reason there comes yearly more people, and among them much gentry, as well as tradefmen of all arts and protessions, who most of them fettle and increase there.

CHAP. XV.

The Adelantado Almagro enters into Chile, having suffered extremely by the Way.

W E left the Adelantado Don Diego de Almagro in a place call'd Paria, from whence he was to pursue his journey to Chile, as he did in the beginning of the year 1535. He himfelf going before, order'd Juan de Savedra to follow with twelve horfe by the royal highway thorough the province of Las Chichas, the chief place of which was Topisa, where he found the Inga Paulo, and the priest Villacumu, who prefented him with ninety thousand pelos of very fine gold, it being the tribute they us'd to fend the *Inga* from *Chile*, and which they were now fending, without being inform'd of the tragical accidents that had befallen the family; and there he fent back a great many Caciques of the countries he left behind him, and who had waited upon him

thither. The three Spaniords, whom he had fent

with the Inga Paulo, and two more who

joined themselves to them, being desirous of making new discoveries, and acquiring honour, and withal making their court to the marshal, went before, till they came to a place call'd Jujuy, which is a place or country where the people are very warlike, and eat human flesh, and who kept the Ingas always in great awe. This boldness cost three of the Spaniards their lives, though they fold them dear. The Adelantado being refolv'd to revenge their deaths. fent captain Salfedo, with fixty horse and foot, to chastife those Indians; but they, being alarm'd, had call'd together their friends, and made a fort to defend themselves in, and many pits with sharp stakes in them, that the horses might fall into them; with which, and many facrifices and invocations

made to their gods, they had refolv'd to

expect their enemies. Captain Salfedo found

them thus fortified, and being himself in-

ferior in strength, sent to the Adelantado

for relief, who fent it him under the com-

mand of Don Francisco de Chares; but the

Indians then avoided engaging, and refol-

ved to abandon their fort; though, not to lose all their pains, they resolv'd first to at-Vol. III.

tack Don Francisco de Chares, where they kill'd a great many, and particularly of the Indians Yanaconas, and carrying off the fpoils, they made a fafe retreat: the Spaniards return'd back to their chief body. Since we mention'd the Yanaconas, it will not be amifs to explain the fignification of that word, for the better understanding of what follows.

The Yanaconas were, among the Indians, What the a people subject to perpetual flavery; and were. to be known, were bound to wear a fort of habit different from the reft. These seeing the bravery of the Spaniards, and how much they made themselves be fear'd and respected, began to rise against their masters, and adhered to the Spaniards, hoping thereby to shake off the yoke of slavery; and became crue. enemies to the other In-That which this word Yanacona now fignifies in Chile, is, those Indians who do not belong to any particular lord; for

as to freedom, there is no difference, the

king having made them all free alike. From Jujuy the Adelantado march'd with the vanguard, purfuing his journey, leaving the rear to the care and command of Nogaral de Ulloa. He came to a place call'd Chaquana, where he found the Indians in arms; for though at first they were frighted with the swiftness of the horses, yet at last they grew fo little afraid of them, that they took a folemn oath by the great fun, either The refute to die or kill them all. The Adelantado ism of the attack'd them, and was in great danger, Indians of for they kill'd his horse under him in the engagement; but he continuing still to fight them, they refolv'd at last to retire: then he purfued his journey, with his whole army, which was of two hundred horse, and fomething above three hundred foot; with a great many Indians, as well Yanaconas, as others, who affifted the Inga Paulo. The army being thus numerous, they began to want provisions; and which was worse, they were without hopes of finding any, there being no place thereabouts that could afford it, the country being a defart,

lera.

OVALLE which lasted seven days, all barren ground, 1646. and full of falt nitre; and for their comfort, as they defcended a hill or precipice, after which they hop'd for fome relief, they met with the fnows of the Cordillera, which was a fight able to freeze the boldest undertaker, confidering the dangers and fufferings they were threatened with. Herrera, when he comes to this paffage, fays, speaking of the bravery of the Spaniards, and their patience in fuffering a great deal, which I shall not relate, that I may not be thought to praife my own countrymen with affectation; but I cannot omit fome part of it: He fays then, That to overcome fuch difficulties, none could have attempted it, but fuch as were us'd to endure hunger and thirst, and to enter into a country without guides, through forests, and over great torrents, fighting at the same time with the hard their enemies and the elements, and shewing invincible minds; marching both day and night, enduring cold and heat, loaded with their arms and provision; being all of them ready to put a hand to all things, even the most noble among them being the first, when a bridge or any thing was to be made, to turn pioneers and carpenters, and cut down trees, by which they were fit for

the greatest enterprizes. The Adelantado feeing the new, and, in all appearance, the infuperable difficulty that attended this journey, did not lofe courage, but made a bold exhortation to his men, telling them, That these were accidents that us'd to befal foldiers, without which no great honour could be gain'd, nor any of those riches which they fought after; that they should put their trust in God, who would not fail to affist them, fince the planting of his faith depended upon their prefervation. They all answer'd chearfully, that they were ready to follow him to death; and because example is the best rhetorick, he first began to enter into the Cordillera, or fnowy mountains, with a detachment of horse going before, that if he found any provisions, he might fend a share to the army, which began to faint Particular-for want of it. But the more he advanc'd, by in passing he met with nothing but vast defarts, with a wind fo cold, that it ftruck them through;

er, till at laft, it pleafed God, that from a high hill, they discover'd the valley of Copiago, where the kingdom of Chile begins, where they were receiv'd very kindly by the Indians, out of the respect they bore to the Inga Paulo, and afforded them provisions enough to fend some to the army which follow'd. 'Tis not possible to imagine how much they were prefs'd both by cold and hunger, both Spaniards and Indians; here one would fall into the fnow, and be buried before he was dead; another would lean againft a rock, and remain frozen, just as if he had been alive. If any did but stop to take breath, immediately a blaft of cold air left him fix'd and immoveable, as if he had been of iron; and a Aegree, who had a led horfe in his hand, A remandid but turn his head, and stop to see who able call'd him, as some body did, and both stance of he and the horse remain'd like two statues; cold, fo that there was no remedy but to keep moving, for it was a certain death to flop a little; but it could not be, but people fo weary and fo weak, must stand still sometimes; and therefore they loft a great many men, strowed up and down the moun-

Garcilasso fays, there died ten thousand Indians and Negroes; of the fifteen thousand which went with the Inga Paulo, only five thousand escaped; for being all natives of Peru, and not having ever felt fuch cold, for which they were totally unprovided with cloaths, they died apace; the Spaniards being better provided, endur'd lefs; and yet Garcilasso fays, they lost above a hundred and fifty men, and thirty horses, which was a great lofs; others loft their fingers and toes, without feeling it. Their greatest fufferings were in the night-time; for they had no wood to make fire, and the Indians eat the very dead bodies out of hunger. The Spaniards with all their hearts would have eat the dead horses, but they could not stop to flea them. At last the provifions, fent them by the Adelantado, met them; fo they pass'd the rest of the way pretty well. When they came to the valley, the Indians made much of them, where we will leave them, to fee how others, that came after the Adelantado, país the

efcaped, fince coverwhelm'd they pass'd it, he end of the winter; winters and most probably it was at the entrance of the winters for if it had been at the going out of the winter, those who followed would not have run fo great a hazard.

The first of these was one Rodrigo Orgonnes, who was left by the Adelantado in Cufco, to raife men and follow him, as he did. He loft his nails, and would have loft his fingers, if he had not taken his hand off the pole that held his tent up: others loft their eyes, their ears, and many their lives; particularly all those who were in one tent, which a fform rifing carried up, and in the morning they were found all dead in the fnow: they loft also fix and twenty horses.

The next who passed after Rodrig Orgonnes, was one Juan de Arrada, who brought the Adelantado the king's dispatches, and his commission for his government, whom we left in Copiago; and it will not be amiss to fee what befel him there, before he receiv'd his commission, and saw his friends. The first thing he did in this valley, was a work of charity and justice, in favour of the true lord of that land, who was not in poffeffion of the government, because he was left a minor, under the guardianship of his uncle, who not only did not think of putting him in possession, but contriv'd to take his life, which he would have effected, if he could have got him into his hands; but the fubjects, more loyal than he, had hid him out of the way. The Adelantado be-ing inform'd of the truth of this matter, and being entreated by the wrong'd prince, restor'd him to the possession of his government, putting the tyrant to death.

Before this happened, at their first arrival at Copiapo, the Inga Paulo took care to look out for fome gold in that little province; and in one day having got together the value of above two hundred thousand ducats, he prefented the Adelantado with it, in the name of his brother, the Inga Mango; which gave the Spaniards great cause of admiration, feeing that in one village, and in fo little time, fo much gold had been found, gathering from this, how prodigious rich the country must be; and therefore Almagro was content to think all his pains well taken, that he had been at to come

The vaft riches of

The Inga Paulo finding his prefent fo well received, being defirous to make his court, got from the neighbouring parts three hundred thouland ducats of gold more, which he presented to the Adelantado; which gave him fuch joy, to fee that so rich a country was fallen to his lot, that he caus'd all his people to be affembled, and pulling out all the bonds and obligations made to him in Cufco, for the gold and filver which he had there lent them, he cancell'd them all,

one by one, declaring to his debtors, That OVALLE. he freely forgave them their debts, and was 1646 forry they were not greater: and not only fo, but opening his bags of gold, he began to use great liberalities; which so pleased them, that they forgot the dangers they had gone thorough, every one promiting himself vast riches from such a conquest. Francisco Lopes de Gomara, who writes this history, says, That it was a liberality becoming a great prince, eather than a private foldier: but he adds, as a confideration of the little flability of human affairs, and the prosperity of this world, that when he died, he had no body to give a pall to cover his coffin.

But let us not afflict the reader fo foon with the memory of that lamentable tragedy; let us rather follow this great captain in his good fortune. As he went further into the country, he was respected and treated as if he had been the Inga himfelf, in all the places he came to; but when he came to a nation called the Promocaes, which was the limits, beyond which the kings of Peru could never extend their empire, he found the fame relistance as they had done. The Adelantado perceiving this, demanded fuccour from the Inga Paulo, who gave it him, by calling in the Inga's garrifons of the neighbouring frontier; and fo the war

Here the Spaniards met with their match, Great of and began to experience that the conquest polition by of this part of America would not be compass'd by their bare appearing with their horses, dogs, and guns; or that a kingdom might be got by taking a king prifoner, and feparating his army to their purpofes, and fo remain absolute masters of the field; for here they met with a nation, who though they admir'd their horses, and were furpriz'd to fee them, yet the greatness of their courage arrercame that surprize; fo they met and engaged them with great valour, and many were kill'd on both fides. The Spanish blood, which used to be so little spilt, was here shed in abundance; and from that time to this, the flaughter of them has not ceased, so as to make either fide fafe.

However, the valour of the Spaniards, and the advantage they had over them by horses and guns, was such, as they might well depend upon, which made them conceive the conquest of *Chile* to be a work of about two years at most; as 'tis probable it would have been, if the divisions between Almagro and Pifarro, and his brothers, had not cut the thread of that enterprize, as it did that of their own lives; for they perished by one another's hands, upon points of contest about jurisdiction.

About

CHA

OVALLE 1646.

About this time the Adelantado being engaged with the Indians in a bloody war, Rodrigo Organnes arriv'd with his Spaniards, and so did Juan de Arrado, with the king's royal patents, and a commission for the government of a hundred leagues of the country; which was just as if a deluge of water had been poured upon the fire already lighted of the war with the *Promocaes*, Cauquenes, and *Pencos*, who were the nations that had withstood this invasion. As for the Indians they pretended to no more than to defend their country, and their liberty, from foreign invaders; and the Spaniards found themselves call'd away by more ear-nest motives of interest, and so turned an-other way. Not but that there were different opinions about what was to be done; fome thought that it was better to fettle where they were, the heavens and earth being both the best that they had yet discovered, and its riches fuch as they were witneffes of; others were of opinion to be content with what they had discovered, without exposing themselves to new dangers, and the accidents of war. But those who brought the king's commission, insisted extreamly, that the Adelantado should go to enjoy the effect of the king's favour to him; and above all, that which mov'd Almagro most, was the jealousy of seeing the Pijarros masters of Peru: to which might be added, that if he did not take possession of Cufco, by virtue of the king's patent, he might be in danger of remaining, at last, without any title to any thing he had. In this confusion of motives, the Adelantado fluck to the worst, as it happened, since he lost his life: he had it seems arriv'd to the top of fortune's wheel; and 'tis the fame thing with her to stand still, and to begin to go down; which he did, till he tumbled

quite to the ground, and had his head feparated from his shoulders.

The world feldom performs its promifes : otherwise who could have told this great and generous man, that he should fall by those hands, to which he had lent his? The Pifarro not have been at that height, " ankness and friendship of ginning with his fortune and good counfel; but nothing of all this was fufficient to fave him from death by their procurement. The differences between them grew to that height, that they engaged in a battle against neight, that they engaged in a battle against each other; in which the Pifarros were conquerors, and Hernando Pifarro, the chief of them, order'd Alinagro to be beheaded, Almagro being no ways touch'd with their antient is beheaded friendflip, nor the fubmillions and tears of the Pifar of t Almagro himfelf, though a venerable oldros, man, begging his compaffion with a body full of honourable wounds; but as if he had been a statue of marble or brass, he shewed no signs of compassion. 'Tis granted that Almagro did ill, to leave the conquest of Chile, fo well begun, and where he might have fettled himfelf and his friends to fuch advantage, to go back to Cusco, to govern there by force, in case the Pisarros should oppose him; but they also were much to be blam'd, in not coming to fome agreement with their antient friend and companion; but they are inexcufable in fhewing fo much cruelty, as to put him to death: accordingly all their own prosperity seem'd to end with his, and to turn to a lamentable tragedy, in which they died by one another's hands, as may be feen more at large in the already-cited authors. For me, it is my business to pursue the conquest and settlement of Chile, which is my theme.

BOOK

BOOK V.

Of the Conquest and Foundation of the Kingdom of CHILE.

CHAP. I.

The Governor Pedro Valdivia enters Chile: He conquers and fettles that Kingdom, and is the first that enters as far as Mapocho.

HE more I draw near to the relating the fettlement made in Chile by its first founders and captains, who reduced that kingdom to the obedience of their catholick majeties, and to the knowledge of God, the more I mis those papers and records, which being so far off, I cannot have the help of in describing the particulars of the events which were very memorable at the first entrance of the Spaniards. I must therefore make use of such passages as I shall find up and down in the general histories of the *Indies*; and this will refresh in me the memory of what I have seen or learn'd by others; and yet I must own the knowledge and information the reader will have from hence, will be but fcanty and short, such as I should have hardly attempted to publish without this apology; and defiring my readers to accept of this collection for the present, till the compleat history of Chile does come out, I having left men most eminent in their profession imploy'd in it when I left those parts.

The Adelantado Almagro being returned in the year 1537. to Cusco, colonel Pedro Valdivia desir'd from the Adelantado Francisco Pisarro leave to pursue the conquest of Chile, fince he had power and commission from the king to grant it. He promised not to return till he should have compleated the subjection of it, and reduced it to the obedience of the crown and God Almigh-The Adelantado, who had it in his thoughts, because of the fame of its great dertakes riches, to follow the conquest of Chile, con-se further sidering this gentleman to be one of the chile, in bravest captains that had come to the Indies, having born arms in Italy and Peru, and given a very good account of all that he had undertaken, chose him for this en-

terprize in the year 1539. giving him a OVALLE, year's time to prepare all things, that he 1646, might fet out, as he did in the year 1540. I do not fay any thing of the particulars of 1540. his journey, nor of the people he carried with him, because I am not where I can have a distinct information; only that in which all agree, is, That he got together a good body of men, both Spaniards and Indians; for these last rele ing what riches the Ingas used to draw! m people who owned his empire in those parts, animated every body to this enterprize; and Valdivia feconding with address these impressions, made a good army, with which he fet out from Peru.

they arriv'd, and advanc'd at first with little difficulty; but as they went, engaging further in the country, still they found more opposition: they first came to the valley of Copiapo, which fignifics the Seed of Torquoises; for there is a rock of them, of Atorquoise for great a quantity, that they are grown valley of less valuable upon it, as Herrera says: it is Copiapo. a blue stone, which makes a very good shew. And since now we enter this kingdom with more advantage, and upon a fleady foot of fettlement, it will not be amifs to describe the valleys and places where the cities were first founded, and the other fettlements, that we may not be ob-

They had almost perish'd with cold, hun-

ger, and other inconveniencies; yet at last

OVALLE fore it empties its felf into the fea in a bay which makes its hurbour. Here grow all forts of the natural fruits and grains of the country, and of Europe; the maiz yields above three hundred for one, and the ears of it are almost half a yard long, as Herre-rs and other authors relate. Though I am not inform'd as to the particular of Valdivia's reception here by the Indlans, yet I suppose it was without much contradiction; because these people were already accustomed to the foreign yoke of the Ingas, and had already feen and received the Spaniards out of respect to the Inga Paulo, who accompanied Almagro, who gave them their lawful Cacique, or prince, as we have feen. They had the fame facility in the

valleys of Guafeo, which is about five and

Owards the east, the great Cordillera,

twenty or thirty leagues from Copiapo, and that of Coquimbe Limari, and as far as Quillota. Here the Indians took arms, and oppos'd the Calilians vigoroully s engaging them almost daily, as people that came to conquer and fubdue their country. governor Valdivia penetrated as far as the valley of Majorbo, though with the loss of many of his men. He found this valley ex-Mapocho treamly well peopled, because of its breadth, a rich said fertility, and pleafantness, being thoroughly lev. well water'd by the river of that name, which, peopled, after having run some leagues, finks under ground, does not lote itself entirely, but appears more nobly, and comes out with a more powerful ftream two or three leagues further, being much bettered in its waters, which from muddy are turn'd clear as chrystal.

CHAP. II.

The Foundation of the City of St. Jago in Mapocho. The Defeription of its Situation.

or fnowy mountain, is a wall to this valley of Mapocho, and is in winter all over white, but in fummer by fpots here and there: to the west it has the ragged rocks of Pouangue, Caren, and Lampa, whose foot we may fay is fhod with gold (for that which is found in it mines is fo fine, that The valley a great deal was got out of them.) Neiof Mapochother is this valley uncovered on the fides;
difficultial. for to the north and fouth it is environed by other mountains, which, though they do not approach the Cordillera in height, yet are high enough to make a circle about this valley, which in feveral of its rocks produces gold: it is, in its diameter from the Cordillera to the hills of Pouangue and Caren, five or fix good leagues, and from north to fouth, which is from the river Colima to that of Maypo, seven or eight leagues more; fo that its circumference is between 26 and 28 leagues or more, if we go down as far as Francisco del monte, which is a place of most pleasant shady woods, where all the timber is cut for the building of the houses. In this valley, two leagues from the great

Cordillera, by the fide of the river Mapocho, God has planted a mountain of a beautiful aspect and proportion, which is like a watch-tower, upon which the whole plain is discovered at once with the variety of its culture in arable and meadow; and in other places woods of a fort of oak upon the hills, which afford all the fewel necessary for the uses of life. At the foot of this mountain, which may be two miles about, the Castilians found many habitations of the Indians, to the number of eighty thousand, as authors report; which Pedro de Valdivia ob-

Inhabited

ferving, and gueffing from thence, that it was the best part of the whole valley, he refolved to found here the city of St. Jago, which he began the 24th of February in the year 1641. It flands in 34 degrees of altitude, and longitude 77. diffant from the Meridian of Toledo 1980 leagues. form and ground-plot of this city yields to of the juna few others, and is superior to most of the tion of this old cities of Europe; for it is regular, like Jago, a chefs-board, and in that fhape, and that iniof Chic which we call the fquares for the men, of 1641. black and white, are in the city called Ifles, with this difference, that some of them are triangular, fome oval, fome round; but the fquare ones are all of the fame make and bigness, and are perfectly square: from whence it follows, that wherefoever a man flands at any corner he fees four streets, according to the four parts of the heavens, These squares at first were but of four large houses, which were distributed to the first founders; but now, by time and fucceffion of inheritance, they have been divided into leffer, and are every day more and more divided; so that in every square there are many houses.

Towards the north, the city is watered by a pleafant river, till it fwells fometimes in winter, when it rains eight, nay twelve and fourteen days together without ceafing; for then it overflows, and does great mifchief in the city, carrying away whole houses, of which the ruins may be yet feen in fome places; for this reafon they have rais'd a ftrong wall on that fide; against which the river losing its strength, is thrown on the other fide, and the city thereby freed

from this inundation.

CX- Mapocho deh, a rieb val

thly ler, well ich, peopled,

The coursethe stry.

From this river is drawn an arm on the remain of east-fide, which being subdivided into as many streams as there are squares, enters into every one of them, and runs thorough all the transversal streets by a conduit, or canal; and bridges are every where, as neceffity requires, for the passage of carts: so that all the houses have a stream of water, which cleanfes and carries with it all the filth of the city: and from this disposition of water, 'tis eafy to water or overflow all the streets in the heat of summer, without the trouble of carts or other conveniencies, and that without any charge. All these rivulets empty themselves to the west, and are let into the grounds without the city, to water the gardens and vineyards that are there: which being done, 'tis let into other fields, fowed with all forts of grain, and then returns to the great river. The inhabitants do not drink of this water, though pretty good; but it serves to water hories and other animals; therefore they fetch water from the river for their own drinking, or draw it from wells, which yield very good, and very cool: those who are yet nicer fend to the springs and fountains, of which there are many in the neighbourhood, which yield most excellent sweet water. The streets of this city are all of the same bigness and proportion, broad enough for three coaches to go a breaft eafily: they are paved on each fide

near the houses, and the middle is unpav'd OVALLE. for the passage of carts. There is one street 1646. that is of an extraordinary breadth, and in another it fifteen or fixteen coaches may go a fren. breast; this is to the fouth, and runs east and west the whole length of the city: this is call'd La Cannada; and though at first it did not extend beyond the city, yet now it does, and has many buildings and gardens; and there is the church of St. Lazarus: but there are feveral fquares built further which enclose in again, and so it is in a

good fituation.

This Cannada is the best situation of the whole place, where there is always an air flirring, fo as the inhabitants in the greatest heats of summer can sit at their doors, and enjoy the cool; to which may be added the agreeable prospect it affords, as well because of the builtle of Larts and coaches, as of a grove of willows which is watered by a little rivulet from one end of the street to the other: it is befides adorned with a famous convent of St. Francis, the church of which is all of a white free-stone, all square stone finely cut, and a steeple of the same at one end of it, so high, that it is seen a great way off by those who came from other parts. It is divided into three parts, and has its galleries; the upppermost is a piramid: from it one may discover on all fides lovely prospects, which delight the eye extreamly, and recreate the mind.

CHAP. III.

Of the other Edifices and Churches of the City of St. Jago.

HIS city has (befide this street, called the Cannada, which might af-The city of ford many places, fuch as are in great St. Jago cities) another very range con-further de St. Saturnino ; it has likewife the place of Sancta Anna, where has been lately built a church dedicated to that glorious faint. There is also a place called *La Placera de la Compania de Jesus*, where the front of their church makes a figure, and is a retreat or tabernacle upon the day of the procession of Corpus Christis. Most of the other religious houses have their places before the great porticos or entrance of their churches: but above all, is the place called the principal place, where all the business of law and commerce is driven. The two fides of the place that are east and fouth have buildings after the old way, though they have made very good new balconies to them, and large windows, to fee the bull-feafts and other publick diversions which are made there. The north-fide is all upon arches of brick;

underneath which are the scriveners and publick notaries, as also the secretariships of the royal Audiencia, and the town-Town-house, house: and overhead are the royal lodgings, with balconies to the place, with the great halls for the meeting of the town-house officers; and in the middle are the audience-rooms of the royal chancery, with their galleries to the place: and, laftly, the royal apartments, where the royal officers are lodged, and the rooms necessary for the treasury and chanber of accounts, and lodgings for the officers

The fide that lies to the west has ih ir, first, the cathedral church, which is of three isles, besides its chapels, which it has on each fide: it is all of a fine white stone; the chief isle, or that of the middle, being upon arches and pillars of an airy and gallant architecture. The remainder of this fide to the corner is taken up with the epifcopal palace, which has a very fine garden, and noble apartments both high and low,

times welve fing; vhole

feen have ainft rown

freed rom OVALLE, with a gallery supported by pillars, which 646. answer the place; which, if it were equally built on the east and fouth sides, would be one of the most beautiful and agreeable places that can be; for it is perfectly square, and very large, with a due regard to the whole plot of the city. I doubt not but in time the two old-fashion'd sides will be pulled down, and others built on pillars and arches proportionably to the other fides.

The greatest part of the buildings, (except the publick ones, which are of a rough stone, but very hard, which the mountain of Santa Lucia affords, and is within the city, and some great gates and windows which are of mouldings of stone or brick,) that is to fay, the ordinary buildings, are of earth and straw well beaten together, which is so strong, that I have seen great openings made in a wall, to make great gates after the modern way, and yet the wall, though a very high one, not feel it, though the house was none of the newest, but almost as ancient as the city; for the fun bakes and hardens the earth and straw fo well together, that I have feen a piece of those walls fall from a high place, and not break in pieces, though fo big that a man could not carry it. At present the houses that are built are of a better form, higher, and lighter than at first, because the first conquerors were more intent upon getting gold, and fpending it in fumptuous treats, and high living, with splendor and libera-lity, than in building palaces, as they might have done, by reason they had many hands, and the stone hard by.

In matter of buildings, this city, as most others of the Indies, may brag, that it imitated Solomon, who began with building the temple and house of God before he built his own palace. So the Spaniards have done all over the Indies, in this new world, inheriting this custom from their ancestors of Old Spain; for I remember, that travelling in Castella, I made this observation, that let the place or village be never fo fmall, yet it has a good church; and even where the houses were poor, and like dove-coats, the churches were of free-stone, with a steeple of the same; which gave me matter of edification, confidering the piety of

the faithful on this occasion.

Just so the Spaniards of the Indies began first to erect churches, with so much application, that they do not feem buildings made within these hundred years; but rather fuch as one would think they had inherited from their ancestors, or had been built by the gentiles; and yet there is not a church in all the *Indies*, which they have not raised from its foundation. We have already spoke of the cathedral of St. Jago;

and much more might have been faid of its ftrength and beauty, and the ornament of its altars and facrifty. There are befides feveral other fine churches. That of St. Domingo, Description though not of stone, is built upon arches of she courts of brick, with a great many fine chapels on St. Domineach fide, particularly that of Nuestra Sen-go. nora del Rosario, which is all painted and gilt, and is frequented with much devo-tion. The covering of this church is of wood, and finely wrought, as well as the choir, which is also painted and gilded, with handsome knots and festoons. The sacrifty is full of ornaments of brocade of gold and filver, and embroidered filks of the fame; a great deal of plate for the altar, and mouldings of the altar-piece all gilded. But this is nothing to the cloyster, which by this time is made an end of, and is of a fine architecture, two stories high; and the lower, where the proceffion goes, is adorned with exquisite paintings in the four corners, where are four altars all gilded, and light as a bright flame: the apartment at the entrance is also finely set off with pictures of faints of the order, of excellent hands.

The convent of St. Francis may be cal-The convent led a town for its largeness: it has two cis us frib cloysters for the processions; the first is up-ed. on arches of brick; and the fecond, which is the largest, very finely painted, with the story of the life of the faint compared with passages of our faviour Jeius Christ's life ; and over, are all the faints of the order; and at each corner four great pictures, with four altars, which ferve for the proceffions and

ceremonies of holidays.

The church is of free-stone, and all its altars gilded on the infide; but above all, the feats of the choir are a piece of rare workmanship: it is all of cypress, by which means there is always an admirable fmell. The first row of seats reaches, with its crowning or ornaments, to the very roof, all of excellent architecture, with its mouldings, bases, cornishes, and other proportions.

The church of our lady of the Mercede, is also built upon brick arches. The great chapel is admirable for the thickness of its wall, and the beauty of ceiling, which is all of cypress wood, in the form of a duomo, or cupola. The great cloyster is begun upon fo fine a model, that to finish it so, will require the care and application of those who have the government of that convent. The fituation of this convent is the finest and nobleft of any, except that of St. Francis: it has the advantage of receiving the river first, whereby water is so plentiful in the convent, that they have been able to make two mills to grind corn enough for the convent, and to give away.

The co

The convent of St. Augustin is but newly begun; but its church, all of free-stone, will out-do all the others for beauty: it is of three isles, and in the midst of all the hurry and business of the town.

ry and business of the town.

Tis not many years that the facred order of the blessed Juan de Dios has been settled in this kingdom; and in a little time those fathers have done a great deal; for having taken upon them the care of the royal hospitals, they have reformed them, affisting the sick with all neatness, care, and diligence, and have added several large buildings. They are much helped in this by the devotion the people have for their sounder, to whom they address their prayers and vows in their wants and necessities, and not in vain, for they seel great relief by his intercession.

The college of the company of Jesus has not been able to build the infide of the house, because from their first soundation the fathers have attended only the finishing of the church; which is now compassed, and is without dispute the finest next to the ca-

thedral. It is all of a white stone, the OVALLE. front of an excellent architecture, and over the cornist a figure in relievo of a Jesus. Description The great chapel has its cupola and lant-of the jehorn all adorn'd with settleons and knots of suit two forts of wood, white and red, which church, makes a beautiful shew.

The covering or roof is all of cyprefs, inlaid with all forts of flower-work, and divided into five parts; the middlemott is a composure of all forts of figures, which feem a labyrinth to those who see it from the ground, and with a noble cornish that runs round, gives a delightful prospect.

The architecture of the altar, and the tabernacle for keeping the holy facrament, are valued at a prodigious fum. The altar rifes to the top of the church; and because, according to art, it ought to have reached from wall to wall, which it does not, the empty places are filled up with two reliquaries on each side, which join to the altar; this being all gilded, seems, when one first comes in, to be one plate of gold.

CHAP. IV.

Of the Civil Government, both ecclesiastical and secular, of the City of St. Jago; and of the Nature and Properties of its Inhabitants.

OVERNMENT is the foul of the I body-politick; and therefore, at the fame time that the city of St. Jago was founded, the corporation was fettled to administer justice, without which no government can stand. The corporation consists of two ordinary alcaldes, an alferes royal, an alguazil mayor, a general depositarius, fix councellors, or aldermen, chosen every year, half out of the gentlemen called en-comenderos, and half out of the inhabitants of the place, who have bought that privilege for themselves and their descendants. Of the two alcaldes, he that is of the encomenderos has the precedence and first vote, and the inhabitant the other: they divide the year between them by fix months. There is a prefident to the affembly, who is always corrigedor, and lieutenant to the captain-general; and it is a place of great honour: and though it be of more charge than profit, by reason of the expence belonging to it unavoidable, yet it never fails of pretenders, because of its authority, and the respect paid to the office. They are chosen yearly, with the two alcaldes, two others of the holy fraternity, or hermandad, whose jurisdiction

is without the bounds of the city, as is practifed in other parts. About thirty years of the royal ago there was founded a royal chancery in and this city, which confifts of a prefident, four Vol. III,

oydores, or counfellors, and two fiscals; one who is the ordinary, and another, who has been added within these four years, and has the fame honours, who has the protec-tion of the *Indians*, and the matters belonging to the holy cruzada. After these is the alguazil mayor de corte, who has also the magistrate's habit, and a chair of state: then are the officers called the chancellor, fecretaries, referendaries, and others, as in There is no appeal from the fuch courts. fentence of review given in this court, but to the royal council of the Indies; and then there is a certain fum, below which there is no appeal neither. It cannot be denied but the majesty of this tribunal has very much adorned the city; though there want not those who lament the hindrance it has given to its riches and increase, which would have been more confiderable, if the inhabitants had continued in their first simplicity, cloathing themfelv. with the manufactures of the country, and avoiding all those pompous liveries which are now in use; for those who before might walk in the publick place in a plain dress of the country, and be honoured and respected, must now appear in filk, or Spanish cloth, which yet is dearer than filk, for a yard of it colts fometimes twenty pieces of eight. Any gentleman of estate cannot now appear decently in publick, without many fervants

The

Ovalle in rich liveries; and within a few years 1646. they have brought up a vanity of rich parafols, or umbrellos, which at first were only used by the people of the greatest quality; and now no body is without them, but those who cannot compass them; and though it is a thing of great gravity, and very useful to preserve health, yet it increafes those forced expences used in great cities: for this, and fome other reasons, fome were of opinion, that it would have been better for the city and kingdom, that they had continued to govern themselves without this court of a royal audiencia, as they did formerly: but, to fay truth, they are in the wrong; for, first, there are many cities in the *Indies*, where, without a court of this nature, I have feen vanity thrive in liveries and fuperfluous expences as much as any where. Secondly, because, abthracting from paffion and interest, which commonly do missead men in the administration of justice, it cannot be denied but that the fovereign authority of this tribunal is of great weight to maintain the quiet of the kingdom, by keeping an even hand in the administration of justice, and not suffering that the tyranny fome affect, either by reason of their preferments or riches, should stifle right reason, or oppress innocency, which has not learn'd to court and flatter.

The audien-

Thus a royal audiencia is a bridle to vice, cia of great a reward to virtue, a protection to the poor, advantage and a maintenance of right and reason; so the city. and this was the intention of our catholick monarch: for this reason did he erect this court, which is the more necessary, because it is at that distance from the royal presence, and so hard that the cries of the poor should reach his ears; for if fometimes they do arrive to his court, 'tis fo faintly, that they can scarce be heard: for this reason, those who have the chusing and fending the king's officers into such remote parts, ought to be the more careful to provide men of christian principles, and well intentioned, as indeed they have been, and are still in that kingdom; and it is no more than is necessary, for a good example to those new christians the Indians.

This royal audiencia is the cause likewise, that much gentry comes from Europe to the Indies, and so help to people them, and to continue the good intercourse between Spain and that country, which is good for both. It cannot likewife be denied, (though that be but as an accessory,) that the presence and affiftance of this royal tribunal at all publick feaths and exercises, is of great countenance to them, and particularly to the literary acts and commencements, whereby learning is encouraged; and those who employ themselves in that honourable study

have a reward before their eyes, hoping to attain to be advocates, referendaries, fifcals, and counsellors: for in the West Indies those places are all very honourable, and particularly in Chile, where the falaries are larger than in other parts, and yet provisions are cheaper; so that 'tis easy to lay up a good part of one's revenue. Besides these tribunals, there are others, as that of the chamber of accounts, or treasury, for the management and administration of the king's revenue: these officers do likewise visit the ships that come in and out at the port of Valparifo: their offices are very honourable. and of great profit, and they are in the king's gift, as those of the royal audiencia

The affairs of justice, and things belonging to good government, are under the audiencia; but those of war and preferments belong to the governor, of whom we shall

speak in a proper place.

The bishop is absolute lord of all the The bishop church government; and though the bi-all ecclesia; shoprick of St. Jago is none of the richest sical affair. of the Indies, because all the product of the earth is so cheap, and by consequence the tithes do not rue high, yet this very abundance is part of the riches of the bishoprick & for by this means the bishop's family and expences are the easier supplied, and he may keep more attendance, and yet lay up a good part of his revenue; whereas other bishopricks, though richer, have enough to do to keep up the decency of their dignity. There is a numerous clergy, who make a great cortege to the bishop upon certain publick days; and when he is received the first time, and takes possession, the ceremony is very great; for part of the royal audiencia, the chapters, all the militia, horse and foot, with the people, go out to meet him; fo that 'tis a day of great

The chapter of the cathedral is a vene-chapter rable body of men, in which the king alone the king. provides the vacancies by virtue of his royal patronage, and the concession of the popes; fo that there is not, as in Spain, the bifhop or the pope's month; but in the Indies all dignities of cathedrals, even to the very parish priests, are all at the king's nomination, but with fome differences; for the dignities are beltowed in Spain itself by the advice of the council of the Indies; but the cures or livings of parish priests, the king does bestow them by his governor or president, who exposes a publick edict, that all oppofers for the vacancy of fuch a benefice may come and oppose the examination; and of these, the bishop presents three to the governor-general, to chuse in the king's name.

There is likewise an officer of the Cruzada, called a commissary, which is likewise a post of great authority; and the day that the bull is published, all the orders of the religious are bound to be at the procession.

Charafter of the na-

Let us conclude this chapter by faying fomething of the natives who are born and bred in this city: They are generally ingenious, and of good parts; and those whose inclination is to learning, succeed very well; but they naturally are more inclined to war, very few of them taking to other employments, either of trade or bufiness; and they who, from their infancy, or by a strong inclination, do not take to learning, feldom fucceed, and eafily leave it, if put upon it, to follow the found of a drum or a trumpet, and never are quiet till they get to be enrolled as foldiers being much better pleased with the liberty of a

foldier's life, than with the discipline of the OVALLE.

They are much addicted to horfemanship: and I have often seen, that to strengthen a child that can hardly go, the best way is to fet him on horfeback: this makes them prove dexterous horfemen, and bold. And 'tis a common opinion, and a known experience, that for horfe, one of the country is better than four from abroad: this has been fufficiently proved in the course of fo long a war as that which has bufied that

They are naturally liberal, good natured, and friendly, particularly if they are treated honourably, with due regard: they are pretty stubborn and wilful; to be led only by fair means, and then they are docile and tractable; but if force is used, they do worse and worse. This we the fathers of the fociety do often experience in our colleges: fo we are obliged to lead them by fweetness and emulation, rather than by ri-

gour and harshness.

CHAP. V.

Of the Riches, Militia, Studies, and Increase of the City of St. Jago.

'HIS city, to which the king has gi-ven the title of most noble and loyal, is the capital city of Chile, and one of the best in the *Indies*, next to those two royal ones of *Lima* and *Mexico*, who do exceed it in fumptuous edifices, in people and trade, because they are more antient and nearer Spain, and of a greater passage for the people that come from Europe, and free from the tumults of war; which is a canker that eats deepest into great cities and kingdoms; and 'tis no small proof of their force, to be

Foundation

able to maintain fo long a war. This city was founded one hundred and of the city, four years ago; and it has all that while fuftained the heavy load of a long and stubborn war, which the native Indians have made upon the Spaniards without any intermission; in which its inhabitants have either always been in arms, or fending many horses and provision to the camp; a calamity, which, far from letting it grow to what it is, ought to have kept it down from the beginning: nor is it of a small confideration, for the growth of other cities in the Indies to reflect, that they being in the way, and, as it were, upon the paffage of other places, many newcomers have fettled there, who perhaps at first were bound for other countries, or at least were indifferent where they stay'd, and took up with them. 'Tis otherwise with the city of St. Jago, because the kingdom of Chile being so remote, and the last of all the Spanish dominions, it is the non-plus-ultra of the

world; fo that no body goes thither by chance, but on purpose, and upon some defign or particular interest; for which reason the number of strangers is little.

But the city is so good and convenient to The riches. pass away life with ease, that notwithstanding these disadvantages, it is so increased, that it aftonishes all who see it, sew cities of the Indies outdoing it in finery, particularly as to the women, (it were to be wished it were not to that excess;) for all things coming from Europe are there prodigious dear; and this causes many families to run behind hand. Who should see the place of St. Jago, and that of Madrid, could fee no difference as to this point, nay, as to the women, the finery exceeds that of Madrid; for the Spanish women, scorning to go to service, are all ladies, and love to appear as fuch, as much as they can; and the emulation between them about fine cloaths, jewels, and other ornaments, for ther iselves and their fervants, is fuch, that let their husbands be never fo rich they want all they have, particularly if they are of the nobility, to fatisfy the pride of the women.

As to the militia of the city, the first Militia. part of it is the company of inhabitants, encomenderos, and reformed captains, who have no other commander but the governor himfelf, or his deputy; after that, there are two or three troops of horse, and three or four companies of foot, all Spaniards. These often muster on holidays, and are exercised in the use of their arms; and sometimes

OVALLE there are general musters before the oydores tened by other buildings; and yet the plot and royal officers, where their arms are examin'd; who also note them down, to know what ftrength they can raife upon occasion, punishing such as do not keep their arms and horses sit for service. By this diligence they are very ready at their arms, and the exercifing of them proves an entertainment for them and the whole city; for very often, in the publick processions, one or two of these companies use to come out, and make a falvo for them; and in the holy week there always attend a troop of horse, and a company of foot, who guard the flreet, where the processions of the whippers go to keep the peace, because of the Indians, who use to take that time to make

taken up with their devotions. The days in which this militia makes the best shew, are, when the bishops come to be receiv'd, because they make a lane from the entrance of the city to the great place of it, where they form their battalion; and the concourse of the people uses to be so great, that though the place is very large,

fome rifings, the Spaniards being wholly

there is fcarce room for them.

And fince we are upon that fubject, we increase of cannot omit to observe that which is worthy of admiration, and that is, to fee how it is increas'd in the number of Spaniards within these forty years. 'Tis probable, the fame has happened to the other cities of the Indies; but this has had a continual drain, by fupplying foldiers for the war with the Indians, where many perifh, and few return. I remember that I have heard fay, that one of our fathers, newly come from Europe, and coming to our college, where he faw but few people in the street, cried out,

Apparent rari nantes in gurgite vasto.

By which he meant to fignify, the dif-proportion of the inhabitants to the bigness of the city; but now that very street is fo full of people, that all hours of the day, and fome of the night, it is extremely frequented; for there have been built many houses for handicraftsmen and shopkeepers on both fides of it, because trade 's consi-

derably increas'd.

I can myfelf affirm, that I observ'd as great an alteration in a much less time, as well in people as in building; for having been absent but eight years, I confess, that at my return, I fcarce knew the place again; for I found feveral ground spots where there was not a house built upon, with very good buildings; and those which I had left built were alter'd to the better, with more and higher apartments; and the courts which were very large, were confiderably streighof the city was larger too; fo that being at first built at the foot of the mountain we have spoken of, to the west of it, I found it extended as much to the east, and the fame proportionably to the fouth and north, and it increases daily towards the river, and the Cannada.

There was, when I left the place, about Increase of a dozen shops of good retailers, and at my trade. return there were above fifty; and the fame proportionably as to the shops of shoe-makers, taylors, carpenters, fmiths, goldfmiths, and other handicraftsmen, whom I found also more curious and exact in their profeffions; and emulation has produced very good pieces of workmanship in gold and filver, and carvings in wood, gildings, paintings, which have adorn'd the churches, with those which have been brought from Europe, and the particular houses; so that in fome houses alone, there are more things of that kind now, than there were in all the city formerly. Some complain, that there are not now fuch rich and powerful men as there were at first; and that is true: but it does not follow, that the generality is the worse for that, but rather otherwise; for the lands and houses which belong now to ten families, were antiently in one; it being certain, that feveral of the heirs of that man have attain'd to as great riches as he himfelf had; or at least 'tis apparent, that the flock of all those who have shar'd the inheritance, far exceeds what was left them; fo that supposing, that some were formerly richer, yet the riches are more in the land, which is also clear to any that fhall confider the houses, possessions, and other improvements made fince that time; for now there is scarce room for the people, whereas before there was not half people for the room that was for them; which is also visible in the country round about, where farms that could hardly find purchasers, and were little worth, are now fo rifen in their value, that the smallest cost great fums; and this rage of purchasing is fuch, that most of the causes in the royal audiencia are about titles; for the antients, who took possession of the land, thought, that if they had a little footing in a valley, it was all theirs; but those who have come fince, have purchased by virtue of new titles, and taken new poffession; which makes fo many law-fuits.

There is not a form'd regular univerfity in this city, because that of Lima serv'd for all the neighbouring kingdoms and provinces to take the degrees; but when in time the going to Lima was found so chargeable, and the journey, which is of three or four hundred leagues, fo troublesome, there were bulls obtain'd of the pope, for CHAP. The pope's the orders of St. Dominick and the jesuits, bulli ob-to have the privilege of conferring the de-tain'd for grees of batchelor, licentiate of arts, as eans and je-alfo doctors in divinity, in the kingdoms wits to con- of Chile, Granada, Ruito, Chuquizaga, Tufer degrees. cuman, and Paraguay.

The effect has shewed how necessary this favour, and how important this privilege has been; for this incitement to honour has caus'd a general application to learning; for the priefts and curates are already great proficients in study, and so more capable of taking upon them the cure of fouls; and those who betake themselves to a religious life, are better qualified to ferve their orders, and be an honour to them, as many of them are; and it does not a little contribute to the value of them, to fee the great folemnity us'd at the reception of the leveral graduates. And in this, as well as the rest, I think our city of St. Jago is not inferior to any: for, first, all the acts are held with great concourse of all the learned, and very often the bishop honours them with his presence, and so do the president of the audiencia, and the chief of the town-government, to whom are dedicated the fubjects of the extempo.y readings, ac-OVALLE. cording to the conftitution of the university, which are given out with great fidelity, dividing the subject into three parts, for the graduate to dispute upon in presence of a great concourse of people; and the severity is indifpenfable in this and all other examinations, for the different degrees which are given by the bishop, by virtue of an approbation first given him by the father rector and the professors, as the bull directs; according to which there is no obligation of giving any treat; but yet that the doctors may affift with more pleafure and diligence, there has been introduced a custom of giving some moderate ones, befides gloves, which were allowed inflead of it; but some out of ostentation, give both treat and gloves. Besides this, there has been introduc'd a custom of inviting the horse of the city to honour the process fion, which makes the folemnity the more tonspicuous; and they very willingly accept of the invitation, for they are very ready to mount on horseback to honour any, much more those who distinguish themselves by the exercises of virtue and learning.

CHAP. VI.

Of the Worship of God, and the Church Ceremonies in the City of St. Jago.

Religions

The we were to make a judgment of this worthin velocity by the worthin of God that is reflately performed in it, and the appearance of the clergy, we thould indee it to be god to clergy, we should judge it to be much bigger than it is; for the state and expence with which the holidays are kept, in the charge of mulick, perfumes, wax, and other ornaments, are very great: let us give some particular instances, and begin with the cathedral. I cannot but commend the piety of those eminent persons, the bishop, pre-sident, and counsellors of the royal audiencia, who taking each of them a day during the ollave of the holy facrament, are at the whole expence of that day, and that is very confiderable; for all the wax and perfumes are very dear, as coming from Europe; and the holy emulation that is between them, increases the splendor of the day; fo that during that offave, the church is fo perfum'd, that its fragrancy is fmelt fome distance from it. The procession of the first and eighth day are upon the account of the chapter, as the hanging of the streets, and erecting of altars for repositories, are at the charge of the inhabitants where the procession passes: this procession is attended by all the convents, and all the companies of trades, with their banners and flags, fo that it reaches a great way. After this of the cathedral come every day Vol. III.

new ones of all the convents, fo that they last a month, every one endeavouring to have theirs the best; by which means there are great variety of ornamental inventions and machines. The Indians of the neighbourhood, that live in the Chagras, that is, little cottages, within fome miles of the city, attend likewise with their banners; and they chuse for this purpose a leader who makes the expence, and treats those of his company: their numbers are fo great, and the noise they make so loud, with their flutes, and their hollowing and finging, that they are placed in the front, or elfe there would be no hearing the church mufick, nor any means of understanding one another about the government of the procession. The other feasts and holidays in the year are proportionably folemniz'd with the same decency by all the orders of friers, who all of them have fome devout persons who help to bear the charge. But the nuns exceed all the rest in ornaments; and these nunneries are so populous, that in that of St. Austin alone there are above five hundred persons, whereof three hundred are veiled nuns, the rest are lay-sisters; and because the nunnery being full, there can be no more receiv'd, but with great difficulty, the other nunnery of Santta Clara receives fo many every day, that in a little time it

OVALUE, will equal the other in number, as it does a dready in the pomp and ornament of its church-fervice; that which these angels of heaven, (for so we may justly call those who with so much piety and anxiety do ferve God continually, and are as a wall of defence to the city,) that which they do most shine in, can hardly be expressed as to the neatness, curiosity, and richness of their altars, and the church-ornaments. What shall I say of the similar strictial showers, fruits, chocolates, pastillos, and perfuming pots, which I have seen sometimes of so great a size, that they struck me with admiration, considering the matter they are made of, which is of a resin'd sugar, as white as show, sometimes in form of a cattle, sometimes of a candlestick, or a pursuid word avoid structure and a consideration.

a pyramid most exquisitely wrought. They are not content with this; for I have sometimes seen the whole grate of the choir, and the joiners work, and beams of the church, all cover'd with preserv'd citron, in form of suns or angels of mezzo relievo, and a thousand other inventions, which I should never have done, if I should report them all. I must only say, that the

generofity of those ladies is such, that though this costs very much, yet I have often seen them at the end of a mass distribute all those things to those who happen to be in the church, without keeping it for themselves: they do not only do this within the church, but the altars waich are see up in their cloysters, and streets near them; for the processions are adorn'd, after the same manner, with fruits and flowers of the same materials, so well imitated, that they appear new-gather'd.

appear new-gather'd.

The monaîteries of men are not fo well The monaîteries of fill'd as those of the nuns, though some terms of have a hundred, others fixty or seventy from and friers. The secular clergy is also very nun-as the mannerous, very virtuous, and learned. Since unit and came away, there has been founded an other nunnery of about thirty nuns, who will need no portion, being provided for by a gentleman who left all his estate to that foundation; it was captain Alonjo del Campo Lantadilla, alguazil mayor of that city, which will be of great service to help the providing for poor maids, who, perhaps, else would not find it easy any other

CHAP. VII.

In which is treated of the Processions of the Holy Week in the City of St. Jago.

ET us conclude this matter of religion and pious exercifes with faying fomething of the most remarkable practice of it in the holy week, by the state iness of the proceffions at that time; which is fuch, that all strangers confess, that if they had not feen it, they should hardly have be-The flateli. liev'd it. These processions begin on the tuefness of the day in the holy week, to which the comprocessions. pany of the Morenes, which is founded in our college, give a beginning, (of which we shall speak more when we treat of its employments, as also of the brotherhood or confrary of *Indians*, on the morning of *Easter-day*.) The procession that follows next, is that which comes out of the convent of St. Austin, in which is founded the confrary of the Mulatios: they go all cover'd with black frocks, and have many paffages of the paffion fung very devoutly, with the best musick of the place, and many lighted torches. The Wednesday the famous procession of the confrary of the Nazarenos fets out, which is all of natural Spaniards, of feveral arts and professions, and is founded in the royal convent of Nuestra Sennora de la Mercede; and it is one of the richest and most adorn'd pro-cessions. This procession is divided into three troops: the first of which carries La Veronica to the cathedral, where it stays to

meet the fecond, in which comes the Redeemer with his cross, so heavy, that he is forced to kneel often.

When this fecond, which is the largest, comes to the great place, that which stay'd at the cathedral goes to meet them; and at a certain distance, in fight of a vast multitude of people, the Veronica comes, and kneeling down to the image of Christ, which is a very large one, feemingly wipes his face, and then shews the people the repre-fentation of it remaining in the handkerchief; and then as they begin to march, there appears the third procession, in which comes St. John, shewing the Virgin Mary that lolorous spectacle: so that by all these there is form'd a mighty procession, with many lighted torches, and all the brothers are cloathed in their red frocks, marching with great filence and devotion. There is another representation of great piety, which is perform'd in the convent of St. Francis, and in this convent; which is the parting of Christ and his mother, which uses to cause great passion and many tears, because of the naturalness with which it is acted.

On the *Thurjday* there are very curious fepulchres erected, and many alms given to the poor; and though in the foregoing proceffions, and on the *Fridays* in *Lent*, there are to be feen fome people whipping themfelves,

with one tion lenc perfe out whic Nuel of th all co who collat and t magn the p who faint of the for th almost fome of certain if they ther th the pr others, one of whippe mulick conven near ti hands.

with divers forts of penances, which every one performs according to his own devotion, yet the proceffions, which by excellency are called the bloody processions, are performed this night. One of them fets out from the chapel of the true cross, which is in the convent and chapel of Nuestra Sennora dela Mercede, and is only of the inhabitants and gentlemen, who go all covered over with black frocks; and he who carries the cross is obliged (besides the collation which he provides for the preacher and the mulick, and which uses to be very magnificent) to provide also men to attend the procession, and relieve the whippers, who often draw fo much blood that they faint away; and others take care to cut off of the disciplines some of the spurs of them, for they use to have so many on, that they almost kill themselves, nay, I have seen fome of fo indifcreet a zeal, that they used certain buttons with points fo fharp, that if they were let alone, 'tis a difpute whether they would not die before the end of the procession. Before this go also two others, both of them bloody processions; one of the Indians, and it is that has most whippers; the other comes from St. Domingo, and is of the Morenos: they both have musick; and the communities of all the convents go to meet them when they come near their churches with torches in their hands. They fpend a great deal of time in their procession, and are accompanied by an infinite number of people.

On the holy friday there are two procesfions more that go out of St. Domingo and St. Francisco, both of natural Spaniards. That of Sancto Domingo is called the proceffion of pity, and has been begun but lately; but it has made fuch progress, that it equals the most ancient: they carry all the marks of the passion by so many dress'd up like angels very richly, and each of them is attended by two brothers of the procession with lights, and their coats of The other procession, which yellow. comes from St. Francisco, is the antientest, and has always been the best: it is mightily commended for the great filence and devotion with which it is performed; for there is not a word spoke in it from its going out to its returning. Before it goes there is performed the descent of the cross before a great concourse of people. This has always been an action of great piety, and very moving. The enligns, or marks of the paffion, go out in order; and when they come, there is another representation very tenderly made in the Cannada: there is a great crofs fet up; and when the image

of the virgin comes up to it, ir lifts up its OVALLE. eyes, as one who miffes the fovereign good that hung on it, and drawing out a white handkerchief applies it to the eyes, as crying, and then opening the arms, embraces the crofs, and kneeling kiffes the foot of it once or twice: all this it does fo dexteroufly, and becomingly, that one would fwear it were a living creature: and this action being accompanied with the mufics of the day proportioned to the grief of the mystery, its incredible what effects it has upon the people, who croud one upon another to

On the Saturday, and on Easter-day in the morning, there are other proceffions. first comes out of St. Domingo, and is of the gentlemen and citizens, who in this are cloathed in white, of most rich cloth of filver or filk, finely garnished with jewels and chains of gold. The ceremony of the refurrection is celebrated by night in the cloyfter; and for that end there is fuch an illumination, that it feems day. The procession goes out very noble and gay, and in it are many lights, musick, and dances, the streets being all adorned with triumphal arches, and hung with tapeftries; and while this procession is in the cathedral, celebrating the mass, and communicating the host to the brothers, there comes another to the great place to meet it, another from the college of the jesuits, which is a con-frary of Indians, the most ancient of the city, confifting of a company of Indians of both fexes, who, with torches in their hands, accompany the child Jefus dress'd up after the indian fashion, (which causes great concern and devotion:) they have alfo many colours, enfigns, and other ornaments, very rich and gay. At the same time two other processions of Indians likewife fet out from the convents of St. Francis, and Nuestra Sennora de la Mercede, and another of Morenos from St. Domingo, all with a great apparatus of drums, trumpets, colours, hautboys, dances, which make that morning appear very gay and merry; and that it may be fo to our faviour refufcitated, they all communicate, and give a happy Easter to the divine majesty and all heaven, to which the earth can never pay a greater tribute than by the conversion of finners, particularly of these new christians, whose ancestors adored but the other day their idols; and now they acknowledge, and kneel before the true God, and fit with him at his table, as grandees of his court; they, who not long before were flaves of the devil.

OVALLE.

CHAP. VIII.

Of some other Holidays of the City of St. Jago.

ness of a city shews itself most, is, in its feast, holidays, and publick entertainments: we will touch a little on those of St. Jago; and, befides the fecular ones of bull-feafts, running at the ring, Juego de Cannas, tournaments, illuminations, and other diversions in which this city shines, it is wonderful how well there are celebrated the publick rejoicings for the birth or marriage of their prince, in universal canonizations of faints, and in all other folemnities, but particularly those ordered by his majesty, as that was about thirty years ago, when his majesty, out of his great piety, ordered, in honour of the queen of angels, that the mystery of her holy immaculate conception should be celebrated in all his kingdoms, as well by the feculars, as by the churchmen; and the first indeed need no incitement in this matter, every one being ready to fhew their acknowledgements to this fovereign queen of heaven, who has favoured more particularly the kingdom of Chile with her protection from the beginning.

Let us now fay what the city of St. Jago did upon this occasion, that the affection with which the inhabitants correspond to what they owe to this illustrious queen of heaven may be manifested, and some proof given of what they can do on fuch occafions; and letting alone what was done by all the convents and monasteries, I come to other particulars, to which three poetical contests gave rise: these were published folemnly on horfeback through the town, with the company of the town magistrates, and all the gentry, without exception. The first of these troops were defrayed by the cathedral, the second by the celebrated monaftery of the conception, the third by the congregation of fludents founded in our college; and in all these there were prizes propos'd of great value for the poets; and those who obtained them, had them given to them with great folemnity; and there were feveral reprefentations, with other diverfions according to the cuftom of that

And fince we are speaking of what happened in those holy feasts, let us not forget as remarkable a passage as any: the day which it fell to the lot of our college to celebrate its feast, the father provincial, who was to preach before mass, selt himself so mov'd with love and devotion to the sovereign virgin, that in a fit of extraordinary

NE of the things in which the greatness of a city shews itself most, is, in feast, holidays, and publick entertainnts: we will touch a little on those of Japo; and, besides the secular ones of and begins:

> All the world in general Says fo, chosen queen of heaven, That you are conceiv'd even Without sin original.

The auditory was much edified with the piety of the good father, but smiled at his propofal as impracticable; yet they all came at the hour, most out of curiosity to fee the event of this novelty: they all took olive-branches in their hands, and began the proceffion while our fathers fung the stanzas. It was wonderful that the same A strange fpirit which moved the father to fuch an inspiration extraordinary invitation, moved also all the en the people to fing before the image of our la- well as dy, which they carried thus to the cathe-laily to dral; out of which the clergy coming to inging meet, and finging the church-hymns, the noise of the others singing was so great, that the canons were forced to give over, and accompany the people in their stanzas, finging altogether like fo many children. They looked one another in the face, admiring at what they were doing, being fcarce able to believe; and if I my felf had not feen it, knowing, as I do, the natural gravity of that people, I should not have believed it neither; but the inward force of devotion can do any thing, when the lord of hearts makes use of it to exalt the immaculate pureness of his mother.

The rejoicings and entertainments upon A tryithis occasion lasted many days; one of them perfect fell to the lot of the congregation of natural malques. Spaniards founded in our college, who made a very ingenious and costly masquerade, representing all the nations of the world, with their kings and princes all cloth'd after their own sashion, with their attendants, and last of all the pope, to whom each nation came, with its king, to desire his holiness to savour this mystery. The liveries were very costly, and there was a triumphal charior, a great machine, in which was represented the church: but that which was most chargable was the wax, which is very dear there; and this entertainment was given by night.

The other days were divided among the Negroes and Indians of all arts and professions, who having a pious emulation to each other, made many rare inventions; but the merchants carried the bell in a tour-

there;

nament, which they perform'd in the great place, each adventurer coming either out of a fea, or a wood, or an enchanted caftle, with his paper or challenge, acting their parts very well: they broke their lances, and receiv'd their prizes, which were things of great value. The gentlemen of the city crown'd the feaft with their utual divertions of bull-feafts, running at the ring Juego de Cannas, &c. There are generally about twenty or thirty horsemen to attack the bulls, and throw the rejous or lances at them, befides him who strikes the bull dead. The illuminations of torches, with which they use to run about all night, are also of great diversion; and upon this occasion they did it with rich liveries, and other chargeable expences, for the greater folemnity of the time.

The ordinary and annual rejoicings which are observed on Midfummer, on St. John'sday, St. James's, and the Nativity of our Lady, are also worth seeing, particularly on the day of St. Jago, who is the patron of the city; for then the royal enfign of the crown brings out the great standard of the conquest, with the king's arms, and is ac-companied by all the gentry, who are oblig'd to appear on that occasion, which

they do very glorioufly. Afteriages

There happen likewife fome marriages and drift or chriftenings of the people of best sashing to the in which they make as good a shew as their and green estates will let them, and often above their somp and abilities. In the bull-feafts, those who undertake them use to treat the royal audiencia, and other bodies corporate; but in marriages they are profuse, for the presents to the bride have been brought in fashion to be very rich, fuch as flaves, carpets, ferutores fill'd with gold and jewels, and other curiofities of great value. There is not less spent in treats and banquets, particularly of late years, that they have taken to counterfeiting natural fruits, and other things, which ferve for the fideboard; fo that after a man has given a treat of all forts of birds and fishes, his entertainment is not gallant enough, if he does not add a defert of preferv'd citrons in all figures of love-knots, &c. and the other fruits imitated after nature: these they mingle on the cloth, with the figures of ewers, faltfellers, jars, falvers, difhes, fpoons, forks, knives, all made of citron, cover'd with leaves of gold and filver; and the first thing the guests do, when they fit down, is to plunder the table of thefe, for there are real

ones of gold and filver for the banquet. OVALLE:

All this costs extreamly, because the sugar comes from Peru, and the manufacture of all these curiosities is very dear; many are the guests; and besides the weddingdinner, the fathers give another the next day as fumptuous. This is what no body of fashion can help doing. I have heard formerly, that at first there were gentlemen, who, upon any of these publick rejoicings, would do it all at their own charges, giving them all liveries of velvet, at the running of the ring for example; and yet then velvet was twice as dear as it is now. But at prefent that is left off, though they make expences equivalent in collations, bonefires, and other contrivances of great flew; for upon these occasions they all think themfelves rich enough, which is a great ruin to families, every one straining out of vanity to equal another, though the difference in

riches be very great.

And now let us leave St. Jago, which has detain'd us more than ordinary, to fatisfy the curiofity of those who are defirous to know the increase and progress of the cities and colonies of that new world, and how the christian customs and government have begun to flourish in it; and by this effay a judgment may be made of those settlements. I pass on to the particulars of the conquest of that kingdom, that I may afterwards give an account of the progress of the christian faith, and the great hopes there is of its greater propagation. And because some curious persons do desire to know fome particulars of the colonies and fettlements of that new world; and that it may be agreeable to the reader to know the form given by the first founders to their cities, I have thought convenient to give here the ground-plot of the city of St. Jago, with all its ftreets, houses, and publick place, with the names of the churches and convents, and the streets that answer them, they being the principal buildings of a christian commonwealth; by which it may be known how other towns and cities in those parts are contriv'd, for they most of them follow this plot or model. And because some judgment may be made of the buildings, I have likewise given the city in perspective, as it looks to those who come from the Peru fide, and enter by the great ffreet call'd the Cannada; though the cupola of the jesuits, and the tower of the convent of St. Francis, with other high buildings, are difcern'd many leagues off.

OVALLE.

CHAP. IX.

The Governor Pedro de Valdivia pursues his Conquest. The Gold Mines are begun to be wrought. He sends Proofs of their Richness to Peru; from whence the General Juan Baptiste Pastene brings him the first Succours.

HE governor Pedro de Valdivia having founded the city of St. Jago, began to think of fortifying himself in that post, to defend himself against the fury of the Indians, with whom he was every day engag'd; and many men were lost on both fides, so that his men began to be uneasy, and talk of going back to Peru, as Almagro had done: for though they faw the richness of the country, yer it appear'd to them dearly bought, fince they could not get any of it without running great hazards by the many engagements the they had with the enemy; fo that they gave their lives for gone. The governor Pedro de Valdivia was not ignorant of the difficulty of his enterprize; but yet encourag'd by the hopes of fuccess at last, he resolv'd rather to die than give it over; and being an experienced foldier, bred in the wars of Europe, he refolv'd to raise a fort for the defence of his men, being convinc'd of the bravery of the enemy he had to do with; and though he was inform'd of a general rifing, which the Indians defign'd, he fent feventy men to make an incursion towards the river of Cachapoal. The Indians tak g the opportunity of the absence of these men, attack'd the fort, and had gain'd it if the Spaniards had not shewed incredible valour in the defence of it till the other men return'd; and by their affistance they repulsed the Indians, and remain'd conquerors.

The governor made good use of this advantage, both with the Indians and his own men; fo that having quieted them, he began to work upon the mines of Quillota, which were of great fame: they prov'd fo rich, and yielded fuch a quantity of gold, that he thought it advisable to make a fort there for the fecurity of his men; but find-ing want of hands, by the loffes he had had, he refolv'd to fend to *Peru* for relief. This he put in execution, giving at the fame time an account of the richness and fruitfulness of the country, to incite people; and because ocular testimony persuades more than what we only hear of, he trusted six men, whom he fent along with thirty others, to have a great deal of gold with them, causing besides the stirrups of their horses, and all that is employed of iron work about the bridles and faddles, to be made of maffy gold, making the stirrups very great The difign and large on purpose. But all this design misearries. was disappointed; for these men, who were

thus gilded like funs, were, when they came to the valley of Copiago, fallen upon by the Indians, and all perish d but two, who were Pedro de Miranda, and Monroy, officers, who got away by the help of their horses; but being purfued by the Indians through mountainous ways, and their horses tiring, they were taken by an Indian captain, call d Cateo, who had a company of archers: they tied their hands behind them, and carried them to their cacique, who defign'd to put them to death.

This cacique was married to the heirefs of all this valley, (for their inheritances follow the women, for greater fecurity of the right line,) and when thele two were expecting nothing but the blow of death, it pleas'd God to infpire the cacica, or cacique's lady, with compassion; and so she went herfelf, and with her own hands un- a worder. tied theirs, commanding their wounds to ful prefere be drefs'd, and treating them with fome of vation. their drinks, which the herfelf prefented to them, having drunk first herfelf, according to their cuftom, and bid them take courage, for they fhould not die. They feeing themselves brought, as it were, from death to life, threw themselves at her feet, and dedicated themselves to her as voluntary flaves, fince by her favour they enjoyed a life which

they gave for loft.

The captain, who had taken them, feeing his princefs and fovereign thew them fo much favour, came to them, and bid them be confident of their lives, for that their lady having commanded they should not be killed, there was not any one bold enough to look awry upon them: they were kept fix months in this captivity; and though it was fo gentle, by the kind usage they met with, yet the natural defire of liberty, and the hopes of returning to their friends, still worked with them.

Let no man think himself secure that has his enemy within his own doors, nor let him trust his prisoner, though yielded up to his difcretion; for let him be us'd as well as can be, yet there is no happiness like being his own man, and enjoying his liberty. This thought continually took up the minds of these two captains, so they laid a plot how to make their escape. They had observ'd in the cacique a curiofity for horses, which were a creature so new in those Indian countries; they perfuaded him to learn to ride, and manage a horfe.

He

Paftene

horfe. He liked the propofal, and began to exercise himself in this genteel amusement, carrying with him nevertheless always his guard of archers, with an Indian before with a lance upon his fhoulder, and another behind, with a naked fword in his hand, more out of grandeur than diffruft; for he had no fulpicion of their plot, which was, to take an opportunity when he rid out to fall upon him, and kill him, as they did; for captain Monroy, with an extraordinary intrepidity, without reflecting on the guard that attended him, attacked the Cacique, and captain Miranda the rest, with fo much fuddenness, that they made themfelves mafters of the lance and fword; and bestirring themselves courageously, they wounded and difmounted the Cacique; fo that he died of his wounds in fome months. Having gained their horfes, they faved themielves upon them; and not being purfued in that diforder, they overcame all the difficulties of those solitudes, and arrived at Peru fafe; where at that time they found the government in the hands of the Licenciado Vaca de Castro.

These two captains were gentlemen of great families; and to this day the Mirandas in Chile are of the flower of the nobility of that kingdom. As for the Monroys, they are so known in Castile, particularly about Salamanca, that it is needless to say more of them. They were very well received by his excellency, for the good news they brought of that discovery and conquest, of the pleafantness of the country, and richness of its mines; and upon this relation, as Antonio de Herrera, and other authors fay, it was refolved to further this conquest, which feemed to be of fuch high importance, and to chuse out some fit person, and accompany him with foldiers, arms, ammunition, and cloathing for the foldiers, who

were almost naked. He chose for this emloyment captain John Baptiste Pastene, a gentleman of the most antient and illustrious house of Pastenes in Genoa; which family is at prefent extinct in that republick, and remains only in its records, where many of that name are in the books of the nobility, and among the greatest dignities of the state. gentleman engaged in the conquest of the

new world by the same desire of glory which OVALLE. moved others, and to mend his fortune. He 1646. happening then to be in Peru, the viceroy took hold of the occasion to employ him for the king's fervice; which this gentleman accepted, and performed, going for Cbile, where he arrived with the fuccours which that kingdom flood in fo great need of.

This relief was received with great joy, His joyful as being in the beginning of the enterprize, received and extreamly wanted, the foldiers being much fatigued and weakened with the continual affaults of their enemies, without any other defence than their fort of St. Jago, where they had enough to do to shelter themselves from their valour and sierce attacks; but the arrival of these succours gave them new courage, and resolution to prosecute their enterprize. To undertake it with more regularity, and prevent what accidents might happen from the fea, the governor fent Pastene with the title of lieutenant-general in his own ship, to discover the coast as far as the Streights of Magellan, as he did ; and it appears by the letters of their catholick majesties, Philip II. and his son Philip III. how agreeable this piece of fervice was to them. About this time the mines of Quillota being working with great profit, and Don Gonçales de los Rios being captain-governor of the work, the Indians The Spabrought him a full pot of great grains of niards gold, for a shew of a great deal which drawn into gold, for a flew of a great usual wines was and they faid shey had found in a certain place. An ambuf-There they had laid an ambuf-cade of feve-covingral of their best men, to fall upon such as ness. blinded with covetousness should go to feek this treasure. This happened accordingly, for they all run prefently to the place; for there is no alarm never to warm, that rouzes better than this defire of growing rich at once did them : but they were much mistaken; for instead of gold, they met with the iron of their enemies lances, who killed them all but their captain and a Negro, who escaped by the swiftness of their horses: so the Indians remained victorious, and by the way of triumph, fet fire to a frigate which the Spaniards had

CHAP. X.

dency with Peru.

The City of the Screna is peopled. John Baptiste Pastene goes for more Succours to Peru, from whence he returns to Chile; and with Valdivia and other captains, goes to help the Royal Army against Pisarro.

Valdivia profess bit HERRERA fays, that with this relief which Valdivia received, he purovercame courageously, though with the

fued his conquest on the people called the loss of some horses; and at that time horses Promocaes; and that he was met by feveral were a thousand crowns a-piece. Having

The

OVALLE discovered large provinces, and being fa-1646. tisfied of the great number of inhabitants in them, he returned to St. Jago. 'Tis fuppos'd the governor did all this in hafte, fince he return'd without making any fort or fettlement: so it is probable he went this time only to discover, in order to form a force proportionable of an army: therefore the general John Baptifte Paftene being returned from discovering of the seacoasts, he sent him back to Peru to endeayour to bring more fuccours, as he had done the first, and so form an army capable of enlarging his conquefts upon fuch powerful enemies, as he found the natives of Chile to be. Judging therefore that it was not yet time to leave any thing bahind him unfortified, he founded in the valley of Coquimbo the city generally call'd by that name, but by him call'd La Serena, to ferve for a refling-place or scala for the people who came from *Peru* to *Chile*; for being in great want of fuch fupplies, he did endeavour to facilitate by all means their paffage, and draw as many people as possi-ble to preserve his conquest; for acting otherwife would only be to have fo much the more to lofe; as indeed it happened, and shall be related in its due place,

The city of La Serena was the fecond The city of La Serena, that was founded in Chile in the year 1544. or Coquim- in a very pleafant and fruitful valley, wabosowadd tered by a very fine river, not of the big-in the year gest, but of clear and admirable water, with which the fields are all fo plentifully refresh'd, that their product is so various, that the inhabitants want almost nothing from abroad that is necessary for human life; for they have corn, wine, flesh, all forts of other grain, and pulle-truits, even more than in St. Jago; for besides all those of Europe, and those of Chile, they have two forts very extraordinary: The first is a fort of cucumbers, which are very fweet, and do not need paring, for the outfide is a very thin skin, fmooth, of a delicate colour between white and yellow, all fireaked with a very fine purple; the other fruit is that which they call Lucumas, and is a fruit, as I remember, I have feen in Peru: it is a very wholesome welltasted fruit, the stone is smooth, and of a purple colour. The oil of this place is abfolutely the best in the whole kingdom, as clear and bright as one's eyes, and of a rare fmell and tafte: they make great quantities, fo that they fend a great deal abroad. They have great flocks of cattle, though not fo many as about St. Jago, because it rains less, and to the paffurages are leaner.

Abounds in But that which is most particular, and rich metals of greatest value in this country, is the great abundance of rich metals, as gold, copper, and lead; fo that though they

have given over gathering of gold in all the other parts of Chile, because other products are of greater advantage, yet in this place they go on gathering it more or left, according as the winter is more or lefs rainy; for when it rains much, the mountains are diffolv'd, and the earth open'd, and to the gold is easier found. And the copper too that is melted down there, ferves for all the kingdom, and Pern befides. The climate of this city is absolutely the most temperate of all the kingdom, because the winter, which in other parts is very fharp, particularly nearer the *pole*, is here to gentle, that it is hardly perceived, it being within five or fix degrees of the trojick, and being in the 29th degree of latitude, enjoys a moderate climate, the longest day being of fourteen hours, and is upon the 11th of December, as the shortest is on the 11th of June, and the night is of fourteen hours.

But the accidental fituation of the city The aler helps much towards the mildness of the cli-rages mate: it is within two leagues of the fea, atome having a plain before it all covered with myrtles: it flands on a rifing ground, having a prospect to the sea, which makes a beautiful bay, abounding in fish of all forces by which it is an excellent place to pass the lent in, fifh being very cheap: but the good cheer is also as well out of Lent; for befides the mutton, which is excellent, and very nourifhing, there is plenty of tame fowl, partridge, turkeys, and all forts of wild fowl. This city begun to be inhabited by many noble families, the founders being men of the best quality that came to Chile; and their defcendants have remain'd, and do maintain the luthre of their ancestors. The governor-general appoints the place of Corrigedor, or mayor of ... and it is one of the most profitable places that are, because of the mines which are wrought in its territory: but notwithstanding all these good qualities which we have mention'd, this city does not increase so fast as that of St. Jago; for this last may be compared to the clove-tree, which fucks to itself all the substance of the earth round about it, a thing which is proper enough to capital cities every where.

About this time the general John Bap-Paffere tifle Paftene arriv'd at Peru for a fecond disposed fupply of men, which Pedro de Valdivia of a month of the fupply of men, which Pedro de Valdivia of a month of the fupply of the fupple of the defired of the viceroy, to carry on his con-Pers. quest; but he found the whole country in turns to confusion, caused by the stubborn disobedi- Chie. ence of Gonçalo Pifarro, fo that the govern-Pifaro ment wanted relief itself, instead of being reconin a condition to relieve others. This was fo true, that Pajtene was forced to return to Chile, to bring a force from thence to join with the royal army. This resolution 'tis probable came to the knowledge of the ty-

rant Pifarres for he found means to feize his ship and his person by cunning. Pastene, though much press d by Pisarro both by promites and threats to join with him, as very well knowing how much he might affift him as his friend, or injure him as his enemy, yet perfever'd in his loyalty to the king, and found means to make his escape out of the hands of the tyrant, and to recover his ship too; which having new fitted with necessaries, he returned to Chile, to bring from thence fome of the best officers to encourage the royal army, which was preparing to engage Pifarro, who on his fide had fuch a force, that he had put to death the viceroy Blasco Nunnes Vela, In Chile they were waiting for his return, and the fuccours he should bring with him; but when they faw him without any, they were much troubled; for they found themselves oblig'd at least to suspend all their projects upon Chile, to go and relieve those upon

whom their own preservation depended.

The governor Pedro de Valdivia, as soon marches to as he heard what pass'd in Peru, refolv'd to go thither in person with some of his best officers and foldiers to join and help the king's forces. He left in Chile for his lieutenant captain Francisco de Villagra, a gentleman of great courage and good parts, that he might govern and preferve what we had already in that kingdom, it being impossible to do more, or make any further progress, till the times should alter, and he provide more forces. He got together what gold he could, and went aboard with his captains and foldiers in the fame fhip, un-

der the conduct of the same general Pastene, OVALLE: His arrival at Peru gave great courage to the king's forces, by reason of the gold and men which he brought, the valour and experience of which was so great, that in the battle they perform'd extraordinary things, being the chief cause of the victory obtain'd being the chief caule of the victory obtain of over Pifarro in the valley of Quiraguana. He himself was taken, and chaftis'd with his guilty affiltants as his folly deferved, and his difloyalty to his prince. The prefident of Peru, Gasca, always advis'd with the governor Valdevia in all his most important affairs, whom he made of his council, with fix more, for the fecretest affairs and of most importance, making great esteem of his prudence and experience, as well as of the valour of his companions.

This victory being obtain'd, the gover- Heis vide nor return'd to Chile, with a good fuccour return to of men and arms, and the fame officers and Chile with foldiers who accompanied him to Peru, a fupply. with which, and other fuccours which came afterwards, he was in a condition to purfue his enterprize vigoroufly, as we shall see hereaster. But all was little enough against the relistance of the Indians, who not only kept them from advancing, but for fix years together, that their stubborn opposition lasted, they reduc'd the Spaniards to great extremities of nakedness and hunger; so that they were forc'd to eat herbs and roots, and rats and mice, and fuch things; and if the heart and courage of the governor Valdivia had not been invincible, it would have been impossible to have made the con-

CHAP. XI.

What happened in Chile during the Absence of the Governor Valdivia, and after his Return; and of the new Succours he receiv'd.

PEdro Sanches de Hoz was a foldier, to whom the king was pleas'd to grant a patent for the discovery and conquest of certain lands, to begin from the jurifdiction of the marquis Francis Pifarro; and he pretending that part of the kingdom of Chile was in his grant, oppos'd the governor Valdivia, to whom Pifarro by a royal commission had given the conquest and government of Chile; but the marquis perfuaded him to defift, and go along with Valdivia to Chile, recommending his person to the governor, to use him with regard, and give him a share in the best part of his conquest. Valdivia did fo, bestowing on him the richest lands of the Indians; but the ambition of commanding is always very contentious, and subject to complain till it gets the upper hand. This appear'd in Pedro Sanches de Hoz, in the absence of the governor from Chile; for being vex'd that he was not left with the authority of lieutenant in his room,

he plotted to take away the life of him who had it, which was Francisco de Villagra, who having notice of his defigns, feiz'd upon Pedro Sanches de Hoz, and cut off his head, by which he affur'd his own; and Valdivia approv'd of the thing as well done, when he was inform'd of it; because he was a friend to justice, and because a competitor is never forry to have his competitor remov'd.

About this time, the Indians of Copiapo, The Copiawho had begun to imbrue their hands in po Indians the blood of the Spaniards, in pursuance revenge the of the revenge of their prince's death, whom their cathe captains Miranda and Monroy had kil-cique. led, as we have related in the ninth chapter, lay in wait, and furpriz'd Juan Bon with forty foldiers more of some companies which were coming from Peru, and marching through their country; these they put all to death. After their example the Coquimbeses attack'd the foldiers and inhabitants of the city of La Serena, whom they kill'd without spaOVALLE ring one, and fet fire to the city, which 1646. they ruin'd utterly, not leaving one from upon another.

All this being understood by the governor at his return from Peru, he fent captain Francis de Aguirre with a good force, to follow them to their retiring-place, where in feveral rencounters, in the valley of Copiape, he overcame the Indians: all which was as much owing to his great valour as conduct, without which the force he had would have prov'd infufficient, (as Herrera observes.) He did the same in the valley of Coquimbo, and rebuilt the city of La Serena, in the place and fituation where it now stands. For which reason he was look'd upon as the true founder of it; and his descendants, who are of the best nobility of the kingdom, have preferv'd that pre-rogative, and are the chiefest in that government, or rather the masters of it; for they are fo numerous and fo powerful, that they yield to none in reputation, and are

accordingly respected by all.

Let us now treat of that which 'tis not reasonable to forget; which is, of those captains, who in those early times entered Chile with fuccours of men to help to conquer it, fince it is just their memory should live for ever in those who enjoy the fruits of their labours, and are now mafters of what they gain'd with their blood and fweat, and the loss of many lives, and danger of their own, which they expos'd in fo many battles and encounters they had with the enemy. I am only forry, that I cannot fpeak of them all, and describe in particular their good qualities and great merits, because I am in a place where I want memoirs and informations for fuch a work; but I will fay what I can of their noble actions, as I find them recorded in other hiftories; though to fay truth, that which they fay about Chile is so little, that it is almost next to nothing. I am not furpriz'd at it, for it is a place much out of the way, and its conquerors were bufier with their fwords than with their pens; for their enemies press'd them continually with so much vigour, that they had but little of that leifure which hiftories and relations require. We shall begin with the governor Pedro de Valdivia, who was the first that entered the rapiains Valarvia, who was the interest and kingdom with a force, as has been related; instrumen- then that which general Pastene brought aftai m the terwards with arms and cloaths. The fuc-conguest of cours brought by cours brought by captain Monroy prov'd of great importance; as Herrera fays, it was of threefcore men, which in those days was as much as fix hundred now: thefe he had hir'd in Peru, being much affifted by the viceroy, who, upon the relations of Mouroy and Miranda, was refolv'd to encourage the enterprize,

I am not certain, whether it was before this, or after, that arriv'd the fuccours fo opportunely brought by captain Christoval de Escobar Villaroel; for I do not find it mention'd in any of the historians, which I have read here; but in Chile the memory of it is very fresh, and will never be forgot; not only for his coming in a time when they extremely wanted fupplies, but also for that circumstance of this noble captain's having brought these succours upon his own charges, (and I think they were feventy men,) and made his way by land to Chile, either by the wilderness of Aracama, or by the Cordillera, either of which must coft a great fum of money, for it is above five hundred leagues.

This action alone was fufficient to shew the nobleness of this gentleman, if that of his family had not been so well known as it is in Spain; but he continued to give proofs of his zeal for the king's fervice, by ferving in person, and employing also his son captain Alonso de Escobar Villaroel, whom he had brought with him from Spain, that they might both give an example to their posterity, as they have; not yielding to any, but have produc'd many noble perfons, both in arms and other civil employ-

ments of the government.

When I reflect upon those I have known of the defcendants of this famous head and conqueror, I find, that between fons, grandfons, and great grandfons, they come up to eighty feven; and if they had not been fo many, there was enough to honour this family in the feven or eight fons of the general Luis de las Cucuas, grandfons of this gentleman, with whom he presented himself to the royal army, all arm'd capa-pee, in which they serv'd many years at their own charges; for in those days the inhabitants that were gentlemen, had no other reward but their loyalty, and the glory of ferving their prince, Antonio de Herrera makes mention of another fupply, of one hundred and eighty men, conducted by captain Francisco Villagra, who was afterwards governor of Chile, and to whom that kingdom owes a great deal of its being, for the hazards he ran, and the noble actions he perform'd in its conqueft, as we shall see hereafter, and may be read in the general history, to which I appeal. nobility of his family was always notorious, and the gentlemen of his name have shewed themselves worthy of it, in the great services they have and do perform every day for the king, worthy of all forts of acknowledgment and reward.

After this, in the time of the viceroy D.n. Antonio Hurtado de Mendoça, his excellency, as Herrera fays, fent captain Don Martin de Avendano by land, with good fuc-

The s always notorious, name have shewed in the great fererform every day ll forts of acknow-

of the viceroy D.n loça, his excellencaptain Don Marwith good fuc-

cours of men, and three hundred and fifty mares and horses, which were of as much importance for the war as fo many men. The descendants of this gentleman are still carrying on the lustre of his family, so known in Salamanca and other parts. 1 was acquainted with two brothers of that name, who alone might preferve and increase the reputation of their family; the one was colonel Don Antonio de Avendano, who was colonel of the regiment of Arauco, who fignaliz'd himfelf at the head of that regiment in many rencounters with the enemy, and particularly in one, where our camp was defeated, and where to preferve the reputation he had gain'd in so many noble actions and eminent dangers, he chose to die, being wounded in a great many places, and almost cut in pieces by the furious enemy. The other was Don Francisco de Avendano, likewise colonel, and who came to Spain; where his majesty, in consideration of his own and his ancestors merit, honour'd him with the habit of St. Jago, and the government of Tucuman, where he died.

I do not mention those companies out of which, as they paffed by Copiapo, forty were killed, with their leader Juan Bon; because Herrera, who speaks of this, does not fay who was the captain of them. Perhaps there were also other commanders, who in those six years time entered into Chile with men; and I should be glad to be where I might have particular information of them, to do them at least that small honour of

putting their names in print, and giving OVALLE. fome glory to actions which, perhaps, de- 1646. ferv'd to be grav'd in brafs.

I do not likewise set down here, that famous fupply of men brought by the fecond governor of Chile, Don Garcia Hurtado de Mendoça, marquis of Cannete, for this shall be spoke of in its proper place, after the death of the governor Pedro de Valdivia; and thus we shall conclude those who entered by the way of Peru. For though, fince that time, there have been feveral fupplies, and are every day still more, yet they have not been remarkable enough, as not having come at first, but after the settlements were made; and befides, it would carry me too far to report them all. But I shall add here those which have come from Spain by the way of Buenos Ayres, as well because they were the most numerous, fome having been of five hundred or a thoufand men, as having come in dangerous times, when the kingdom was ready to be loft, the enemy having, as it were, befieg'd it; and fo 'tis just to preserve the memory of fuch famous benefactors, who have been, as it were, fathers of their country. we shall perform at the end of this book, in a treatife by itfelf, where we will likewife put the pictures of all the governors of *Chile*, as well as may be, confidering how long they have been dead, that their descendants may preserve the memory of men who feem to deferve eternity by their heroical actions.

CHAP. XII.

The Governor Pedro de Valdivia pursues his Conquest, and peoples the City call'd the Conception, where he had like to have been destroyed in a Battle.

Valdivia THE governor Pedro de Valdivia fee-ing himfelf with a good force, and comquest. the greatness of his mind persuading him that he had wherewithal to put an end to his enterprize, Herrera fays he fent to the other fide of the Cordillera, from St. Jago, captain Francisco Aguirre with a good number of men, with which he pass'd those terrible mountains, and founded among the Diaguitas and Juries.

Herrera fays no more; nor do I know any thing of those individual places and cities which he founded. The governor Valdivia on his fide fet out of St. Jago with a powerful army, and paffing the furious rivers of Maypo, Cachapoal, Tinguiritica, Peteroa, Teno, and Mataquito, he conquer'd the Promocaes, a warlike people, who had refitted Almagro, and before that had repuls'd an army of fifty thousand men, which the Inga fent against them when he endeavour'd to conquer Chile; but the good fortune and great valour of Valdivia and his men overcame that which feem'd invincible, though I am perfuaded that it was not without blood: but I refer myfelf to the general history of Chile, which has describ'd the particular encounters and battles on both sides.

The army pass'd the deep river of Maule, and the wide Itata, and coming to that of Audalien, quarter'd by the fea-fide; and for the conveniency of lituation, he founded there the city of the Conception in the year 1550. But the natives aftonish'd and The city of enrag'd at this boldness of strangers to en-tos Con-ter thus into the heart of their country, as ception if it were their own, call'd a general affem-the year bly, and with a numerous and brave army 1550. presented them battle so furiously, that our people began to wish they had not engag'd themselves so far. Much blood was shed

OVALLE on both fides; and our army was in great danger of being destroyed, till it pleas'd God, (who guides all things to his ends,) who was to reap the fruit of his victory over those gentiles, whom he had predestinated by the means of the gospel, which was to be preach'd to them in case the Spaniards were victorious, to make them so at last, and that very gloriously, the famous Aynabillo, chief head of the Pencones, remaining prisoner, after having behav'd

The fitua-

himself with great bravery in the fight. The situation of the city of the Concep tion is on a plain where the sea makes a most beautiful bay, in form of a half-moon; and nature has provided a mole, by put-ting there a large ifland, behind which ships ride fafe from the north wind. By land, towards the east, it is encompassed with fome high hills, the fides of which are all planted with vines and other fruit-trees; fo that which way foever one looks, the prospect terminates in beautiful plantations of trees, or rather a green femicircle, which rejoices the fight, and fortifies the city. From the north, there comes into it a fmall river, which comes down from the mountains, which we have already describ'd in the chapter of the rivers of Chile. On the fouth fide, another larger deeper river runs by it, and is call'd Audalien. Neither of these rivers do the kindness to the city which Mapocho does to St. Jago, that is, to come into the houses; but the want of this is supplied by excellent fountains of christalline and delicate water, which rife very near the city, and are brought into it very plentifully, and which was carried to the publick place by the general Don Diego Gonçales Montero, he being corrigedor of this city, and governing it with the fame prudence and generofity, that he fince govern'd that of St. Jago, in the same quality of corrigedor and lieutenant general.

This city is in the latitude of thirty three degrees and five and forty minutes to the antartick pole; and for this reason, and because of the high land it stands upon, the air is so temperate, that the heats never are troublesome, nay, in the heat of sum-mer 'tis necessary to have as many bedcloaths as in winter, which is not at all fevere, because it never snows there, though it rains extreamly. For the security of the city, there was erected a good fort for our people to retire to when press'd by the Indians, which often happened, and made them frand to their arms almost continually; for they, impatient of any yoke, were inceffantly taken up with the thoughts and endeavours of driving them out of the country; and notwithstanding all the care that was taken, the city was lost at last, for the enemy over-powered us: but yet in length

of time it was built again, as we shall see; though still remaining a frontier to the enemy, it has not had such increase as St. Jago. But it gains ground, and has many rich inhabitants, who have enter'd upon a great vent of falt, slesh, and hides, which is one of the richest commodities of Chile; and they have, besides, magazines of slower, with which they furnish the army: the wines too of those parts, are generally better than those of St. Jago, though they are lower ceps or vines; nay, the grapes ripen as they lie along on the ground, as it is in many parts in Europe: they have not that abundance of almonds, oil, oranges and lemons, pusse, and dried fruit, as in other parts of Chile, their summer being shorter, and the sun having less force.

The Spanish children born here are of a Charatter very fweet nature, and docile; of good wits, of its naand take to learning very well. The men are loyal, faithful keepers of their word, friendly, and fuch as for their friends will venture any thing to defend them in their honour or fortunes, even with the hazard of their own, and their lives too: they are very well dispos'd to virtue, having good inclinations; and those among them, who have taken to arms, have extremely fignaliz'd themselves. They are bred in great simplicity, as being far from the corruption of the court, which generally improves the malice, and raifes the libertinism of young people. The bishoprick of this city is a poor one, not being worth above two or three thousand pieces of eight a year, because, though the land is rich of itself, and that in which there are most mines, yet the Decimes or tenths are very fmall, because of those continual wars which this city has maintain'd from its beginning; for we may fay, it has been nurs'd with blood, and grown up in arms, not having laid them down in ninety five years, which is no fmall evidence of the good qualities of its inhabitants, and what it may be henceforward, when this dead weight is taken off. Another cause of the small revenue of this bishoprick, is the loss of seven cities, fome of them the richeft of the kingdom, which all belong'd to its diocese.

In the year 1567, there was fettled a high court of chancery, which remain'd till the year 1574, and afterwards it was remov'd to St. 7420, where it now is: and though its jurifdiction reaches as far as this city, there is little for it to do, because the governors are generally present, to be nearer the garrisons, and countenance and affilt the war, of which there is a continual necessity. The garrison is very numerous, and of choice soldiers, where every day they mount the guard, as it is practised in places of war. The general provides all the officers,

CHAP. XIII.

The Governor Pedro de Valdivia profecutes his Conquest, and founds the animage of Cities of Imperial, Valdivia, and Villa Rica, and raises three Forts in which are

THE governor Valdivia having spent the year 1550. in peopling the city of the Conception, and defending himfelf in his fort against the continual attacks of the enemy, and having at the fame time inform'd himself more exactly of the country, and its fertility, by the means of captain Hyeronimo de Alderete, who had gone through it, and observ'd the number of its inhabitants, refolv'd to go out of the Conception, and pursue his conquest. In order to this, after having well provided his fort, and left a garrison in it, he set out in the

beginning of the year 1551. He took his way with his army by the plains of Angol, croffing first the great river Biobio, and coming to that of Cauten, which for its gentleness is call'd the Ladies River, when join'd with another very pleafant one near the fea: here he found great fettlements of *Indians*, and founded the city of *Imperial*. This is one of the most agreeable fituations of the whole kingdom, the city of Imperial, being about three or four leagues from the fea, and thirty nine leagues from the Conception, and a hundred and nine from the city of St. Jago, in thirty nine degrees of fouth latitude. All the territory of this city is very fruitful, bearing corn, and all forts of pulse and fruits, though the black grapes do not ripen fo kindly as the white ones and the muscadines: the country is not all plains and valleys, nor all hills, but ra-ther a composition of the whole; the hills are gentle and tractable, with good pasture and shelter for cattle; the ground does not want much watering, it having frequent and large dews that fertilize it. The city was fituated upon a pretty ftiff hill, and the confluence of two navigable rivers; but the port is not good, for the flats there are within three fathom and a half of depth. Here the governor met with fourfcore thoufand Indians fettled, nay, fome authors fay, they were many more; and all agree that they were a quiet and good-natur'd people, not at all fo warlike as the Araucanos.

This city was the head of the bishoprick, and it began to increase at first very much, by reason of the excellency of its soil and fituation; and if it had not been destroyed, Vol. III.

as we shall see hereafter that it was, it would by this time have been a great city; for it was already very well peopled, and must have increas'd, if the gold mines which are in its neighbourhood had been wrought.

This city, which was the fourth of this

kingdom, being thus founded, the governor divided the territory, and gave the lordfhips to his conquerors, according to the royal privilege he had fo to do, that he might engage the Spaniards to enter more heartily into his enterprize. He took for himself the lordships of Arauco and Tucapel, as far as Puren, except some manors that he gave to others, to content all. Having left a force, which feem'd fufficient in the city of Imperial, he marched as far as Valdivia. Being come to that famous river, and defiring to pass it, to conquer the land and people on the other fide, the brave Indian lady, call'd Recloma, hinder'd him, offering to pass the river alone swimming, and to reduce the Indians to his obedience, as fhe did, and as we have already related in the ninth chapter of the first book; and there likewise is a full description of the fituation of the city, and all its other qualities, which it was proper to make in that place, and so is not necessary to repeat here. The governor having founded the city of The city of Valdivia, erected a fort, and fettled all things Valdiv as he had done at the *Imperial*. While he founded, ftay'd there to pursue his settlement, he sent erested. captain Hyeronimo de Alderete to discover the country as far as the Cordillera Nevada; and he having fent to the governor relations of his discoveries, as he went founded a town, which he call'd, by the excellency, The foun-

been discover'd. Though the fituation he chose seemed at first to be the best, yet in time it was refolv'd to change it, and place it upon a great lake, at the bottom of the Cordillera, and about fixteen leagues from the Imperial, and forty from the Conception. It has not fuch . a plenty of corn and wine as the others, but it has enough, and many other good qualities, which I omit, because it being since destroyed with other cities, already men-

Villa Rica, the appearances of the riches of dation and

that country being greater than any yet had fituation of Villa Rick.

Ovalle tion'd, I am likewise forced to be filent of their particular properties, and refer my felf to the general history of Chile, which will embrace all those particulars.

These were the cities planted and peopled by the governor *Valdivia*; and though I have not, as to these last, made mention of the blood spilt in gaining them, 'tis not to be imagined but that they cost dear enough, fince the contest was with such warlike nations, that it feem'd a great rashnefs (and would have been fo without a particular protection of heaven) to undertake fuch enterprizes. There are not wanting those who blame the governor Valdivia, judging that he did not measure well his ftrength, but grafped more than he could hold, as he found by a fad experience at

his own peril in a little time.

The authors who fpeak of these at-tempts are full of the commendation of the valour, patience, and fufferings of the Castilians; but all this would not have done, nor have subjected those people, nor twice that force could have prevail'd against them, if because they saw them on horseback, and killing people at a distance, they had not believed them to be Epunamones, by which name they called the gods they ador'd; fo they imagined them to be immortal, and that they came from above with a power to fend out thunderbolts like God: for having never feen either fmall arms, or great artillery, they thought the noise was thunder; and to this day that fort of arms is call'd Talca, which in their language fignifies thunder; and out of the fame imagination they cail'd the Spaniards Viracochas, which is as much as to fay, fcum of the fea, or a people come by fea, giving to understand, that those men, if they were men, were fent from God to subject them. This made them ready at first to shew all respects to the Spaniards, and kept them from rebelling, and relifting to vigoroufly as they did afterwards, though they always made some opposition, particularly the Araucanos, who have ever been the eagles among the Indians. Valdivia having well observ'd this, was content at present with what he had conquered, and returning to Arauco by Puren and Tucapel, he caused three strong houses to be erected in the diftance of eight leagues from one another, and in such places as might have an easy communication together. Having thus settled matters, he return'd to the Conception, and so to St. Jago; from whence he dispatched captain Hyeronimo de Aldarete to Caftille, to give the king information of the riches that were discover'd in that country, and its other good qualities; as also a relation of the fettlements made there, in order to obtain a supply of people, which was

granted. The cities newly founded were in great danger of being loft; for indeed they were more than our forces could protect, and the Indians shewed great impatience, and fretted to fee foreigners fettle cities in their country, and erect forts and itrong places for their fecurity.

The governor being inform'd of this dif-valdivia position of the *Indians*, set out from St. Ja-strengthens go with a supply of men which he had received from Peru, under the conduct of fors. Don Martin de Avendano, and relieved all the garrifons: which having done, and prefurning they were fafe, without reflecting on the danger that threatened him, he applied all his intention to give a beginning to the working of the gold mines for a

defign he had.

This was to go to Spain, and carry with Defigns a him all the gold he could get together, to voyage to shew the king the vast riches of the coun-Spani. try, and to obtain from his majesty those titles of honour which were generally heflowed upon the conquerors and discoverers of those Indian kingdoms, and so bring back a good force to fubdue them. For this end he did two things; the first, to fend to the Streights of Magellan, in the year 1552. Francisco de Ulloa, that with two ships, which were equipp'd on purpose, he might discover all the Streight, and give an account of it, that so he might know how to undertake the voyage to Spain that way: the other thing he did, was to fet people to work to find out new gold mines, which they eafily did, there being fo many in these parts; among which, the most famous were the mines of Quilacoya, four leagues from the city of the Conception; and others in Angol, to work which he imployed twenty thousand Indians. Tis easy to imagine how much gold fuch numbers of men might get from those mines, which had never been touch'd till then: it was very great, and enough to enrich both governor and foldiers, which it did: and with the acquifition of fo much treafure, they began likewise to despise their enemies; who, while they were buty in fearching the bowels of the earth for gold, were employed in thinking how they should recover their loft liberty, and free themfelves from the yoke of fubjection, which they had never felt before.

The city of the Conception went on profpering, because of the great quantity of gold brought into it every day; by which means the minds of the inhabitants were elevated in proportion, and the foldiers grew wanton and infolent. The governor being tainted with the fame difeate of too much profperity, neglected to take notice of these disorders; for the desire of riches increafing by riches, which they faw every

day fill their coffers, they were less attentive to that which ought most to have drawn their attention, which was their own and the kingdom's prefervation, and fo made way for that blow of fortune that laid them all along.

The Araucanos were as uneafy, and concanos se tinually plotting how to compass their de-foice to re-figns, and at last resolved to rise unanimoufly against the Spaniards, and take their revenge of them. To try how it would be taken they began to talk big, and carry themselves haughtily, more like masters of

the land than like fervants; they quarrell'd Ovalle. with one and the other, and lofing all respect drove the thing so far as to kill some Spaniards in these contests; and then perceiving that these things were dissembled, and that their boldness had its desired etfect, they grew every day more infolent: and at last being thoroughly satisfy'd that the Spaniards were neither gods, nor immortal, nor of any other species than they, but fubject to all human infirmities, they began to fear them no longer, but refolved to fall

CHAP. XIV.

The City of Angol is peopled, and the Indians rife against the Spaniards.

UPON occasion of the mine that were begun to be wrought in the district of The city of Angol founded. Angol, the governor Pedro de Valdivia fettled a city of that name there, which was also call'd the city of the confines. Some attribute this foundation to the marquis of Cannete, Don Garcia Hurtado de Mendoça, who governed after the death of Pedro de Valdivia: perhaps the reason of this is, that the lituation of this city at first was three leagues from the place where it now stands; so it might be that Valdivia first fettled it, and the marquis removed it to the place it is now in, and that was ground enough to make him the founder.

The prefent fituation is in a plain, very Its fitua-tion and de- large and difengaged, eight leagues from the Cordillera, and twenty from the Conception; some say sixteen, which perhaps is caus'd by the difference of its two fituations. Their longest day and night are of fourteen hours and half. The land is very fertile; fruits ripen very well: there is good wine, and good ftore of raifins dried in the fun, figs, and other dried fruits; a vast quantity of tall cypresses, which yield a very sweetfcented wood, of which, Herrera fays, there is made a gum-lac. The great river Biobio runs by it, and ferves it for a wall and ditch on the fouth fide; and on the north fide another pleafant rivulet comes running from hills of a moderate heighth, and turns character many mills for the use of the city. Those of the nawhom I have known that have been born in this city, have prov'd very gentle in their dispositions, of good wits, and noble inclinations, very friendly and real, and extremely leyal to the king, as indeed all the Chilenians are, looking on that as the highest puncto of their gentility.

Now let us return to the Araucanos, who were bufy in calling together their affemblies there, to treat how to cast off the yoke of fervitude, and make themselves mafters of that which was truly theirs. So it was, that the Caciques being poffes'd with

an opinion that their forces were not inferior to the Spaniards, began to call them together: and they needed no incitements of pay or money; for the love of their liberty, and possessions, and posterity, was a sufficient spur to them, thinking every day a year that kept them from engaging with their enemies, and conquering them. The Caciques that met were these: first, Theca-Tucapel, a great butcher of christians, with eights of three thousand foldiers; Angol, who was roll, and very brave, with four thousand; Cayocupilraife a with three thousand men, whom he brought numerous from the Cordillera, as hardy as the rocks army. they came from, and made to endure any labour; Millarapue, an old man, of great wisdom, brought five thousand; Paicavi with three thousand; Lemoleno with fix thousand; Mareguano, Gualemo, and Leucopie, each with three thousand; the robust Elicuera, held for one of the strongest men, with fix thousand, and they ancient; and chief of all, Colocolo, with as many more. Ongolmo offer'd four thousand; and Puren fix thousand; Lincoyce, who was of the stature of a giant, offered to bring more than any; Peteguelen, lord of the valley of Arauco, from whence the whole took their name, came with fix thousand; and the samous Caupolican, and his two neighbours Thome and Audalican, and many others, kept themfelves ready to come in with their subjects. They met, according to their cuftom, to eat and drink at the appointed rendezvous, for that never is omitted in these assemblies; and having been unanimous in the first and chief point, which was to rife, there was fome difference about the choice of a general, every one defiring to have that command, as it generally happens in such elec-tions: every one alledg'd their particular merits; the one his valour, another his experience, another his good fortune, and none feemed to want a pretence for obtaining their defire. They grew warm in this ambitious

contest, and would have come to blows, if the

OVALLE old and wife Colocolo, by his prudence and authority, had not quieted them, and reduc'd them to confent to choose Caupolican, not only as the braveit foldier, but the ableft chief. This done, they all fwore obedience to him, and promis'd to obey his orders, for the better carrying on of their common defign.

The Spaniards had, as we have already mentioned, three castles for their security, and one of them was near the post where this affembly was kept; and the Indians, proud and impatient, had a mind to attack it immediately; but Caupolican, their general, forbid it, in order to do it with more dexterity and fafety. He commanded Palta, who perform'd the place of serjeantgeneral, to chuse him out fourscore soldiers of the bravest, and such as were least known to the Spaniards, and the India s their friends: these he put under the conduct of two very brave men, Cayaguano and Alcatipay, and order'd them to enter the caffle with their arms by this stratagem. The An Indian Araucanos, though in peace, were not perfragem. mitted to enter the caftle, except fuch as ferv'd the Spaniards; and these enter'd often with their loads of grafs, wood, and other necessaries for the garrison. Caupolican order'd these feurscore men to seign themselves to be fervants of the Spaniards, and having hid their arms in the grass they carried, to answer nothing, but pretend they did not hear if they were ask'd any questions: they acted their parts to the life, fome counterfeiting lameness, others weariness, so that they were all let in without suspicion: then they took their arms out of the grafs, and fell unanimously upon the Spaniards, who were much aftonish'd at so unforeseen a

boldness: however, they gave the alarm,

and all coming out of their quarters, refifted them, so as to kill some of the Indians; the others, either out of fear of the Spiniards, or on purpose to draw them out of the castle in their pursuit, retir'd, on purpose to gain time till their general Caupolican could come up with his army; which he did with a very numerous one, and forced the Spaniards to retire to their fort. He befieg'd them in it, and after having kill'd many of them, those who remain'd aiive were glad to leave the post, and get away, judging it better to retire to Puren, left they should lose all; whereas being join'd with the garrison of Puren, they might better refift the enemy, though he was very powerful, and much elevated.

The news or this invasion foon reach'd the Conception, and the governor Pedro de Valdivia, wno was then there, began prefently to confider how to remedy fo great a mischief. Some blame him as tardy in doing of it; for to secure the treasure of the mines, where (as Herrera fays) he had fifty thousand vasfals at work to get gold for him. Before he went to fuccour those in Puren, he went out of his way, and flay'd the erecting of a fort at the mines, which took him so much time, that he came later than was requifite to their relief. But, indeed, if any thing was ill done Valdivia by him, it was the making too much hafte; marches for without staying for the relief and fuc Araucana cours he might have received from the other cities, he fet out with a force not frong enough to encounter that of Caupolican: his courage deceiv'd him; for being elevated with his fuccesses, and trusting to his fortune, he run into the precipice, as we shall shew in the following chapter.

CHAP. XV.

The Governor Pedro de Valdivia, and all his People, are kill'd by the Indians. The famous Action of Lautaro is related, that being the chief Caufe of this Event.

THE time of this great captain's death was now come; all things therefore feem'd to concur to that end. The prefent remedy that was to be applied to this mifchief, to stop its progress, and the delay of those succours he expected from the other garrifons, were all combining causes; his heart misgave him at his setting out from Tucapel. He had fent out parties to bring him an account of the state of the enemy, but none came back: this gave him fome apprehension, but being engag'd, it was necessary to go on. He had sent out scouts, as I faid, and had fcarce gone two leagues on his way after them, but he faw the heads of two of them hanging upon a tree: this increas'd his fear, and he confulted with

those with him, whether it would not be rash to proceed. The young men were of opinion, that it would be a lessening of their reputation to turn their backs to danger, though there came to them an Indian of their friends, and defir'd them not to proceed, because Caupolican was at Tucapel with twenty thousand Indians, and that the hazard they ran was manifest, but he followed on his way, and came within fight of the enemy: they foon engag'd, and the battle Hi engage was cruel on both fides, fo that for a great them while no advantage could be perceiv'd, because the brave actions on both sides kept victory in fuspence.

After a good while of this contention, the Spaniards began to prevail, and to cry

Viva Espaina, or Live Spain; with which recovering new vigour, the Indians seem'd to give way, when (as Arzilla, in his Araucana, fays) the famous Lautaro, an Indian, who had been bred page to the governor Valdivia, having more regard to the love of his native country and his liberty, than for the education he had received, and the fidelity he owed his mafter, went over to the Indians, and fpoke to them in this manner: "What is this, brave Araucanos? do she Arau-"you turn your backs when your liberty is concern'd, your country, your children, your posterity? Either recover your liberty, or lose your lives; for 'tis a less misfortune to die, than to live flaves. Do you intend to stain the glory of your ancestors, acquir'd for so many ages past, in one hour? Remember you are de-feended from those who gain'd that renown by refifting their enemies, and not flying from them; and fuch as fear'd not to lofe both lives and fortunes to preferve their fame: drive away all fear, generous foldiers, and either live free, or die." With these words he so inflam'd the minds of his friends, that despising death, they return'd with fury to invade those whom before they flew from. Lautaro, to encourage them the more, led them on, shaking his lance against the governor, his master; who, furpriz'd at his action, cried, Traytor what dost ihou do? To which he answer'd only with a thrust or two, animating his people to do the same. This renewed the fight, and they all refolv'd, by the example and exhortations of Lautare, to conquer,

> Lautaro ftill encourag'd his countrymen without any relenting. Valdivia did the same by the Spaniards, and shewed himself every where, in the greatest danger, without the least apprehension, though he saw many of the bravest of his men fall by the fword. One would have thought the Indians had but just begun to engage, to see how like lions they fell on, and begun to find victory incline to their fide, till at laft

> or die; which they perform'd with fo much

fury, that the concern of both fides was now at the highest, and the contention only who should venture farthest into danger. Many

Spaniards and Indians fell on both fides, and

there fell fo many Spaniards, that Valdivia was almost left alone. In this extremity he went afide with his chaplain to confess his fins, that being the principal thing he had now to do. The *Indians* gave him but lit-

tle time to make his peace with heaven; for a great troop of them fell upon him with darts and lances, killing the chaplain, divia and taking him prisoner, they brought him

alive to their general, for the last triumph OVALLE.

of their victory... This hitherto unconquer'd captain appear'd in the presence of the great Caupolican, his hands tied behind him as captive, his face all bloody, though venerable. He ask'd his life as a favour; he who a little before had it in his power to grant it his enemies. He turn'd his eyes towards his Lautare, and with their language feem'd to defire him to intercede for him who had been his lord and mafter, and by whose means he was in this extremity. He promis'd Caupolican, if he might have his life, to withdraw all his forces, and leave the country free from their incumbrance. He made oath of this feveral times, and perfuaded with fo much eloquence his hearers, that Caupolican, who was as generous as brave, began to relent, and incline to compaffion. But the greatest part said it was madness to trust to any words or promises of a captive, who is forced to humble himself; but that when he should be free, he would do that which should be most for his advantage. However, the dispute between them increas'd, and no doubt but Lautaro would have inclin'd to mercy; for if he fought against his master, it was not out of any hatred to his person, but out of the great kindness he had to his country, which, with the defire of liberty, prevail'd over the gratitude he owed for the good usage he had receiv'd at his hands; but nothing of this was able to appeare the vulgar, though Caupolican inclin'd to clemency; fo they forc'd him to pronounce his death, and to execute it immediately in hot blood, though they He is flain differ'd in the manner of it; for fome fay by the that they poured melted gold into his mouth, bidding him once for all content his thirst after that metal which he had so infatiably coveted: others fay, that one of those Caciques, bearing impatiently that it should bear a question whether he should live or die, gave him a blow on the head with a club; which Caupolican refented highly, as a want of respect to him. That which I find most probable is, that according to They make the custom of the Indians, they made flutes flutes and and trumpets of the bones of his legs and of his bones, thighs, and kept his head as a testimony of so remarkable a victory, and to animate their youth to undertake the like actions,

as they might fee by this their fathers had done. Thus I have heard it related. Of all the Spanish army, 'tis faid there of all the escaped only two Indian friends, who ta-Spanish king advantage of the obscurity of the night, swo e cape, hid themselves in a thicket, from whence creeping out as well as they could, they

OVALLE.came to the Conception, and brought the of their husbands and fons, others that of their fathers and relations, and all together mediately full of confusion and complaints, the women crying and bewailing the loss

the common calamity of their city, in which they were all equally concern'd,

CHAP. XVI.

What happened after the Death of the Governor Pedro de Valdivia.

HE enemy having obtain'd fo remarkable a victory, their general Caupolican commanded the retreat to be founded, and call'd a council, to consider whether, or no, it would be best to follow their blow warmly. Many were of opinion it would be most expedient to fall upon the cities immediately, before they could prepare for them; yet Caupolican, after having heard them all, refolv'd to do otherwise. Tis better, faid he, to expect our enemies in our own homes, than to go to feek them at theirs, where all men fight with more valour; let them come to feek us in our mountains and bogs, where we are fure of a fafe retreat: let us give our enemies a free access to us, who have our situation to befriend us; and in the mean time our horfes and foldiers may refresh themselves: and if they out of fear (which I believe they will not) do forbear to feek us out, we may attack them when we will. Having spoke thus, he took Lautaro by the hand, and having publickly commended him, by attributing to him the victory and the liberty of his country, he, by confent of all, Caupolican made him his lieutenant-general, and gave

makes Lau-him leave to chuse out the men he would tare his have to ferve under him, to go and pitch general. upon a fit post to expect the Spaniards in. His charace Lautaro was no very tall man, but well fet, and ftrong, industrious, cautious, of good counsel, gentle, and well proportion'd, very brave, as we have feen, and shall fee hereafter.

To celebrate this victory, the Indians folemniz'd publick games of wreftling, running, leaping, and other proofs of their ftrength and dexterity: they made also great feafting with dancings, and for feveral days did nothing but rejoice and be merry; but still without forgetting to be upon their guard, as men that expected their enemies, whom they prefum'd defirous of revenge.

Francisco de Villagran was lieutenant-general to Valdivia when he was kill'd; who to revenge remaining chief in command, affembled all he could to go and take vengeance of the enemy for his defeat. Setting out, he came as far as Arauco; and being come to a high mountain in the way, he found Lautare on the top of it, with ten thousand men, without having fent out any to diffurb the Spaniards march; for he had left all the paffes easy, to oblige them to come to that

place: it was not far from the fea, which wash'd the foot of the mountain on one side; the coming up on the other fide was eafy; all the reft was precipice; but the top was a plain fit to draw up in, and very proper for his delign.

The Spanish general being in presence, and una the armies began to draw up on both fides; to a bank and not to make the *Indians* too prefump-taro, tuous, he order'd three troops of horse to begin the charge, in hopes to draw the Indians from their post, but in vain; for though they made three attacks, yet Lau-taro would not stir, but receiv'd them with fhowers of arrows, stones, and darts, which made them retire fafter than they came on. Our people, who could not break this battalion, with the evident danger of falling into precipices, did what they could, but with little elect, only tiring their horses; for the enemy kept his post, not a man of them stirring out of his rank; only Lautare would permit fome of the bravest to go out, and defy the Spaniards body to body. There came forth, among the reft, a brave youth, call'd Curioman, who taking a long career, would throw his lance with that dexterity, that he wounded many of the Spaniards: he did this feven times, and at the eighth, Villagran, being vex'd at his importunate boldness, commanded a famous foldier, call'd Diego Lano, to chaftise the Indian's infolence, which he did; and it was all this high courage and strength could per-form. The Spaniards seeing themselves tir'd, and that all the movement of their horse fignified little, and that the Indians were taking the paffes behind them, began to use their small shot, which at first made a great slaughter among the Indians. Lautaro, to remedy this inconvenience, commanded Leucaton, one of his captains, to attack the Spaniards on the flank, and not to ftop till he came up close with their musqueteers, that by this means mingling with them, they might avoid their small shot, which in that case could not be of any use to the Spaniards, without wounding their own men too. This he observ'd, and they ever fince have practis'd the fame with good fuccess; and without this boldness, in which they always lose some men, they would be much inferior to the Spaniards, they having

no fire-arms to use in the like manner: they

they having nanner: they shew frew in this their invincible courage, and undifturb'd bravery, by which they make to thensfelves a defence of their own enemies; for being once mingled with them, they cannot offend them, vithout destroying at the same time their own people.

The fight on both fides was bravely maintain'd, Lautaro relieving and encouraging his men, as Villagran did his, both of them doing the parts both of general and fol-dier, and exposing themselves to the greatest danger. He that signaliz'd his valour most on our fide, was the famous captain Pedro Olmos de Aquillera, killing with his own hand four of the chiefs of the Indians. Our army was encourag'd with his valour, which he inherited from that noble family fo spread in Andaluzia: he was seconded by the Bernales Pantoias, Alvarados, and many others, who perform'd wonders in this battle, which was long contested, very bloody, and in fuspence to the last. The enemy was much superior in strength to our forces, and therefore the victory began to incline to their fide; for though Villagran the general, and fome others, would rather have chose to die there with honour, than turn their backs, yet the greatest part judging that there was no honour lost in a vigorous retreat, and that it would be rashness to perfift in fo desperate a case, they began to retire, fighting and defending themselves; but the enemy, elevated with this success, followed close, and having knock'd Villagran off his horse, they had made an end

frew in this their invincible courage, and undiffurb'd bravery, by which they make to themselves a defence of their own energy themselves a defence of their own energy to themselves a defence of their own energy that the state of the state

These famous commanders did not obtain The Spaless glory in this retreat, than if they had mards bear gain'd a victory; for the enemy following tune, them for fix leagues together, being a hundred to one, and having feiz'd upon most of the passes, and the numbers still increafing, yet the Spaniards made a noble defence, and kill'd many of them. Those who escap'd from this engagement, came with the fad news of the ill fuccess to the city of the Conception, which fet all the inhabitants in an uproar, mingled with lamentations and cries, every one being infome measure concern'd in this calamity; for between Spaniards and friendly Indians, there died in this engagement two thousand five hundred. One would have thought the day of judgment had been come, to fee the confusion that was in the city upon this news; one laments the death of his father, another of her husband; fome cry for their fons, fome for their brothers; the women wring their hands, pull off their hair, fill the air with lamentable cries; the children cling to their parents, asking for their loft fathers, which is more grievous to them than daggers. In the midst of these horrors, night came on, in which no one could flut their eyes, for the memory of their misfortunes keep the foul attentive, without any

CHAP XVII.

Lautaro facks the City of the Conception, and Caupolican befieges the City of the Imperial, which is defended by the Queen of Heaven.

Isfortunes feldom come alone; and fo it happened to this afflicted city, which, instead of receiving comfort from the approaching day, no fooner did it appear, when the noise of drums and trumpets gave a warm alarm of the enemies being at hand. Here the confusion increas'd; for now the concern was not for the loss of others, but for every one's own fafety, the danger threatening them fo immediately: there was nothing but diforder, no counsel nor resolution being to be found in the wifest: they could not defend themselves, because they were so over-powered in numbers by the enemy; and the retreat, though necessary, was difficult, because of the approach of the Indians. In this hard conflict, at last the resolution that prevail'd, was to abandon the city, without pretending to fave any thing but their lives. They

leave the city then, and all the gold they they for had got together in fuch quantities. They from the matters beloing Concepgo out in long files, the mothers helping Cont their little children along: the way that they undertook, was to the city of St. Jago, a long one, in which many rivers were to be cross'd, and hard passes to be gone thorough: this labour was accompanied. with the perpetual fright the enemies purfuing them. Who can relate the hardthips of hunger and other fufferings, through fo long a tract of mountains, defarts, and uninhabited countries? How the women, the children, the old men, could bear this fatigue, we must leave to imagination to represent the true idea of these missortunes! Let us therefore return to the Indians. The Spaniards had hardly made an Lautaro end of abandoning the city, when the In-enters and dians enter'd into it; and not being able facks the

OVALLE to execute their rage upon the inhabitants, they did it upon the houses, to which they fet fire, and confum'd them to the very foundation, killing even the very animals which the Spaniards left behind them. Thus was loft the city most abounding in gold, and fituated in the most populous part of the Indian country; for 'tis faid there were not less than a hundred thousand Indians, with their families, who were all employed in gathering gold for the Spaniards, whom they enriched to that degree, that Pedro de Val-divis, if he had liv'd, would have had fifty thousand Crowns of gold a-year, and

others twenty and thirty thousand.

This burning of the city being over, news was brought, that Caupolican had called a great affembly in Arauco, which made Lautaro return with his people to be at it. When the two generals of the Araucanos met, they greeted one another for the victories obtained over the Spaniards; and in fign of triumph, one hundred and thirty caciques, all dreffed themselves in the spanish dress with the cloaths they took from the Spaniard; killed in the battle. The general had Valdivia's cloaths, which were, as tis reported of green velvet, laced with gold lace, a back and breaft of well tempered steel, and a helmet with a great emerald for crest. All having seated them-felves in order by the general's command, he proposed to them the design of conquering back all that was gained from them by the Spaniards, who now were so dejected with their loss. They all agreed to his defire, every one delivering his opinion with great pride and arrogance. 'Tis faid, that the old and prudent Colocolo, hearing them deliver their opinions with fo much infolence and prefumption, that it looked as if all the world was too weak to refift their valour, humbled them a little, by putting them in mind, That if they had obtained two victories, the Spaniards had gained many more over them, and had made them ferve as flaves; therefore that they ought to behave themselves with moderation and temper, that they might expect fuccess from their arms; and added, that it was his opinion, that they should divide their forces into three parts, and at the fame time affault the city of the Imperial.

Puchecaleo, a famous conjuring Cacique,

following the fame thought of humbling the intolerable haughtiness of the assembly, told them, That they might give over their prefumption; for he was to acquaint them, that having confulted his oracles, they had anfwered him, That though at prefent they were so victorious, yet at last they were to live under the Spanish yoke in perpetual slavery. The Cacique Tucapel could not bear to hear this; and rifing from his place, with his mace of arms gave him fuch a blow as took away his life. The general was highly of-fended at this infolence, and being refolved to chaftize the author of it, the whole affembly was diffurbed; and though they all endeavoured to lay hold on the murderer, yet he defended himfelf fo well with his mace of arms, that it was not eafy to feize him: but Lautaro, who had great power with the general, made up the whole business; and the result of the council being to beliege the city of the Imperial, they immediately put it in execution.

Their army took its posts three leagues Caupolican

from the Imperial; which city, though it designs to had a good garrison of brave men, was not Imperial, nevertheless prepared nor provided for a but it m fiege with ammunition and victuals, because recolonly the enemies would have taken it, if any had prevented been fent to it; but the queen of heaven delivered them from this great danger. The enemies drawing near the city, there arose on a sudden a mighty storm of hail and rain, with black clouds; and their Epunamon appeared to them in form of a terrible dragon, casting out fire at his mouth, and his tail curled up, bidding them make hafte, for the city was theirs, being unprovided; and that they should enter it, and put to the sword all the christians; and so disappeared. But as they were pursuing their delign, animated by this oracle, on a fudden the heavens cleared up, and a very beautiful woman appeared upon a bright cloud, and shewing them a charming, but majestick and severe countenance, took from them the pride and haughtiness inspired into them by their first vision, commanding them to return to their own homes, for god was refolved to favour the christians; and they obey'd immediate-To which the author who reports this flory adds, That the whole camp faw the apparition, which was on the 23d of April,

The City of the Conception is rebuilt; and Lautaro having taken it a fecond Time, marches to take the City of St. Jago, where he dies.

ception re-

THE Spaniards being in safety, began to think of returning to the Concepraifed men at St. Jago, and with great difficulty compassed their intention, making a good fortress within the city for their better fecurity. The Indians of the neighbourhood, though they were in their hearts as averse as any others to be commanded by ftrangers, and to let them build cities in neir territories, diffembled nevertheless at present, but in due time gave advice to Arauco, defiring help to drive out these new comers, or make an end of them at once. Lautaro came to them prefently with a good army; and fome companies of Spaniards, freend sime which went out to encounter him, were forced to retire to the fort they made, in which they defended themselves as long as they were able to withstand the force of Lautaro; but at last being overpowered, they were forced to retire a fecond time to the city of St. Jago. Many Spaniards were loft, and Lautaro followed the pur fuit, in which many brave action were performed on both fides: among the , 1, a famous Indian captain, called Rengo, following three Spanish captains, who were retiring, called them cowards, and faid a hundred infolent things to them, which moved one of them to attack him at the passage of a river; but he secured himself by choosing a strong post; so the Spaniards went on to St. Jago, and Lautaro retreated to Arauco, where great rejoicings were made for this new victory.

The Indians renewed their meetings; and being much elevated with their success, they came to a refolution of not troubling themfelves with the leffer cities, which they reckoned as their own; but to attack the capital of St. Jago. Lautaro offered to unmarches to dertake this enterprize; and chusing the most warlike among them, he marched with a powerful army. He paffed the rivers Biobio, Itata, Maule, and Mataquito; near this last he raised a fort to secure his retreat, if need were, he being engaged far from his own territories.

When the news of this resolution came to St. Jago, many looked upon it as a fable, not being capable of imagining, that the Indians had boldness enough to march so far to attack them; but those who were come back from the city of the Conception undeceived them, as knowing by experience Lautaro's courage; they therefore fortified the place, and provided it: they also sent out parties to engage the enemies, if the occasion offered; but Lautaro forced them to return in hafte to carry the news, and yet fome remained behind too.

Francisco de Villagran, the lieutenant-ge-The Spaneral was fick at this time; and fo fent his niard cousin Pedro de Villagran, with all the force march to he could make, to meet Lautare; they meet him. lodged within half an hour from the fort which the Indians had raifed upon the Rio Claro; the next day they entered the fort without any refistance; for Lautaro had cunningly ordered his men to feem to fly, that he might catch the Spaniards in the fort; and fo, when he faw his time, he gave the fignal, and his men fell on the Spaniards like lions, who had enough to do to make their retreat, and escape from their The Indians followed them for a league, doing them much mischief, though they defended themselves with great valour. Lautaro feigned a fecond time to fly; and our people being reinforced, engaged him a-fresh. They attacked his fort, and gave three affaults to it; where they were received with showers of arrows, darts, and stones, and at last forced to retire to a valley s whence they defign'd to return, and try their fortune again: but Lautaro faved them the trouble; for refolving to make an end of them all at once, and in order to it feigning that he wanted provisions, he sent to our camp to demand some. His project was to let in a river upon the Spaniard's camp, which he could do conveniently, because it was already in dams and canals; and fo having made a marsh of the ground where they lodged, so as they should not be able to ftir, seize all the passes behind them. But Villagran having discovered this stratagem, raised his camp, and retired to St. Jago, to the great disappointment of the enemy.

Yet this did not make Lautaro give over his defign; for confidering that he could not attack St. Jago, which was well provided with men and ammunition, except he had a greater strength, he raised a fort in a valley to cover himself, while his succours fhould arrive, and enable him to attack St. Jago. Those of the city were making, M_m

OVALLE-with great care, preparations for their de1646. fence a and had lent for fuccours to all the other cities. Their general Villagran had fent out upon this defign; and making as if he was going to Arauco, had on a fud-den marched to the Imperial, from whence he brought many good men away with him; and while Lautaro was raifing his fort, Villagran, guided by an Indian, came fwiftly and filently upon Lautaro, and attacked his fort. In the first assault that was given, Lautaro himfelf fell, wounded by an arrow, which struck him in the heart: thus ended that valiant captain of the Araucanos.

His foldiers were not at all discouraged with

this misfortune of their general; but rather enraged with fuch a lofs, and a defire to revenge his death, they fell like lions upon the Spaniards, taking no quarter at their hands. There were on both fides great actions performed; but the refolution of the Indians was the nobleft in the world, preferring their glury to their lives, which they husbanded fo little, that though they were broke, and but few left in a fighting condition, yet they ran upon the Spaniards lances, and with their hands pulled them into their bodies, to come close to their enemy, and revenge their death with his, or at least die in the attempt.

CHAP. XIX.

Don Garcia Hurtado de Mendoça comes to the Government of Chile; what happened at his Arrival, and in the Engagement be had with the Araucanos.

FTER the death of Pedro de Valdi-Via, there was application made from Chile to the viceroy of Peru, who is to provide a governor till the king can fend one, that is, both prefident and governor independent of Peru. The viceroy at this time was Don Antonio Hurtado de Mendoça, marquis of Canete, who governed with great zeal, and a prudent feverity, making exemplary punishments where they were necessary, by which he fecured the country. He had then with him his fon Don Garcia Hurtado de Mendoça, who afterwards fucceeded him in his viceroyfhip, with as much applause and efteem of the world. The embaffadors from Chile defired him of his excellency the father for their governor, which he granted. King Philip the fecond had appointed the Adelantado Hyeronimo de Alderete, to fucceed the governor Pedro de Valdivia, whose death was known at court; but the news came likewife that Alderete was dead in the island of Taboga near Panama. The viceroy's fon having raifed a good body of horse, sent some of them by land with the horses, and he embarked with the rest; and after a hard storm, in which they had like to have been all loft, he arrived in the bay of the city of the Conception, and Don Gar- landed upon the island of Quiriquina, to cia, the new inform himself from thence of the state of governor of the country. The people of the island, who were fierce and warlike, took arms when they faw the ships draw near the harbour. and pretended to hinder the Spaniards from landing; but having no fire-arms, as foon as the cannon of the ships began to fire, they gave way. As foon as the governor landed he published the design of his coming, that the Indians might know it; which was, to

fave their fouls by the predication of the gotpel, and reconcile them to god by the means of baptism; and to confer that sacrament, he had with him religious men of the famous orders of St. Francis and the Mercede: that if they would fubmit to that, he would treat with them in the name of the emperor Charles V. This declaration reached the ears of the Araucanos; and there affembled at Arauco fixteen caciques, and many other captains, to treat about what was best for them to do in this case; and though many youthful and arrogant fpeeches were made, according to their usual haughtiness, which made them despise all good counsel and peace, yet the old and prudent Colocolo restrained their pride with prudent reasons, and persuaded them to treat with the Spaniards, fince they were by them invited to do it. It cannot burt us, faid he, to bear them : we shall have our forces as strong still to maintain our right, if they demand unjust things. This opinion was followed by the most prudent among them; and they fent for their ambassador the Ca-The Indian cique Milalan, a man of great rhetorick and fend south eloquence among them, giving him order bajidair to treat with the Spaniards, and observe well him. their strength; and that he should shew inclinations to peace, to draw them to land on the continent, and forfake the ifland, hoping that the defire of gold would tempt them to go further into the country. Milalan came to the governor's tent; and making a fmall but civil bow, faluted him, and the other Spaniards that were with him; then with chearful countenance he delivered his message. He said, That his countrymen admitted the terms of peace that were proposed, and should observe those of friendship; not out

d making , and the im; then ivered his rymen ad-e profosed, p; not out

of any terror or apprehension caused in them by the arrival of theje new forces; for no fower was great enough to terrify them, baving fulficiently experienced their strength in the success they had bitherto had, but that which moved them was the compassion they had for so many innocent people, so many this war, remain'd widows and orphans: that upon fair terms they would own the king of Spain, upon condition that he did not concern bimself any ways with their liberty or rights, that if they had any thought of acting by violence, and making them flaves, they would fooner eat their own children, and kill

themselves, than suffer it.

The governor answered him with all asfurance of a good treatment as they expected; and having made him fome prefents, dispatch'd him back to give an account of his embaffy: but this was not fufficient fecurity for either side; so they remain'd upon their guard. The Indians observing the caution of the Spaniards, to give them more fecurity, feign'd to dismiss their forces, but fecretly gave them orders to fland upon their guard, and not lay down their arms, but be ready upon any occasion that might happen: yet the Spaniards for all this did not think fit to land upon the continent, but flay'd two months upon the island He lands on where they first landed, till the winter was entirely over. About the spring, they set on shore about one hundred and thirty men of the bravest among them, to raise a fort, as they did, upon the top of a hill which overlooks the city of *Penco*, (otherwise call'd the city of the Conception.) Under the protection of this fortrefs, the rest of the Spaniards went out of the island, hoping, that in a little time, their horses, which were coming by land, would arrive, having fome news of them: in the mean time, they cut wood and fascines to fortify their camp, the governor and the commanders shewing an example to the rest in the labour of retrenching themselves, and cutting of wood, as if they had never done any thing elfe all their life-time. They brought it to perfection in a little time, and planted upon it eight field-pieces, with all other necessary provisions for their defence.

The Araucanos, who were watching all

ans attack their motions, no fooner faw them bufy in their fort, but, without expecting any further proof of their intentions, which they took to be for war, call'd immediately an affembly, and with all their ftrength came like lions, with a resolution to demolish the new fort. They took up their post at Talcaguano, about two miles from the Spaniards fort, and about break of day they gave an

alarm, and having first challeng'd out many Ovalle. Spaniards to fingle combat, they at last tell on in a body, with no more fear of the cannon-bullets than if they had been of cotton or wooll, knowing, that though they receiv'd at first some damage, it could last no longer than till the battalions were engag'd. With this refolution they fell on like lions, and fome of them got over the fortifications; amongst whom was Tucapel, who did wonderful actions. Neither were the Spaniards unprepar'd for them, doing extraordinary things, which it were too long to describe in particular, though the actions were fuch as very well deferve it.

The Spaniards who were in the island and And are aboard the ships, hearing of the danger of beaten off. their companions, came to their affiftance, and by the help of God, who aided them, join'd their friends; and then thus united they began to prevail over the Araucanos; who, finding themselves inferior, and having loft many of their bravest men, began to retreat all but Tucapel, who having flay'd laft, and being forely wounded, yet made his escape from the Spaniards, whom he left full of admiration of his valour and re-

About this time the horses which came The new go. from St. Jago arriv'd, and with them a versor re troop of good horsemen from the Imperial. The enemies muster'd all their forces, and the Staniards went to feek them out in the valley of Arauco, where they had another very bloody engagement: the Araucanos fled, or rather retir'd; and the Spaniards having taken one prisoner call'd Gualbarino, they, in order to terrify the rest, cut off both his hands; but the Araucanos were fo far from being terrified by it, that this enraged them the more; for Gualbarino himself being return'd to his countrymen, went up and down, begging them to revenge the injury done to him, which they all looked upon as their own. Caupolican their general fent to challenge the governor Don Garcia with all his strength, telling him, that he would flay for him in his camp, which he moved near the Spanish camp, which was at Millarapue. He came He gives over night; and the next day prefented Caupolican him battle; which was as well differed as beats him. the rest, both sides fighting with extreme valour. The Indians pressed the Spaniards fo hard, that victory had declared for them, had not a Spanish battalion, in which alone remain'd all the Spaniards hopes, charg'd fo desperately among the Indians, that they were forced to retire, and leave the field to the Spaniards; but their retreat was with great honour and reputation. 'Tis related, that in this engagement some of the neigh-

the contiment, and raijes a fort.

The Indi-

He raijes

Ovalle bouring Indians were made prisoners; and that though they were put to a most exquisite torture, to force them to reveal fomething that the Spaniards wanted to know, yet they remain'd constant and true to their country, as if they had been insen-sible of pain. The Spaniards had here a confiderable advantage; for, befides many dead enemies whom they left upon the spot, they took twelve prisoners of the chief among the Indians, whom they hang'd upon so many trees for an example to the rest; and among them that fame Gualbarino; who not only shewed in dying an intrepid mind, but encouraged the others: and amongst the rest, a Cacique, who began to fear and beg his life; to whom Gualbarino fpoke before all with fo much haughtiness, taxing his base cowardice as if he had been the conqueror, and not the conquered, which struck the Spaniards with such admiration, that they were befide themselves.

From this place our camp marched to the valley where Valdivia was loft. Here the Spaniards raifed a good fort; from whence they made their excursions upon the enemy, endeavouring to advance their conquests, but not without danger of being

often cut off; particularly the hazard they ran at a narrow pass, caus'd by the mountains on the way to Puren, where they were attack'd by the Indians, and very hard fet by them, whom they might have destroy'd if they had not fallen to plunder the baggage: for a company of Spamiards observing this miscarriage, seiz'd on a fpot on the top of an hill, from whence And Aria with their small shot they so gall'd the In-beats the dians below, that they fled in confusion to Indians, avoid fuch a tempest, leaving the Spaniards masters of the field, but much weakened: having been forely handled in this rencounter, they retir'd to their camp, where they were receiv'd with great demonstration of joy. After this, leaving a good garrison in the fort, well provided for two months, the governor went to visit the other cities, to strengthen them, and provide them with necessaries against all attacks, which they had reason to fear; for Caupelican, enraged that in three months he had loft three victories, had call'd a general affembly; where it was refolv'd never to give over, b. either die or conquer, that they might drive out the Spaniards, and restore their country to its liberty.

CHAP. XX.

More Events of War: The Death and Conversion of Caupolican.

AUPOLICAN followed his defigns; but fortune feemed to be weary of affifting him; for in most rencounters he came off either worsted, or entirely defeated, and the victory snatch'd out of his hands when he thought himself sure of it: this made his people begin to grow weary of his command; and the vulgar began to censure his conduct as too remiss, and that the defire of preserving his power, and being general, made him neglect opportunities of putting an end to the war.

Caufolican being inform'd of these suspicions of his own people, call'd a new assembly, in which he proposed methods of carrying on the war, so as they might obtain an entire liberty. This was unanimously agreed to, with a firm resolution of not giving it over till they either conquer'd or died. This resolution coming to the knowledge of the governor Don Garcia Hurtado de Mendoşa, who was gone, as we have seen, to the city of the Imperial, to fortify it, he dispatch'd to the fort advice of what pass'd, and sent them a competent relief.

Amongst other designs pitch'd upon by Caupolican, the first was to surprize the Spaniards in their fortress by a stratagem

before they were aware of him, and fo mafter the place. The other captains of repute, Rengo, Orompello, and Tucapel, who were used to lead always the vanguard, did not approve of his project; and so let him go by himself with his own forces, they scorning, as they faid, to obtain a victory by fraud or furprize. Caupolican fer out then by himself; and being come within three leagues of the spanish tortress, he sent cat his spies to observe their disposition, and how they might be easiliest circumvented. He chose out for this purpose one of his best captains, whose name was Pran, a cunning fagacious man, and prudent, with a great deal of ready wit. This captain difguis'd himfelf; and putting on the habit of an ordinary Indian, he went alone, and without arms, as a private person, to the fortress of the Spaniards. He entered the fort without suspicion, or being known by the other friendly Indians, with whom he foon grew acquainted; and walking up and down, he observed our camp and forces, and took particular notice of the time of day that our men us'd to be least upon their guard, which was generally at noon, when they went to fleep, to repair their

There was in the Spanish fort, a young Indian fpy, Indian, (not like Lautaro, in whom the love fign against of his country prevail'd over his duty to his the Spa- mafter,) but of another temper; his name was Andres, fervant to a Spanish gentleman, and very much inclin'd to all the Spanish nation. Pran had made a great friendship with this young man; and one day, as they were going together in the fields to feek out fome provision, as they us'd to do, talking from one thing to another, Pran discover'd himself entirely to his friend Andres; perfuading him to help on the defign he came about, fince upon its fuccefs the liberty of the whole nation depended. Andres, who was not less sagacious and prudent than Pran, promis'd him all he could defire; but distembled all the while. This being fettled, they agreed, that each of them should return home to his camp, and that the next day Andres should come to a certain post they agreed on, and there Pran should meet him, and carry him to Caupolican's quarters, where he might fettle all matters with him. Pran went back to the Indians camp, overjoyed that he had fuc-ceeded fo well, as he thought: he gave a particular account of all the business to Caupolican, while Andres did the fame to captain Reynoso, who commanded in the Spanish fort. If God Almighty had not by this way deliver'd the Spaniards out of this eminent danger, they must have perish'd; for naturally Andres ought to have been of the

fide of his own countrymen. According to what had been agreed between them, Andres came the next day to the affignation, where he met his friend Pran; and they went together to Caupolican, who receiv'd him with all demonstrations of joy and confidence, shewing him his camp, and all his army; the refult was, that he should affault the Spaniards the next But it turn; day about noon. Andres went back to the Spaniards, to inform them of all that paffed, sum of the and by that captain Reynoso knew how to difpose every thing to receive the attack. Caupolican came at the time appointed with all his Indians, the greatest part of which were fuffer'd to enter, the Spaniards making as if they were afleep; but on a fudden, upon a fign given, they rose up like lions, and making a furious discharge on those enter'd, the horse sallied to engage those who had remain'd without, of whom they made a great flaughter. The furprize of the Indians was fo great, that few of them could make their escape; but Caupolican, with ten more, fav'd himself by by-paths, though he was hotly purfued; the Indians that were Vol. III.

overtaken, still denying they knew any Ovalle. thing of him, and neither threats nor gifts could oblige them to reveal what they might know more.

But it being very hard there fhould not Caupolibe one traytor among many loyal men, the can beSpaniards lite at last upon one of his fol-trayed by diers, who was discontented that he had not own men. been advanc'd according to his pretenfions, who betrayed to them where he was: this man guided them by a fecret path to a place where they could not be discover'd, and from thence shewed them a very thick wood, about nine miles from Ongolmo, where in a thicket by a river fide, over a precipice, this brave man had hid himfelf till he could get a new army, and rally his men.

The Spaniards came upon him on a fud-He is taken den, and furpriz'd him with the few that by the Spawere with him; and though he did all that was in his power to defend himfelf, yet they mafter'd him. His wife feeing him a prisoner, and his hands tied behind him, call'd him coward, and us'd all the opprobrious language to him that was possible.

Caupolican was deservedly among the In-Hischaras dians the most valued of their generals; and im. accordingly, in an affembly of fixteen Ca-ciques, all fovereign lords, who met to raife an army against the Spaniards, he had the chief command given him. This was the man who, with fourfcore bold fellows, furpriz'd the castle of Arauco, and overcame the Spaniards in a bloody encounter without the city walls: this was he who durft expect the general Valdivia in open field, and routed him and his whole army, fo as there was not one Spaniard left alive: this was he who destroyed Puren, and fack'd Penco, not leaving one ftone upon another in it, the Spaniards having been all frighted away by the terror of his name: this, in fine, was the man who manag'd all the war with fuch fuccess, by his military skill and valour, that his authority was every where respected. This great man was now, by the means of a traitor, deliver'd up to his most cruel enemies. In this calamity he shewed no baseness; for though he begged his life, it was in a grave way, promising in return to cause all the country to fubmit to the king of Spain, and to give way to introduce the christian religion.

Confider, faid he, to captain Reynoso, His speech.

that what I promife, I am able to perform, by the great veneration that all my people have for me; and if thou doft not accept of this proffer, thou wilt do nothing; fince for one head taken away,

there will rife up a hundred Caupolicans to revenge my death, that the true one

OVALLE." will not be miffed. I defire not to be 1646. " fet at liberty, but to remain thy prifomer till I perform my promile."

All these reasons were of no use to Caupolican, for he was publickly sentenced to
be empaled alive, and shot to death with
arrows, for a terror to the rest of the Indians; though as time has since shewed,
this had no other effect, than to light the
fire of war more and more, and make the

wound almost incurable. He heard this hard sentence without any alteration in his countenance; but he desir'd with great concern to be baptiz'd. The priests are sent Baptiz'd, for, and after a short instruction he receives the holy ablution, and the character of a christian. After this the sentence was executed upon him, which he endur'd with saired, great constancy.

The Conclusion.

THOUGH father Ovalle has continued in the remainder of his treatife to give an account of the various events of the war with the Araucanos, in which narrative he runs through the commands and actions of all the governors of Chile, to the peace made with that nation; yet it being by him more a piece of courthip to his nation, and to those families, than an information instructive to a foreign reader, it has been thought proper to take the death

of that great general Caupolican for the first natural period of that war. In the course of the remaining narrative, there are so many superstitious notions inculcated, so many improbable miracles given for the soundation of great enterprizes, and such a monkish spirit runs through the work, that here in England it would rather prejudice than recommend the impression, and is therefore omitted.

Sir William Monson's Naval TRACTS.

In Six BOOKS.

CONTAINING,

- I. A Yearly Account of the English and Spanish Fleets during the War in Queen Elizabeth's Time; with Remarks on the Actions on both Sides.
- II. Actions of the English under King James I. and Discourses upon that Subject.
- III. The Office of the Lord High Admiral of England, and of all the Ministers and Officers under him; with other Particulars to that Purpose.
- IV. Discoveries and Enterprizes of the Spaniards and Portuguese; and several other remarkable Passages and Observations.
- V. Divers Projects and Stratagems tender'd for the Good of the Kingdom.
- VI. Treats of Fishing to be set up on the Coast of England, Scotland, and Ireland, with the Benefit that will accrue by it to all his Majesty's three Kingdoms; with many other Things concerning Fish, Fishing, and Matters of that Nature.

The Whole from the Original Manuscript.

THE

PREFACE.

TAVING had the perufal of these naval tracts of Sir William Monson, as well to compare two copies together, and supply the defects of the one out of the other, as to correct what might be found in them amiss, either through the negligence of tran-feribers, or the author's want of time to revise his work, yet without prefuming to alter Sir William's sense or design in the least, but only to make the whole sit for the press, I thought it necessary to give the reader some little information concerning the work before he enters upon it, but with that brevity which I have always affected, when any thing has appear'd abroad under my own name, and which I am much more inclin'd to, being to speak of what must give praise or dispraise to another, and not to me, who am no way con-

cern'd in it.

Some nice persons will, perhaps, at the first reading of this work, find fault with the language, and wonder that Sir William, who was a gentleman by birth, and so great a man as an admiral, should answer their expectation so little in that particular. I cannot, I must confess, vindicate the language; but it was not my province to alter it: and as for the author, it must be considered, that though born a gentleman, be spent most of his time at sea, a very unsit school for a man to improve his language. For the same reason we may suppose he was not much a scholar, but of excellent natural parts, and a great master of the art he prosessed, as will sufficiently appear by this work, and is enough to recommend it. Besides, we must not expect that the days of queen Elizabeth could form a man to the language of our time; and though Sir William lived till the civil war in the reign of king Charles I. it is to be observ'd, that he was then in his declining age, when for the most part men rather mind what they fay, than how they fay it.

The work therefore, though perhaps not so pleasing in stile as some might desire, is correst, and clear from abundance of oversights, which, as I said before, had either crept in through the sault of transcribers, or for want of the author's due revising it. Nor was it proper to alter the stile, but to allow the author to deliver himself in his own way; for should discerning persons sind Sir William Monson speak the language of this time precisely, having never before appear'd in print, they might be rather apt to believe these tracks supposi-

titious, than his own lawful offspring.

There is another thing, which perhaps will seem unpardonable, and not without just cause, if judges be rigorous; and is, that there are some mistakes, or to speak plainly, salshoods to be found in these tracts. What I can say to this, is, that they are most, if not all, in things then not better known; as for instance, the affairs of the East and West-Indies; concerning which, many extravagant stories were formerly told, which time and experience have disprov'd. Besides, we must not be too rash in supposing every thing salse, which does not seem provable to us; for there might be many accidents or occurrences in those days, which might be really true and undoubted, though to us they feem preposterous and strange. And it is farther to be observed, that these errors are not in things, whereon the credit of the subjectmatter depends, but only in such as fall in by-the-by, and wherein Sir William was either impos'd upon by authors then in credit, or by living persons, whose reputation might be untainted.

I will not pretend to give a character of the author, or more of his work, which every reader has as much right to judge of as myself, and perhaps is better able. What little I have faid, as to those two points above, is not to apologize for the work, or to preposses the reader, but only to prevent his being too hasty in condemning, because some men are naturally so precipitate, that they are apt to take a prejudice to a book upon the first dislike; which they may afterwards, upon second thoughts, and more mature deliberation, find both useful and delightful. Nor is there any need to give an account what the work is, as I thought once to have done, because it would be a needless repetition of the contents, in which every man may at one view fee the heads of all thefe tracts; besides that every book has a short argument,

yet sufficient to shew what it treats of.

Sir WILLIAM MONSON

His ELDEST

Dear Son,

♦ H E cuftom of dedicating books is antient; and they have been usually dedicated either to great persons, for protection or reward; or to acquaintance, out of friendfhip and affection; or to children, out of natural love, and for their instruction. And to this end it is I commend the reading of the following discourse to you, that fo beholding the eighteen years war by fea, which for want of years you could not then remember, and comparing them with the eighteen years of peace, in which you have lived, you may confider three things: First, That after so many pains and perils, God has lent life to your father to further your education. Secondly, What proportion his recompence and rewards have had to his fervices. Laftly, What just cause you have to abandon the thoughts of fuch dangerous and uncertain courses; and that you may follow the enfuing precepts, which I recommend to your frequent perufal.

In the first place, I will put you in mind of the small fortune I shall leave, that you may rate your expences accordingly; and yet as little as it is, 'tis great to me, in respect I attained to it by my own endeavours and dangers; and therefore no body can challenge interest in it but myself, though your carriage may claim the best title to it.

Beware you prefume not fo much upon it, as to grow disobedient to your parents; for what you can pretend to, is but the privilege of two years of age above your younger brother; and in fuch cases fathers are like judges, that can and will diftinguish of offences and deferts according to truth, and will reward and punish as they shall see

And because you shall know it is no rare or new thing for a man to dispose of his own, I will lay before you a precedent of your own house, that so often as you think of it, you may remember it with fear, and prevent it with care.

Your grandfather's great grandfather was a knight by title, and John by name, which name we desire to retain to our eldest sons: God bleffed him with many earthly benefits, as wealth, children, and reputation: his eldest son was called John, after his father, and his fecond William, like to yourfelf and brother; but upon what displeasure I know VOL. III.

not, (though we must judge the son gave the occasion,) his father left him the least part of his fortune, yet sufficient to equal the best gentleman of his shire, and particularly the ancient house call'd after his name. His other fon William he invested with what your uncle now enjoys. Both the fons whilft they lived carried the port and estimation of their father's children, though afterwards it fell out that the fon of John, and nephew to William, became difobedient, negligent, and prodigal, and spent all his patrimony; so that in conclufion he and his fon extinguished their house, and there now remains no memory of them. As for the fecond line and race, of whom your uncle and I descended, we live as you fee, though our estates be not great, and of the two mine much the least; which notwithstanding is the greater to me, in respect I atchieved it with the peril and danger of my life; and you will make my fatisfaction in the enjoyment of it the greater, if it be attended with that comfort I hope to receive from you.

The next thing I will handle shall be arms. Know that wars by land or fea are always accompanied with infinite dangers and difasters, and feldom rewarded according to merit: for one foldier that lives to enjoy that preferment which becomes his right by antiquity of fervice, ten thousand fall by the fword and other cafualties: and if you compare that of a foldier with any other calling or profession, you will find much difference both in the reward and dan-

Though arms have been efteemed in all ages, and the more as there was greater occafion to use them, yet you shall find they have been always subject to jealousies and envy i jealousies from the state, if the general or other officer grow great and popular; fubject to envy from inferiors, who through their perverse and ill dispositions. malign other mens merits.

The advancement of foldiers is commonly made by counfellors at home, whose eyes cannot witness the services perform'd abroad; but a man is advanced as he is befriended, which makes the foldier's preferment as uncertain as his life is cafual.

Compare the condition and advancement of foldiers of our time but with the mean and mercenary lawyer, and you shall find fo great a difference, that I had rather you 00

Sir William Monson to his Eldest Son.

make profession of the other.

A captain that will feek to get the love of his foldiers, as his greatest praise and felicity, of all other vices must detest and abandon coverousness. He must live by fpending, as the mifer does by sparing; infornuch as few of them can obtain by war, wherewith to maintain themselves in peace ; and where wealth is wanting preferment

Soldiers that live in peaceable islands, as in England, are undervalued, because we see not those dangers which make them necessary, as others do where wars are practifed. And the good fuccess in our wars has been fuch as makes us attribute our victories, not fo much to valour as to chance.

I confess the base and ill behaviour of fome foldiers has made them and their profession the less esteemed; for the name of a captain, which was ever wont to be honourable, is now become a word of reproach and

Soldiers may have reputation, but little credit; reputation enough to defend their honours, but little truft in commerce of the world: and not without cause; for their fecurity is the worfe, by how much the danger of death is the greater.

Learning is as much to be preferred before war, as the trade of a merchant before that of the factor. By learning you are made fenfible of the difference betwixt men and other creatures, and will be able to judge between the good and the bad, and how to walk accordingly. By learning you attain to the knowledge of heavenly mysteries, and you may frame your life accordingly, as God shall give you grace. By learning you are made capable of preferment, if it concur with virtue and diferetion; and the rather, because you are a gentleman by birth, and well ally'd; which I observe, next to money in this golden age, is the fecond step to preferment.

For one that is preferred by arms, there are twenty by learning; and indeed the foldier is but a fervant to the learned; for after his many fought battles, and as many dangers of his life, he must yield account of his actions, and be judged, corrected, and advanced, as it shall please the other.

You may wonder to hear me extol learning fo high above my own profession, confidering the poor fortune I shall leave was atchieved by arms: it is enough therefore to perfuade you what I fay is not conjectural, but approved: for if I did not find this difterence, the natural affection of a father to a fon would make me difcover it to you, that you may follow that which is most probable and profitable.

Good fon, love foldiers for your coun-

should become apprentice to the one, than try's fake, who are the defenders of it; for my fake, who have made profession of it; but shun the practice of it as you will do brawls, quarrels, and fuits, which bring with them perplexities and dangers.

There are many things to be shunned, as being perillous both to body and foul; as quarrels, and the occasions of them, which happen through the enormities and abuses of our age. Esteem valour as a special virtue; but shun quarrelling as a most detestable vice. Of two evils it were better to keep company with a coward than a quarreller; the one is commonly fociable and friendly; the other dangerous in his acquaintance, and offensive to standers-by. never free from peril, that is converfant with a quarrelfome person, either for offence given to himself, or to others, wherein he may be engaged.

H

B

F

A true valiant man will have enough to do to defend his own reputation, without engaging for others; nor are all valiant that will fight; therefore discretion makes a difference betwixt valour and desperateness. Nothing can happen more unfortunate to a genlteman than to have a quarrel, and yet nothing so ordinary as to give offence: it draws with it many mischiefs both to body and foul: being flain he is in danger of damnation; and no less if he kill the other, without great repentance. He shall perpetually live in danger of revenge from the friends of the party killed, and fall into the mercy of the prince and law where he lives; but if for fear and baseness law he avoid and shun a quarrel, he is more odious living than he would be unhappy in

Drinking is the foundation of other vices; it is the cause of quarrels, and then murders follow. It occasions swearing, whoredom, and many other vices depend upon it.

When you behold a drunkard, imagine you fee a beaft in the shape of a man. It is a humour that for the time pleases the party drunk, and so bereaves him of sense, that he thinks all he does delights the beholders; but the next day he buys his shame with repentance, and perhaps gives that offence in his drunkenness, that makes him hazard both life and reputation in a quarrel. man will brag or boaft fo much of the word reputation as a drunkard, when indeed there is nothing more to a man's imputation than to be drunk.

A drunkard is in the condition of an excommunicated person, whose testimony betwixt party and party is of no validity. Avoid, good fon, the company of a drunkard, and occasions of drinking, then shall you live free without fear, and enjoy your own without hazard.

Whore-

fit; for on of it; will do h bring

on of an exflimony beto validity. y of a drun-, then shall enjoy your Whoredom is an incident to drunkenness; though, on the contrary, all whoremasters are not drunkards. It is a fin not washed away without the vengeance of God to the

third and fourth generation.

Befides the offence to God, it gives a difreputation to the party and his offspring: it occasions a breach betwixt man and wife; encourages the wife very often to follow the ill example of her husband, and then entue diflike, divorce, difinheriting of children, suits in law, and consuming of estates.

The next and worst fin I would have you shun is swearing. I do not advise you like a puritan, that ties a man more to the observing of fundays, and from taking the name of God in vain, than to all the rest of the commandments; but I wish you to avoid it for the greatness of the sin itself; for the plague of God hangs over the house of the blassphemer. Swearing is odious to the hearers: it gives little credit to the words of him that uses it: it affords no pleasure as other sins do, nor yields any profit to the part:: custom begets it, and custom must make one leave it.

For your exercifes, let them be of two kinds; the one of mind, the other of body: that of the mind muft conflit of prayer, meditation, and your book. Let your prayers be twice a day, howfoever you difpose of yourself the rest of the time: prayers work a great effect in a contrite and penitent

heart.

By this I do not feek to perfuade you from fuch exercifes and delights of body as are lawful and allowable in a gentleman; for fuch increase health and agility of body, make a man sociable in company, and draw good acquaintance: many times they bring a man into savour with a prince, and prove an occasion of preferment in his marriage: they are often a safeguard to a man's life, as is vaulting suddenly upon a horse to escape an enemy.

I will espécially commend to you such pleasures as bring delight and content without charge; for others are fitter for greater men than one of your fortune to

follow.

Hawking and hunting, if they be moderately used, are, like tobacco in some cases, wholesome for the body; but in the common use both laborious and loathsome: the valike bring one inconveniency, (as commonly vices do,) that they are not so easily left as entertained.

Tobacco is hot and hurtful to young bodies and ftomachs, and augments the heat of the liver, which naturally you are subject to. It is offensive to company, especially the breath of him that takes it: it dries the brain, and many become fools with the continual use of it. Let your apparel be handfome and decent, not curious nor coffly. A wife man is more effected in his plain cloath, than gay cloathing. It is more commendable to the able to buy a rich fuit than to wear one.

A wifeman efteems more of a man's virtues and valour than of his apparel; but feeing this age is fantaftical and changeable, you must fashion yourself to it, but in so mean and moderate a manner, as to be rather praised for frugality, than derided for prodigality.

He that delights in curious cloaths is an imitator of a player, who measures his appared by the part he acts. And as players appear upon the stage to be seen of the spectators, so do the gallants expose their brave-

ry in open affemblies.

Whilft I live, and you do not marry, I shall temper this expence; but when I die, remember what I say: seek advancement rather by your carriage than gaity; the reputation you gain by that will be latting, when this will appear but like a flower sa-

ding

Frame your course of life to the country and not to the court; and yet make not yourself such a stranger to great persons, as in assemblies they should ask others who you are. I consess the greatest and suddenest rising is by the court; yet the court is like a hopeful and forward spring that is taken with a sharp and cold frost, which nips and blasts a whole orchard, except two or three trees; for after that proportion commonly courtiers are preferr'd: and he that will thrive at court must make his dependency upon some great person, in whose ship he must imbark all his hopes; and how unfortunate such great persons are oftentimes themselves, and how unthankful to their followers, we want not precedents.

He that fettles his fervice upon one of them, shall fall into the disfavour of another; for a court is like an army, ever in war, striving by stratagems to circumvent and kick up one another's heels. You are not ignorant of the aptness of this comparison by what you know of me, whose case will serve you for a prospective-glass, wherein to behold your danger afar off, the better to prevent it: yet reverence lords, because they are noble, and one more than another, as me

is more notable in virtue.

Be choice of your company; for as a man makes election of them he is centured. Man lives by reputation, and that failing he becomes a monster. Let your company consist of your own rank, rather better than worfe; for hold it for a maxim, The better gentleman, the more gentle in his behaviour.

Beware they be not accused of crimes; for that may touch you in credit; and if you lose your reputation in the bud of your

Whore-

youth, you shall scarce recover it in the whole course of your life: let them be civil in carriage; for commonly such men are sensible above all: let them be learned; for learning is a fountain, from whence springs another life: let them be temperate in diet and expence, so shall you learn to live in health, and increase in wealth.

Beware they be not cholerick in disposition, or arrogant in opinion: for if so, you will become a slave to their humours, and base by suffering. A cholerick man, of all others, is the worst companion; for he cannot temper his rage; but on any slight occassion, of a friend becomes an enemy. Value true friendship next to marriage, which nothing but death can dissolve; for the sickleness of friendship is often the ruin of one's fortune.

Beware of gaming, for it causes great vexation of mind: if you lose, it begets in you that humour, that out of hope of regaining your losses, you will endanger the loss of all. Do not presume too much of your skill in play, or making wagers, as if you were excellent above others, or have fortune at command; for she is like a whore, variable and inconstant; and when she disfavours you, it is with more loss at once

than she recompences at twice. Love your brother and fifters for their own fakes, as you are bound by nature, but especially for mine, whose they are. member you are all indifferent to me, but that God chose you from the rest to be a firength and flay to them: think you can-not honour your father more being dead, than in shewing affection to them he dearly loved; and nothing will more approve you to be mine, than love and kindness amongst yourselves. You owe somewhat more to me than that I am your father, in that I feek your advancement above theirs; of which obligation I will acquit you, conditionally you perform what you ought to them: for because man cannot himself live ever, he defires to live in his posterity; and if I had an hundred fons, my greatest hope must depend upon you, as you are my eldeft; and feeing my care is of you above the reft, do not make my memory fo unhappy, as to give the world occasion to fay, I left an unnatural fon. The only request I make, is, be kind and loving to them, who, I know, by their disposition, will give you no cause of offence. A discourtefy from you will be as fharp to them as a razor from another.

Be courteous and friendly to all; for men are efteem'd according to their carriage. There is an old proverb, The courtefy of the mouth is of great value, and costs little. A roud man is e-vy'd of his equals, hated by his inferiors, and fcorn'd by his supe-

riors; fo that betwixt envy, hate, and fcorn, he is friendless.

Many times a man is condemned to death out of prefumption, especially when it concurs with an opinion of his former ill carriage: how much therefore does it concern a man in the times of his prosperity to lay up a stock of love and reputation?

lay up a flock of love and reputation?

There cannot be a greater honour than to gain a man's enemy by a courtefy: it far exceeds the kindnefs that is done to another, and doubly obliges him that receives it. Love is a thing defir'd by a king from his fubjects, by a general from his foldiers, and by a mafter from his fervants; he that has it is rich by it; it maintains peace in time of per:, and is a fafe bulwark in time of war.

Ν

Do not buy this love with the ruin of your estate, as many do with prodigal expences, and then are requited with pity and derision. Let your expence be agreeable to the wearing of your cloaths, better or worse, according to company; or the journeying your horse; the less way you go to day, you may travel the farther to-morrow; but if you go every day a long and wearing journey, your horse will fail, and you be fore'd to go a-soot. And so will it be in your expences: if you do not moderate them according to days and companies, your horse and you may travel faintly together.

horfe and you may travel faintly together.

If you are prodigal in any thing, let it be in hospitality, as most agreeable to will of God; you shall feed the hungry, relieve the poor, and get the love of the rich. What you spend among your neighbours is not lost, but procures their love, and helps when you have need, and thereby you shall find friendship in the country as available as favour at court.

If you are called to any place of magitracy, do justice with pity, revenge not your felf of your enemy under colour of authority; for that shews baseness, and will procure you hatred. In money matters fayour your country, if it be not against the present profit of the king; for many times his name is used for the gain of other men.

Study the laws, not to make a mercentry practice of them, but only for your own use, the good of your neighbours, and the government of your country. Hold the laws in reverence next to the king: for that kingdom is well govern'd where the king is ruled by the laws, not the laws by the king.

Be not prefumptuous in your command; yet feek to be obey'd as you defire to obey; for as you are above others, others are above you. Give your mind to accommodate controverfies among your neighbours, and you shall gain their love, which will more avail you than the hate of the lawyers can hurt you.

Punish

If you marry after my death, choose a wife, as near as you can, fuitable to your calling, years, and condition: for such

marriages are made in heaven, though celebrated on earth.

If your effate were great, your choice might be the freer: but where the preferment of your fifters must depend upon your wife's portion, let not your fancy over-rule your necessity. It is an old faying, He that marries for love, bas evil days and good nights: consider if you marry for affection, how long you will be raising portions for your fifters, and the misery you shall live in all the days of your life; for the greatest fortune that a man can expect is in his marriage. A wife man is known by his actions; but where passion and affection fway, that man is depriv'd of sense and understanding.

It is not the poverty or meanness of her that is married, that makes her the better wife; for commonly such women grow elevated, and are no more mindful of what they have been, than a mariner is of his escape from a danger at sea when it is past. You must set your wise a good example by your own carriage; for a wise and discreet husband usually makes an obedient and dutiful wise. Beware of jealousy; for it causes great vexation of mind, and scorn and laugh-

ter from your enemies.

Many times it is occasion'd by the behaviour of the husband towards other women: in that case do like the physician, take away the cause of the infirmity, if not you are worthy to seel the smart of it. Jealousy is grounded upon conceit and imagination, proceeds from a weak, idle, and distempered brain; and the unworthy carriage of him that is jealous many times makes a women do what otherwise she would not.

If God be pleafed to give you children, love them with that difcretion that they difcern it not, leaft they too much prefume upon it. Encourage them in things that are good, and correct them if they offend. The love of God to man cannot be better express'd, than by that of a father to his children. Comforts or crosses they prove to their parents; and herein education is a great help to nature.

Let your children make you to diffelish and abandon all other delights and pleasures of the world, in respect of the comfort and joy you receive by them: make account then that fummer is paft, and the melancholy winter approaches; for a careful and provident father cannot take delight in the world, and provide for his children.

world, and provide for his children.

For a conclusion I will recommend two principal virtues to you; the one is fecrecy, the other patience. Secrecy is neceffary, requir'd in all, especially publick persons; for many times they are trufted with things, the revealing whereof may cost them their lives, and hinder the deligns of their mafters. It is a folly to truft any man with a fecret that can give no affiltance in the bufiness he is trufted with. Counsellors of flate, and generals of armies, of all others ought to be most secret; for their designs being once discovered, their enterprizes fail. Silence was fo much efteemed among the Perfians, that she was ador'd for a goddefs. The Romans kept their expeditions fo fecret, as that alone was a principal cause of their victories: but of all others trust not women with a fecret; for the weakness of their fex makes them unfecret. Be patient, after the example of Job, and you shall become a true fervant of God. Patience deferves to be painted with a fword in her hand; for the conquers and fubdues all difficulties. If you will take advantage of your enemy, make him cholerick, and by patience you shall overcome him.

Marcus Aurelius being both emperor and philosopher, consessed he attained not the empire by philosophy, but by patience. What man in the world was so patient as our faviour himself? By following whose example his ministers have converted more by their words, than all the persecuting emperors could deter by rigour or cruelty of laws. The impatient man contests with God himself, who gives and takes away at

his good will and pleasure.

Let me (good fon) be your pattern of patience; for you can witness with me, that the difgraces I have unjustly suffered, (my estate being through my misfortunes ruined, my health by imprisonments decay'd, and my fervices undervalued and unrecompenced,) have not bred the least diftafte or discontent in me, or alter'd my refolution from my infancy, that is, I was never fo base as to infinuate into any man's favour, who was favoured by the times; I was never fo ambitious as to feek or crave employment, or to undertake any that was not put upon me. My great and only comfort is, that I briefly my princes both faithfully and fortunately; but feeing my fervices have been no better accepted, I can as well content my felf in being a spectator, as if I were an actor in the world,

THE

Epistle Dedicatory of the First Book,

TO SUCH

Gentlemen as are the Author's intimate Friends, that shall read these small Treatises.

T is proper to all discourses not to comprehend more in one book than the subject whereof they are to treat, because variety of matter may breed confusion and forget-fulness in the reader; and though the ensuing work treats of several nations, several matters and accidents, and of several times and ages, yet all tends to sea-actions, and men of that profession, as namely, the first discovery of countries, the settling of commerce and trade betwirt remote nations, the success of many warlike expeditions by sea, and several admonitions, and other particulars therein mention'd.

I have divided them into fix books: in the first and second I place the acts and enterprizes of *Englishmen*, in respect of the deserved honour the world attributes to them for their marine affair; secondly, in duty being bound to prefer my own country before all others, wherein I cannot be tax'd with partiality or stattery; and, thirdly, because the actions and journeys of the *English* will give light to ensuing ages, by comparing them with times past for advantage of time to come, if there be occasion.

In the third book I fet down the office of the lord high-admiral of England, and all other inferior offices belonging to him, and his majefty's finps, from the highest com-

mander to the meanest failor.

In the fourth book I touch upon divers discoveries and conquests of the Spanish and Portuguese nation; but I will forbear to say any thing of them in particular, till I come to the place where I am to treat more at large of their acts and enterprizes.

In the fifth I treat of projects, which I dedicate to the projectors of this time, not to honour, but to display them and the infamous courses they take against the commonwealth

In the fixth I discover the benefit of fishing upon his majesty's coasts of England, Scotland, and Ireland, and with what case it may be undertaken by his majesty's subjects.

Many things contain'd in these six books are no other than collections of other authors; and my labour is more therein, than theirs who gather variety of slowers out of several gardens to compose one sightly garland.

It is not my intention that many shall read them; and such as do shall be only my dearest friends, because they will put a favourable construction upon any oversights I shall make, and will conceal and hide what weakness they discover in me.

All my aim is my own pleasure, and my friends satisfaction, if this yields them any; if not, my good will ought to be never the less valued, considering my intention in offering it. What is wanting in perfection, shall be supplied by my affection and service ever devoted to you. And so, sarewel.

BOOK

BOOK I.

A Yearly Account of the English and Spanish Fleets, fet out from the Year 1585. when the War with Spain first began, till the Year 1602. when King James made his happy Entrance into this Kingdom, shewing the Designs, Oversights, and Errors, on both English and Spanish Sides, with the Names of the Queen's Ships and Commanders in every Expedition.

Sir Francis Drake's Voyage to the West Indies, Anno Dom. 1585. 1585.

The Elizabeth Bonaventure. The Aid.

Commanders.

Sir Francis Drake. Captain Forbisher. Captain Carlee, lieutenant-general by land.

PON knowledge of the imbargo laid by the king of Spain in the year 1585. upon the English ships, men, and goods found in his country, her majesty having no means to help or relieve her fubjects by friendly treaty, authoriz'd fuch as fuftain'd lofs, by the faid order, to repair themselves upon the subjects of the king of Spain; and to that end gave them letters of reprifal, to take and arrest all ships and merchandizes they should find at sea, or elsewhere, belonging to the fubjects of the faid king.

Her majesty at the same time, to revenge the wrongs offer'd her, and to refift the king of *Spain*'s preparations made againft her, equipp'd a fleet of twenty five fail of fhips, and employ'd them under the command of Sir Francis Drake, as the fittest man, by reason of his experience and success in fundry actions.

It is not my intent to fet down all the particulars of the voyages treated of, but the fervices done, and the mistakes and overfights committed, as a warning to those that shall read them, and to prevent the like errors hereafter.

This voyage of Sir Francis Drake being the first undertaking on either side, (for it endued immediately after the arrest of our

fhips and goods in Spain,) I will deliver my opinion of it before I proceed any farther.

One impediment to the voyage was, that to which the ill fuccess of divers others that after follow'd is to be imputed, viz. the want of victuals and other necessaries fit for fo great an expedition; for had not the fleet by chance met with a ship of Biscav in her return from Newfoundland, laden with fish, which reliev'd their necessities, they had been reduc'd to great extremity.

The fervice perform d in this action, was the taking and facking Sancto Domingo in Hispaniola, Cartagena on the continent, and Santa Justina in Florida, three towns of great importance in the West Indies. This fleet was the greatest of any nation but the Spamiards, that had been ever feen in those feas fince the first discovery of them; and if it had been as well confider'd of before their going from home, as it was happily per-form'd by the valour of the undertakers, it had more annoy'd the king of Spain, than all other actions that enfued during the time of the war.

But it feems our long peace made us un-capable of advice in war; for had we kept and defended those places when in our poifession, and provided to have been reliev'd and succour'd out of *England*, we had di-

for at that time there was no comparison betwixt the strength of Spain and England by fea, by means whereof we might have better defended them, and with more ease incroach'd upon the rest of the Indies, than the king of Spain could have aided or suc-

> But now we fee and find by experience that those places which were then weak and

unfortified, are fince to fortified, that it is to no purpose to us to annoy the king of *Spain* in his *West Indies*.

And though this voyage prov'd both fortunate and victorious, yet confidering it was rather an awakening than a weakening of him, it had been far better to have wholly declin'd, than to have undertaken it upon fuch flender grounds, and with fo inconfiderable forces.

1587. Sir Francis Drake's fecond Voyage to the Road of Cadiz, and towards the Tercera Islands, Anno 1587.

Ships.

The Elizabeth Bonaventure.

The Lyon.

The Rainbow.

The Dreadnought.

Commanders.

Sir Francis Drake general. Sir William Borrougbs vice-admiral. Captain Bellingam. Captain Thomas Fenner.

LER majefty having receiv'd feveral advertifements, that while the king of Spain was filent, not feeking revenge for the injuries the ships of repriful did him daily upon his coasts, he was preparing an invincible navy to invade her at home. She thereupon fought to frustrate his defigns, by intercepting his provisions before they should come to Lisbon, which was their place of rendezvous; and fent away Sir Francis Drake with a sleet of thirty fail, great and small, four whereof were her own ships.

four whercof were her own ships.

The chief adventure in this voyage (befules those four ships of her majetly's) was made by the merchants of London, who fought their private gain more than the advancement of the service; neither were they

deceiv'd of their expectation.

Sir Francis Drake being inform'd by two ships of Middleborough, that came from Cadiz, that a steet with provisions and ammunition riding there, was ready to take the sirst opportunity of a wind to go to Lisbon, and join with other forces of the king of Spain, he directed his course for Cadiz road, where he found the advertisement he receiv'd from the ships of Middleborough in every point true; and upon his arrival attempted the ships with great courage, and perform'd the service he went for, by destroying all such ships he found in harbour, as well of the Spaniards as other nations that were hir'd by them; and by these means he utterly deseated their mighty preparations, which were intended against England that year 1587.

The fecond fervice perform'd by him, was the affaulting the caftle of cape St. Vincent,

upon the utmost promontory of *Portugal*, and three other strong holds; all which he took, some by force, and some by composition. Thence he went to the mouth of the river of *Lisbon*, where he anchor'd near *Cascais*, which the marquis of *St. Cruz.* beholding, durst not with his gallies approach so near as once to charge him.

Sir Francis Drake perceiving, that though he had done important fervice for the state by this fortunate attempt of his, yet the fame was not very acceptable to the mer-chants, who adventur'd only in hope of profit, and preferr'd their private gain before the security of the kingdom, or any other respect; therefore from Cascais he flood to the Tercera islands, to expect the coming home of a carrack, which he had intelligence winter'd at Mosambique, and confequently she was to be home in that And though his victuals grew month. fcarce, and his company importun'd his return home, yet with fair speeches he perfuaded, and fo much prevail'd with them, that they were willing to expect the iffue fome few days at the iflands; and by this time drawing near the island of St. Michael, it was his good fortune to meet and take the carrack he look'd for; which added more honour to his former fervice, and gave great content to the merchants, to have a profitable return of their adventure, which was the thing they principally defir'd. This voyage proceeded prosperously, and without exception; for there was both honour and wealth gain'd, and the enemy greatly endamag'd,

The Moon,
The Spy,
The Noy,

Otwithstanding the great spoil and hurt Sir Francis Drake did the year past in Cadiz road, by intercepting some part of the provisions intended for this great navy, the king of Spain us'd his utmost endeavours to revenge himself this year, left in taking longer time his designs might be prevented as before, and arrested all ships, men, and necessaries wanting for his sleet, and compell'd them by force to serve in

this action.

He appointed for general the duke of Medina Sidonia, a man employed rather for his birth than experience; for fo many dukes, marquiffes, and earls, voluntarily going, would have repin'd to have been commanded by a man of lefs quality than themfelves: they departed from Lisbon the 19th day of May, 1588, with the greatest pride and glory, and least doubt of victory, that ever any nation did; but God being angry with their infolence, difpos'd of them contrary to their expectation.

The directions from the king of Spain to Vol. III.

The lord admiral. Sir Francis Drake vice-admiral. Sir John Hawkins rear-admiral. The lord Thomas Howard. The lord Sheffield. Sir Robert Southwell. Sir Martin Forbisher. Captain tirofs. Captain Reyman. Captain George Beefton. Captain Thomas Fenner. Captain William Fenner. The lord Henry Seymor. Sir William Wentworth. Captain Fenton. Sir Henry Palmer. Captain Paker. Captain John Wentworth. Captain Richard Hawkins. Captain William Wentworth. Captain Askley.

Captain Roberts: Captain Clifford. Captain Bradbury.

his general were to repair, as wind and weather would giveleave, to the road of Callifice in Piccardy, there to abide the coming of the prince of Parma and his army; and upon their meeting, to have open'd a letter directed to them both, with further influctions.

He was especially commanded to fail along the coasts of Brittany and Normandy, to avoid being discover'd by us here; and if he met with the English steet, not to offer to fight, but only seek to desend themselves. But when he came athwart the north cape, he was taken with a contrary wind and foul weather, and forc'd into the harbour of the Groyne, where part of his steet lay attending his coming. As he was ready to depart from thence, they had intelligence, by an English sisteman whom they took, of our steets late being at sea, and putting back again, not expecting their coming that year, informuch that most part of the men belonging to our ships were discharg'd.

Qq

This

This intelligence made the duke alter his resolution, and to break the directions given him by the king: yet this was not done without fome difficulty, for the council was divided in their opinions; some held it best to observe the king's command, others not to lose the opportunity offer'd to surprize our fleet unawares, and burn and destroy

Diego Flores de Valdes, who had the command of the Andalufian squadron, and on whom the duke most relied, because of his experience and judgment, was the main man that perfuaded the attempt of our ships in harbour, and with that refolution they directed their course for England.

The first land they fell in with, was the Lizard, the fouthermost part of Cornwall, which they took to be the Ram's-Head athwart Plimouth; and the night being at hand they tacked off to fea, making account in the morning to attempt our Thips in Pli-

But whilft they were thus deceiv'd in the land, they were in the mean time discover'd by captain Flemming, a pirate, who had been at fea pilfering; and upon view of them, knowing them to be the Spanish fleet, repair'd with all fpeed to Plimouth, and gave notice to our fleet, then riding at anchor: whereupon my lord admiral haftened with all possible expedition to get out the thips; and before the Spaniards could draw near Plimouth, they were welcom'd at fea by my lord and his navy, who continued fight with them, till he brought them to an anchor at Calais. The particulars of the fight, and the fuccess thereof, being things fo well known, I purposely omit. While this armada was preparing, her

majesty had from time to time perfect intelligence of the Spaniards defigns; and because she knew his intent was to invade her at fea with a mighty fleet from his own coast, she furnish'd out her royal navy, under the conduct of the lord high admiral of England, and fent him to Plimouth, as the likeliest place to attend their coming,

as you have heard.

Then knowing that it was not the fleet alone that could endanger her fafety, for that they were too weak for any enterprize on land, without the affiftance of the prince of Parma, and his army in Flanders, therefore the appointed thirty fail of Holland thips to lie at an anchor before the town of Dunkirk, where the prince was to imbark in flat-bottom'd boats, made purposely for the expedition of England,

Thus had the prince by the queen's providence been prevented, if he had attempted to put out of harbour with his boats; but in truth, neither his veffels nor his army were in readiness, which caus'd the king ever after to be jealous of him, and, as 'tis 1588

fuppos'd, to haften his end.

Her majefty, notwithflanding this her vigilant care to foresee and prevent all danger that might happen at fea, would not hold herfelf too fecure of her enemy, and therefore prepar'd a royal army to welcome him upon his landing; but it was not the will of God that he should set foot on English ground, the queen becoming victorious over him at fea, with little hazard or bloodfhed of her fubjects,

Having shewed the defign of the Spaniards, and the course taken by her majesty to prevent them, I will now collect the errors committed as well by the one as by the other, as I have promis'd in the beginning

of my discourse.

As nothing could appear more rational and likely to take effect, after the duke had got intelligence of the flate of our navy, than his defign to furprize them unawares in harbour, he well knowing, that if he had taken away our strength by sea, he might have landed both when and where he lifted, which is a great advantage to an invader; yet admitting it had taken that effect he defign'd, I fee not how he was to be commended in breaking the instructions given him by the king; what blame then did he deserve, when so ill an event follow'd by his rafhness and disobedience?

It was not the want of experience in the duke, or his laying the fault upon Valdes that excus'd him at his return; but he had finarted bitterly for it, had it not been for his wife, who obtain'd the king's favour

Before the arrival of the fhips that efcaped in this voyage, it was known in Spain, that Diego Flores del Valdes was he who perfuaded the duke to break the king's inftructions; whereupon the king gave commandment in all his ports, where the faid Diego Flores del Valdes might arrive, to apprehend him; which was accordingly executed, and he carried to the castle of Santander, where he was not permitted to plead his excuse, but remain'd there, without being ever feen or heard of after, by report of his page, with whom I fpoke afterwards, we being both prisoners together in the castle of Lisbon.

If the king's directions had been punc-tually follow'd, then had his fleet kept the coast of France, and arriv'd in the road of Calais, before they had been difcover'd by us, which might have endanger'd her majesty and the realm, our ships being so far off as Plimouth, where then they lay; and though the prince of Parma had not been presently ready, yet he had gain'd time sufficient, by the absence of our sleet, to

make himfelf ready.

And what would have enfued upon their landing here, may be well imagined.

But it was the will of him that directs all men and their actions, that the fleets should meet, and the enemy be beaten, as they were, put from their anchorage in Calais-Road, the prince of Parma beleaguer'd at fea, and their navy driven about Scotland and Ireland with great hazard and lofs; which shews how god did marvellously defend us against their dangerous designs.

And here was opportunity offered us to have followed the victory upon them; for after they were beaten from the road at Calais, and all their hopes and defigns fruftrated, if we had once more offered them fight, the general, it was thought, by per-fuation of his confeffor, was determined to yield; whose example, 'tis very likely, would have made the rest to have done the like. But this opportunity was loft, not through the negligence or backwardness of

the lord admiral, but merely through the 1588. want of providence in those that had the charge of furnishing and providing for the fleet; for at that time of fo great advantage, when they came to examine their provisions, they found a general fearcity of powder and shot, for want whereof they were forced to return home: besides that, the dreadful florms which deftroy'd the Spanish fleet, made it impossible to pursue the remains of them. Another opportunity was loft, not much inferior to the other, by not fending part of our fleet to the west of Ireland, where the Spaniards of necessity were to pass, after so many dangers and disasters as they had endured.

If we had been so happy as to have followed this courfe, as it was both thought and difcourfed of, we had been abfolutely victorious over this great and formidable navy; for they were brought to that necesfity, that they would willingly have yielded, as divers of them confessed that were ship-

By this we may fee how weak and feeble the defigns of men are, in respect of the creator of man, and how indifferently he dealt betwixt the two nations, fometimes giving one, fometimes the other, the advantage; and yet fo that he only ordered the battle.

THE last overthrow of 1588. given are wanting, what hope is there of pre- 1589. they termed it, did so encourage every man to the war, that happy was he who could put himself into the service against the Spaniards, as it appeared by the voluntiers that went in this voyage; which the queen, (confidering the great loss the king of Spain received the year past, whereby it was to be imagined how weakly he was provided at home,) was willing to countenance, though the undertook it not wholly herfelf, which was the main cause of its ill success and

For whosoever he be of a subject, that thinks to undertake fo great an enterprise without a prince's purfe, shall be deceived; and therefore these two generals, in my opinion, never overshot themselves more, than in undertaking fo great a charge with fo little means; for where victuals and arms

The project of this voyage was to restore a distressed king to his kingdom, usurped as he pretended; and though the preparations for this expedition were not fo great as was expedient, yet in the opinion of all men, if they had directed their course whither they intended it, without landing at the Groyne, they had performed the fervice they went for, restored Don Antonio to the crown of Portugal, differered it from Spain, and united it in league with England, which would have answer d the present charge, and have fettled a continual trade for us to the West Indies, and the rest of the dominions of Portugal; for so we might easily have

But the landing at the Groyne was an unnecessary lingering and hinderance of the other great and main defign, a confuming

1589. of victuals, a weakening of the army by the immoderate drinking of the foldiers, which brought a lamentable fickness amongst them, a warning to the Spaniards to strengthen Portugal, and (what is more than all this) a discouragement to proceed further, being repulsed in the first attempt.

But notwithstanding the ill success at the Groyne, they departed from thence towards Portugal, and arrived at Peniche, a maritime town twelve leagues from Lish, w, where with fmall refistance they took the caftle, after the captain understood Don Antonio

was in the army.

Thence general Norris marched with his land forces to Lisbon, and Sir Francis Drake with his fleet failed to Cascais, promising from thence to pass with his ships up the river to Lisbon, to meet with Sir John Norris, which yet he did not perform, and therefore was much blamed by the general confent of all men, the overthrow of the action being imputed to him.

It will not excuse Sir Francis Drake, for making such a promise to Sir John Norris; though on the other hand, I would have accufed him of great want of discretion, if he had put the fleet to fo great an adventure to fo little purpose: for his being in the har-bour of Lisbon, fignified nothing to the taking of the caftle, which was two miles from thence; and had the castle been taken, the town would have been taken of courfe.

Befides, the ships could not furnish the army with more men or victuals: wherefore I understand not in what respect his going up was necessary; and yet the fleet must have run many hazards to fo little pur-

For betwixt Cascais and Lisbon there are three castles, St. Julian, St. Francis, and Bellem. The first of the three I hold one of the most impregnable forts to feaward in Europe; and the fleet was to pais within calliver-shot of this fort, though, I confess, the paffing it was not the greatest danger; for with a reasonable gale of wind, any fort is to be passed with small hazard.

But at this time there was a general want of victuals; and being once entered the harbour, their coming out again was uncertain, the place being subject to contrary winds. In the mean while the better part of the victuals would have been confumed, and they would have remained there in fo desperate a condition, that they would have been forced to have fired one half of the fleet, to bring home the reft; for as it was, when the army imbarked for England, many died for hunger in their way home, and more would have done, if the wind had taken them short; or if by the death of some of them, the rest who furviv'd had not been the better reliev'd.

Befides all these casualties and dangers, 1589. the Adelantado was then in Lisbon with the gallies of Spain; and how eafily he might have annoy'd our fleet by towing fire-ships amongst us, we may suppose by the hurt we did the Spaniards the year before in Cadiz-Road; and greater we might have done had we been affifted with gallies.

It was a wonder to observe every man's opinion of this voyage, as well these that were actors in it, as others that staid ar home; fome imputing the overthrow of it to the landing at the Grovne; others to the Portuguese failing us of those helps and asfiftances promified by Don Antonio; and others, to Sir Francis Drake's not coming

up the river with his fleet.

Though any of these three reasons may feem probable enough, and the landing at the Groyne the chiefest of the three, yet, if we weigh truly the defect, and where it was, it will appear that the action was overthrown before their fetting out from home, they being too weakly provided of all things necessary for so great an expedition.

For when this voyage was first treated of, the number of fhips was nothing equal to the proportion of men: wherefore they were forced to detain divers Easterlings they met with in our channel, and compelled them to ferve in this expedition for the transportation of our foldiers; and though thefe fhips were an eafe to our men, who would have been otherwise much pestered for want of room, yet their victuals were nothing augmented; but they were put aboard the fhips, like banished men, to seek their fortunes at fea, it being confessed, that divers of the ships had not four days victuals when they departed from Plimouth.

Another impediment to the good fuccefs of this voyage, was the want of field pieces; and this was the main cause why we failed of taking Lisbon: For the enemies strength confifting chiefly in the caftle, and we having only an army to countenance us, but no means for battery, we were the loss of the victory ourselves; for it was apparent, by intelligence we received, that if we had presented them with battery, they were refolved to parley, and by confequence to yield; and this too was made use of by the Portuguese, as a main reason why they

joined not with us.

And there is as much to be faid in behalf of the Portuguese, as an evidence of their good-will and favour to us, that though they shewed themselves not forward upon this occasion to aid us, yet they opposed us not as enemies: whereas if they had purfued us in our retreat from Lisbon to Cafcais, our men being weak, fickly, and wanting powder, and fhot, and other arms, they had in all probability put us to a great lofs

And if ever England have the like occasion to aid a competitor in Portugal, we shall questionless find that our fair demeanor and carriage in this expedition towards the people of that country, have gained us much reputation among them, and would be of singular advantage to us; for the general strictly forbad the rifling of casion to affist us.

A Voyage undertaken by the Earl of Cumberland, with one Ship Royal of her Majesty's, and six of his own, and other Adventurers, Anno Dom. 1589.

Ships.

The Victory, the queen's ship, The Margaret, And five others. Commanders.

The Earl of Cumberland, Capt. Christopher Lister, Capt. Monson, afterwards Sir William Monson vice-admiral.

S the fleets of Sir John Norris and Sir Francis Drake returned from the voyage of Portugal, the Earl of Cumberland proceeded upon his towards that coaft; and meeting with divers of that fleet, relieved them with victuals, who otherwise had perished.

This voyage was undertaken at his and his friend's charge, excepting the Vittory, a fhip royal of the queen's, which she adventured.

This voyage is writ at large by the famous mathematician Mr. Wright, who was an actor in it himfelf; what is here fet down is but a brief collection out of his account.

The fervice performed at fea was the taking of three French ships of the league in our channel, and his encountering upon the coast of Spain with thirteen hulks, who made some resistance. Out of these he took to the value of 7000 l. in spices belonging to Portugal.

From thence he cross'd over to the Tercera islands, about three hundred leagues from the rock of Lisbon; and coming to St. Michael's, the first and greatest of the islands, with his boats, he fetched out from under the castle, which fired upon him, two ships that arrived there the night before from Shain.

In his course from thence to the island of Flores, the westermost of the Terceras, he took a Spanish ship laden with sugars and sweatmeats that came from the island of Madera.

At Flores he received intelligence, by an English man of war, of divers Spanish flips which were in the road of Fayal; whereupon he fuddenly made from that illand, where captain Lister and captain Monson gave a desperate attempt in their boats upon the faid ships; and after a long fight possessible themselves of one of them of three hundred tuns burden, carrying six pieces of ordnance, and sixty men. This ship, with one other, came from the Indies; two of the rest out Vot. III.

of Guinea, and another was laden with wood, which that ifland affords in great plenty. The captains returning after the carrying off that great fhip, took the reft, being feven in all. This done, we all put to fea again, and making the ifland Graciofa, made feveral attempts there for two days to land, in order to get fome provision, but were ftill repulfed with great loss; yet at laft the island came to composition, and fent such refreshments as it afforded. In the mean while we discovered and took a French ship of two hundred tuns, homeward bound from Canada.

Afterwards, failing to the eastward of the road of Terceras, in the evening we beheld eighteen tall ships of the Indies entering into the said road, one whereof we after took in her course to the coast of Spain: she was laden with hides, filver, and cochineal; but coming for England, she was cast away upon Mount's Bay in Cornwall, being valued at 100000 l.

Two other prizes of fugar we took in our faid course to the coast of *Spain*, esteemed each ship at 7000 l. and one from under the castle of *St. Mary's* to the same value.

There was no road about those islands that could defend their ships from our attempts; yet in the last assault we gave, which was upon a ship of sugars, we found ill success, being sharply resisted, and two parts of our men stain and hurt; which loss was occasioned by captain Lister, who would not be persuaded from landing in the view of their forts.

The fervice performed by land, was the taking of the ifland of *Fayal* fome months after the furprizing of those thips formerly mentioned. The caftle yielded us forty-five pieces of ordnance, great and small: we facked and spoiled the town, and after ranfomed it, and so departed.

Thefe fummer fervices, and ships of sugar, proved not so sweet and pleasant, as the winter was afterwards sharp and painful; for

R I

1589. in our return for England, we found the calamity of famine, the hazard of shipwreck, and the death of our men so great, that the like befel not any other fleet during the time of the war. All which disasters must be imputed to captain Lister's rashness, upon whom my lord of Cumberland chiefly rely'd, wanting experience himfelf.

He was the man that advis'd the fending the ships of wine for England, otherwise we had not known the want of drink: he was as earnest in persuading our landing in the face of the fortifications of St. Mary's, against all reason and sense. As he was rash, so was he valiant; but paid devely 1589, for his unadvised counsel: for he was the first man hurt, and that cruelly, in the attempt of St. Mary's, and afterwards drowned in the rich ship cast away at Mount's Bay.

After our quitting St. Mary's, as you have heard, we repair'd to the island of St. George, as you may read in the fixth book, where there happened a strange accident to me, and indeed, I may fay, the strangest efcape that ever befel me in my life. I refer you to that book, thinking it fitter to he inferted there than in this.

Sir John Hawkins and Sir Martin Forbusher, their Voyage to the Coast of Spain and Islands, Anno 1590.

Ships.

The Revenge, The Mary-Rofe, The Lion, The Bonaventure. The Rainbow, The Hope, The Crane, The Quittance, The Forefight,

The Swiftfure,

Commanders.

Sir Martin Forbufber. Sir John Hawkins. Sir Edward Yorke. Captain Fenner. Sir George Beefton. Captain Bostock. Captain Hawkins. Captain Burnell.

FROM the year 1585 until this present year 1590, there was the greatest possibility imaginable of enriching our nation by actions at fea, had they been well followed: the king of Spain was grown fo weak in shipping by the overthrow he had in 1588, that he could no longer fecure the

trade of his fubjects.

Her majesty now finding how necessary it was for her to maintain a fleet upon the Spanish coast, as well to hinder the preparations he might make againft her to re-pair the difgrace he receiv'd in 1588. as al-fo to intercept his fleets from the *Indies*, by which he grew great and mighty, she sent this year 1590 ten ships of her own in two fquadrons; the one to be commanded by Sir John Hawkins, the other by Sir Martin Forbusher, two gentlemen of tried experi-

The king of Spain hearing of this preparation of hers, fent forth twenty fail of fhips under the command of Don Alonso de Baffan, brother to the late famous marquis of St. Cruz, who had not long before fubdued the Tercera islands, and overthrown the navy of France. Don Alonso was charged to convoy home the fleet from the Indies, and the carracks expected home about that time.

But after Don Alonso had put off to sea, the king of Spain becoming better advised, than to adventure twenty of his ships to ten 1500. of ours, fent for Don Alonfo back, and fo frustrated the expectation of our fleet.

He likewise made a dispatch to the Indies, commanding the fleets to winter there, rather than to run the hazard of coming home that fummer. But this proved fo great an hindrance and loss to the merchants of Spain, to be fo long without return of their goods, that many broke in Seville, and other places; besides, it was so great a weakening to their ships, to winter in the Indies, that many years hardly fufficed to repair the damage they received.

Our fleet being thus prevented, spent seven months in vain upon the coasts of Spain, and the islands; but in that space could not possess themselves of one ship of the Spaniards; and the carracks, upon which part of their hopes depended, came home without fight of the islands, and arriv'd fafe at

Lisbon.

This voyage was a bare action at sea, though they attempted landing at Fayal, which the earl of Cumberland the year before had taken and quitted; but the caftle being refortified, they prevail'd not in their enterprize: and thenceforwards the king of Spain endeavoured to strengthen his coasts, and to increase in shipping, as may appear by the next enfuing year.

Two Fleets at Sea; . English under the Lord Thomas Howard, and the Spanish commanded by Don Alonso Bassan, Anno 1591.

Captain Cross. Captain Fenner.

The Lion, The Forefight,

Captain Vavasor. Captain Duffeild.

The Crane,

HER majesty being inform'd of the Indian steet's wintering in the Havana, and that necessity would compel them home this year 1591. The fent a fleet to the islands under the command of the lord

Thomas Howard.

The king of Spain perceiving her drift, and being fenfible how much the fafety of that fleet concerned him, caus'd them to fet out thence so late in the year, that it endangered the shipwreck of them all; choosing rather to hazard the perishing of fhips, men, and goods, than their falling

into our hands.

He had two defigns in bringing home this fleet fo late; one was, he thought the lord Thomas would have confum'd his victuals, and have been forc'd home: the other, that he might in the mean time furnish out the great fleet he was preparing, little inferior to that of 1588. In the first he found himself deceived; for my lord was fupply'd both with ships and victuals out of England: and in the fecond he was as much disappointed; for the earl of Cumberland, who then lay upon the coast of Spain, had intelligence of the Spaniards putting out to fea, and gave notice thereof to the lord Thomas the very night before they arrived

at Flores, where my lord lay. The day after this intelligence, the Spanish fleet was discovered by my lord Thomas, whom he knew by their number and greatness to be the ships of which he had warning; and by that means escaped the danger that Sir Richard Greenville, his vice-admiral, rashly ran into. Upon view of the Spaniards, which were fifty five fail, the lord Thomas warily, and like a difcreet general, weighed anchor, and made figns to the rest of his fleet to do the like, with a purpose to get the wind of them; but Sir Richard Greenville being a stubborn man, and imagining this fleet to come from the Indies, and not to be the Armada of which they were informed, would by no means be perfuaded by his mafter or company to cut his cable to follow his admiral, nay fo headstrong and rash he was, that he offered

violence to those that advis'd him so to do. 1591. But the old faying, That a wilful man is the cause of his own wee, could not be more truly verified than in him: for when the Armada approached, and he beheld the greatnes of the ships, he began to see and repent of his folly, and when it was too late, would have freed himself of them, but in vain: for he was left a prey to the enemy, every ship striving to be the first should board him.

This wilful rashness of Sir Richard made the Spaniards triumph as much as if they had obtain'd a fignal victory, it being the first ship that ever they took of her majesty's, and commended to them by fome English fugitives to be the very best she had: but their joy continued not long; for they enjoy'd her but five days before the was caft away, with many Spaniards in her, upon the Tercera islands.

Commonly one misfortune is accompanied with another: for the Indian fleet, which my lord had waited for the whole fummer, the day after this mifhap, fell into the company of this Spanish Armada, who, if they had stay'd but one day longer, or the Indian fleet had come home but one day fooner, we had poffess'd both them and many millions of treasure, which the fea afterwards devour'd: for from the time they met with the Armada, and before they could recover home, nigh an hundred

that were funk by the fide of the Revenge. All which was occasioned by their wintering in the Indies, and their late difenboguing from thence: for the worm, which that country is subject to, weakens and confumes their ships.

of them fuffered shipwreck, besides the

Ascension of Seville, and the double fly-boat.

Notwithstanding this cross and perverse fortune, which happened by means of Sir Richard Greenville, the lord Thomas would not be difmay'd or difcouraged; but kept the fea as long as he had victuals; and by fuch ships as himself and the rest of the fleet took, defray'd the better part of the charge of the whole action.

The Earl of Cumberland to the Coast of Spain, 1591.

Ships.

The Garland, of her majetty's.

Seven other ships of his, and his

Commanders.

The earl of Cumberland. Captain under him,

Captain Monson, afterwards Sir William Monfon.

THE earl of Cumberland keeping the coast of Spain, as you have heard, while the lord Thomas remain'd at the islands, and both to one end, viz. to annoy and damnify the Spaniards, though in two feveral fleets, the earl found fortune in a fort as much to frown upon him, as it had done upon the lord Thomas Howard.

He departed England in May, and in his course to the Spanish coast, met with several Dutch ships, which came from Lisbon, wherein he found a great quantity of spices belonging to the Portuguese. So greatly were we abus'd by that nation of Holland, who, though they were the first that engag'd us in the war with Spain, yet still maintain'd their own trade into those parts, and supplied the Spaniards with ammunition, victuals, shipping, and intelligence against us.

Upon my lord's arrival on the coast of Spain, it was his hap to take three ships at feveral times, one with wine, which he unladed into his own; and two with fugars, which he enjoy'd not long; no more did he the spices, which he took out of the Hollanders.

For one of the ships of sugar, by means of a leak that fprung upon her, was forced to be cast off, and the men, with much difficulty, recover'd the shore, and sav'd their lives.

The other being fent for England, and toffed with contrary winds, was for want of victuals forc'd into the Groyne, where they render'd themselves to the enemies mercy.

The fpices were determined to be fent for England, and a ship appointed for that purpole, with other ships to guard her to the

islands of the Burlings; in which ship cap-tain Monson was sent with orders to see her fafe dispatch for England.

But the other ships, not observing the directions given them, and the night falling calm, early in the morning, this forfaken fhip was fet upon by fix gallies, the rest of the fhips not being able to come up by reafon of the calm; and after a long and bloody fight, the captain and principal men being flain, both ship and spices were taken; but whether it was the respect they had to the queen's fhip, which was admiral of that fleet, or honour to my lord that commanded it, or hope, by good usage of our men, to receive the like again, I know not; but true it is, that the ordinary men were treated with more courtefy than they had been from the beginning of the war; I mean, that of such men as were taken, only captain Monson was detain'd as hostage for performance of covenants agreed upon for release of the rest, in which imprisonment he remain'd almost two years.

My lord of Cumberland confidering the difasters that thus befel him, and knowing the Spanish fleet's readiness to put out of harbour; but efpecially finding his ship but ill of fail, it being the first voyage she ever went to fea, he durst not abide the coast of Spain, but thought it more discretion to return for England, having (as you have heard) fent a pinnace to my lord Thomas, with the intelligence aforefaid, which prov'd a fervice of great moment to the queen and frate, in preventing the danger that might have otherwise ensued, if that notice had

not been fent.

A Voyage undertaken by Sir Walter Raleigh; but he returning, left the Charge of it to Sir Martin Forbusher, Anno 1592.

y, and others, fome place in the West Indies; and with this resolution he put out of harbour; but spending two or three days in soul weather, her majesty was pleased to order his return, and to commit the charge of the ships to Sir Martin Forbusher, who was sent down for that purpose; but with an express command, not to sollow the design of the West Indies.

This fudden alteration being known to the reft of the captains, for the prefent made fome confusion, as commonly it happens in all voluntary actions. Their general leaving them, they thought themselves free in point of reputation, and at liberty to take what course they pleas'd; sew of them therefore submitted themselves to the command of Sir Martin Forbusher, but chose rather each to take his particular fortune and adventure at sea.

Sir Martin, with his own fhip the Garland, and two others, repair'd to the coast of Spain, where he took a Bifcainer, laden with iron; and a Portuguese, with sugar: he remain'd there not without some danger, his ship being ill of sail, and the enemy having a steet at sea to guard the coast.

Sir John Boroughs, captain Cross, and another, stood to the islands, where they met with as many ships of my lord of Cumberland's, with whom they conforted. After some time spent thereabouts, they had sight of a carrack, which they chas'd; but she recover'd the island of Flores before they could approach her; but the carrack, seeing the island could not defend her from the strength and force of the English, chose rather, after the men were got on shore, to fire herself, than we the enemy should reap benefit by her.

The purfer of her was taken, and by threats compelled to tell of four more of their company behind, that had orders to fall in with that ifland; and gave us fuch particular advertifement, that one of them was afterwards taken.

he took the Revenge: he was directed with those ships to go immediately to Flores, to expect the coming of the carracks, who had order to fall with that island, there to put on shore divers ordnance for strengthening the town and castle. Sir William Monson, being then released out of prison, fail'd in a Hamborough ship with this steet.

Don Alonjo breaking his instructions, un-

leons, which the year before he had when

In the mean time don Alonfo de Bassan 1592 was at Lisbon, setting out twenty three gal-

Don Alonjo breaking his inftructions, unadvifedly repair'd first to St. Michael's, and there deliver'd his ordnance before he arriv'd at Flores; and in the mean time one of the carracks was burnt, and another ta-

ken, as you have heard.

This he held to be fuch a diffreputation to him, and especially for that it happen'd through his own error and default, that he was much perplex'd, and pursued the English an hundred leagues; but in vain, they being so far a-head.

The king of Spain being advertis'd of his two carracks mishap, and the error of don Alonso, though he had much favour'd him before, on account of divers actions he had been in with his brother the marquis of St. Cruz, and for what he had lately perform'd, by taking the Revenge; yet the king was so offended not to have his intructions obey'd and observ'd, that he did not only take from don Alonso his command, but he lived and died in difgrace; which, in my opinion, he worthily deserv'd.

The queen's adventure in this voyage was only two fhips; one of which, and the leaft of them too, was at the taking of the carrack; which title, joined with her regal authority, fhe made fuch use of, that the reft of the adventurers were fain to submit themselves to her pleasure; with whom she dealt but indifferently.

The Earl of Cumberland to the Coast of Spain, Anno Dom. 1593.

Ships.

Commanders.

The Lyon,

The Bonaventure, and feven other ships.

THE earl of Cumberland finding that many of his voyages had milcarried through the negligence or unfaithfulness of those who were intrusted to lay in necessary provisions; and yet, being incourag'd by the good success he had the last year, obtain'd two of her majesty's ships, and victualled them himself, together with seven others that accompanied them; and arriving upon the coast of Spain, he took two Vol. III.

The earl of *Cumberland*. Captain under him, captain *Monfon*. Sir *Edward Torke* vice-admiral.

French ships of the League, which did more than treble the expence of his voyage. My lord being sever'd one day from his sleet, it was his hap to meet with twelve hulks, at the same place where captain Monson was taken the same day two years before: he requir'd that respect from them that was due to her majesty's ship, which they peremptorily refus'd, presuming upon the strength of their twelve ships against one

1593. only; but they found themselves deceiv'd; for after two hours fight, he brought them to his mercy, and made them acknowledge their error; and not only fo, but they wil-lingly discover'd, and deliver'd up to him a great quantity of powder and ammunition, which they carried for the king of Spain's fervice. Here I must not let pass, as I promis'd in the beginning of my difcourfe, to lay down all errors and mifcarriages committed; and this that follows is one, for which my lord and his mafter deferve blame. My lord, upon taking the hulks aforesaid, stood to see with part of them, examin'd as a un angle. His lordship to-wards the constant and the his custody; and the had forgot that his long boat and may of his men were left with captain Monjon, under the guard of one fmall thip for their defence: thefe hulks being thus difmiss'd, and coming towards Sir William Monfon and their conforts, Sir William mistrusted, as indeed it fell out, that they would take advantage of my lord's keeping his loofe, to board and furprize them, as they had done, if Sir William had not prevented it by leaping into his boat on one fide, as they boarded him on the other. In which leap he receiv'd a hurt in his leg, which to this time, being the year 1640, he has found a prejudice to his whole body.

My lord of Cumberland having spent fome time thereabouts, and understanding that Fernantelles de Menezes, a Portuguese, and the king's general of a sleet of twenty

four fail, was gone to the islands, he purfued them, thinking to meet the carracks
before they should join together. At his
coming to Flores, he met and took one of
the fleet, with the death of the captain,
who yet liv'd so long as to inform him
both where the fleet was, and of their
strength. The day after he met the fleet;
but being far too weak for them, was forced to leave them, and spent his time thereabouts, till he understood the carracks were
pass'd by, without feeing either fleet or
island.

About this time the earl being taken foill, that his recovery was despair'd of, unless he could return to the English shore, or get a cow to supply him with milk, captain Monson ventur'd ashore on the ill and of Corvo, where, what with threats, and what with promise of reward, he got a cow, which he carried aboard, and in all likelihood was the means of saving the earl's life.

However, captain Monjon valuing the earl's fafety above all the profit of the voyage, hafted towards home, and loft company of the reft of the ships by so strange an accident, that it will scarce be believ'd, though it is a most undoubted truth; for the whole sleet being one day becalm'd, the said calm lasted for several days, and in it the ships were so parted, that they lost sight of one another, and never saw one another more, till they met in England, about four or sive weeks after: those ships so parted from the earl, took a prize laden with sugar, which was a good addition to what was taken before.

Sir Martin Forbusher with a Fleet to Brest in Britany, Anno 1594.

Ships.

The Vanguard, The Rainbow, The Dreadnought, The Quittance, Commanders.

Sir Martin Forbusher. Captain Fenner. Captain Clifford, Captain Savil.

ABOUT three years before, and in 1591, the queen fent Sir John Norris with 3000 seldiers, to join with the French king's party in those parts of Britany about Brest. The king of Spain, who upheld the faction of the league, fent don John de Aguila with the like forces, to join with the duke de Merceur, who was of that side. The Spaniards arriving first, had fortified themselves very strongly near the town of Brest, expecting new succours from Spain by sea; which the French king searing, craved assistance from the queen; which her majesty was the more willing to grant, because the

Spaniards had gotten the haven of Breft to entertain their shipping in, and were like to prove there very dangerous neighbours: wherefore she sent Sir Martin Forbusher thither in this year 1594. with four of her ships; and upon his arrival there, Sir John Norris with his forces, and Sir Martin with his seamen, assail'd the fort; and though it was as bravely desended as men could do, yet in the end it was taken with the loss of divers captains, Sir Martin Forbusher being himself fore wounded, of which hurt he died at Plimouth after his return.

Sir Thomas Baskervile.

THESE two generals prefuming much upon their own experience and knowledge, ufed many perfusions to the queen to undertake a voyage to the Weft Indies, giving much affurance to perform great fervices, and promiting to engage themselves very deeply therein with the adventure of both substance and life. And as all actions of this nature promite fair till they come to be performed, so did this the more in the opinion of all men, in respect of the two generals experience.

There were many impediments and lets to this voyage, before they could clear themselves of the coast, which put them to greater charge than they expected. The chiefest cause of their lingering, was a mistrust our state had of an invasion, and the danger to spare so many good ships and men out of England as they carried with

them.

The Spaniards with their usual subtilty, let slip no opportunity to put us into a fear, thereby to disappoint the expedition, and fent four gallies to Bluet in Britany, from thence to fall into some part of our coast, that so we might apprehend a great force was to follow. These gallies landed at Pensants in Cornevall; where, finding the town abandoned, they sacked and burnt it: but this design of theirs took little effect; for the voyage proceeded nevertheles.

The intent of the voyage was to land at Nombre de Dios, and from thence to march to Panama, to posses the treasure that comes from Peru; and if they saw reason for it, to inhabit and keep it. A few days before their going from Plimouth, they received letters from her majesty, communicating the intelligence she had out of Spain, that the Indian sleet was arrived; and that one of them, with loss of her mast, was put back to the island of Porto Rico. She therefore commanded them, seeing there was so good an opportunity offered, as the readiness of this her sleet, and the weakness of Porto Rico, to possess themselves of that treasure; and the rather, for that it was not much out of their way to Nombre de Dios. Neither years nor experience that can foresee

and prevent all mishaps; which is a manifest proof, that God is the guider and dispoier of mens actions : for nothing could feem more probable to be effected than this latter defign, especially confidering the ability and wifdom of the two generals; and yet was unhappily prevented, and failed in the execution : for there bring five frights fe but of Spain to fetch this treasure from I 10 R in their way it was there fortune to talpinnace of the English fleet, by hom ! understood the secrets of the voyage; and to prevent the attempt of Pe = Ric, they haftened thither with all fpeed, (hilft our generals lingered at Guadaiape to fet up their boats,) and at their ar wal, fo ftrengthened the town with the to the orought in the frigats, that when our feet came this ther, not expecting reliftance, they found themselves frustrated of their hopes, and were forced to retire with difhonour, and loss of many gentlementhere flain; which indeed they themselves were the occasion of, in managing their defign with no more feerefy. This repulse was so grievously refented by Sir John Hawkins, who was then fickly, that it is thought to have haftened his death; and being great and unexpected, did not a little discourage Sir Francis Drake's great mind, who yet proceeded upon his first refolved defign for Nombre de Dies, though with, no better fuccess: for the enemy having knowledge of their coming, fortified the paffage to Panama, and forced them to return with shame and loss. Sir Francis Drake, who was wont to rule fortune, now finding his error, and the difference between the present strength of the Indies, and what it was when he first knew it, grew melancholy upon this difappointment, and fuddenly, and I hope naturally, died at Porto Bello, not far from the place where he got his first reputation. The two generals dying, and all other hopes being taken away by their deaths, Sir Thomas Baskervile fucceeded them in their command, and began now to think upon his return for England; but coming near Cuba, he met and fought with a fleet of Spain, though not long, by reason of the sickness and weakness of his

vantag

1595. men. This fleet was fent to take the advantage of ours in its return, thinking, as indeed it happen'd, that they should find them both weak and in want; but the fwiftness of our ships, in which we had the advantage of the Spaniards, preserved us. You may observe, that from the year the Revenge was taken, until this present year 1595, there was no fummer but the king of Spain furnished a fleet for the guarding of his coasts, and securing of his trade; and though there was little fear of any fleet from England to impeach him befides this in the Indies, yet because he would shew his greatness, and fatisfy Portugal of the care

he had in preferving their carracks, he fent 1595. the count of Feria, a young nobleman of Portugal, who defired to gain experience, with twenty ships to the islands; but the carracks did, as they used to do in many other years, mifs both islands and fleets, and arrive fafe at Lisbon. The other fleets of the king of Spain in the Indies, confifted of twenty four ships, their general Don Bernardino de Villa Nova, an approved coward, as it appeared when he came to encounter the English fleet; but his defects were supplied by the valour of his vice-admiral, who behaved himself much to his honour: his name was John de Garay.

The Dreadnought, The Swiftfure,

The Quittance, The Tremontain,

The Crane, and others.

HE first of June, 1596. we departed

from Plimouth; and our departure was the more speedy, by reason of the great pains, care, and industry of the sixteen captains, who, in their own persons, laboured the night before to get out some of their ships riding at Catwater, which otherwise had not been eafily effected. The third we fet fail from Canfom Bay, the wind, which, when we weighed was at west and by fouth, instantly cast up to the north-east, and so continued till it brought us up as high as the North Cape of Spain; and this fortunate

beginning put us in great hopes of a lucky fuccess to ensue.

We being now come upon our enemy's coast, it behoved the generals to be vigilant in keeping them from intelligence of us, who therefore appointed the Litness, the Truelove, and the Lion's Whelp, (the three best failors of our fleet,) to run a-head, sufpecting the Spaniards had some carvels of advice out, which they did usually send to discover at sea, upon any rumour of a less fleet than this made ready in England.

No ship or carvel escaped us; which I

oyage: for 1596. he inconved upon our

three ships from Cadiz we underd that they e looked on fortune to

, a ship of the other the fleet, to ith a flynd escaped ne Streights, ur fleet, and and reward courfe for evented by hip of Lonaduke Darigue of the it a fourth irst (as hath been

1596. been faid) was for the wind to take us fo fuddenly, and to continue fo long: for our foldiers being shipp'd, and in harbour, would have confumed their victuals, and have been so pettered, that it would have endangered a fickness amongst them. The fe-cond was the taking all ships that were feen, which kept the enemy from intelligence. The third was the intercepting of the fly-boats from Cadiz, whither we were bound, who affured us our coming was not fuspected, which made us more careful to hail from the coast than otherwise we should have been: they told us, likewife, of the daily expectation of the galleons to come from St. Lucar to Cadiz, and of the merchant-men that lay there, and were ready bound for the Indies. These intelligences were of great moment, and made the generals presently to contrive their business both by tea and land, which otherwise would have taken up a longer time after their coming thither; and whether all men would have confented to attempt their ships in harbour, if they had not known the most pare of them to confift of merchants, I hold very doubtful. The fourth, and most fortunate of all, was the taking of the fly-boat by the John and Francis, which the Swan let go: for if the had reached Lisbon, the had been able to make report of the num-ber and greatness of our ships, and might have endangered the lofs of the whole defign, the feeing the course we bore, and that we had pass'd Lisbon, which was the place the enemy most suspected, and made there his greatest preparation for defence: but had the enemy been freed of that doubt, he had then no place to fear but Andaluzia, and Cadiz above the reft; which, upon the least warning, might have been strengthned, and we put to great hazard: he might alfo have fecur'd his ships by towing them out with gallies, and, howfoever the wind had been, might have fent them into the Streights, where it had been in vain to have purfued them, or over the bar of St. Lucar, where there had been no attempting

of them. And, indeed, of the good and ill of intelligence we had had fufficient experience formerly; of the good in 1588, for how fuddenly had we been taken, and furprized when we least suspected, had it not been for captain Hemming? of the ill, in the year before this, by the Spaniards taking a bark of Sir Francis Drake's fleet, which was the occasion of the overthrow of himself and the whole action?

The 20th of June we came to Cadiz, earlier in the morning than the masters made reckoning of. Before our coming

Vol. III.

most part of the land, and thither came 1596. all the ships to an anchor, every man preparing to land as he was formerly directed; but the wind being fo great, and the fea fo grown, and four gallies lying to intercept our boats, there was no attempting to land there without the hazard of all.

This day was spent in vain, in returning messengers from one general to another; and in the end, they were forced to refolve upon a courfe which Sir William Monfon, captain under my lord of Effex, advis'd him to the fame morning he discover'd the town, which was to furprize the ships, and to be possessors of the harbour before they

attempted landing. This being now refolved on, there arose a great question, Who should have the honour of the first going in? My lord of Effex stood for himself; but my lord admiral oppos'd it, knowing if he miscarried, it would hazard the overthrow of the action; besides, he was streightly charged by her majesty, that the earl should not ex-

pose himself to danger, but upon great neceffity.

When my lord of Effex could not prevail, the whole council withstanding him, he fent Sir William Monfon that night on board my lord admiral, to refolve what ships should be appointed the next day to undertake the service. Sir Walter Raleigh had the van given him, which my lord Thomas Howard hearing, challeng'd in right of his place of vice-admiral, and it was granted him; but Sir Walter having order over-night to ply in, came first to an an-chor, but in that distance from the Spaniards as he could not annoy them, and he himself return'd on board the lord general Esfex, to excuse his coming to anchor so far off, for want of water to go higher; which was thought strange, that the Spaniards which drew much more water, and had no more advantage than he of tide, could pass where his could not; but Sir Francis Vere, in the Rainbow, who was appointed to fecond him, paffing by Sir Walter Raleigh's fhip, Sir Walter the fecond time weighed, and went higher. The lord general Essex, who promised to keep in the midft of the fleet, was told by Sir William Monfon, that the greatest service would depend upon three or four ships; and Sir William put him in mind of his honour; for that many eyes beheld him.

This made him forgetful of his promife, and to use all means he could to be foremost in the fight. My lord Howard, who could not go up in his own ship the Mere-bonour, betook himself to the Nonpareille, and in respect the Rainbow, the Repulse, and Warthither, it was determined in council that spight, had taken up the best part of the we should land at St. Sehastian's, the wester-channel by their first coming to an anchor,

have been upon harder conditions than we 1596.

1596. to his grief, he could not get higher: here did every ship strive to be the headmost; but fuch was the narrowness of the channel, as neither the lord admiral, nor any other fhip of the queen's, could pass on. Order was given that no ship should shoot but the queen's; making account, that the honour would be the greater, if the victory were obtain'd with fo few. This fight con-tinu'd from ten till four in the afternoon: the Spaniards then fet fail, thinking either to run higher up the river, or else to bring their other broad-fides to us, because of the heat of their ordnance. But howfoever it was, in their floating they came a-ground, and the men began to forfake the ships: whereupon it was ordered, that all the hoys and veffels that drew leaft water should go to them. Sir William Monfon was fent in the Repulse-boat with like directions. possess d our selves of the great galleons, the Matthew and Andrew; but the Philip and

down before they could be quenched.

I must not omit to deferibe the manner of the Spanish ships and galleys riding in harbour at our first coming to Cadiz. The four galleons singled themselves from out the seet as guards of their merchants. The galleys were placed to shank us with their prows before entry; but when they saw our approach, the next morning the merchants ran up the river, and the men of war to the point of the river, and brought themselves into a good order of fight, mooring their ships a-head and a-stern, to have their broad-sides upon us. The galleys then betook themselves to the guard of the town, which we put them from before we attempt-

Thomas fir'd themselves, and were burnt

ed the ships.

But because I have promis'd in the beginning of my discourse to particularize fome errors and miscarriages, my capacity would permit me to judge of, before I proceed further on this voyage I will declare a main overlight in the Spaniards.

After the galleons had (as you have heard) brought themfelves to the mouth of the bay of Cadiz, and found themfelves unable to withftand us, if, inflead of running to Point Royal, they had put themfelves under the defence of the town, they had been defended by their fort Pbilip, which had added a ftrength to theirs; or being overcome, as afterwards they were, they might with more fecurity have run themfelves a-ground near the town, which would have fecured their men in spite of us, and not as they did where there was no fort, nor any force of men to support them. Besides, the men that had then escaped into the town, might have defended it with their numbers, that, though we had taken the place, it must

The victory being obtain'd at fea, the lord general Essev landed his men in a sandy bay, which the castle of Puntall commanded; but they seeing the success of their ships, and mistrusting their own strength, neither offered to offend his landing, nor to defend the castle, but quitted it, and so we became possessor it.

After my lord's peaceable landing, he confider'd what was to be done; and there being no place from whence the enemy could annoy us, but the bridge which croffes over from the main land to the island, by our making good of which bridge there would be no way left for the galleys to efcape us, he fent three regiments under the command of Sir Coniers Clifford, Sir Christopher Blunt, and Sir Thomas Garret, to the bridge; who, at their first coming, were encountered by the enemy, but yet possesfed themselves of it, with the loss of some men; but whether it was for want of victuals, or for what other reasons, our men quitted it, I know not, and the galleys breaking down divers arches, pass'd it, and by that means escaped.

My lord difpatch'd a meffenger to my lord admiral, intreating him to give order to attempt the merchants that rode in Port Royal, for that it was dangerous to give them a night's respite, left they should convey away their wealth, or take example by the Philip and Thomas to burn themeleves. This metiage was delivered by Sir Anthony Afhley and Sir William Monson, as my lord admiral was in his boat, ready with his troops of featmen to land, who, fearing the lord general Esses should be put to distress with his small companies, which were but three regiments, hastened by all means to second him, and gave order to certain ships the next day to pursue them.

Since I have undertaken to shew the overlights committed in any of our English voyages, such as were committed here shall, without fear or flattery, appear to the judicious reader.

Though the earl of Effex's carriage and forwardness merited much, yet if it had been with more deliberation, and less haste, it would have succeeded better: and if he were now living, he would confess Sir William Monson advis'd him rather to seek to be master of the ships than of the town; for it was that would afford both wealth and honour: for the riches in ships could not be concealed, or convey'd away, as in towns they might. And the ships themselves before mens eyes there, and put them in mind of the greatness of the exploit; as for

the town, perhaps it might be foon won, but probably not long enjoy'd, and fo quickly forgotten: and to fpeak indifferently, by the earl's fudden landing, without the lord admiral's privity, and his giving advice by a meffage to attempt the fhips, which should have been refoly'd upon mature deliberation, no doubt the lord admiral found his honour a little eclips'd, which perhaps hasten'd his landing for his reputation sake, when as he thought it more advisable to have possessed himself of their fleet.

Before the lord admiral could draw near the town, the earl of Effex had entered it; and though the houses were built in such manner, that every house serv'd for a platform, yet they were forc'd to quit them, and retire to the castle.

My lord at last, in despite of the enemy, gain'd the market-place, where he found the greatest resistance from the houses thereabouts, and where that worthy gentleman Sir John Wingfield was unluckily flain. The lord general Effex caus'd it to be proclaim'd by beat of drum through the town, that all that would yield, should repair to the town-house, where they should have promise of mercy, and those that would not to expect no favour. The caftle defir'd respite to consider till the morning following, and then by one general confent, they furrender'd themselves to the two lord generals mercy. The chief prifoners, men and women, were brought into the caftle, where they remain'd a little space, and were fent away with honourable usage. noble treating of the prisoners has gain'd everlasting honour to our nation, and the generals in particular.

It cannot be supposed the lord generals had leisure to be idle the day following, having so great business to consider of, as the securing the town, and enjoying the merchant ships: wherefore, for the speedier dispatch, they treated with the best men of the city about the ransom to be given for their town and liberties. One hundred and twenty thousand ducats was the sum concluded on; and for security thereof, many of them became hostages. There was likewise an overture for the ransom of their ships and goods, which the duke of Medina hearing of, rather than we should reap any profit by them, he caus'd them to be fired.

We found by experience, that the deftroying of this fleet, (which did amount to the value of fix or feven millions,) was the general impoverifhing of the whole country; for when the pledges were fent to Seville, to take up money for their redemption, they were answer'd, That all the town was not able to raise such a sum, their loss

was fo great by the destruction of their steet. And to speak the truth, the king of Spain never receiv'd so great an overthrow, and so great an indignity at our hands as this, for our attempt was at his own home, in his port that he thought as safe as his chamber, where we took and destroy'd his ships of war, burnt and consum'd the wealth of his merchants, sack'd his city, ransom'd his subjects, and enter'd his country without impeachment.

To write all accidents of this voyage, were too tedious, and would weary the reader; but he that would defire to know the behaviour of the Spaniards, as well as of us, may confer with divers Englishmen that were redeem'd out of the galleys in exchange for others, and brought into England.

After we had enjoy'd the town of Cadiz a fortnight, and our men were grown rich by the spoil of it, the generals imbarked their army, with an intent to perform greater fervices before their return; but fuch was the covetousness of the better fort, who were inrich'd there, and the fear of hunger in others, who complain'd for want of victuals, that they could not willingly bedrawn to any farther action, to gain more reputa-tion. The only thing that was afterwards attempted was Faro, a town of Algarve in Portugal, a place of no refiftance or wealth, only famous for the library of Oforius, who was bishop of that place; which library was brought into England by us, and many of the books bestowed upon the newerected library of Oxford.

Some prifoners were taken; but of fmall account: who told us, that the greatest strength of the country was in Lagos, the chief town of Algarve, twelve miles diftant from thence, because most part of the gentlemen thereabouts were gone thither, to make it good, expecting our coming: this news was acceptable to my lord of E/\sqrt{ex} , who preferr'd honour before wealth; and having had his will, and the fpoil of the town of Faro, and country thereabouts, he shipp'd his army, and took council of the lord admiral how to proceed. admiral diverted his course for Lagos, alledging the place was strong, of no wealth, always held in the nature of a fisher-town belonging to the Portuguese, who in their hearts were our friends; that the winning of it, after so eminent a place as Cadiz, could add no honour; though it should be carried, yet it would be the loss of his best troops and gentlemen, who would rather die than receive the indignity of a repulse. My lord of Effex, much against his will was forc'd to yield to these reasons, and defift from that enterprize.

About this time there was a general complaint for want of victuals, which proceeded 1596. rather out of a defire that fome had to be at home, than out of any necessity; for Sir William Monson and Mr. Darrel were appointed to examine the condition of every thire, and found seven weeks victuals, (drink

Thip, and found feven weeks victuals, (drink excepted,) which might have been fupplied from the fhore in water; and this put the generals in great hope to perform fomething more than they had done. The only fervice now to be thought on, was to lie in wait for the carracks, which in all probability could not efcape us, though there were many doubts to the contrary, but eafly answer'd by men of experience: but in truth fome mens defires homeward were fo great, that no reaion could prevail with,

or perfuade them.

Coming into the height of the rock, the generals took council once again; and then the earl of Effex and the lord Thomas Howard offered, with great earnestness, to flay out the time our victuals lafted, and defir'd to have but twelve fhips furnish'd out of the rest to stay with them: but this would not be granted, though the fquadron of the Hollanders offer'd voluntarily to stay. Sir Walter Raleigh alledg'd the scarcity of victuals, and the infection of his men. My lord general Effex offer'd, in the greatness of his mind, and the defire he had to flay, to fupply his want of men and victuals, and to exchange ships: but all proposals were in vain; for the riches of Cadiz kept them that had got much, from attempting more, as if it had been pure want, and not honour, would have enforc'd them to greater enterprizes.

This being the last hopes of the voyage, and being generally withstood, it was concluded to steer away for the North Cape,

and afterwards to view and fearch the harbours of the *Groyne* and *Ferrol*; and if any of the king of *Spain's* fhips chanced to be there, to give an attempt upon them.

The lord admiral fent a carvel of our fleet into these two harbours, and apparell'd the men in Spanish cloaths, to avoid fuspicion: this carvel return'd the next day with a true relation, that there were no ships in the harbours: and now paffing all places where there was any hope of doing good, our return for England was refolv'd upon; and on the 8th of August the lord admiral arriv'd at Plimouth with the greatest part of the army: and the lord general Effex, who staid to accompany the St. Andrew, which was under his charge, and reputed of his fquadron, two days after us, being the 10th of August, where he found the army in that perfect health, as the like has not been feen, for fo many to go out of England to fuch great enterprizes, and to return home again so well.

He himself rid up to the court, to ad-

He himself rid up to the court, to advise with her majefty about the winning of Calais, which the Spaniards took the Easter before. Here was a good opportunity to have regain'd the ancient patrimouy of England; but the French king thought he might with more ease regain it from the Spaniard who was his enemy, than recover it again from us who were his friends.

My lord admiral with the fleet went to the Dovons, where he landed, and left the charge of the navy to Sir Robert Dudley and Sir William Monson. In going from thence to Chatham, they endur'd more foul weather and contrary winds, than in the

whole voyage befides.

action 1597 ing the it were cast away upon the North Cape, in their coming thither, he prepar'd with all possible means to revenge the disgrace we did him the year last past at Cadiz. Her majesty likewise prepar'd to desend herself, and sitted out the most part of her ships for the sea; but at length, perceiving his drift was more to affright than offend her, though he gave it out otherwise, because she should provide to resist him at home, rather than to annoy him abroad, she was unwilling the great charges she had been at should be bestowed in vain; and therefore turn'd her preparations another way, than that for which she first intended them.

The project of this voyage was to affault the king of Spain's shipping in the harbour of Ferrol, which the queen chiefly defir'd to do for her own fecurity at home, and afterwards to go and take the Tercera islands, and there to expect the coming home of the Indian fleet: but neither of these two designs took that effect which was expected; for in our fetting forth, the fame day we put to fea we were taken with a most violent storm and contrary winds; and the general was feparated from the fleet, and one ship from another; so that the one half of the fleet was compelled to return home; and the rest that kept the sea, having reach'd the coast of Spain, were commanded home, by order of the lord ge-

Thus, after their return, they were to advise upon a new voyage, finding by their ships and victuals they were unable to perform the former: whereupon it was thought convenient all the army should be discharg'd for faving of victuals, except a thousand of the prime soldiers of the low countries, which were put into her majesty's flips, that they might be the better prepar'd, if they should chance to encounter the Spanish sheet. Thus the second time they departed England, though not without some danger of the ships, by reason of the winter's near approach.

The first land in Spain we fell in withal was the North Cape, the place whither our directions led us, if we happen'd to lose company. Being there deferred from the thore, and not above twelve leagues from the Groyne, where the Spanish Armada lay, we were in good hopes to have enticed them out of the harbour to fight us; but spending some time thereabouts, and finding no fuch disposition in them, it was thought fit no longer to linger about that coaft, left we should lose our opportunity upon the Indian fleet; therefore every captain receiv'd his directions to fland his course into thirty fix degrees, there to spread ourselves north and fouth, it being a heighth that commonly the Spaniards fail in from the Indies.

VOL. III.

At this time the lord general complain'd of a leak in his ship; and two days after, towards midnight, he brought himself upon the lee to stop it. Sir Walter Raleigh, and some other ships, being a-head of the sleet, and it growing dark, they could not differn the lord general's working, but stood their course as before directed; and through this unadvised working of my lord, they lost him, which was a great disheartening to his sleet.

The day following, Sir Walter Raleigh was inform'd, by a pinnace he met, that the great Armada, which we supposed to be in the Groyne and Ferrol, was gone to the islands for the guard of the Indian fleet: this pinnace, with this intelligence it gave us, Sir Walter Raleigh immediately fent to look out the general. My lord had no fooner receiv'd this advice, but at the very instant he directed his course to the islands, and difpatch'd fome fmall vessels to Sir Walter Raleigh, to inform him of the fud-den alteration of his course, upon the news receiv'd from him, commanding him with all expedition to repair to Flores, where he would not fail to be at our arrival. At the islands we found this intelligence utterly false; for neither the Spanish ships were there, nor were expected there. We met likewise with divers Englishmen that came out of the Indies; but they could give us no affurance of the coming home of the fleet; neither could we receive any advertisement from the shore, which made us half in defpair of them.

By that time we had watered our ships, and refresh'd ourselves at Flores, Sir Walter Raleigh arriv'd there; who was will'd by the lord general, after he was furnish'd of fuch wants as that poor island afforded, to repair to the island of Fayal, which my lord intended to take. Here grew great questions and heart-burnings against Sir Walter Raleigh; for he coming to Fayal, and miffing the lord general, and yet knowing my lord's refolution to take the island, he held it more advisable to land with those forces he had, than to expect the coming of my lord; for in that space the island might be better provided: whereupon he landed, and took it before my lord's approach. This act was held fuch an indignity to my lord, and urg'd with that vehemence by those that hated Sir Welter, that if my lord, though naturally kind and flexible, had not fear'd how it would have been taken in England, I think Sir Walter had fmarted for it.

From this island we went to Graciosa, which did willingly relieve our wants as far as it could; yet with humble intreaty to forbear landing with our army, especially because they understood there was a square

List

sired

not use to forbear cruelty wherever they came: and here it was that we met the *Indian* fleet, which in manner following mi-

raculoufly efcap'd us.

The lord general having fent fome men of good account into the ifland, to fee there should be no injury offer'd to the Portuguese, because he had pass'd his word to the contrary, those men advertis'd him of four fail of ships descried from the shore, and one of them, greater than the rest, seem'd to be a carrack. My lord receiv'd this news with great joy, and divided his fleet into three fquadrons, to be commanded by h'mfelf, the lord Thomas Howard, and Sir Walter Raleigh. The next ship to my lord, of the queen's, was the Rainbow, wherein Sir William Monson went, who receiv'd direction from my lord to fleer away fouth that night; and if he should meet with any fleet, to follow them, carrying lights, or shooting off his ordnances, or making any other fign that he could; and if he met with no ships, to direct his course the next day to the ifland of St. Michael; but promiling that night to fend twelve fhips after him. Sir William befought my lord, by the pinnace that brought him this direction, that above all things he should have a care to difpatch a fquadron to the road of Angra in the Terceras; for it was certain, if they were Spaniards, thither they would refort

Whilst my lord was thus contriving his business, and ordering his squadron, a small bark of his fleet happen'd to come to him, who affur'd him, that those ships discover'd from the land were of his own fleet, and that they came in immediately from them: this made my lord countermand his former direction; only Sir William Monson, who was the next ship to him, and receiv'd the first command, could not be recalled back. Within three hours of his departure from my lord, which might be about twelve of the clock, he fell in company of a fleet of twenty five fail; which at the first he could not affure himfelf to be Spaniards, because the day before, that number of ships was miffing from our fleet. Here he was in a dilemma, and great perplexity with himfelf; for in making figns, as he was directed, if the ships prov'd English, it were ridiculous, and he would be expos'd to fcorn; and to respite it till morning were as dangerous, if they were the Indian fleet; for then my lord might be out of view, or of the hearing of his ordnance; therefore he refolv'd rather to put his perfon, than his ship in peril. He commanded his master to keep the weather-gage of the fleet, whatfoever should become of him; and it blowing little wind, he betook himfelf to his

boat, and row'd up with this fleet, demand- 1500 ing whence they were. They answer'd, of Seville in Spain; and ask'd of whence he was. He told them, of England; and that the ship in fight was a galleon of the queen's of England, fingle and alone, alledging the honour they would get by winning her; his drift being to draw and entice them into the wake of our fleet, where they would be fo entangled, as they could not escape. They return'd him some shot, and ill language; but would not alter their course to the Terceras, whither they were bound, and where they arriv'd, to our misfortune. Sir William Monjon return'd aboard his ship, making figns and lights, and report with his ordnance, but all in vain; for my lord altering his course, as you have heard, stood that night to St. Michael's, and pass'd by the north fide of Tercera, a farther way than if he had gone by the way of Angra, where

he had met the Indian fleet.

When day appear'd, and Sir William Monfon was in hopes to find the twelve ships promis'd to be fent to him, he might difcern the Spanish fleet two miles and a little more a-head of him, and a-stern him a galleon, and a pinnace betwixt them; which putting forth her flags, he knew to be the earl of Southampton in the Garland. pinnace was a frigat of the Spanish fleet; who took the Garland and the Rainbow to be galleons of theirs; but feeing the flag of the Garland, she found her error, and fprang a-loof, thinking to escape; but the earl purfued her with the lofs of fome time, when he should have followed the fleet, and therefore was defir'd to defift from that chase by Sir William Monson, who fent his boat to him. By a shot from my lord this frigat was funk; and while his men were rithing her, Sir Francis Vere and Sir William Breok came up in their two ships, who the Spaniards would have made us believe were two galleons of theirs; and fo much did my lord fignify to Sir William Monson, wishing him to flay their coming up; for that there would be greater hope of those two ships, which there was no doubt but we were able to mafter, than of the fleet, for which we were too weak.

When Sir William knew the two ships to be the queen's, which he had before suspected, he began to pursue the Spanish steed, he had before suspected, he began to pursue the Spanish steed of him, and had so little way to sail, they recover'd the road of Tercera; but he and the rest of the ships pursued them, and himself led the way into the harbour, where he found sharp resistance from the castle; but yet so batter'd the ships, that he might see the mastes of some shot by the board, and the men quit the ships; so that there wanted nothing but a gale of wind to enable

We may fay, and that truly, there was never that poffibility to have undone the state of Spain as now; for every royal of plate we had taken in this fleet, had been two to them, by our converting it by war

upon them.

None of the captains could be blamed in this bufiness; all is to be attributed to the want of experience in my lord, and his flexible nature to be over-ruled: for the first hour he anchored at Flores, and call'd a council, Sir William Monfon advised him, upon the reasons following; After his watering to run west, spreading his sleet north and south, so far as the lastern wind that then blew would carry them; alledging, that if the Indian fleet came home that year, by computation of the last light moon, from which time their difemboguing in the Indies must be reckoned, they could not be above two hundred leagues short of that itland; and whenfoever the wind should chop up westerly, he bearing a slack fail, they would in a few days overtake him.

This advice my lord feem'd to embrace; but was diverted by divers gentlemen, who, coming principally for land-fervice, found themselves tir'd by the tediousness of the sea. Certain it is, if my lord had followed his advice, within less than forty hours he had made the queen owner of that fleet; for by the pilot's card, which was taken in the frigat, the Spanish fleet was but fifty leagues in traverse with that eastern wind, when my lord was at Flores; which made my lord wish, the first time Sir William Monson repair'd to him, after the escape of the fleet, that he had loft his hand, fo he had

been ruled by him,

Being met aboard Sir Francis Vere, we confulted what to do, and refolv'd to acquaint my lord with what had happen'd, defiring his prefence with us, to fee if there were any possibility to attempt the shipping, or furprize the ifland, and fo to possess the treafure.

My lord receiv'd this advertisement just as he was ready with his troops to have landed in St. Michael's; but this message diverted his landing, and made him prefently caft

about for the islands of the Tercera, where 1597. we lay all this while expecting his coming. In his course from St. Michael's it was his hap to take three ships that departed the Havana the day after the fleet; which three ships did almost then countervail the

expence of the whole voyage.

At my lord's meeting with us at Tercera, there was a confultation how the enemy's ships might be fetched off, or deftroyed, as they lay; but all men, with one confent, agreed the impossibility of it. The attempting the island was propounded; but withstood for these reasons, The difficulty in landing; the strength of the island, which was increased by fourteen or afteen hundred foldiers in the fhips; and our want of victuals, to abide by the fiege. Seeing then we were frustrate of our hopes at the Tercera, we refolv'd upon landing in St. Michael's; and arrived the day following * Punta Delgada, the chief city. Here my lord imbark'd his fmall army in boats, with offer to land; and having thereby drawn the enemy's greatest force thither to refist him, fuddenly he rowed to Villa Franca, three or four leagues diftant from thence; which, not being defended by the enemy, he took. The ships had order to abide in the road of Delgada; for that my lord made account to march thither by land; but being ashore at Villa Franca, he was inform'd that the march was impossible, by reason of the high and craggy mountains which diverted his purpose.

Victuals now grew fhort with us; and my lord general began difcreetly to foresee the danger in abiding towards winter upon these coasts, which could not afford him an harbour, only open roads that were subject to foutherly winds; and upon every fuch wind, he must put to sea for his safety. He consider'd, that if this should happen when his troops were ashore, and he not able to reach the land in a fortnight, or more, which is a thing ordinary, what a desperate case he should put himself into, especially in so great a want of victuals; and fo concluding, that he had feen the end of all his hopes by the escape of the fleet, he embarked himself and army, though with fome difficulty, the feas were now grown

fo high.

By this time the one half of the fleet that rid in Punta Delgada made away for Villa Franca; and those that remain'd behind, being thought by a fhip of Brafil to be the Spanish fleet, she came in amongst them, and so was betray'd. After her there follow'd a carrack, who had been ferv'd in the like manner, but for the hafty and indifferent weighing of a *Hollander*, which made her run afhore under the castle. When the wind leffen'd, Sir William Monson weighed with the Rainbow, thinking to give an attempt

1597. on her, notwithflanding the caffle; which she perceiving, as he drew near unto her, she fet herself on fire, and burned down to the very keel. She was a ship of fourten hundred tuns burden, that the year before was not able to double the cape of Good-Hope in her voyage to the East Indies, but put into Brazil, where the was laden with fugars, and afterwards thus destroyed. The Spaniards, who prefumed more upon their advantages than valour, and thought themselves in too weak a condition to follow us to the islands, and put their fortunes upon a day's fervice, fubtilly devifed how to intercept us as we came home, when we had least thought or fufpicion of them and their fleet, which was all this while in the Groyne and Ferrol, not daring to put forwards while they knew ours to be upon the coast. Their general, the Adelantado came for England, with a refolution to land at Falmouth, and fortify it; and afterwards with their fhips to keep the fea, and expect our coming home feattered; and having thus cut off our fea-forces, and possessing the harbour of Falmouth, they thought with a fecond fupply of thirty feven levantine ships, which the marquis Arumbullo commanded, to have returned and gained a good footing in England.

We may fay, and that truly, that God fought for us: for the Adelantado being within a few leagues of the island of Silly, he commanded all his captains on board him to receive his directions; but whilft they were in confultation, a violent florm took them at eaft, infomuch that the captains could hardly recover their ships, but in no case were able to save their boats: the storm continued fo furious, that happy was he who could recover home, feeing their defign the overthrown by the loss of their boats, where by the means of landing was taken away Some who were willing to ftay, and receive the farther commands of the general, kept the feas fo long upon our coaft, that in the end they were taken; others put themselves into our harbours for refuge and fuccour; and it is certainly known, that in this voyage the Spaniards lost eighteen ships, the St. Luke and the St. Bartholomew being two,

We must ascribe this loss of theirs to God only; for certainly the enemies defigns were dangerous, and not diverted by our force, but by his will, who from time to time would not fuffer the Spaniards in any one of their attempts to let footing in England, as we did in all quarters of Spain, Portugal, the Islands, and both Indies.

and in the rank of his best galleons.

In this voyage to the iflands, I have fet down my lord's design upon the Spanish feet lying at Ferrol; wherein his lordship required a captain he most relied on to have his opinion in writing. First, Whether he

fhould attempt the ships in harbour, or no? 1 97 Secondly, whether before or after his being at the Tercera? And, Laitly, the manner to affail them? The captain's answer toliows, which you may read and judge of.

To the Right Honourable the Earl of Essex.

N answer to your lordship's demand, Whether to give an attempt upon the ships in Ferrol, before the landing your men, and the castles gain'd, this I fay, That before I can give my refolution, I must describe the state of the harbour, and the fituation of the forts, with the strength of the ships; for out of these must proceed my reasons.

" I conceive at the entrance of the harbour there are two caftles, the one on the fouthfide, the other on the north, both commanding any flip that fhall enter: they are feated low by the water, the cliffs on both fides very high, and the harbour to be chained,

" My opinion is, if your lord hip do land your men in the bay before you take the forts, as there is no other tlace of landing, you must consider it is n open road, the coast subject to norther i wind; which beat fo hard on the flice, that you cannot land your folders and their furniture with conveniency an 1 fafety, efpecially being fure to find refiftance at

your landing.
"But your lordship may answer. That he who attempts great things, must run all hazards: and as it is wildom to fore-" caft all doubts and dangers, fo were it too great fecurity not to hazard lofs upon hope of victory: and whereas the langer of landing by reason of the sea's breaking on the fhore is alledged, you may think we are not always fure of a northerly wind, nor of fo great a fea; and therefore you must put your attempt in adventure.

"But for your lordship's satisfaction in this point, you must know that you cannot feize that coast, but with such a wind as makes fuch a fea as renders it difficult for you to land. Or suppose, that being upon the coast as you were the last year, when you came from Cadiz, and that the wind should now do, as then it did, chop up from the fouthwell to the northweft, your lordfhip would be imbay'd, and forced to feek the harbour of the Groyne or Ferrol, and make good those places, which then you might have done: but now you must consider your army is not fo great as it was then, and their fortifications and shipping are much stronger than they were. My opinion is, therefore, That there is little possibility of at-

ampling

the forts; neither do I fee any possibility to possess them with your small army.

"But your lordfhip may alledge, That though the ports were impregnable, yet they may be pass'd with a large wind; for every shot that comes from them hits not, or if it does it kills not, but though it should, it sinks not.

"I flouid, it inns not.
"I allow it is no great difficulty to pass any fort with a ship under fail, being a movemble thing, where no certain aim can be had; yet I think no place more dangerous than Ferrol, because of the highness of the hills, and the narrowness of the entrance that makes a continual calm, or the little wind so uncertain, that every puff brings sundry shift of wind. Many of the king of Spain's ships have been there lost: and therefore the advantage of a ship in passing a castle is the force and largeness of a wind; as to the contrary, these forts will be able to

"annoy a ship upon the former reasons.
"But allow that your lordship's sleet should enter fafely; for the greatest difficulty is not to pass in, but to perform the fervice when they are within: your sleet being entered, they will be in the state of a prisoner, that cannot get out of a house without leave of his keeper; for the wind that is good and large for them to enter, is as much against their coming out; and therefore it behoves every commander, as well to think of bringing himself off with discretion, as of falling on with resolution.

" Hitherto I have shewed the uncertainty " of your lordship's landing, the doubtfulness of your attempt, and the danger in nor having the caftles; but I will now fuppose the forts to be ours, and the whole fhipping paffed them without any loss; yet will the enemy have as great an advantage as they can wish; for the number of men and shipping, and the greatness of their vessels, are known to exceed ours; and where there is an equa-" lity in shipping on both sides, the victory is not to be obtained on neither fide, whilft there is ammunition and men on the other fide, unless it be by a general boarding, or stratagem of firing; in which the Spaniards shall have advan-" tage of us, they being in their own har-" bour, where they may be supplied, and " we can have no relief but what we bring

with us.

"If your lordfhip fhall hold it convenient,
as in difcretion I think you will not, to
fend in her majefty's fhips upon this fervice, then you must confider the reft of
your fleet to be far inferior to the enemics strength, and so you will fend them

" apparently to their own destruction, 1597." flaughter, and ruin.

As I am against the attempt of Ferrol " before you return from the islands, so I " am also against your lordship's present-" ing yourself upon that coast; for in " thinking to entice forth the fleet, befid's " that you shall discover your own strength, you fhall give them occasion to arm their country; and besides, it will be in their choice, whether to fight with you, or no; for they will be able to discover and judge of your forces; and fuch is their discipline, that though they had your lordship upon advantage, yetthey dare not attempt you without a fpecial order from the king; which your lordship found by experience in the count de Fuentes's anfwer to your lordship's challenge at the walls of Lisbon. And to conclude, fince your lordship intends to go from "Ferrol to Tercera, it were much better, in my opinion, first to attempt that island, whilst your army is strong and in " health. It is a place of much more importance, and more likelihood of prevailing than in your enterprize upon the fhipping: that island being possessed, will draw contributions from the rest to maintain it: your lordship will cut off the supplies the Spaniards and Portuguese receive from both the Indies, Guinea, and Brazil: your lordship will provide a place " of refuge for our fleet hereafter; from whence they may with eafe keep the feas, and endanger all the trades aforefaid: your lordship will unite that island to the crown of England; and if there be an agreement of peace betwixt the two nations, you will gain advantageous conditions to the state of England upon a treaty: your lordship will be in a possibility of drawing the Armada of Ferrol to purfue you thither, that ifland importing them so much to defend; and then your lordship will have your fire to fight them upon equal terms a lea. If you attempt Ferry at first, and should happen to be repulfed, your lordship will confess, it will be so great a dishonour and lofs, that you will not be able to refolve upon any other fervice; and then will your expedition for the Terceras be utterly void: whereas if you would pleafe to make your attempt upon the Terceras first, it will not take away your hope of Ferrol afterwards; for in your return from thence, you will find the fhipping either in the same state you left them in harbour; or if you meet them at fea, you will encounter them upon advantage. Thus have I answered your fordship's demand as you required. 18. M.

expectation of war, with less performance. Whether it was a mistrust the one nation had of the other, or a policy held on both fides, to rake peace with fword-in-hand, a treaty being entertained by confent of each prince, I am not to examine; but fure I am, the preparation was on both fides very great, as if the one expected an invasion from the other; and yet it was generally conceived, not to be intended by either; but that ours had only relation to my lord of Effex, who was then in Ireland, and had a defign to try his friends in England, and to be revenged of his enemies, as he pretended, and as it proved afterwards by his fall. Howfoever it was, the charge was not fo great as necessary; for it was commonly known, that the Adelentado had drawn both his thips and galleys to the Groyne; which was not usually done, but for some action intended upon England or Ireland, though he converted them afterwards to another ife ; for the galleys were fent into the Low Countries, and passed the narrow seas, whilst our fhips lay there; and with the fleet the Adelentado pursued the Hollanders to the islands, whether he suspected they were gone. This fleer of Hollanders, which confifted of

feventy three fail, were the first ships that ever display'd their colours in warlike fort

against the Spaniards, in any action of their

own; for how cruel foever the war feemed

to be in Holland, they maintained a peace-

able trade in Spain, and abused us. This

not very successful; for after the spoil of a town in the Canaries, and some hurt done at the island of St. Tome, they kept the sea for feven or eight months; in which time their general and most of their men sickened and died, and the rest return'd with loss and shame. Another benefit which we received by this preparation, was, That our men were now taught fuddenly to arm, ever man knowing his command, and how to be commanded, which before they were ignorant of; and who knows not, that fudden and falfe alarms in an army are fornetimes necessary? To fry truth, the expedition which was then u'ed in drawing together fo great an army by land, and rigging fo great and royal a navy to fea, in fo little a space of time, was fo admirable in other countries, that they received a terror by it; and many that came from beyond fea, faid, The queen was never more dreaded abroad for any thing the ever did.

Frenchmen that came aboard our ships did wonder (as at a thing incredible) that her majefty had rigged, victualled, and furnished her royal ships to sea in twelve days time: and Spain, as an enemy, had reason to fear and grieve to fee this fudden preparation; but more, when they understood how the hearts of her majetty's subjects joined with their hands, being all ready to fpend their dearest blood for her, and her fervice. Holland might likewife fee, that if they became infolent, we could be as foon provided as they; nor did they expect to find fuch celerity in any nation but themart action of the Hollanders at fea proved

It is probable too, that the king of Spain, and the archduke, were hereby drawn to entertain thoughts of peace: for as foon as our fleet was at fea, a gentleman was fent from Bruffels with fome overtures, though for that time they fucceeded not. However, whether it was that the intended invalion

from Spain was diverted, or that her ma- 1599. jesty was fully satisfy'd of my lord of Effex, I know not; but so it was, that she commanded the fudden return of her fhips from fea, after they had lain three weeks or a month in the Downs.

1600. THE last year, as you have heard, put all men in expectation of war, which yet came to nothing. This fummer gave us great hope of peace; but with the like effect; for by confent of the queen, the king of Spain, and the archduke, their commisfioners met at Bologne in Picardy, to treat of peace, a place chosen indifferently, the French king being in league and friendship with them all. Whether this treaty were with them ail. intended but in shew only, or that they were out of hopes to come to any conclusion, or what elfe was the true and real cause of its breaking off fo fuddenly, I know not; but the pretence was flender: for there grew a difference about precedency betwixt the crowns of Spain and England; and so the hopes of peace were frustrated, though had it been really intended, matters might eafily have been accommodated.

The queen suspected the event hereof before their meeting; and the rather, because the Spaniards entertained her with the like treaty in 1588, when at the same instant their navy appeared upon her coast to invade her: therefore, left she should be guilty of too great fecurity, in relying upon the fuccess of this doubtful treaty, she furnished the three ships before named, under pretence to guard the western coast, which at that time was infested by the Dunkirkers.

And because there should be the less notice taken, part of the victuals was provided at Plimouth, and Sir Richard Lewfon, who was then admiral of the narrow feas, was appointed general, for the more fecret carrying on of the buliness; so as it could not be conjectured, either by their victualing or by their captain, being admiral of the narrow feas, that it was a fervice from

home. As they were in a readiness at Pli- 1600. mouth, expecting orders, the queen being fully fatisfy'd that the treaty of Bologne would break off without effect, she commanded Sir Richard Lewson to hasten to the islands, there to expect the carracks and Mexico fleet. The Spaniards, on the other fide, being as circumfpect to prevent a mischief, as we were fubtile to contrive it; and believing (as we did) that the treaty of peace would prove a vain hopeless shew of what was never meant, furnished eighteen tall fhips to the iflands, as they had usually done fince the year 1591. The general of this fleet was Don Diego de Borachero.

Our ships coming to the islands, they and the Spaniards had intelligence of one another, but not the fight; for that Sir Richard Lewson hailed fixty leagues westward, not only to avoid them, but in hopes to meet with the carracks and Mexico fleet, before they could join them. But the carracks being formerly warned by the taking of one of them, and burning of another, in 1591. had ever fince that year endeavoured to shun the fight of that island; fo that our fleet being now prevented, as they had often before been, (nothing being more uncertain than actions at fea, where ships are to meet one another cafually,) they returned home, having confumed time and victuals to no purpose, and seen not so much as one fail, from the time they quitted the coast of England, till their return, two thips of Holland excepted, that came from the East Indies, (for then began their trade thither,) which ships Sir Richard Lewson relieved, finding them in great diffress and

1601. In the year 1600, and part of the year 1601, there was a kind of ceffation from arms, though not by agreement; for this year gave a hope of peace, which failing, the former course of annoying each other was revived; we in relieving the Low Countries, the Spaniards in affiling the rebels in Ireland. This was the summer that the archduke besieged Osend, which was bravely defended, but principles.

pally by the fupplies out of *England*. And towards winter, when the *Spaniards* thought we leaft look'd for war, *Don Diego de Borachero*, with forty eight fail of fhips, and four thoughand foldiers, was fent to invade *Ireland*.

eland.

In his way thither he lost the company of

his vice admiral Siriago, who returned to the Groyne; which when the king heard, he was much diftafted with Siriago, and commanded him, upon his allegiance, to haften with all fpeed for Ireland, as he was formerly directed. Don Diego's landing was known in England when it was too late to prevent it; yet, left he fhould be fupply'd with further forces, Sir Richard Levofon valiantly entered the harbour, drew har their fortifications, and fought the enemy for the fpace of one whole day, his flip being an hundred times fhot through, and yet but eight men flain. God fo bleffed him, that he prevailed in his enterprize, destroyed their whole shipping, and made Siriago fly by land into another harbour, where he obscurely embarked himself in a Frenco v-stel for Spain. All this

while the main army, which landed with

their general Don Juan de Avila, was at

Kingsale, expecting the aid of Tyroen, who

promifed every day to be with them. Our army, commanded by the lord *Montjoy*, lord deputy of *Ireland*, befieg'd the town, fo that he prevented their meeting, and many skirmifhes paffed betwixt them.

The fiege continued with great miferies to both the armies, and not without caufe, confidering the feafon of the year, and the condition of the country, that afforded little relief to either. Some few days before Cbriffmas, Tyroen appeared with his forces, which was fome little heartening to the enemy, in hopes to be freed of their imprifonment; for fo may I call it, they were fo ftrictly beleaguered. The day of agreement betwixt the Spaniards and Tyroen was Cbriffmas-Eve, on which day there happened an earthquake in England; and as many times fuch figns prove aut bonum, aut malum omen, this proved fortunate to us, the victory being obtained with fo little lofs as is almost incredible.

This was the day of trial, whether Ireland should continue a parcel of our crown, or no; for if the enemy had prevail'd in the battle, and a treaty had not afterwards obtained more than force, it was to be feared Ireland would hardly have been ever recovered. The Spaniards in Ireland seeing the success of Typoen, and the impossibility for him to reinforce his army, being hopeless of supplies out of Spain, and their poverty daily increasing, they made offers of a parley; which was granted, and a peace ensued; the conditions whereof are

extant in print. They were furnished with ships, and secured of their passage into Spain, where arriving in English vessels, the ships returned back for England.

Sir Richard Lewson and Sir William Monson to the Coast of Spain, Anno 1602.

Commanders. Ships. Sir Richard Lewfon admiral. The Repulse, Sir William Monfon vice-admiral. The Garland, The Defiance, Captain Goer. Captain Slingsby The Mary Role, Captain Sommers. The Warfpight, Captain Reynolds. The Nonparcille, Captain Mainwaring. The Dreadnought, The Adventure. Captain Trever. The English Carvel, Captain Sawkel.

THE last attempt of the Spaniards in Ireland awaken'd the queen, who, it feems, for two or three years together, entertained the hopes of peace, and therefore was sparing in setting forth her sleets; but now perceiving the enemy had found the way into Ireland, and that it behoved her to be more vigilant than ever, fhe refolv'd, as the fafeft course, to infest the spanish coasts with a continual fleet, and this year furnished the ships aforesaid, naving promife from the states of Holland to join to them twelve fail of theirs; and because this important fervice required great fpeed, she had not time enough to man them, or fupply them with provisions altogether fo well as they were usually wont to be, but was content with what could be got in fo fhort a warning, fo defirous was fhe to fee her thips at fea.

Sir Richard Levoson set sail with five of them the 19th of March, and left Sir William Monson behind with the other four, to attend the coming of the Hollanders; though within two or three days after Sir William received command from the queen to hasten with all speed to Sir Richard Levoson; for that she was advertis'd, that the filver ships were arrived at the Terceras. Sir William Monson hereupon neglected no time, nor stay'd either to see himself better mann'd, or his ships better surnished, but put to sea the 26th of March.

This intelligence of the queen's was true; for the plate-fleet had been at the Terceras, and departing thence, in their course for Spain, Sir Richard Lewson, with his sew thips, met them; but to little purpose, wanting the rest of his sleet, and the help of the twelve Hollanders. We may very well account this not the least error or negligence that has been committed in our voyages; for if the Hollanders had kept rouch, according to promise, and the queen's ships had been fitted out with care, we had made her majesty mistress of more treasure than any of her progenitors ever enjoy'd, Vol. III.

Sir Richard Lewfon's defign against the 1602. Indian fleet, notwithstanding his great valour, being thus frustrated, and by the Hollanders slackness crossed, he plyed towards the rock, to meet Sir William Monon, as the place refolved on between them; but Sir William having spent fourteen days thereabouts, and hearing no tidings of him, went round to the fouthward Cape, where he was likewise frustrated of a most promi-fing hope; for meeting with certain Frenchmen and Scots, at the same instant he deferied three ships of ours, sent by Sir Ri-chara to look him. These French and Scotch ships came from St. Lucar, and gave an account of five galleons, ready the next tide to fet fail for the *Indies*: they likewife told him of two others that departed three days before, wherein went Don Pedro de Valdes to be governor of the Havana, who had been prisoner in England in 1588.

These two latter ships were met one night by the Warspigot, whereof captain Sommers was commander; but whether it was by the darkness of the night, or by what other casualty, (for the sea is subject to many,) I know not; but they escaped.

This news of the five galleons, and the three ships of the queen's so happily meeting together, made Sir William direct his course into the latitude the Spaniards were most likely to fail in; and coming to it, he had fight of five ships, which, in re spect of their number and course, he made reckoning to be the five galleons; and thought that day should fully determine and try the difference between the strength and puiffance of the English and Spanish thips, their number and greatness being equal. But his joy was foon abated; for coming up with them, he found them to be English ships from the Streights, and bound home. Yet this did not lessen the hope he had conceived that the Spaniards might be met withal; and the next day he gave chase to one ship alone, that came out of the Indies, which he took, though he ¥у

Sir

1602, had been better without her; for she brought him to far to leeward, that at night the galleons paffed to windward, not above eight or ten leagues off us, by report of an English pinnace that met them, who came into our company the day following. These missortunes lighting first upon Sir Richard, and after upon Sir William, might have been sufficient reasons to discourage them: but they knowing the accidents of the sea, and that fortune could as well laugh as weep, having good ships under foot, their men found and in health, and plenty of victuals, they did not doubt but that some of the wealth which the Indies fent forth into Spain would fall to their

> Upon Tuesday the first of June, to begin our new fortune with a new month, Sir Richard Lewfon and Sir William Monfon, who fome nights before, had met accidentally in the fea, were close on board the rock, where they took two ships of the east country, bound for Lisbon; and while they were rummaging these ships, they descried a carvel from cape E/pichel bearing with them, which, by figns the made, they perceived had a defire to fpeak with them. Sir Richard immediately chased her, and left Sir William with the two Easterlings to abide about the rock till his return. The carvel being fetch'd up, gave account, that a carrack and eleven galleys were in Cerimbra road, and that the was fent by two thips of ours, the Nonpareille and the Dreadnought, which lay thereabouts, to look out the admiral. With what joy this news was apprehended may be easily imagined: Sir Richard made figns to Sir William to stand with him, and left he fhould not be difcern'd, he caused the carvel to ply up with him, withing him to repair to him; but before they could approach the cape it was midnight, and nothing chanced all that time but the exchanging of fome fhot that pass'd betwixt the admiral and the galleys.

> Upon wednesday, the second of June, every man look'd early in the morning what fhips of her majefty's were in fight, which were five in number; the Warfpight, wherein Sir Richard was; for the Repulse he had fent for England some days before, by reason of a leak; the Garland, the Nonpareille, the Dreadnought, and the Adventure, befides the two Easterlings taken the day before. All the captains reforted on board the admiral to council, which took up most part of the day. At first there was an op-position by some, who alledged the danger and impossibility of taking the carrack, being defended by the caftle and eleven galleys: but Sir William Monfon prevailed fo far, as that all confented to go upon her the next day, and concluded upon this

courfe following, That he and Sir Richard 1 2 fhould anchor as near the carrack as they could, the reft to ply up and down, and not anchor. Sir William was glad of this occafion, to be revenged of the galleys, hoping to requite the flavery they put him to when he was prifoner in them, and fingled himfelf from the fleet a league, that the galleys might fee it was in defiance of them; and fo the marquis of St. Cruz and Frederick Spinola, the one general of the Portuguefe, the other of the Spanish galleys, apprehended it, and came forth with an intent to fight him; but being within fluit, were diverted by one John Bedford, an Englishman, who undertook to know the force of the ship, and Sir William that commanded

Before I go farther, I will a little digress, and acquaint you with the fituation of the town, and the manner of placing the galleys against us. The town of Cerimbras lies in the bottom of a road, which is a good fuccour for ships with a northerly wind. It is built with free-stone, and near the fea is erected a strong and spacious fort, well replenished with ordnance: above the town, upon the top of a hill, is teated an ancient itrong friery, whose fituation makes it impregnable, and able to command the town, caftle, and road : close to the shore lay the carrack, like a bulwark to the west side of the cattle, so as it defended both that and the east part of the town. The eleven galleys had flank'd and fortify'd themselves with the small neck of a rock on the west side of the road, with their prows right forward, to play upon us, every one carrying a cannon in her beak, befides other pieces in their prows; and they were no way to be damaged by us, till our ships came so nigh the town, that all thefe forces might play upon us in one

The galleys being placed to this great advantage, they made account (as a captain of one of them we took confess'd,) to have funk our fhips of themselves, without any farther help. We saw the tents pitched, and great troops of foldiers drawn together, which was no less than the whole country in arms against us: the boats paifed betwixt the shore and the carrack all the day long, which we supposed was to unlade her; but we found afterwards it was rather to strengthen her with men and ammunition. Here appear'd many difficulties and dangers, and little hope of taking, but rather of finking or burning her, as more men conjectur'd. The danger from the galleys was great, they being flank'd with the point of a rock at our entrance, as you have heard, it being likewife calm, and they shooting low: another danger was, that of Book I. 1602, the

And notwithstanding these, and many more apparently feen, and that there was no man but imagin'd that most of the carrack's lading was afhore, and that they would hale her a-ground under the caftle, where no fhip of ours should be able to come at her; all which objections, with many more, were alledg'd, yet they little prevail'd. Procraftination was perilous, and therefore with all expedition they thought convenient to charge the town, the fort, the galleys, and carrack, all at one inftant: and they had determin'd, if the carrack had been aground, or fo nigh the shore, that the queen's thips could not reach her, that the two Entlerlings, the day before taken, should board and burn her.

Thursday the third day, early in the morning, every man commending himfelf to God's tuition and protection, expected when to begin, according to the agreement the day before. A gale of wind happening about ten of the clock, the admiral weigh'd, fhot off a warning-piece, and put forth his flag in the main-top. The vice admiral did the like in his fore-top, according to the cuftom of the fea. Every captain encourag'd his men; which to emboldened them, that though they were weak and feeble before, they now revived and bestirred themselves, as if a new spirit had been in-The admiral was the first fus'd into them. that gave the charge; after him follow'd the rest of the ships, shewing great valour, and gaining great honour. The last of all was the vice-admiral, who entering into the fight, still strove to get up as near the thore as he could, where he came to an anchor, continually fighting with the town, the fort, the galleys, and carrack, all together; for he brought them betwixt him, that he might play both his broad-fides upon them. The galleys still kept their prows towards him. The flaves offer'd to forfake them, and fwim to us; and every thing was in confusion amongst them: and thus they fought till five of the clock in the

The vice-admiral was anchor'd in fuch a place, that the galleys rowed from one fide to another, feeking to fhun him, which Sir Richard Lexeson observing, came on board him, and openly, in the view and hearing of his whole company, embraced him, and told him, He had won his heart for ever.

The rest of the ships, as they were directed, plied up, except the admiral; who by the negligence of his mafter, or fome other impediment, when he should have anchor'd, tell to far to leeward, that the

wind and tide carried him out of the road, 1602. fo that it was the next day before his ship could be fetch'd in again; whereat the admiral was much enrag'd, and put himfelf into the Dreadnought, and brought her to an anchor, close to the vice-admiral, about two of the clock in the afternoon. There was no opportunity let pass; for where the admiral faw defect in any other ship, he prefently caused it to be supplied; and the Lafterlings, who were appointed to board the carrack, beginning to faint, and fail of observing the directions given them, the vice-admiral perceiving it, went on board them himfelf, vowing, that if they feem'd backward in putting in execution the defign of firing the carrack, they should look for as little mercy from the English, as they Whilft the could expect from the enemy. vice-admiral was thus ordering things, Sir Richard Lewfon came to him, and would in no case suffer him to board the carrack himfelf, but carried him into the Dreadnought, where they confulted how to preferve the carrack, and enjoy her.

The refult of this confultation was, to offer her parley, which they prefently put in practice, and commanded all the fhips to leave shooting till the return of the messenger. The man employed was one captain Sewell, who had efcaped, and fwam to us, having been four years prisoner in the galleys, as did many Turks and christians. The defign of this parley was to perfuade them to yield, promising honourable conditions; and he was to intimate, as from himself, that the galleys, whose strength they prefum'd upon, were beaten, fome burnt, the reft fled; that we had the poffession of the road, the castle not being able to abide our ordnance, much less the carrack; and if they refused this offer of mercy, they were to expect all the cruelty and rigour that a conqueror could impose upon his enemy. After fome conference to this effect, the captain of the carrack told him, he would fend fome gentlemen of quality, with commission to treat, and defir'd that fome of like quality from us might repair to him to the same purpose.

Thefe gentlemen came aboard the Dreadnought, where the admiral and vice-admiral were, attending the return and fuccess of captain Sewell. After the delivery of their meffage, they would needs haften on board the carrack again; for that, as it feem'd, there was an uproar and a division in her, fome being of opinion to entertain a parley, others to fave themselves, and set her on fire; which Sir William Monjon hearing, without further delay, or conference with Sir Richard what was to be done, he leaped fuddenly into his boat, and rowed to the carrack. When he drew near to her,

1602, he was known by divers gentlemen on

board her, as having once been a prisoner among them: they feem'd to be very glad of this meeting, and they embrac'd in re-membrance of their old acquaintance: the captain was Don Diego Lobo, a gallant young gentleman, of a noble house: he came down upon the bend of the ship, and commanded his men to fland afide; Sir William did the like to his company in the boat. The captain demanded of him if he had the Portuguese language. He told him he had enough to treat of that business; acquainted him of the place he commanded in the fleet. intimated the affection and respect he bore to the Portuguese nation, and that the treaty which was offer'd was his motion, and wished him to make his proposals, which were as follows. The first demand he made was, That they should be safety put ashore with their arms. The second, That it should be done the same night. The third, That they should enjoy their ship and ordnance, as agpertaining to the king, but we the wealth. The fourth, That the flag and ancient should not be taken down, but worn while the car-rack was unlading. His speech being end-ed, Sir William told him, That his demands gave suspicion, that under pretence of parley, they meant treachery, or that their hopes were greater than there was cause; and but that be knew it was the use of some men to demand great things, when less would serve them, be would not lose his advantage to entertain a parley. He defired that what they intended might be quickly concluded, for night growing on might advantage them, and for his refolution he should understand it in few words, viz. To his first demand, He was willing to yield, that they should be put ashure with their arms. To the second, ashure with their arms. That be was content they should be set ashore that night, except eight or ten of the principal gentlemen, whom he would detain three days. To the third, He held it idle and frivolous to imagine be would confent to separate ship and goods, and look'd upon it as a jest. the fourth, He would not consent, being refolv'd never to permit a Spanish flag to be worn in the presence of the queen's ships, unless it were disgracefully, over the poop. There was long expostulation upon these points; and Sir William Monson seeing the obstinacy of the captain, offer'd in a great rage to leap into his boat, refolving to break the treaty; which the rest of the gentlemen perceiving, and that he had propounded nothing but what might very well stand with their reputation, they intreated him once more to afcend into the carrack, and they would enter into new capitulations: the effect whereof, as it was agreed upon, were thefe that follow:

That a meffenger should be sent to the

admiral, to have his confirmation of the 1602. points concluded on; and that in the mean time the flag and ancient should be taken down, and if the admiral should not confent to the agreement, they to have leisure to put out their flag and ancient before the fight should begin. That the company should be presently set on shore; but the captain, with eight others of the principal captain, with eight others of the principal gentlemen, three days after. That the ship, with her goods, should be surrendered, without any practice or treason. That they should use their endeavours, that the castle should forear shooting whils we rid in the road; and this was the effect of the conditions agreed upon. This carrack winter'd in Mosembique, in her return from the Indies, a place of great infection, as appear'd by the mortality among them; for of fix hundred and odd men, twenty liv'd not to return home. After a great deal of calamity and mortality, fhe arriv'd at this port of Cerimbra, as you have heard, the viceroy of Portugal having fent eleven galleys to her refcue, and four hundred Mocas du Camera, which is a title of gentlemen that ferve the king upon any honourable occasion, when they are commanded. That the was brought to this pass, and forced to yield on these conditions, Sir Robert Cecil was wont to impute to the gentlemens acquaintance with Sir William Monson. Though three days were limited for fetting the captain on shore, yet it was held discretion not to detain them longer than till the carrack was brought off fafely to our ships; and therefore Sir William Monfon having carried the captain, and the rest of the gentlemen aboard him, where they supped, had variety of mulick, and spent the night in great jollitry. The morning following he accompanied them affere himfelf, whither the Conde de Vidigueira had drawn down all the force of the whole country, amounting to the number of twenty thoufand men.

I must not omit to describe the behaviour of the galleys in the fight, that every man may have that honour that is due to him, Those of Portugal, being of the squadron of the marquis of St. Cruz, betook themfelves, with their general, to flight in the middle of the fight; but Frederick Spinola, who was to convey his galleys out of Spain into the low countries, follow'd not the example of the marquis, but made good the road; which the other feeing, with fhame return'd, but to both their costs; for before they departed, they found the climate so hot, that they were forced to fly, their galleys being so miserably beaten, and their flaves fo pirifully flain, that there wanted nothing but boats to possess them all, as well as the two we took and burnt;

1602. which is a thing has been feldom feen or heard of, for fhips to take and deftroy galleys. The number of men flain in the town, the cattle, the carrack, and galleys, is unknown, though they could not chuse but be many. The wealth of the carrack could then as ill be estimated, though after found to be great. The value of the two galleys burnt, with their loading of powder, is hard to judge, though it's known to have been a service of great importance. For our loss, it was not much, only one man kill'd in the sty-boat, sive slain, and as many hurt in the Carland, and one hurt in the Adventure. Sir William Monson had the left wing of his doublet shot off, but

receiv'd no other hurt. The day following, with a favourable wind, we stood our course for England, which brought us into forty feven degrees; and there we met a pinnace, fent with a packet from the lords, fignifying the rea-diness of a second seet to supply us, and the fetting out of the Hollanders which were fo long look'd for; which fleet of Holland was in view of the pinnace the fame night, but passed by us unseen. This unlook'dfor accident made the admiral and viceadmiral confider what to do, and concluded they could not both appear at home, and leave a fleet of fo great importance upon the enemies coast without a guide or head; and therefore they held it fit the vice-admiral should put himself into the Nonpareille, as the ablest ship of the sleet, and make his return once more to the coast of Spain. But he having taken his leave, and standing his course for the coast, a most violent storm, with a contrary wind, took him, which continued ten days, and discovered the weakness of his ship, who had like to have founder'd in the deep. The carpenters and company feeing the apparent danger, if he bore

a petition, befeeching him to have regard to their lives; for by keeping the feas, they should all perish. Thus was he fore'd by mere extremity to bear for England; and coming for Plimouth, he found the carrack fafely arriv'd, and the sleet he went back to take charge of, not to have quitted the coast of England.

of England.

Though it be formewhat impertinent to this voyage, to treat of more than the fuc-cess thereof, yet I will a little digress, and relate the misfortune of that worthy young gentleman Don Diego Lobo, captain of the carrack; and because his worth will more appear by his answer to Sir William Monson's offer to him when he was his prisoner. Thus it was; Sir William Monfon told him, he doubted, that by the loss of the carrack, he had lost his best means; for that he supposed, what he had gain'd in the Indies was laden in her, and therefore offered, That what he would challenge upon his reputation to be his own, he should have freedom to carry along with him. The gentleman acknowledg'd the favour to be extraordinary; but replied, That what he had, he gain'd by his (word, and that his fword, he doubted not, would repair his fortunes again, utterly refusing to accept any courtefy in that kind. But, poor gentleman, ill fortune thus left him not; for the vice-roy, Don Christoval de Mora, holding it for a great indignity to have the carrack taken out of the port that was defended by a castle, and guarded with eleven gal-leys, and especially in his hearing of the ordnance to Lisbon, and in the view of thousands of people who beheld it; some of them feeling it too, by the loss of their goods that were in her, others grieving for the death of their friends that were flain; but every man finding himfelf touched in reputation.

to be apprehended, imputing the loss of the carrack to their cowardice and fear, if not treason and connivance with the enemy. After some time of imprisonment, by mediation of friends, all the gentlemen were Z z releas'd

1602. leafed but the captain; who received fecret was no more than one gentleman was bound 1602. advice, that the viceroy intended his death; and that he should seek by escape to prevent it. Don Diego being thus perplexed, practifed with his fifter; who finding means for his escape out of a window, he fled into Italy, where he lived in exile from 1602. when this happened, till 1615. His government of Malaca in the Indies, for which he had a patent in reversion, was confifcate, and he left hopeless ever to return into his native country, much lefs to be reftored to his command; an ill welcome after fo long and painful a navigation. Having thus fpent thirteen years in exile, at the last he advised with friends, whose counsel he followed, to repair into England, there to enquire after fome commanders that had been at the taking of the carrack, by whose certificate he might be cleared of cowardice or treason in the loss of her, which would be a good motive to restore him to his government again. In the year 1515, he arrived in London, and after some enquiry found out Sir William Monson, to whom he complained of his hard mishap, craving the affiflaffice of him and some others, whom Sir William knew to be at the taking of the carrack, and defired him to teftify the manner of furprizing her, which he alledged,

to afford another in fuch a cafe,

Sir William wondered to fee him, and efsecially upon fuch an occasion: for the prefent he entertain'd him with all courtefy; and the longer his stay was in England, the courtefies were the greater which Sir William did him, who procured him a true and effectual certificate from himfelf, Sir Francis Howard, Captain Barlow, and fome others who were witnesses of that service; and to give it the more reputation, he caused it to be inrolled in the office of the admiralty. The gentleman being well fatisfy'd with his entertainment, and having what he defired, returned to Flanders, where he prefented his certificate to the archduke and the Infanta, by whose means he got affurance, not only of the king's favour, but of restitution likewise to his government. The poor gentleman having been thus tofs'd by the waves of calamity from one country to another, and never finding rest, death, that masters all men, now cut him off fhort in the midst of his hopes, as he was preparing his journey for Spain; and this was the end of an unfortunate gallant young gentleman, whose deferts might justly have challenged a better reward, if God had pleased to afford it

Sir William Monfon to the Coast of Spain, Anno 1602.

Commanders.

Sir William Monson. Captain Trevers. Captain Cawfield. Captain Norris. Captain Brodgate. Captain Browne. Captain May. Captain Jason. Captain Hooper.

THE fleet of Sir Richard Lewfon being happily returned, with the fortune of a carrack, as you have heard, and the queen having now no ships upon the Spanish coast, to impeach the enemies preparations, she feared the fleet which was ready at the Groyne, would give a fecond affault upon' Ireland; whereupon Sir William Monfon, who by this time was arrived at Plimouth, was fent for in great hafte by her majesty, to advise about, and take on him the charge of the fleet then at Plimouth. After a long conference with Sir William Monson, in the presence of her majesty, her lord admiral, treasurer, and secretary, it was resolved, That Sir William should repair to Plimouth, and with all speed get forth those ships, and others that were there making ready. His

directions were to present himself before the 1601. harbour of the Groyne, being the place where the Spaniards made their rendezvous; and if he found any likelihood of a defign upon Ireland, not to quit that coast till he faw the iffue; but if he found Ireland fecure, and the enemies preparations to be intended only for defence of their own coasts, then his instructions led him thence, to the place where the Holland fleet had order to attend and expect him: and afterwards the whole carriage of the action was referred to his discretion; but with this caution, that above all respects of other profit or advantage, he attended the affair of Ireland. The wind this part of the fummer hung contrary, and it was fix weeks before he could clear the coast, during which time he

1602. loft his greatest hopes, by the return of the carracks of the Indian fleet, which happen'd a full month before his arrival. He fet fail from Plimouth the last of August, with a feant wind, which continued with foul weather till he recovered the Groyne, chufing rather to keep the fea, than hazard the overthrow of the voyage by his return.

He flay'd at the Groyne till he understood that the fleet, which was suspected to be prepared for Ireland was gone to Lisbon, to join with Don Diego de Borachero, who all that fummer durft not budge forth for fear of our fleet that made good the coast thereabouts. Sir William in his way to the Rock, commanded his carvel to repair to the islands of Bayona, as the likelieft place to procure intelligence of the state of those parts. As the carvel drew near the islands, she difcerned the Spanish fleet, confifting of twenty four fail, whose defign was, as she underflood by a boat she took, to look out the English fleet, whose coming they daily expected upon the coaft; and meeting Sir William with this news, he held it a good ferzice to be thus warned of them. Here he took two goodly ships of France, bound for Lisbon, which harbour he put them from, and took pledges, that they should directly return into France, without touching in any harbour of Spain; for that he understood the Spanish fleet was ill provided of men, and many other things, which these ships could supply. Sir William and the Dreadnought were carried with a chase into the road of Cerimbra, where the carrack was taken not long before; and after fome fight with the caftle, who defended the veffel chafed, they came to a friendly treaty, and prefents paffed between them.

That night, while the admiral rid in the road, a carvel coming in, not miftrufting him, was taken, but difmiffed in a friendly manner; by whom he understood the affairs of Lisbon, but could get no notice of the Holland fleet, which was appointed to attend at the Rock, whither once more he repaired.

Coming thither the 26th of September, a light was spied in the night, which the admiral chased, thinking it had been the seet of St. Tome, or Brazil, bound for Lisbon, where they were expected; but drawing fo near them, that he might hail them, he found them, by the hugeness of their vessels, and the number, which answered the relation the carve! made, to be the Armada of Spain: whereupon he fought means how to clear himself, being engaged amongst them, and made a Spaniard that served him call to them, but they could not hear him; the Adventure only and the Whelp were left with him, the rest losing company four nights before in a storm. The enemy perceiving

our lights, and thinking it to be some fleet 1602. of Flemmings, stood in amongst us; but the Adventure being discovered to be an enemy, the alarum was foon taken, and they shot at her, and slew and hurt some of her men. As foon as the day appeared, the Spaniards beheld the three English ships a-head of them, which they chased; and three of them, which were better failors than the rest, fetch'd upon us, and drew near the Whelp, who was of small force to resist

But the admiral refolving, though it was to his own evident peril, not to fee a pin-nace of her majefty's fo loft, if he could rescue her with the loss of his life, though it was much against the persuasions of his rafter and company, he struck his two fails for the Whelp, and commanded her to stand her course, while he staid for the three Spanish ships, with hope to make them have little lift to pursue us. The admiral of the Spaniards perceiving how little he cared for his three ships, in that he lingered for their coming up, took in with the shore, and that off a piece for his three thips to follow him. It may appear by this, as by feveral other expeditions of ours, how much the fwift failing of fhips does avail, being the principal advantage in fea-fervice; and indeed the main thing we could prefume upon in our war against the Spaniards. Sir William having thus escaped the enemy, in his traverse at sea there happened, as there does upon all coasts where there is plenty of trade, divers occasions of chases; and one day Sir William following one ship, and the Adventure another, they loft company for the whole voyage.

Sir William was advertised by a ship he took, being a Frenchman, who came from St. Lucar, that the St. Domingo fleet was looked for daily; which intelligence made him bear up for the South Cape, as well in hopes to meet with them, as to have news of his fleet.

He was no fooner come to the cape, but he was informed by some English men of war, that the St. Domingo fleet was paffed by two days before: here he met with ships of feveral nations; fome he refcued from pyrates, and to others that were in league with her majefty, he gave his fafe-conduct for their free passage on the sea. He kept that coast till the 21st of October, on which morning he gave chase to a galleon of the king of Spain, who recovered the castle of Cape St. Vincent before he could fetch her up; though he knew the strength of the castle, yet he attempted, and had carried her, had it not been for the fear and cowardice of him at the helm, who bore up when he was ready to board her. fight was not long, but fharp and dange1602. rous; for there nev r past shot between them, till they were thin a ship's length one of another. The castle play'd her part, and tore the Swiftfure, so that a team of oxen might have crept through her under the half-deck, and one shot killed seven men. Between the castle and the galleon they flew in the admiral ten men, and hurt many more, in the view of Siriago and his fquadron to the westward, and of divers English men of war to the eastward, who durst not put themselves upon the rescue of Sir William, for fear of the castle. Sir William being now left alone, and feeing what head-land feever he came to, he was to encounter a Spanish squadron, stood his course that night to fea, thinking to try if the islands of Tercera would afford him any better fortune; but coming within forty or fifty leagues of the islands, he was taken fhort with the wind, yet still bearing up what he could for the rock; but at length finding his victuals grew short, his mast perished, and the dangers he was exposed to, by keeping that coast, he directed his course for England, and came to Plimouth the 24th of November, where he found the Mary Rose and Dreadnought, most part of their men being dead or fick.

The Adventure arrived within an hour mander, and belonged to Sir George after him, who in her way homewards fell then governor of the Isle of Wight.

amongst the Brazil fleet, and encountering 1602. with them, lost divers men, but took none. The Paragon was at home long before, with a prize of fugar and spices, which countervailed the charge of the voyage. The Quit-tance in her return, met two ships of Dunkirk; and in fight with them, her captain was flain; but she acquitted herself very well, without further harm. This fleet, as you have heard, was to keep the enemy busied at home, that he might be diverted from the thoughts of Ireland; what hazard it endured by the enemy, the fury of the fea, and foul weather, does appear: and no marvel; for it was the latest fleet in winter that ever kept upon the Spanish coast; as it was likewise the last fleet her majesty employ'd; for in March after the died, and by her death all war ceafed. As Sir William Monfon was general of this last fleet, fo he was a foldier, and a youth, at the beginning of the wars; and was at the taking of the first Spanish prize that ever faw the English coast, which yet was purchased with the lois of twenty five of our men, befides fifty hurt. This prize was afterwards a man of war, and ferved against the Spaniards, and was in those days reckoned the best ship of war we had: she was called the Commander, and belonged to Sir George Carew.

SIR William Monson returning with his fleet in November, there was a resolution to furnish another against February, which should be recruited with fresh ships, men, and victuals, in June. Sir Richard Lewson was to command the first steer, and Sir William Monson the latter; for the queen found it a course both secure and profitable, to keep a continual force upon the Spanish coast, from February to November, that being the time of the greatest peril to her majesty; and she was the rather encouraged thereto, by the safety she found the last summer, and the wealth and riches she had from time to time taken from the enemy. The

complaint of the ill furnishing out of her 1603. hips in other voyages, made it more carefully to be looked to now, and there was better choice of victuals and men than usually had been; but in the mean time, it pleased God to visit her majesty with sickness, which caused a lingering, though no absolute dissolving of the steet; but (when her danger was perceived to increase, the ships were hastened out to sea, it being a point of good policy, to keep our seas guarded from any foreign attempt, till his majesty should be peaceably settled in England.

This

This fleet departed from Queensborough the 22d of March, and artiv'd in the Downs the 25th of the same, being the day after her majesty's death. The news whereof, and commandment to proclaim king James the fixth of Scotland our lawful king, and the rightful inheritor to the crown, arriv'd both together; which put us into two contrary passions, the one of grief, the other of joy; grief for the loss of the queen, joy for accepting of the king in that peaceable manner; which was a happiness beyond all expectation, either at home or abroad.

As the defign of this fleet was to guard and defend our own coasts from any incurfion that might be made out of France or
the low countries; so the commanders were
vigilant to appear on those coasts once in
two days, to dishearten them, in case they
had any such thought: but the truth is,
it was beyond their abilities, whatever was
in their hearts, to impugn his majesty: and
because the archduke would make the can-

didness of his intention apparent to the 1603. world, he call'd in his letters of reprifal against the English, and published an edict for a free and unmolested trustick into Flanders; so that now our merchants might again trade peaceably into those parts, from which they had been debarr'd the space of eighteen years. The king finding that France neither impeach'd his right, nor gave any jealoufy by the raifing of an army; and that the archduke made a demonfirstion of his defire of peace, his majesty did the like, acknowledging the league he had with those princes, with whom the late queen had wars; for wars betwixt countries are not hereditary, but commonly end with the death of their kings; wherefore he commanded his ships to give over their fouthern employment, and to repair to Chatbam, giving manifest testimonies, how defirous he was that his subjects should recover that wealth and freedom by peace, which they had formerly loft by war.

The Voyage of the Earl of Cumberland to the Island of Puerto Rico, and the Reasons why it is inserted at the End of this first Book.

SHALL exceed my first design, by adding this voyage to Puerto Rico to the rest of her majethy's actions, or those where her ships were employed at the charge of others; yet because this was the greatest undertaking by subjects, without the help or affistance of the queen, both in number of ships and land forces, being surnish'd as well for land as sea service, as also because so great a person as the earl of Cumberland took upon him the command of it, having by several voyages before attain'd to a perfect knowledge in sea-affairs; for these reasons I have inserted this action to Puerto Rico among the rest of the queen's, aforesaid.

The earl being naturally addicted to the fea from his youth, as may appear by his undertakings, the first shew whereof was in a voyage he undertock at his great charge and expence in 1586. intending his ships should pass to the South Sea by the Streights of Magellan; but unadvifedly they fail'd. After this he made fundry adventures in his own person, as in the former discourse is declar'd; and he often obtain'd the favour of her majethy, to affist him with some of her ships; which she was the more willing to grant, to encourage him in his enterprizes, and to cherish the forward spirit of io great a person.

But at laft my lord began difcreetly, to confider the obligation he had to the queen, for the loan of her flips from time to time, and withal weigh'd what fear and danger he brought himself into, if unluckily any

of those ships should missarry; for he valued the reputation of the least of them at the rate of his life.

Upon these considerations, no persuafions being of force to divert him from his resolution of attempting some great action on the sea, where he had spent much time and money, and thinking thereby as well to enrich himself, as to shew his forwardness to do his prince and country service, he resolved to build a ship from the stocks, that should equal the middle rank of her majesty: an act so noble and so rare, it being a thing never undertaken before by a subject, that it deserv'd immortal same.

This fhip, which he nam'd the Malice-Scourge, (for by that name it feems he tafted the envy of fome that repin'd at his honourable atchievement,) was eight hundred tuns burthen, proportioned in all degrees to equal any of her majefty's ships of that rank, and no way inferior to them in failing, or other property or condition of thirs.

thips.

When built, the had feveral employments to fea, whilft my lord was owner of her, and prov'd as all other thips and men usually do, fometimes fortunate, and fometimes otherwise; for there is nothing that a man can account firm or stable in this world, especially where the fea hath the most predominant power.

And for her last farewel to sea, my lord perform'd this voyage to Puerto Rico in her; where he had trial of her goodness and wholesomeness in the sea, by the violent

h

10

th

1603. ftorms he endur'd, better than most part of his fleet.

It was not the ceasing of warlike actions by the king's coming to his crown, who brought peace with him, that made this hip cease from doing the part for which she was built: but another, while she was employed by the merchants of the East Indies, who bought her for that trade, and whither she reforted, and made two happy returns: but in her third, what by soul play and treachery, she became a prey to the Hollanders, where she ended her days in stre, being worthy of a far better suneral.

My lord being aboard this ship, (the Malice-Scourge,) and having divers others of burthen and strength under his command, he set sail from Plimouth the 6th of March, 1597. Besides his general design to take, to destroy, or any way else to impoverish and impeach the king of Spain, or his subjects, he grounded his voyage upon two hopes, the first more probable than the second, in my opinion, who undertake, as I have said before, to observe the errors committed in such voyages.

From Plimouth he directed his course to the mouth of the river Tagus, upon which river the city of Lisbon is seated, that sends forth yearly a number of ships to the East Indies, called carracks, and that in the month of April. There was no question to be made of the certainty of their departure, because if they stay beyond that month, they meet with much bad weather, and cannot weather the capes south of the line in their voyage to the Indies, but particularly that of Good Hope.

My lord's principal end in this voyage was to intercept those carracks, which for burthen exceed all other ships in Europe, and go full freighted with commodities for the East Indies, besides the abundance of money transported in them, which would have enrich'd my lord abundantly, and the rest of the adventurers.

Against the time they should depart out of harbour, my lord appear'd with his sheet before it, which did so much dishearten and dismay the Portuguese, that rather than they would put themselves in hazard of him and his sheet, they chose to give over their voyage, and lose the excessive charge they had been put unto in surnishing their ships, by means whereof their carracks lay at home, without employment the whole year after.

Besides the profit my lord proposed to himself by this project thus frustrated, it tended to a matter of greater consequence to the state of England, if it had prov'd successful; for you must understand that in the East Indies they are prohibited planting of vines, and want many other things for their

fustenance, with which they are supplied yearly out of Portugal, that the Indies may not substit without Portugal. Then let us consider what hindrance and losses both Portugal and the Indies receiv'd, by hindering their ships from going to the Indies that year.

And if one year prov'd fo prejudicial to them, what would three or four years have done, if they had been so serv'd and prevented? It would have reduc'd them to great want, and forc'd them to accept of a friendly traffick with us; or in time we might have divided the Indies from Portugal, especially if we had carried a younger son of Don Antbony, whom no doubt they might have been forc'd to accept as king.

The error committed in the profecution of this voyage, must be imputed to my lord himself, in not forecasting how to prevent the hazard and fears that might be impediments to his defign; therefore he worthily deferved blame, to present himfelf and fleet in the eye of Lisbon, to be there discover'd, knowing that the secret carriage thereof gave life and hope to the action. By a familiar example of a man that being fafely feated in a house, and in danger of an arrest, knows that catchpoles k him, and yet notwithstanding lie to ... ure abroad, and not feek to o; to fared it with the carracks avo. at the time, who rather chose to keep themselves in harbour, than venture upon an unavoidable danger.

If my lord had done well and providently, his fleet should have been surnished without rumour, noise, or notice, in several harbours in England; the men that went in them not to know or imagine the design of their voyage, or that they should meet to compose a main fleet, till they were come to the heighth the carracks were to fail in; and after that each captain to have open'd their directions, with a special caution not to appear within sight of the shore, for sear of discovery. This way, and no other there was, to lull the Portuguese into security, or to avoid mistrust, till they had fallen into their hands.

My lord's other hope, if this should fail, was to give an attempt with his land forces, either upon some island or town that would yield him wealth and riches, being the chief end of his undertaking; and after many propositions made at council, his refolution was to make an attempt upon the island of Puerto Rico, in which island there is a town of convenient bigness and strength, which my lord not long after took and possessed, with little loss of men on either lide, because they came to composition.

Herein lies my part to except against this defign of my lord's, as I promis'd in my

ept against this
romis'd in my

1603. former relations; for whereas all mens actions have a reasonable shew of likelihood of good to redound to them in their intended enterprizes, yet cannot I conceive how a land attempt upon towns could yield my lord any profit, or the merchants that adventur'd with him; for my lord by experience well knew, having been himself at the taking of some towns, that they afforded little wealth to the taker, because riches of value will be either buried, or fecretly conveyed away. And for merchandizes of great bulk, which that poor island yielded, it was only fome few hides, black fugar, and ginger, which would not amount to any great matter, to countervail the charge of fo coftly a journey.

Commonly that island sends out two or three ships of a reasonable burthen to transport the yearly commodities it yieldeth, for though it have the name of being in the Indies, yet it is a place remote, and unfrequented with traffick, either from the Indies, or any other place: or though the island should be surprized at such a season of the year as their commodities were ripe, and ready for transportation, yet the value is not to be esteem'd, where so many people that adventur'd with my lord were to look for a dividend according to their adventure.

And yet I will not deny, but by accident this island was made worthy an attempt upon it, by example of Sir Francis Drake and Sir John Hawkins, who, as you have heard, fail'd thither on their own account, Anno 1595. and their defeat made it the more admir'd, and purchas'd my lord's greater honour, in that he carried it with a smaller number of men, and less loss than Drake was repulsed.

But because time and opportunity alter the circumstances of things, therefore, to fatisfy these common and vulgar people, who judge according to event, and not to reason, you shall understand the difference, and the cause that made the difference betwixt Sir Francis Drake in the year 1595. and the earl of Cumberland in 1598.

Sir Francis Drake was commanded thither

by directions from the queen; not that fhe expected profit or benefit from the ifland, which fhe well knew, of itfelf, was unworthy any enterprize; but what fhe did was upon intelligence fhe receiv'd of a galleon of plate; which, with the loss of her maft, was forced into that ifland, as I gave an account, when I treated before of that voyage of 1595.

In the mean time five frigates were preparing in Spain to bring home that treafure, and in them to the number of eight or nine hundred foldiers, who, in their course to Puerto Rico surpriz'd a pinnace of Sir Francis Drake's fleet, that gave in-telligence of his defign, as well against that place as Nombre de Dios, whither he was bound; by which accident his defigns were prevented, and the enemy had leifure to fortify, strengthen, and man the town with the foldiers brought in by the frigats, which made Sir Francis Drake fuddealy and dishonourably retire, with the loss of divers gentlemen and others of good quality. This misfortune was supposed to haften the death of Sir John Hawkins, who then died, after he had feen himfelf thus

My lord might as well have consider'd, that no use could be made of the situation of that siland, as of other silands of less value and riches there might be; as for instance, the Tercera, which, though the soil yields not that plenty and profit Puerto Rico does, yet by our inhabiting it, the Spaniards and Portuguese would find great annoyance in their returns from their Indies, Brasili, and Guinea; in which seas our ships would continually lie, and endeavour cutting them off: as on the contrary, Puerto Rico is seated so lonesome, that they have searce the sight of a ship in the whole year, except those sew of their own I have formerly spoke of.

And thus much for my exception against my lord's voyage to *Puerto Rico*. Now will I collect some brief proceedings in that voyage, taken out of the printed copy publish'd by Dr. *Lafeild*, chaplain to my lord in that expedition.

Bool 1603.

Captain Jolliffe. Captain Careless. Captain Goodwyn. Captain Bromley. Captain Dixon. Captain Lea. Captain Harper.

My lord, with the ships aforesaid, being furnished with all things necessary for fuch a fleet, set sail from Plimouth the 6th of March, 1597, and directed his course for cape Finister, the northermost cape of

The Old Frigat.

But before he could reach that coaft, he found a defect in his main maft, which was almost perished, and he forced to favour it with a stack fail, until he arrived at the island of the Burlings, over against Peniche in Portugal, where he anchor'd, and commanded his fleet to keep a good distance off at fea, to avoid being discovered from the shore, knowing that the hopes of his voyage confifted in fecrecy

He was not many days fitting his maft, having carpenters and materials enough for difafters: but notwithstanding his direc-tions to his ships to stand off to sea, it could not keep the enemy from knowledge of them at Lisbon, where the carracks lay ready to depart; and thus the expectation of my lord's voyage was frustrated; for the carracks being fallen down as low as the bay, ready to fail, they were instantly commanded to give over their voyage, and return to Lisbon.

My lord finding it bootless to expect any good of the carracks, upon which the grounds of his voyage depended, directed his course to the Canaries, rather to refresh his men afhore, who were raw foldiers, and wearied at fea, than out of expectation of gain, or any way to annoy the enemy: he landed without resistance at the poor island of Lanfarotte, and the rather, because he was made believe a marquis liv'd there, who, being taken prisoner, would yield ten thoufand pounds ranfom; but the projector knew as little of the truth thereof, as he did of the place when he came to land.

This miferable island afforded nothing

but earth to walk on, and fome little store of wine, not worth the speaking of; and yet, as fmali a quantity as it was, it put his company into a mutinous diforder of drunkenness, that to pacify them, my lord was forc'd to use threats and the rigour of his commission, and to admonish them how to carry themselves ever after, upon danger and peril of their lives.

The 21st of April he fet fail from thence, and being off at fea, he call'd a council; in which he proposed to his captains, Whether, in their opinions, it was better to direct his course for Fernan-Buco in Brazil, or Dominica in the West Indies, and there to take a new confultation. After long discussing this point, every man having the liberty to use his best argument, it was at last resolved for Dominica, whither he haften'd, and landed there on the 23d of May. Having water'd, (for the island afforded nothing elfe,) he ftood for the island of Virgines, a place unpeopled, where he landed, and muster'd his foldiers, and found the greatest part of them both rude and raw.

At this island he was not far from Puerto Rico, whither his former refolution led him: my lord himfelf went in his boat to view a convenient landing-place, and found a fandy bay fit for his purpose; whereupon he instantly put his men ashore on the 6th of June, where he found no refiftance; and because there needs no long account of the affault he gave to the outworks, before his approach to the town, I shall say no more, to avoid prolixity, but that in two days he took both town, fort, and what else were impediments to his enterprize,

Having brought the enemy to his mercy, he carry'd himfelf both nobly and with pity: and whereas in fuch tumults diforders cannot be avoided, yet if they appeared, or were made known to him, he pu-

1603. nished the actors with great feverity, and in fight of the Spaniards, who beheld the juffice of his carriage.

We have one inflance of it in a valiant foldier, who otherwife had deferved well, and whom, for having committed violence upon the wife of a Spaniard, my lord, without hearkening to mediation or mercy, hanged in the publick mar-ket-place. A failor had been fo ferv'd for deficing the church, but by the importunity of other failors (for at that time there was occasion to please them above foldiers) my lord forbore his execution after he was brought to the gibbet. As the fleet lay in harbour, upon St. Peter's-Day there was a fhip came bearing in amongst them from Angola in Africk, laden with blacks, a commodity that country does chiefly deal in, and was there fecured: another had been to ferved, but that feeing fo many ships in the harbour, she suspected they could not be Spaniards, and so escaped. There was another which came from Trinidad; but of fo fmall value, that the is

After all things were thus quieted and fettled in the town, there was a confultation whether it should be kept or quitted; but in the end one reason prevailed against all objections, which was a fudden fickness among the foldiers, which in a few days fwept away four hundred of them.

not worth mentioning.

There was nothing more to do now but to embark ordnance, and goods as the town afforded, which confifted of hides, ginger, and coarse sugar, things of small value to countervail fo great an expence as that of this voyage: in fine, he returned into England. It is needless to set down accidents at sea; but he arriv'd safely in the month of October following.

And thus much concerning the voyages. fucceffes, defigns, and commanders, from the year 1585 to 1603, that the wars ceased; wherein it plainly appears how conquering and victorious our nation has been in their latter actions at fea: and to add the more to their honour, you must observe the exploits they have performed by land in the land-voyages, in taking and spoiling of towns, ports, fortresses, and other places of moment, which for a time they have enjoyed and poffes'd in the feveral dominions of the kings of Spain, as namely, in the Indies, Brazil, Spain, Portugal, the islands; and farther than all thefe, in the South Sea, which at that time no nations failed to but the Spaniards themtelves, till the voyage of Sir Francis Drake and Mr. Cavendifb.

The Taking of these Places following is to 1603, be justify'd by the Lawfulness of a War begun 1585, between England and

Sir Francis Drake at his first voyage, which was in the year 1585, took thefe places following in the West Indies.

Fernando Buco taken and quitted, and the carracks and goods brought from thence by captain Lancaster and others.

Captain Langton in the West Indies, 1593. burnt and ransomed several farms and plantations in Margarita, Hispaniola, and Jamaica.

Drake to the bay of Cadiz, 1587 and 1589, took two or three forts upon cape St. Vincent and cape Sagre.

He and Sir John Norris took, in the voyage to Portugal, Peniche, and feveral villages: in Sir John Norris's march to Lisbon he took the fuburbs of Lisbon, and Drake took Cafeais.

1589. The earl of Cumberland took the island of Fayal, and made Graciofa, the island of Flores, and Cuervo, give him re-

1596. The earl of Effex and the lord admiral took the city of Cadiz, the bridge of Swafe, and the town of Faro in Portugal, (a bifhop's feat.)

1597. The earl of Effex took the island and town of Fayal, and Villa Franca in the island of St. Michael.

I omit divers other places taken by private ships of war.

The names of fuch private persons as went to to the West-Indies upon their own account, with juch prizes as they took, by which may appear bow little hurt we have done or can do to the Spaniards in the West Indies, in comparison of other places we have annoy'd them in, as I have more largely proved in my second book.

1587. Sir George Cary fet out three ships; two of which took nothing, and the third took a prize, and brought her into Bristol, worth 2000 l.

1589. Captain Michelfon, in the Dog, 160 took three flips, but of no value, none of which he brought for England.

1593. A finall thip of Sir George Cary's took nothing; but had like to be taken her felf.

In the fame year captain Newfort return'd with the like fuccess.

1594. These ships following were set forth:

Captain Lane with three ships of Mr. Wats's.
Captain Roberts in a ship of Bristol.

Captain Renjamin Wood with four thips of my lord Thomas.

Captain Kevill of Lime-House, and captain King of —: in all thirteen, which return'd not the charge of their voyage.

1594. Sir Robert Dudley, having two fhips and two pinnaces, did not countervail his charges.

1596. Sir Anthony Shirley and captain Parker took some towns; but no profit to them.

1596. My lord of Cumberland, as I have faid, took Puerto Rico without profit.
1593. Two fhips and a pinnace of my

1593. Two flips and a pinnace of my lot of Gumberland did fome fpoil to the Spaniards, but little good to themselves.

1601. Captain Parker did fome spoil

upon towns, but they were like the rest in profit.

David Middleton brought home a prize of one hundred and forty tuns of Campeachy wood, but of little value.

1595. Sir Walter Raleigh to Guiana, no profit at all; and the year before Sir John Burroughs with the like fuccefs.

There were divers pinnaces that went feveral years to discover Guiana, and the river of Amazons, but never any of them returned with profit.

1601. Captain *Cleive*, with a fhip and a pinnace, took a prize of hides, which he reftored at his return, the peace being concluded between the two kingdoms in the time of his absence.

These private voyages being compared with the rest of the queen's that went before, a man may plainly perceive that they produced greater loss, spoil, and damage, to the Spaniards, than profit or advantage to the English; for computing the expence of our publick actions and private adventures with the gain that arose out of them, we shall find they were much more chargeable than gainful to us; though I consess, in that case we are not to value the expence and loss in our disbursements; for it was repaid with the honour we gain'd, which will immortalize our nation.

1603. The Advantages of keeping a Fleet on the Coast of Spain in Time of War.

Omit in this first book to insert a treatife I was required by Sir Robert Cecill, then principal fecretary of state, to write, concerning the abuses and corruptions at fea. which then began to creep in, not only in fhips, men, and victuals, but in the defigns; with a remedy how to amend and redrefs them. But because it is more proper for my third book, where I treat of projects, a reformation of the abuses of the navy, as also how to make an offensive and detenfive war upon our neighbouring countries that oppole us on the feas, I refer you to that book, and have gathered by this that follows, That whilft the Spaniards were employed at home by our yearly fleets, they never had opportunity nor leifure either to make an attempt upon us, or to divert the wars from themselves; by which means we were fecured from any attempt of theirs, as will appear by what follows.

The Spaniards stood so much in awe of her majesty's ships, that when a few of them appeared on the coast, they commonly diverted their enterprizes; as namely, in the year 1587, when Sir Francis Drake with twenty five ships prevented an expedition that summer out of Cadiz-Road for England, which the next year after they attempted, in 1588, because not molested as the year

Our action in *Portugal* following fo quick upon the overthrow in 1588, made the king of *Spain* fo far unable to offend, that if the undertaking had been profecuted with judgment, he had been in ill circumstances to defend it, or his other kingdoms.

From that year to the year 1591. he grew great by fea, because he was not bussed by us as before; which appeared by the steet that took the Reverge; which Armada of his, it is very likely, had been employ'd against England, had it not been diverted that year by my lord Thomas Howard.

And for four years together after this the king employ'd his ships to the islands, to guard his merchants from the *Indies*, which made him have no leifure to think of *England*.

The voyage to Cadiz in 1596, did not

only frustrate his intended action against England, but we destroy'd many of his ships and provisions that should have been employ'd in that service.

He defigned the fecond revenge upon England, but was prevented by my lord of Effex to the iflands; which action of his, if it had been well carried, and that my lord would have believed good advice, it had utterly ruined the king of Spain.

The next year that gave cause of sear to the queen was 1599, the king of Spain having a whole year, by our sufferance, to make his provisions, and brought his ships and army down to the Groyne; which put the queen to a more chargeable desensive war, than the value our offensive fleet would have been maintained with upon his coast.

This great expedition was diverted by the flect of Holland, which the Adelantado purfued to the iflands.

The following years, 1600 and 1601, there was hope of peace, and nothing was attempted on either fi z till the latter end of 1601, that he invade. **Ireland*, but with ill fuccess, as you have heard.

The last fummer, 1602, he was braved by her majesty's ships in the mouth of his harbour, with the loss of a carrack, and rendered unable to prosecute his designs against *Deland*, for no sooner was Sir *Ricbard Lewson* returned, but Sir *William *Monjon* was sent back again upon that coast, as you have heard, who kept the king's forces so employ'd, that he betook himself only to the guard of his shores.

It is not the meanest mischief we shall do the king of Spain, if we war thus upon him, to force him to keep his shores still armed and guarded, to the infinite vexation, charge, and discontent of his subjects; for no time or place can secure them so long as they see or know us to be upon the coast.

The fequel of all these actions being duly considered, we may be consident, that whilst we busy the Spaniards at home, they dare not think of invading England or Ireland; for by their absence their sleet from the Indies may be endangered, and in their attempts they have as little hope of prevailing.

Her majefty left these ships aforenamed at her death in good condition; and whilst she lived they gained her and her realms honour, by the exploits and victories they and her subjects obtained; and she left in every one of those ships, officers serving in their several places whilst they lay in harbour.

But as abuses by continuance of time are crept in for want of care and overlooking, like chimneys that gather soot by continual

fires, that may indanger the house if it be not prevented by sweeping; so fared it with our navy at the latter end of the queen's reign; which Sir Robert-Gecill, the principal secretary, carefully forefaw, and caused me to write the ensuing discourse how the then abuses might be taken away, and a course settled for a reformation, that the like might not hereafter happen; which I directed to him as follows:

1603.
To the Right Honourable Sir Robert Cecill, Principal Secretary to ber Majesty.

> Have by your honour's command, and my own experience and observation, briefly collected the abute of our " feamen, and the corruptions that are to-" lerated; and shew the injuries offered in furnishing, victualling, and manning her majefty's ships; and lastly, how such " wrongs may be reformed; all which I " humbly represent to your honour."

Concerning the Abuses of our Seamen.

OTHING breeds diforders in our failors, but liberty and over-much clemency: the one they have in their ordinary ships of reprisal, where no discipline is used, nor authority obey'd; the other in escaping punishment when they justly deferved it, which hath brought her majesty's fervice to be no more accounted of, than the actions of private men. It is strange what mifery fuch men will chuse to endure in fmall ships of reprifal, though they be hopeless of gain, rather than serve her majesty, where their pay is certain, their diet plentiful, and their labour not fo great. Nothing breeds this but the liberty they find in the one, and punishment they fear in the other.

The ships these men covet to go in, are neither of service nor strength to the state, or annoyance to the enemy: their owners are men of as base condition as themselves, making no more reckoning what outrages their ships commit at sea, than the men themselves that commit them. They grow fo bold upon the lenity used toward them, that they as confidently detain men after they are preffed, as if there were no law to prohibit it. Nor are they fatisfy'd with a competent number of men in their ships; but commonly carry twice as many as their fhips and victuals require; and the first carvel or fisherman they take, they put their fpare men into, who many times fink in the sea, famish for want of victuals, or are forced ashore into Spain, where they must either be compelled to serve against their country, or die in misery. And thus have more feamen been confumed, than in all other actions or enterprizes against Spain. And no man dares reprove it, because the lord admiral is interested in all such prizes as thefe unprofitable fhips take.

It is time to foresee and prevent these inconveniencies; for it is apparent this neg-lect of the queen's service lost her majesty the Indian fleet Sir Richard Lewson met withal, being forced to leave Sir William Monfon with half the ships at Plimouth for want Vol. III.

time more men were fuffered to go in pri- 1603. vate ships of war, than would have manned her majesty's navy.

And yet this is not all the mischief that enfues upon it; for these men being thus fuffered to go, her majefty's ships are supplied with fishermen at the season of their voyage to Newfoundland; so that not only the poor failors, but the countries about them that are supported by that trade, are half undone. The men themselves are so unserviceable, and of so little spirit, that I look upon it as a principal cause of sickness in her majesty's ships. These abuses are well known to the Spaniards, which made Siriago, general of their fea, covet nothing more than to board one of her majefty's fhips, knowing how ill they are manned in

comparison of privateers. Besides many private voyages have prov'd prejudicial to her majesty's designs; for very often those men that go in such ships are taken prisoners, and give notice of our intentions, whereby the enemy is provided, and we prevented. As for example, the two voyages of Sir Francis Drake and Mr. Cavendish about the world, which though honourable to themselves, yet it had been much better for the queen that they had not been undertaken, but with greater forces; for we have now discovered to the Spaniards our finding the way through the Streights of Magellan, which they thought to conceal from us: we have passed by the coast of Chile and Peru up to Panama, cross'd over to the Philippine and Molucco islands, and the East Indies. Thus have we warn'd, without annoying them, to strengthen themfelves in those parts; so that such places as had no defence, are now made able both to defend and offend, as appeared by the taking of Mr. Hawkins in the South Sea, 1594.

And fince that time, it is apparent by three feveral voyages made by the Hollanders, the one in 1597. with five ships; the fecond in 1614. with as many; but, laftly, and especially in the fleet called by the name of the Nassaw Fleet, in 1623. all which fleets passed the Streights of Magellan, attempted landing in divers parts of Peru and New Spain with a force of three thousand foldiers, and were repulfed in those places which Mr. Cavendish had taken and enjoy'd, Anno 1587. but with thirty shot.

How to redress these Disorders.

F it be true, as it is held to be, an easier I f it be true, as it is need thing to cure than discover a disease, thing to cure than discover a disease, of amendment of then may there be hopes of amendment of these enormities and abuses: but the first thing that must be obtained, is, the consent and countenance of the lord admiral; for of failors to man them, when at the fame. I have shewed, that these abuses are crept

Gecill, the princirefaw, and caused discourse how the

the house if it be

s fo fared it with

d of the queen's

ken away, and a rmation, that the happen; which I 1603. in by his permission, or at least his officers.

The fecond is, not to admit of all men to become owners and captains, that are able to buy or victual a fhip; but to examine their condition, their eftate, and qualities, and to cause them to give security not to connive at the abuses here mentioned.

Thirdly, to reftrain all private actions whilst her majesty's are on foot; but if they will adventure, to let it be done in the company of her ships, where they shall have a fhare proportionable to their adventure; and I believe it will prove more beneficial than now they find it: or if they refuse it, it shall be lawful for them to adventure alone four months in the year, (when it is not fit to keep the king's fhips at fea;) but to injoin them to return at a day limited: and the care to fee this executed may be committed to the vice-admiral of every county, who is to take care they carry no more men than the ships require, nor less provision than is requisite, lest they run into the misfortunes above mentioned.

This will be the way to redress all abuses, to make men obedient to discipline and command, to avoid sickness in her majesty's ships, to imploy none but such as are serviceable, not to molest the poor labouring sistemen, to give the merchants satisfaction, and to preserve the life and liberty of failors.

Now follow the Abuses in her Majesty's Ships.

THERE are fo many, and feveral abuses in her majetty's ships, that the reforming of one is to little purpose, unless there be a reformation in the whole. And I will first begin with victuals upon which the lives of men depend: in this there is such great abuse in every voyage, that there is no man but has cause to complain.

The gunners, into whose charge is committed the strength of the ship, are preferred to their places rather for money than merit: and to defcend to the ships themfelves, there are to many impediments in them in our fouthern voyages, that we cannot fay any thing is strong or serviceable about them. And though their wants be made known before their going from home, the officers of the navy, either out of frugality, or following precedents of former ages, not confidering there was no fuch imployment for the queen's ships heretofore, have not that care which is expedient. And, lastly, the men that serve in them are so ill treated, that they alledge it for the cause of their backwardness to serve the

The Manner how to reform these Abuses.

THE way to redress every abuse, is, to execute severe justice upon the chief men in office: as, first, the victualler, if he fail either in goodness or quantity of her majesty's allowance, let his life answer it; for no subject's estate is able to countervail the damage her majesty may sustain by such defect. And to take away all excuses of his part, and to provide there may be no failing of the service, it were convenient to have a surplus of victuals transported in other ships, to be exchanged, if upon view the other prove to be ill-conditioned.

Secondly, For the gunners: their frauds in powder and shot, and other things under their charge, are intolerable; and they have been the more embolden'd by the baseness of some captains, who have consented to their thest.

For reformation hereof, it were good to have a deputy appointed in every fhip from the officers of the ordnance, to take charge of powder, fhot, musket, &c. and to deliver them to fuch men as shall be accountable for them at the end of the voyage; for it is no reason so great a charge should be committed to the gunner; who make no conscience to steal, and may steal without controulment when it is in their possession.

Another thing, a captain must have orders to forbid, and look precisely it be obey'd, which is the lavishness of snooting for pleasure at the meeting of ships, passing by castles, and feating aboard; for indeed there is more powder wastefully spent in this fort, than against an enemy.

For the third, which is the difability of ships to the fouthward, it is occasioned by the great weight of ordnance, which makes them laboursome, and causes their weakness, and considering how sew gunners are allowed to every ship, it were better to leave some of these pieces at home, than to pester the ships with them. I must say, and with truth, that all her majesty's ships are far undermanned; for when people come to be divided into three parts, the one third to tackle the ship, the other to ply their small shot, and the third to manage their ordnance, all the three services sail for want of men to execute them.

Neither do I fee that more men can be contained in the queen's fhips to the fourli-ward, for want of flowage for victuals, and room to lodge in. No fhip that returns from the fouthward flould go to fea again under half a year's refpite; in which time fhe will be well air'd, and her ballaft mult be chang'd.

There

There should be a general workman appointed in harbour, carefully to overlook the ships that shall be employed: this man should go the voyage, and have the like charge at sea. Nothing that is necessary

charge at tea. Nothing that is necessary for ships, but must be carried in a great abundance by a deputy from the officers of the navy, as I have formerly said in the like case of the officers of the ordnance. All precedents of former times of furnishing the queen's ships to be abolish'd; and whosoever takes upon him this office as deputy, to be bound to give an account of the surplusses remaining, that what is not spent may be restor'd; which will nothing increase the charge in carrying them to sea; and yet the ships shall be so provided, as no casualty that can happen at sea will bring them into distress. Besides, they shall supply the want of such prizes as they take, who by reason of their long voyages have consum'd their sails, ropes, and tackling, as in the like case we found by the carrack,

which we could not have brought for England, if we had not supplied her want out of the queen's ships.

And lastly, for the men that sail in the ships, without whom they are of no use; their usage has been so ill at the end of their voyages, that it is no marvel they shew their unwillingness to serve the queen; for if they arrive sick from any voyage, such is the charity of the people associated with they shall sooner die, than find pity,

unlefs they bring money with them.

And feeing her majefty must and does pay those that serve, it were better for them, and much more profit and honour to the queen, to discharge them upon their first landing, than to continue them longer unpaid; for whether they are sick, or lie idle in harbour, their pay runs on till the ships and they are discharg'd, to the great consumption of victuals and wages, which falls upon the overen.

upon the queen.

Wherefore it is necessary, that an undertreasurer be appointed in every sleet, who should carry money for all necessary disbursements. I have borrow'd some part of these reformations, and annex'd them to my fifth book, which I presented to the king's view, shewing the abuses of this time, both in ships, victuals, men, &c.c.

When all these Things are reform'd and well order'd, and ships ready surnish d to Sea, the next important Thing in a General, is to provide how to get Intelligence of his Enemy, and to keep the enemy from having Intelligence of him; which in our late Wars with Spain we compast by the following means.

WHAT I have faid touching an offensive and defensive war with Spain, needs no other repetition than what is con-

tain'd in the fifth book; for as I have often faid in the precedent difcourfes, the life
of all action by fea is to get intelligence of
an enemy, and to keep the enemy from intelligence; for in fo doing, a man is arm'd
to encounter an enemy naked and unprovided, as I have inftanc'd in many examples before; for whofoever is fuccefsful by
chance and good luck, rather than by providence and forefight, cannot challenge the
honour as his own, but must allow fortane a share with him; for fuccefs is the
mistres of fools, and true management proceeds from judgment.

ceeds from judgment.

And to the end in our fucceeding actions and wars with Spain, if ever there fhould happen a new breach, we may not be ignorant how to proceed against that nation by our former precedents. I have annexed these following precepts as a light and guide how to get intelligence at our arrival upon that coast, by which we shall be able the better to direct ourselves in the whole voyage; for it is an easier thing to follow a lesson well taught us, than to compass it by

our own practice or study. The first means we used to get intelligence of the affairs of *Spain* upon our arrival, was to hall into the height of the *Bur*lings, a small defart island, whither every night the carvels of Peniche, opposite to it, resorted to take fish, which serv'd the whole country. About the time the carvels were to draw near the island, in the night time, we used to leave some ships boats, well mann'd, near the shore, where there could be no suspicion of them, and at the dawning of the day, the shallops sud-denly boarded and seized some of the said carvels, of which we made good use in two kinds: the first was the intelligence we receiv'd of the state and affairs of Lisbon, and the whole coast; as also what preparations were made, either to defend or offend. The fecond was in respect of the carvels excellent failings, for there were few ships but they could fetch up, and then keep fight of them both night and day, till our approach to them. Thirdly, by the unufual fails carvels carry, by means whereof we deceived the Spaniards, and made them believe they were their own. At last, when the voyage was at an end, the poor men were reftored again to their veffels, and fome reward bestowed on them.

The Means bow we obtain'd Intelligence of the fouth Parts of Spain, by a Method of my own.

In the voyage of Sir Richard Lewfon and Sir William Monfon to the coaff of Spain, you will find an intelligence I received from certain Scotch and French fhips, of five galleons riding at St. Lucar, watch-

1603. ing an opportunity of wind and fpring tides to pass the bar of St. Lucar, being ready bound for the West Indies; and because I would be particularly resolv'd of all the circumstances thereof, I employed captain William Love to the ports of Sally and Mamora in Barbary, with the following in-

Imprimis, That you first repair to Sally; and if you cannot be fully inform'd of such things as you desire to know, to depart thence to Mamora, seven leagues eastward

of Sally.

Item, You are to have especial care to manage your business with secrecy, as well from the English that go with you in the bark, as from the Spaniards and Moors resident in the country. And because you shall have the better pretence of coming into their forts, I will deliver you certain commodities to trade with, that are vendible in that country.

Item, You are to inquire and feek for the chiefeft Englishman in either of the two places, and to deliver him a letter with a fuperfeription, To my faithful countryman. And finding no fuch man there, if you break your mind to any other stranger, let it be to a Hollander, that either licht there as agent or merchant, to whom you shall have another letter, To my dear friend and

neighbour.

Item, If you find neither English nor Hollander, you having the language, may infinuate yourfelf into the acquaintance of fome Portuguese or Spaniard, of whom you may learn by circumlocutions, so that he may find you have an intention to be inform'd of any thing in particular; and if you find his intelligence to concur with that I received from the French and Scotch, you may the more boldly give credit to him.

Item, The things you are principally to enquire after, are these following: the number and quality of all ships at Cadiz or St. Li. car. Secondly, whether the galleons you are employed to hearken after be gone to the Indies, or no; or whether they came over the bar the last spring tide; or if they be not gone, to demand the cause of their stay, or when they will depart. To enquire whether there be any fhips appointed to convoy them to the Canaries, and how many, and their names, because I have a catalogue of all the king of Spain's ships, and may judge of their ftrength accordingly. To learn whether they alter their ordinary course of failing, for fear of her majesty's ships being upon their coast. Speak nothing of their wealth, left it should give some cause of mistrust. I will not write thus particularly, either to the Englishman or the Hollander; but they having my letter to credit what you shall say, and shewing my hand

1603. ing an opportunity of wind and fpring tides to these instructions, it will be sufficient to 1603.

Item, That you fuffer not any of the bark's company to go afhore, nor, as near as you can, any of the Moors to come aboard; but if any of the English should happen to go ashore, to give them great charge not to discover the place or height I lie in, or that any of the queen's ships are at fea, pretending it was four months since you left England, unless the cleanness of your ship may give sufficient, and then you may tell them you trim'd her at Mogosbor, an island in Barbary.

Item, That finding yourselves fully inform'd as to these things you desire, or what essentially to repair to me in the same height you left me; and missing me there, to direct your course to Puerso Santo, near the island Madera, where I intend to refit my ships after the fight, if I chance to meet

with the galleons aforefaid.

Given on board the Garland, the 17th of April, 1602.

The Means to get Intelligence at the Tercera Islands.

THE inftructions following I have formerly used to be informed of affairs in those parts, and employed captain Whiskens in a small carvel to the effect following.

Imprimis, You are to keep company with the Primrofe of London, which is bound for Gratiofa, till you come short of that island, and then to ply into the road of Villa Franca and St. Michael; where you shall use your endeavour to speak with the ships there riding, that trade under the Scotch colours, but are properly English; and to avoid suppicion and danger that may after arise to the said Englishmen, you shall speak with

them in the night.

Ilem, The things you shall defire to know are these, viz. Of the state of the West-India steet; and whether they still continue at the Tercera islands, not venturing to go from thence without a convoy from Spain; to learn the time of their departure from thence, and what port they mean to repair to; learn whether they keep their treasure aboard, or if it be landed, and how far their ships ride from the shore; whether they have any intelligence of Sir Richard Lewson and my being at sea; what you can learn of the carracks coming home, or any thing essentially these points.

Item, When you are thus fatisfied of all your demands, that from thence you go to the island of Tercera, and view the road of Angra, to fee in what state the ships there ride, and the possibility to surprize them at an anchor.

Item,

Book I.

afficient to 1603.

ny of the or, as near to come aclifb should them great e or height n's ships are nonths since cleanness of and then you

Item, If you be informed that the fleet of the Indies hover about the island, expecting a convoy from Spain, that you endeavour to speak with some English man of war, and there to deliver them this letter, the contents whereof you are already acquainted with, which will direct both you and the man of war with whom you shall meet; and so wishing you prosperous success, I rest.

From aboard the Garland at Plimeuch, March 27, 1602.

A Copy of the faid Letter fent by Captain Whiskens.

AFTER my hearty commenda-tions; Whereas the queen's most excellent majefty is advertised of the late arrival of the plate fleet in the road of Angra, at the island of Tercera, in their course from the West Indies towards Spain; and forafmuch as her majesty hath sent divers of her ships to sea, whereof Sir Richard Lewson is admiral, and myself vice-admiral, to hinder and impeach the faid filver fleet's passage through the seas, as a fervice of the highest importance, " to leffen the greatness of so dangerous and mighty an enemy as the king of " Spain; so it is, that my admiral, Sir Ri-chard Lewson, is put to sea some sew days before me, and before her majesty was advertised of the said fleet's arrival at the Tercera; wherefore I have employed " this bearer, captain Whiskens, with fuch instructions for the accomplishment of the fervice, as is thought most convenient for the effecting it; which instructions I have given him order to acquaint "you with upon your meeting, and the delivery of this letter, which contains a request, and as much as lieth in my power, to command all you English captains and mafters, with whom he shall meet in the fea, to be helping, aiding, and affifting to him in so great and weighty a ser-" vice, as well in counsel and advice, as in " willingness to execute the directions given in my faid letter, viz. If you shall understand the plate fleet intends not to " venture home without ships to guard it, that you prefently thereupon use the best means to give notice to Sir Richard, or me, when you shall know by captain Whiskens where to find us, or elle that you keep about the road of Angra, and send captain Whiskens himself to look us, which sever of you comes, must observe these directions following.

"Upon the Spanish fleet's putting to fea,
both of you to purfue them aftern, till
you bring them to the height they mean
to hail in; and that done, then one of
you to lose company of them in the night,
and to ply with all possible speed to the
place aforesaid, to meet Sir Richard or me.

"And that the other bark do ftill attend the fleet, that if they should alter their height, she may in like manner leave them in the night, and follow the directions aforefaid, as the other bark is directed; but with this caution, that you keep a strict account of the shifting of the winds, from the time you left them, until your meeting with us; for knowing their height, and observing the winds shifting, there will be little doubt of our meeting. The service you will do the queen and state by this, and the good that will redound to yourself, needs no repetition; and therefore not doubting of your willingness and care herein, I bid you farewel."

From on board the Garland at Plimouth, March 26, 1602.

I have known our flate use this policy in time of war, when they desir'd to be inform'd of the state of the king of Spain's ships, the places of their abiding, furnishing, and building: they have senta spy, disquised like a pilgrim, to travel through all the ports of Biscay and Galicia, in his way to Saint Jago de Compostella, pretending his going to be in devotion; by which means he has seen and discover'd all those things he had in charge, and return'd with a true relation how things then stood.

The Spaniards in all their actions against England by sea, could never set foot on shore, but in the year 1595, when with sour galleys they passed from Bluet in Britany, which they had taken from the Frenck king, into Pensance in Gornwall. These four galleys took, spoiled, and risted that poor town of Pensance, made no long stay there, but seed they reproved again for Britany.

but speedily return'd again for Britany.

The plotter of this stratagem was one captain Burleigh, an Englishman, who was afterwards well requited for his treachery; for to be even with him for so foul a sact, Sir Robert Cecill, the principal secretary, writ a letter to him residing in Lisban, pretending that he was employed as a spy, and gave

Ddd him

B

him thanks for fome particular fervice he named he had done, when indeed there was no fuch cause, for the man was ever too honest to that side.

Sir Robert Cecill fo ordered it, that this letter fell into the hands of fome minifters of the king of Spain; whereupon Burleigh was apprehended, clofe imprifoned, and cruelly tortured, when he deferved no fuch fevere ufage. I fpeak this, because I would have the world judge how justly he deferved it, and how prettily the Spaniards were imposed upon by it.

Some Observations of my own.

THETHER we shall impute it to the work of God, who disposes of all things, or to the queen's good fortune, which attended throughout the greatest part of her reign, or to the wife conduct of those fhe reposed trust in, or to the care and skill of the captains, masters, and mariners that took charge of her ships, I know not which to judge of them; but it is very certain, we must acknowledge it for a great and admirable work of God, that in her majesty's eighteen years war with Spain by fea, her fleets, which were continually employed on the Spanish coast, in the Indies, and other places, continually abiding and enduring the fury of all winds and weather, never out of motion, and working in troublefome water, never for the space of three, four, five, or fix months fo much as putting into harbour, or anchoring, or having any other refreshment from shore, but still toffing on the waves of mountanous feas that never break, in comparison of ours that feem but little hills to them, the difference in times and tides much altering the cafe, for upon our coafts and narrow feas, where our greatest wars have been, no difaster to our Thips but might be eafily remedied and amended, for commonly we were never further from home than we might repair to fome of our ports in twenty four hours.

The marvel I speak of, is, that notwith-standing the apparent dangers and casualties of the sea aforesaid, yet not one of her majesty's ships ever miscarried, but only the Revenge, which I said, in her voyage in 1591. was taken by the Spaniards by the unad ifed negligence and wilful obstinacy of the captain, Sir Richard Greenville.

And we may partly judge by that ship the Revenge's precedent misfortunes, that she was design'd, from the hour she was built, to receive some fatal blow; for to her, above all other her majesty's ships, there happen'd these unfortunate accidents. In 1582, in her return out of Ireland, where she was admiral, she struck upon a sand, and escaped by miracle. Anno 1586, at

Portsmouth, being bound upon a southern expedition, coming out of the harbour she run aground, and against the expectation of all men was sav'd, but was not able to proceed upon her voyage. The third disaster was in 1589, as she was safely moor'd in Chatham, where all the queen's ships lay, and as safe one would think as the queen's chamber; and yet, by the extremity of a storm, she was unluckily put ashore, and there over-set, a danger never thought on before, or much less happen'd: and to make this misiortune the more strange and remarkable, the same night being twelstibnight, it was my chance to be at Cork in Ireland, and passed down from thence in a boat to Cross-Haven, in the greatest calm I have seen.

If we compare these fortunes of the queen's with those of her father's, who next to her had the greatest employment for his ships at sea, you will find great difference betwirt them, although we cannot properly call them voyages of king Henry the eighth's time; for his ships were never so far from home, but they might return again with a good wind in twenty sour hours sail; as the others never expected to see the English shore, under four, five, or six months, and many

times more.

The Disasters of some of King Henry VIII's Ships, and the Lord Admiral.

PON the coast of Britany, in a fight betwirt the English and the French, the Regent, otherwise call'd the Sovereign of England, encounter'd with a carrack of Bress, and being grappled together, were both burnt; and the captain, Sir Thomas Nevet, and seven hundred men in her; and the captain of the carrack was Sir Pierce Morgan, with nine hundred men that perish'd with him.

The Mary Rose, next to the Regent in bigness and goodness, after this was cast away betwixt Portsmouth and the Isle of Wight, the very same day king Henry boarded her, and dined in her. Part of the ribs of this ship I have seen with my own eyes: there perish'd in her four hundred persons.

The next disafter that befel the king at fea, was the lord admiral himself, lord Edward Howard, who offering to land in his boat at Bertaume-Bay, near Brest in Britany, was there sain and drowned together.

When the lady Mary, fifter to king Henry, was transported into France with fourteen ships of his majesty's, to marry Lewis XII. king of France, three of his ships were cast away; and the admiral, wherein the lady went, being the best and the greatest of the rest, called the Lubeck, was one of them that perish'd; but by good hap, and industry and pains of men, the lady

Within two days after the cafting away of the Mary Rose aforesaid, a pinnace of the king's, called the Hedge-bog, riding before Welminster oridge, by a misfortune of shooting off a gun a barrel of powder took fire, and blev her up.

As I have fet down in this first book the state of the war with Spain by fea from 1585. when it began, till 1602, when it ended; for the cinclusion of the affairs of that time, I will annex the advice and resolution of our state, and the council of war, for making a defensive war against Spain, when we feared an invasion in 1588.

If the following discourse seem more tedious to the reader than is fitting, let it not be imputed a fault in me; for I neither add nor diminish one word from the original copy resolved on by the council of war, whose names here follow:

The lord Gray, Sir Francis Knowles, treasurer of the houshold. Sir Thomas Laken, Sir Walter Raleigh, Sir Richard Greenville, Sir John Norris, Sir Richard Bingham, Sir Roger Williams, Ralph Lane Efq; The 27th of November, 1587.

PROPOSITIONS.

Such means as are confidered to be fitteft to put the forces of the realm in order to withstand an invasion, and the places most to be suspected that the Spaniards intend to land in.

> Milford, Heylford, Falmouth, Plimouth, Torbay, Portland, Portsmouth, The Isle of Wight,

These are aptest for the army of Spain

Neffe in Suffex, The Downs, Margate in Kent, The river of Thames, Harwich, Hull, and Scotland.

How many of these places may be put in defence to hinder the r landing.

Milford for Wales, Plimouth for the west. Portland for the middle of the west parts. The Isle of Wight, Portsmouth, and the River of Thames.

MILFORD.

Although we do suppose the barrenness of the country to be such as it is not likely to be invaded, yet touching Milford-Haven, in respect of the goodness of the fame, we think it convenient, that there should be trained the number of two thoufand foot and five hundred horse, to be levied, and had in readiness: and for the increase of horsemen, if any lack be, then the gentlemen with their ferving-men may be commanded to supply the default of the number aforefaid.

PLIMOUTH.

The reason why Plimouth is thought to be the most likely place, is, for that it is unlikely that the king of Spain will engage his fleet too far within the channel, before he has maftered fome good harbour; and Plimouth is the nearest to Spain, easy to be won, speedily to be by them fortify'd, and conveniently situated to 'nd succour to, either out of Spain or France.

PORTLAND.

The reason why Portland is also an apt place to land in, is, for that there is a great harbour for all his ships to ride in, and good landing for men; the ille being won, is a ftrong place of retreat, the country adjoining champion, where, with great conveniency, he may march with his whole

The reason why the Downs, Margate, and the river of Thomes, are thought fit anding-places, is in respect of the commodity of landing, and nearness to the prince of Parma, in whose forces the king of Spain reposed special trust.

Now in these places following, order may be taken to binder their landing, whether by fortification or affembly of the people, or both.

For Plimouth, both by fortification and af-fembly of people.

In Devon and Cornwal there are of These are aptest for the army of Flan- train'd men in the counties and stannaries

 \mathbf{B}_0

ge we

enc

and

the

as,

of I Shire

tha

five thoufand men, which are to be affembled for the defence of Plimouth, ftanding equal to both counties, of which we are of opinion, in place of mufter-days, which is very chargeable, and, in effect, to no purpose, That two thousand of those should be affembled together at Plimouth, under such a general as shall be ordain'd to govern that western army, to the intent that they may know their leaders, be acquainted, be throughly instructed to all purposes, that on sudden occasions there may be no amaze, nor any consustion: this shall be done, the one half at the charge of her majesty, the other at the charge of the country, if the country's charge does not surmount the ordinary trainings.

For Portland, by affembling of men and fortifying.

In Dorfet and Willshire there are of trained men two thousand seven hundred, which are to be affembled for the desence of that place; and that two thousand of the said number should be affembled and exercised, as before is said, at Plimouth, or in some place of Willshire, appointed for the Isle of Wight to take Somerfessive, in which there are two thousand foot.

At Sandwich, and the Downs, by the affembling of men.

In Kent and Suffex there are of trained men four thousand five hundred, which are to be affembled in those places for defence thereos, and two thousand of the fame number to be affembled at Sandwich, to be governed and exercised, as before is said, for Plimouth.

So likewise for Norfolk and Suffolk, like order to be observed.

Our farther meaning is, That thefe garrifons shall remain but for twenty days, to be throughly trained and acquainted with encamping; and then every such two thousand men in garrifon being so acquainted with this discipline, shall give example to a great army of raw men, whereby there shall be no manner of confusion on all sudden emergencies.

Farther, we are of opinion, That to thefe two thousand men there shall be twenty captains appointed, which twenty captains having each of them an hundred trained men, shall receive under their charge, when the army shall affemble, an hundred more; so as in effect there shall be four thousand men in order, and under martial discipline: the choice of which captains we think, for the one half, to be left to the choice of the general of the army, and the other to be of the principal

gentlemen of the country, under whom there may be foldiers appointed for their lieutenants.

The like order is to be observ'd in every of the other places of garrison.

What order must be taken to fight with the enemy, if by force he be landed.

For the manner how to fight with the enemy, it must be left to the discretion of the general; only we give this advice, That at his landing he may be impeached, if conveniently it may be done; and if he march forward, that the country be driven so as no victuals remain, but such as they shall carry on their backs, which will be simall; that he be kept waking with continual alarms; but in no case that any battle be adventured, till such time as divers licutenants be affembled to make a gross army, as we have before specified, except upon a special advantage.

Farther, it is thought necessary, that in these two provinces, and in all others, where many lieutenants be, there should one be appointed to be chief to lead the army, (for among many lieutenants there may be fome straining of courtefy,) lest by fuch delay and confusion great inconveniencies do grow to the country, and advantages to the enemy; and therefore any lieutenant coming out of any country with his force, his authority only to extend to govern his company as colonel of that regiment, and fo to be commanded by the lieutenant-general: as for example, in Devon and Cornwal there are ten lieutenants, whereby it may be known who shall command in either, as need shall require.

What proportion of men must be prepar'd to ferve to that end.

Wherefoever the enemy shall land, as if at Plimouth, for example, then by the computation of fix thousand men armed, and furnished in Devon and Cornwal, we conceive that the affiftance of Wiltsbire, Dorset, and Somerset, adjoining to the fix thousand of the west, will make a sufficient army, being strengthened by the gentlemen and ferving-men, and other of the country that shall be adjoined, though not fo throughly arm'd as the west: and if it happen, either by defign or contrary weather, that the enemy pass over Plimouth, and land at Portland, then the arm'd men and trained foldiers of the west shall repair to them. And farther, if the invalion be in Kent, or any otherwhere to the west of the river of Thames, then those middle shires directed to affift the west, may turn to the east along the coast.

If

Boo

thall land, as e, then by the d men armed, d Cornwal, we of Wiltsbre, ining to the fix nake a fufficient by the gentled other of the ned, though not west: and if it rontrary weaver Plimouth, the arm'd men west shall repair the invasion be to the west of n those middle west, may turn

If the army of Flan'ers land in the river of Fbames, then the same order is to be taken with the shires adjoining, as is aforefaid, namely, Suffik, Norfolk, Effex, and the city of London.

And because there is a special regard to be had of her majetty's person, we think it most necessary that an army should be provided to that end, to be composed of such counties as are appointed and reserved for that purpose, and to join with the forces of the city of London, and such other as may be armed out of her majesty's store.

Farthermore, generally for the increase

Farthermore, generally for the increase of foot lacking armour, we think it fit that there be of the able men unarmed, whereof choice may be made of the trained men armed one fourth part more; of the which fourth part of unarmed men, eighty may be pikes, and twenty billmen; for the providing of which pikes and bills, there must be speedy provision made, being weapons that the realm does furnish.

Also for the increase of armed pikemen in this time of scarcity of armour, we do think it good, that all the armed billmen may be converted to be made armed pikemen; and that all able billmen unarmed should be levied, and chosen in their places; because the ranks of billmen in order of battle are always environed and encompassed about with pikemen; for the billmen serve especially for execution, if the enemy in battle shall be overthrown: but here is to be noted, that there must be reserved a sew armed billmen and halbardiers to guard the ranks, wherein the ensigns and drums, &c. are placed in the order of battle.

Alfo, fince upon any fudden invafion it would be too late to provide these things, which shall be necessary for defence, it is thought necessary that before-hand a store of ordnance and ammunition be provided, as also powder, spades, and all other furniture whatsoever; and to be lest in these forenamed places, in which these garrisons shall

It is also to be provided, that all those general affemblies be held for training, as well the horsemen as sootmen; and to that end, that at Plimouth, Portland, Sandwich, and any other places that shall be fit to have the like training, the horsemen of the next adjoining counties be brought together; as, namely, at Plimouth those of Devon, Cornwall, and Somerset; at Portland those of Dorset and Willbire, Hampshire and Berkbire; at Sandwich those of Kent, Suffen, Surrey, &c. But because it may fall out, that in those places appointed for training of the insantry, there may want sorage, or place fit for horsemen, it may be left to the discretion of the lieutenants to chuse the

Vol. III.

fittest for the cavalry, as near the foot as conveniently they may.

SCOTLAND.

Farther, as touching Scotland, where landing we cannot refift, we think it meet that a ftronger proportion be confidered of for that part, namely, fix thousand foot, and two thousand horse, whereof to be a thousand lances, arms of far more defence, and may be furnished as good and cheap as the jack, and to be taken out of the tower.

If therefore the army of Flanders should happen to land in Scotland, whereby their force and strength shall be so great, as the army aforesaid shall not be able to encounter them, then we think fit that a good part of the army prepared to guard her majesty's person shall march to support the army of the North against that enemy, and join with the trained men of that country, and the army of the west be brought to supply that charge.

ply that charge.
It is also most carefully to be considered, that the king of *Spain* is not hopeless of some party of nanifes and malecontents.

party of papifts and malecontents.

All which, if these small regiments before spoken of, be not in readiness, it will be too late both to affemble for resistance of any soreign enemy, and to withstand them at home both on one day: for every man shall stand in fear of firing of his own house, and destruction of his family; therefore if any stir should happen, such severe proceedings or execution towards such offenders, would be used by martial law.

And to conclude, when it shall be bruted in Spain, that there are at Plimouth and other places such a number of armed soldiers under ensigns and leaders, the number will be reported to be double or treble; so as the king of Spain, upon good probability, may conceive that these soldiers, and such as are in other places upon the coast in like readiness, are determined to land in Portugal or the Indies, the same opinion being fortify'd by the preparations of so many ships as are given in charge to be made ready in those parts by Sir Francis Drake.

We think it also very necessary, that throughout all the countries of the realm, this proportion, as well amongst the arm'd and trained, as the unarm'd pikes and bills, may be observed, that is to fay, that of every hundred there be eighty pikes and twenty bills.

We think it necessary also, that some order and provision be taken by their lordships, that her majesty's ships being at Rochester be not entrapped.

Thus far is the Direction and Resolution of the Honourable Commissioners aforesaid, con-cluded on November 27, 1587.

The direction and Resolution of the converted that cannot be converted to find them; and for other kind of victuals, as corn, &c. that cannot be con-

Now follows an Exception to some Points of the Resolution above faid.

If I had been of that age and experience as now I am, and worthy to have been called upon for my opinion, by fo many noble and able personages, to the propositions aforesaid, I should have dissented in some things from them, under correction be it spoken, as shall appear by these ensuing reasons.

Our fafety upon an invalion depends on three defences; the one, on the good fuccefs of our fhips at fea; the fecond, on our repulfing an enemy in offering to land a and the third, on our forces within the kingdom, if they chance to land: all which are at large handled in the precedent discourse, by the prime and most experienced foldiers of

our time.

MILFORD HAVEN.

The first direction of propositions by them is Milford Haven, as a place of danger, and wish it may be guarded with two thousand loot, and five hundred horse, with some supplies of gentlemen and their servants, which they think sufficient, in respect of the barrenness of the country of Wales.

The ANSIVER to Milford Haven.

I conceive, as Milford Haven has the advantage of all havens in England, or almost in Europe, for the largeness and goodness of the port, so there are multitude of landing places; for it is said of Milford Haven, that a thousand ships may ride in it, and not one see another; whereby an enemy may land to his advantage when he list, without resistance; and in that case, where two thousand five hundred soldiers are designed to withstand the enemy's landing, there is no possibility for them to do service, unless the shore should be as well fortify'd; which would be a thing impossible.

I would therefore advise, if it were not too great a prefumption in me, not to hazard any part of the two thousand five hundred men in seeking to defend their landing; but to draw them to a head, and seek to take advantage of them after their landing; as, namely, in cutting off the rear and stragglers in their marches, wearying them with often alarms, to prevent the foraging of the country of victuals; and in the mean time to draw and convey their cattle of all kinds into the mountains, that

an enemy can neither possess, nor know where to find them; and for other kind of victuals, as corn, $\mathcal{E}_{\mathcal{C}}$ that cannot be conveniently transported, to set them on fire, that the enemy may meet with hunger and famine, instead of food.

they will run themselves into.

Their victuals in that part of Wales will not fuftain them; and it will be the lefs, being before destroy'd. Secondly, their march will be wearifome and tedious, where they must pass mighty mountains, and find themfelves deftitute of all fuccour; in which paffages the two thousand foot and five hundred horse aforesaid, knowing the country fo perfectly well, as the others do not, they may take great advantage of them. Thirdly, the further they march they will be the greater distance from their ships, and confequently from fuccour and affiftance: and in the mean time, whilst they are upon their troublefome and dangerous march, the queen will have time enough to draw her forces from the furthest part of England,

PLIMOUTH.

The next that is alledged is *Plimouth*, as the likelieft place, in respect it is the nearest port to *Spain*, to give succour; and that they will not in reason adventure their fleet further into the channel before they are masters of some good harbour.

ANSWER.

I approve these reasons, as a chief ground for an enemy to fettle upon; for whofoever invades by fea, above all things must feek to obtain a port for his fleet; only I difapprove the election of Plimouth before Falmouth; for Falmouth lies more convenient for Spain, fourteen or fifteen leagues nearer to it, a better harbour and outlet, and at that time of less desence than Plimouth; and being possessed by the Spaniards, it will be made stronger by the situation. Moreover Falmouth is in Cornevall, a small shire, and narrow betwixt fea and fea, and has no country neighbour to it westward to give us affistance, as Devensbire hath Cornwall to the west, and Somerseisbire to the east; but the one and the other I hold as fit to be fortify'd, as any two harbours of England.

PORTLAND.

Portland is alledged to be an apt place for the Spaniards to arrive in; for that it is a great harbour for all their ships to ride

in.

nor know er kind of it be conm on fire, hunger and

narch from part of the onquerors,) ent dangers

Wales will the lefs, betheir march where they d find themn which pafd five hunthe country do not, they hem. Thirdy will be the ps, and con-Tiftance: and re upon their rch, the queen w her forces land.

a chief ground for whofoever ngs must seek only I disap-th before Falpre convenient leagues nearer outlet, and at han Plimouth; aniards, it will uation. More-, a fmall fhire, fea, and has no ward to give us Cornwall to the east; but the fit to be forti-England.

be an apt place n for that it ir ships to ride for retreat, the country adjoining to it champion, where with great conveniency they may march with their whole army.

In Dorfet and Wilefbire there are of train'd men two thousand five hundred, which are to be affembled for defence of that place; and the honourable commissioners do advise that two thousand of the same number should be affembled and exercised, as before is said of Plimonth ; and that some place be appointed in Wiltshire for the succour of the Isle of Wight, and to take the help of Somersetshire, which are two thousand foot.

ANSWER.

The honourable commissioners are misinformed in the state of Portland; for is it neither an ifland, nor has, as they conceive, a harbour for fhips to lie in faiely from all weather. It hath only an open bay, where with an eafterly wind ships ride in danger. And if the fleet of Spain should arrive there, I should sooner look to have them wrecked upon the shore than to return safe again to

Portland is a road fome leagues over from shore to shore, and within it lieth a small bar, and dry haven, called Weymouth, of no defence against an enemy's landing, nor fit for great fhips, as is all that fhore, except only a fmall port of no importance upon the road.

This place is in the state of Milford Haven, that hath an infinite number of places to land in, and no possibility to impeach an enemy's landing: and this will ferve as well for an answer to the Isle of Wight, and other places of that fort, where there are feveral landings.

The road of Portland gives us an advantage over the Spaniards, if they should anchor there, by reason of the breadth of the road, which is fuch, that no fortifications from the shore can impeach our attempts upon them. For suppose we should not be able to cope with them in fhips, yet keeping ourfelves to windward of them, during the time of the whole flood, we shall be able to put in execution stratagems, in firing them with veffels we may drive among them; or, if we fail one flood we shall be able to attempt them as often as we lift, and the flood fhall run without danger to ourselves; for during the flood they cannot come to us; and with the first of the ebb, we shall be able to ply out, without endangering ourfelves any manner of way.

I confess it is necessary that the men be mustered and trained in every shire, to make them able foldiers; but, in my opinion, it is not fafe to delign fo many men to fo ma-

in, and a good landing for their men; that ny feveral places, without there be works the ifland being won, it is a ftrong place and trenches made to defend them, and to enable them to repulse an enemy's landing; for if those men should be defeated, the lofs of their arms would equal the lofs of fo many men, and dishearten others that have not been acquainted and accustomed to the accidents and chances of war.

Something I have faid to this part of keeping an enemy from landing in my fifth book, where I treat of stratagems, by example of the Dozons, and other places, where the shorefide is full of fmall ftones and fhingles caft up by fea.

How to fight.

The next that follows is the order to be taken to fight the enemy if he be landed, which must be left to the discretion of a general: what enfues more, by the advice of the honourable commissioners, I refer to their former directions which you have read; and for brevity fake will deliver my opinion for the world to confider.

ANSWER.

There must be great consideration, not only how to fight, but a place must be chosen fen within the land to make their radezvous, for all their forces to meet to ther with most conveniency; for the enemy being landed, we must lay aside all other propolitions or stratagems, more than to think how to force them in a main battle, as we shall hear they direct their course, either by dividing their army, or marching in a whole

And for the effecting hereof, we must refolve to gather and draw fo many men into a body, as will make two main battles, the one to attend the fouth and west coast, the other to be ready to attend the prince of Parma and his army in the east.

If our ships fail of intercepting the Spamiards landing, they will become mafters of all our ports; and there is no coast where they fhall arrive in England; but will yield them store of landing places without resistance, as before I have expressed; and therefore our chief defence must consist in our land army, if we must not employ so many men as is defign'd to withstand their landing as aforefaid.

For the place of rendezvous for our weftern army, I hold Salisbury the most convenient feat: it lieth half way betwixt London and Plimouth, which will make the eafier march for them both; not forty miles from Portland, and that fouthern coast; not above eighteen from Southampton, nor thirty to the Isle of Wight and Portsmould; fo that we shall in a manner be upon the

enemy before they can be provided or prepared for their march. invasion upon England; but I believe it proceeded rather out of a hope, or an ima-

All the foldiers that are defign'd to oppose their landing in Cornwall, Devon, Somerfet, Dorfet, and Hampshire, being join'd with the rest that shall be drawn out of the inland shires, will make an army able to encounter more men than three such steets can either contain or bring.

When it comes to this extremity, the countries must have care to drive away their cattle, and live things of all forts, and to convey their cornand other victuals in carts, and one cart to take it of another, that the first may return back for another load; and if they have not time enough, then to burn the rest, and carts also, that the enemy may be disappointed of carriages as well as victuals; and for forage for their horses, they coming by sea, their number cannot be

The place to drive their cattle to be near the army, which will furely guard them. This being done, the general is to advife whether to march and meet the chemy before their further entrance into the land, or to fuffer him to march into the inward country, to have the greater advantage of them, being far from their fhips, and by confequence from all relief and help that they can afford them: but I am utterly againft the adventuring of our people 'y handfuls before they come to a main battle.

The place of our rendezvous for our eaftern army was well and advifedly chofen in 1588, when her majesty repaired to her army: first, in respect of the small distance from London, from whence they were to receive supplies; secondly, by the provision made of building a bridge of boats to pass over the river to the fuccour of Kept, or Kent of them; and, thirdly, for appointing their rendezvous on the Effex shore, rather than in Kent : for if an enemy land in Kent, he is kept by the river of Thames from coming to London, unless it be by the bridge of London, or of Kingston, which may be prevented by breaking them down: whereas if an enemy land on Effex fide, he may march directly to London without let, impeachment, or other impediment, but by the encounter of an army, that may be drawn out of Esfex, Kent, Hartfordsbire, Buckingbamsbire, Bedfordsbire, Huntington, Northampton, Lincoln, Norfolk, Suffolk, Middlesex, and London. And for Berksbire, Bedfordsbire, Gloucestersbire, Worcestersbire, and the shires thereabout, they lie indifferently to give affiftance as well to the weftern as eastern armies.

The honourable commissioners did conceive, that this great preparation of ours would so much terrify the Spaniards, that it would divert them from their intended

invasion upon England; but I believe it proceeded rather out of a hope, or an imagination, than out of any ground or reasion; for so great an expedition as this of the Spaniards, is not to be seared away like birds with wisps from a cherry-tree: but if you do it as a policy to amaze them, I fear they are not so unprovided of intelligence from England, but to know that the preparation of ships, the quantity of victuals, and the raising of soldiers, does intend no great matter from home.

Befides, if we should fright them with a voyage to the Indies, there are many things required in such a voyage that cannot be suddenly provided, as, namely, the sheathing our ships, provisions of all kinds, iron hoops for casks, and many other things

needless to express.

But suppose we should actually undertake such a voyage from home, I know not how we can give a greater advantage to the Spaniards, they having so great an army and navy in readiness to assault us whereseever we arrive; and in such a place where they shall be continually supplied from home; whereas we shall find nothing but what we carry with us.

PROPOSITION.

Whereas the council of war do advise, that in the army that shall be raised there be an increase made of pikes and bills, as weapons that the country assorbat, and shews the necessity of their being put into such mens hands as have not been taught other

I will be bold, without derogating from those noble persons, to deliver my conceit to this point, and to commend to them a weapon, that though it be known to us, yet has never been used in war, or against publick enemies; and yet in my opinion it may be made useful in the field, where there is neither castle, fort, nor town of strength.

The weapon is a pike-staff, such as keepers and warreners use for the guard of the game; and that every wood affords us without

This staff to have an extraordinary long pike, and three small ones to be scrued in at the lides of the staff, and so light, that a man may easily command him; every man in a town to be enjoined to have one. And to give the more credit and reputation to this weapon, and to encourage men to the use of it, as an exercise of value, credit, and pleasure, as footbal, hurling, and wrestling, have been anciently used, when there was more society and friendliness among men than now-a-days, I would advise, that all people thus armed with staves, may every

raordinary long to be ferued in fo light, that a im; every man have one. And d reputation to rage men to the flue, credit, and wreftling, when there was efs among men advife, that all ves, may every holiday

holiday have a place and time appointed for meeting and converfation, to ule thefe commendable exercises and sports, and amongst them to have men of skill appointed to intruct them, as matters of defence do their scholars, till they be made perfect.

At this meeting they may also use wrettling, and other laudable sports, which would put life and agility of body into thera: it will make them couragious to encounter an enemy, and skilful to take an advantage upon him: they need take no care but to weild their staffs with such advantage as shall be taught them; as a musketier, with whom they are to encounter, has his musket, his rest, shot, powder, and match, to look to, one whereof failing, he may cast away his piece for any other fervice he can do.

Let the musketier in this case be sure to kill him he levels at, or else the piske will be within him before he can load again, and have the advantage of his weapon upon him; and the pikeman being taught to wrettle, will suddenly kick up the other's heels; and if he carry ever a dagger or knife in his pocket, he will be the death of his opposite, if his staff fails him.

The bill in this case is improper, under correction to the commissioners, whose use is, if an army be routed, to fall upon them pell-mell with blows only: a bill is short, and not so nimble in a man's hand as a staff: it will be commanded by the horse,

and a great trouble to him that carries it after the purfuit of an enemy. A flaff has no impediment, but may eafily overtake a musketier that is laden with his piece and furniture, that he shall be either forced to yield, or cast away his arms, to escape by slight. It will also be an advantage to a man if he be put to leap a ford or ditch, and many other uses may be made of it.

This meeting for recreation will make good converfation and love amongst men; it will make them abandon alchouses, and think on nothing but on holidays to ipend their time in sports, which for many years they have been debarr'd of. And for the better governing it, and to avoid any hurt that may arise by it, it is wish'd, that at the time of practice the pikes be taken out of their screws; and at every such meeting the constable and his deputy be appointed to govern them, and punish abuses.

Thus shall all men in the kingdom be made to serve their prince and country without murmuring, exception, or offence offered by one or other: they are drawn to no expence or charge by it, or time lost or spent in vain, to hinder their other affairs or labours; the holiday yields them free liberty for their delights and sports, which have been of later times worse spent.

And thus much of a gentle private opinion, to be compar'd with that of the honourable commissioners.

The Queen's Death, and the Advantages of the Peace that enfued above the War in her Time.

AVING run over as briefly as I could fuch accidents as the eighteen years war did produce betwirt Spain and us, now happen'd, as you have heard, the queen's death, which, as was to be expected, produced alterations in Europe, though not much in England; for commonly every flate changes with time, and fornetimes to its advantage; for fubjects fondness of princes is uncertain, and they are often friends to

day, and enemies to morrow.

When God call'd her majefty to his mercy, it had been long look'd for, and defir'd by her foes, and fear'd by her friends; fome laugh'd, fome lamented; Spain and its adherents rejoiced, having tafted the bitterness of eighteen years of war with her; Itoliand fear'd, and suspected their good days began to wain, because his majefty needed not to support factions abroad to defend his just and lawful title.

Thefe two nations that were opposite one to another, had their particular ends; but the people that heartily and inwardly mourn'd, were the English, to see themselves deprived of a sovereign so good and gra-

cious, fo virtuous and victorious, whose reign had continued so long, as few had before in *England*, which made them the more uneasy.

But this trouble was foon turn'd into joy: for when his majefty appear'd, they recover'd a new life and fpirit, and receiv'd him with that alacrity, that they had foon forgot their grief, and fixed their hearts as faithful to ferve the king, as they had willingly obeyed the queen.

But before I end with the queen's death, I will shew you and the world, by comparison, the difference betwirt peace and war in the queen's time, if she had been so happy as to enjoy it; for though her actions were of great reputation to her and her subjects, through the success she had against of mighty and potent an enemy as the king of Spain, yet I must confess, the actions of our two succeeding kings (king James and king Charles) settled a firm and quiet league and peace in this kingdom, that has produced greater happines and benefit, if we will lay aside passion and partiality.

Peace has eafed us of needlefs taxes, which in war princes are forced to lay upon their fubjects: peace takes away all fear of enemies, fo that every man may live quietly under his olive-tree. Our peace has trebled our number of fhips to that of former times; mariners are abundantly increased, and wealth plentifully augmented; so that we are better enabled and provided to resist the fury of war, either by land or sea, if there should be occasion.

should be occasion.

And if eighteen years of peace have produced to great an alteration and change to this kingdom, in comparison of the eighteen years of war past, how happy had we been, if the eighteen years aforefaid had been converted into the same number of peace. All bleffings had been poured upon this land, which by war was hinder'd; for who fees not that eighteen years of trade doubly increased those riches that time consumed. These errors of ours will serve for a warning to us in future times; for it is an old faying, That example is of greater force than precept; and, That custom teacheth nations,

reason men, and nature beasts.

Spain is more punish'd by the king's peace, than by the queen's war; for by our peace, England is enlarg'd by feveral plantations in America, all neighbours to Spain in their habitations of the West Indies, in case they become insolent, or offer injuries; which plantations in eighteen years are brought to afford plenty of food, without the help of England; which is no small benefit to us, confidering the increase of Scotch and French that are ready to devour us: and befides this abundance of victuals, the foil of that country will produce whatever we shall plant or graft there; so that England need spare nothing out of it, that will bring a want to it; for their chiefest want is of tools, materials, and other instru-

The air is delightful, and the climate wholefome, and lies moft convenient for other nations to take off their commodities: then judge, if queen *Elizabeth* had not been diverted by war, what honour, what wealth, and all other bleffings, had fhe left as a legacy to her fubjects, which was afterwards increafed by our two kings aforefaid.

And befides these seven western plantations, begun and continued by subjects, without expence to the kings, and not molested by the terror of the enemies, I will sail to the East Indies three times further distant that the other from England, and where the equinoctial line must be twice cut; there we found a trade to the island of Socotora, at the mouth of the Red Sea, and the nearest part of that continent to us; and keeping the shore of that African coast, we landed at the island of Ormus, and other places

within the gulph of *Persia*, where we assisted the king of *Persia* to take that island from the king of *Portugal*.

But I confeis, this was not fo commendable as many other noble acts of ours; for here we defiled our hands with ftealth; and what is worfe, we did it to aid and benefit a mahometan. But mark what the end of that voyage prov'd to the English, which brought God's anger and revenge upon them; for the Persians treacherously broke their word with our men, and upon a flight occasion seized all the goods they had taken. And besides, an English ship lighting upon greater wealth than the reft, was there cast away and perish'd; not to speak of many other disasters that besel them.

We stopp'd not here, but in the same easterly course repair'd to Surat, in the kingdom of Gambaya, under the government of the great mogul, to try what trade and riches that king and country would yield us. The long distance betwixt the seacoast and the court of the mogul, did not obstruct our visiting him, but thither we fent at times several ambassadors, who found civil entertainment, which has afforded us a peaceable trade, with divers immunities.

But before we leagued, or had correspondence with this king, we had fettled and continued, and to this day do enjoy a greater trade, and further from home than Surat, as namely, at Java, Sumatra, Jacatras, the Molucca islands, and others. We have feen and tried what China and the island of Japan afford, though we are not much encouraged to perfevere in those trades; for they do not answer the great expectation we had conceived of them. I dare boldly aver, if the custom-books of that trade to the Indies were viewed, it has yielded the crown of England many an hundred thoufand pounds, all which we must attribute to our peace; for though in the queen's days, and in the year 1591. captain Raymond gave a warlike attempt, if he and his fhips had not miscarried in his going to the East Indies, yet that voyage produced no-thing but mifery, as you will understand hereafter.

But I know the well-wifhers to war, and favourers of the queen's time, will except againft me, and all I can alledge in conmendation of peace, as placing it before war. But in answer to them, I say, I was as great an actor in those days of war, as any other that shall question what I say, and have as good reason to judge of the difference of times as they, if partiality and faction does not transport them.

And because I infilt so much upon peace, and go about to prove the good it produced above the queen's war, I expect to be hit in the teeth with his majesty's late war

on peace, it produpect to be late war with

with Spain in 1625, and with France in 1628. But before I come to that time, I must tell them, That king James, who reigned twice as long as his fon, reckoning to the year 1635. could not be faid to have been molested, or his countries infested by enemies. And the accident that fell out in the days of king Charles, might rather be term'd an act of unkindness with the king of Spain, than of malice, and therefore deferved not the name of war, for it was begun and ended before either fide could think to frame themselves to hostility; and who knows not that some evil and passionate counfellors drew our king to a fudden and sharp revenge upon France, which was as quickly ended, as words could give fatisfaction.

But I would ask these captious persons, whether either of these two unkindnesses or occasions were so violent, or of so long continuance, as to hinder his majesty's designs to enrich his kingdoms, or whether the plantations sailed by any missortunes

we found by war.

Another objection will be made againft what I fay of our plantations, which is, That they were known to us long before; and that English ships visited the East Indies in the queen's time; and perhaps they will press me with the first discovery of Sebastian Cabot, Anno 1496. from fifty eight to thirty six degrees of latitude; which I thus answer:

fix degrees of latitude; which I thus answer: No relation of Caboa's ever mentioned his possession, or setting his foot ashore to inhabit any of the lands betwixt the degrees aforefaid; and therefore we can challenge no right of inheritance, wanting proof of possession, which is the law acknowledged for right of discovery: and by this argument, the Spaniards may as well incroach on us upon as colourable title, because they were the first that failed into America.

The second objection is, the proof of our inhabiting Norrambega, a part of the main continent of America, and betwixt the degrees aforefaid, in 1584. and so we say captain Raymond, before spoken of, was in the East Indies in 1591.

I confess here was a possession in 1584, and a patent granted Sir Walter Raleigh, who placed there a colony; but so ill seconded, that all the planters were there confumed, and no memory lest of them, though our late planters endeavoured to find what became of them; whereby we may say our possession was lost, as in the case of inheritance, that for want of heirs a man sorfeits his estate.

And to answer the objection of the East Indies, there is no mention of possession by Drake, who was there the first of any Engliflman, when he failed round the world, and before the reign of king James. And moreover, in the forty third year of the queen, and the year before the died, the granted a patent to certain merchants for fifteen years trade to the East Indies, which was prolonged in the ninth year of king James to continue for ever; but the queen lived not to fee the return of that first voyage which captain Lancaster went. And moreover, his imployment was as well to take by violence, as to trade by fufference, and unworthy the name of an honest defign: for the hands of merchants should not be stained or polluted with thest; for in fuch case all people would have liberty

to do the like upon them.

But indeed, the most memorable thing we can challenge by that trade, is, That we have lately agreed with the Portuguese, who were the first discoverers, and to this day enjoy the benefit of it; have fettled their government and language; built rich and curious cities, churches, and monasteries; and all things else that belongs to a civil nation, in as large and ample a manner, as in their own country of Portugal: and more than this, they have the command of many civilized countries adjacent to them. They have ships sufficient to uphold the trade betwixt Portugal and the Indies; and yet they are willing to make us sharers in their commerce, and to incorporate us as freely as themselves, with promise to imploy and freight our ships for our better satisfaction.

But give me leave freely to deliver my opinion concerning this voluntary offer made by the Portuguese, who hitherto could be brought upon no account to grant us trade. We must conclude they are drawn to it rather through necessity than love, or other respects; for they find the intrusion and good fuccess of the Hollanders to be such, as in time may hazard the ruin and fubversion in the Indies, without the help of England, who is best able to right them; therefore let us consider the time and the occasion of this overture, and embrace it as friendship grounded upon interest; for though leagues betwixt states be to support one another, yet every one has his particular advantage. I will fay no more to this point, but advise you to fafety and fecurity, and to beware you be not deluded with golden pills, wherein is hidden most deadly poifon.

re m is fra in

A Farewel to the Gentlemen to whom I dedicated this Book.

Gentlemen,

MAKE you the Alpha and Omega of my difcourfe; for at the beginning of this book, I commended it to your view; and now, at the end, I take my leave with a loving farewel, adding this admonition by way of caution, That you beware of adventuring yourfelves and eftates upon fea expeditions; you may perceive, by my obfervations, what peril they bring, without profit; and what pains, without preferment; for there are few whose imployment has gain'd them advantage or honour; as to the contrary, many are brought to want and misery by them.

"Our private actions of reprifal have been as fatal to the adventurers, as Sejamus's horfe to the riders, or the gold of Toulouse to Scipio's foldiers; for to this day there remains a proverb in France, That he who is unfortunate, has some of the gold of Toulouse in his house: and so fares it with our undertakers of reprifals; for wealth so gain'd, brings a curse with it; and not only wastes itself, but confumes goods well gotten, if mixed with it.

"Take notice of these few persons folding to the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the sec

"I have notice of their few perions following, inflead of a multitude I could recite, that have been brought into the flate of Sejanus's riders, or the deftroyers of Toulouse; and it will appear, God was displeased with their actions, and punished their designs.

"I will begin with the earl of Cumberland, whose voluntary undertakings were
well punished in his first two voyages, bereaving him of two hopeful sons, whom
this kingdom could not match; and in
the prosecution of such actions, he so impaired his estate, that his heirs, and their
posterity, have just cause to bewall his
proceedings.

"The three eminent men of that time by fea, were Drake, Hawkins, and Forbulher, none of which left any legitimate iffue to enjoy their adventurous labours: and if two of them were now alive, they knew not where to find the effaces they left behind them.

they left behind them.
"The miferable gentlemen that undertook fuch enterprizes for gain, to recover their fpent and confumed eftates, were Canlifb, Chidley, Manby, Cock, with many others I could name, whose funerals were all made in the bottomless sea, and their lands confumed and turned into the element of water.

"And if we defcend to the towns, which for that time flourished with the goods fo gotten, and examine the conditions of them and their inhabitants, we shall find not only the people, but the places impoverished after the same manner they were enrich'd, (that is to fay,) by rapine, fpoil, and piracy: and I may further say, that there are not three men in this kingdom who can boast they have succeeded their fathers in any quantity of goods forotten.

What I warn you of, is not fo much out of perfuafion, as precedents and example, which is a compafs to fail by; but if your wilfulnefs will not admit of advice, and hereafter you feel the fmart of it, remember that counfel is always full of perturbation to fuch as embrace their own wills.

"And remember the faying of a grave and wife counfellor, That as youth is warned to prevent the worft, fo age bids us provide for the best; for it is a ficknes of most men to be guided by opinion, and not by judgment: but wise men do otherwise; for if they run into an error, they seek quickly to amend it."

The End of the FIRST BOOK.

Book I.

Sir WILLIAM MONSON His SECOND SON.

Good SON,

Y computation of years, it is now nine fince I address'd my self to you in writing; which number of nine changes one's complexion, and many times one's conditions:

nine times seven, or seven times nine, make fixty three, which is the climacterical, or

dangerous year.

This ninth year has bred greater alterations in you, than either in complexion or condition: her malice and perils towards others have begotten a contrary effect in you, and in fo high a measure, by your marriage, that the climacterical year has lost its reputation with the observers of it; for in defpite of it fortune has given you a lady of birth, parts, and means, far above your merit or thought; and fince fortune has been so liberal, do not give her cause of fcandal, or to find ingratitude in your face, by your carriage to your lady; for an unthankful man incites God to punish, and people to abhor him.

No man can treat with an ungrateful person, without suspicion of him; and next to the name of an evil christian, the word Ingratitude is the worst: God, for all his bleffings on man, requires nothing at his

hands but thankfulness.

Next the respect to your lady, let your carriage to all others be with that moderation and affability, that they may perceive you are no more elevated with good fortune, than you will be dejected with bad; but stand like a tree well rooted, which no wind can stir or move.

The reputation you may feek to get in this world, depends not fo much upon prudence as goodness; for a man ought to get credit and efteem of all, and to be suspicious of his own advice and carriage: time will inform you, that the greatest gift nature can bestow on a young man, is comelines of body, discretion in his carriage, and eloquence of tongue; and yet all this is nothing, if it be not attended with a good reputation. The true property of a gentleman, which I would have you to observe, is to be temperate in speech, liberal and frank in giving, moderate in diet, honest in life, and courteous in carriage: for it is not titles or riches that makes men esteemed, but the favour they do, and the gifts they bestow.

The mischiefs that breed contrary effects to these, as hate, spleen, and contempt, are

covetousness, pride, and disdain: the cure to falve this, is not to prefume too much upon your felf, without the counfel of others; for many times people (and especially young men) attribute more to themfelves, than others can difcern in them. Solomon fays, That wife men take counsel; and be that does things with advice, governs prudently; and he that does otherwise perisheth, and faileth in his own designs.

This counsel is not to be expected from one of twenty or thirty years of age, but from hoary hairs. Licurgus ordered that old men fhould be more respected, because their advice was more to be regarded.

The greatest combat in this world, is to conquer one's felf, and to tame his heart, as Plate fays: but the way for young men to be virtuous in this battle, is to take advice, to hear, and with humility fubmit to reason; for naturally youth is inclin'd to have an opinion of themselves, and to abandon the counsel of others, which commonly ingenders pride, vain-glory, and ambition: then followeth reproach, contempt, and fcorn; which makes their paths as dangerous to walk in, as the slipperiest of ice or glass to tread on.

Be careful in the choice of your friends; and efteem them more for virtue than honour: the one is but a title of power; the other of defert. Know there's no end of friendship which is founded upon love, and requited with the same. To such a friend one ought to be scarce in words, but prodigal in works; for the true perfection of friendship is to supply a man's wants, and advise him in his errors. But Seneca faith, That fuch are rare; and a man ought to feek but one of them, and to have never an enemy: for as it is dangerous to have enemies, fo it is troublesome to have many hiends: if he be poor, you must give; if rich, you must observe; if favoured, you must adore; if disfavoured, you must support; if cross and perverse, you must flatter; if cholerick, you must forbear; if proud, he is not long to be endured.

Above all other vices, beware of that of pride; for young men are subject to it: it is called vanity in women, and ambition in old age. Youth are prone to be proud of their persons and external parts: women are as vain therein; and what they want by nature, they help by art. Young men affect oftentation, and to be praifed: women vain-

glory, and to be adored. A man endures no competitors, nor woman equal.

Many women by reason of their lightness, and young men for want of knowledge, are inconsiderate: they apprehend, and execute, all with one breath, which many times brings them to repentance: and yet do I rather approve the vanity of women, which are governed by the inconstant motion of the moon, than mens pride, that can give no reason for their being so, if they seriously consider how indifferently God distributes his gifts to all creatures; so that no man can persuade himself but that housands equal him.

If he is proud of the favour of a prince, he may as well be proud of his fortunes; for comparing his merits with others, he will find many competitors exceed him: if of his progenitors, or other parts of his ancestors, kings reward mens proper virtues, not what they can challenge to descend from others: if of learning, his waste hours permit him not to attain to that perfection ordinary scholars do by continual study: if he affect popular applause, it is like an echo, to be heard, but no man knows where: and let him not be deceived, for no proud man is either valued or beloved, as himfelf can witness; for the nature of pride, is to abhor it in another: if he be frank and liberal, for pride without bounty is like a fpot in a fair face that defiles it, his esteem will be according to his expence; but that ceafing, men turn their hearts against their

Ambition is more fufferable and allowable in an old man, than pride in a young one: for there are two diffinctions in ambition; the one is allowable and commendable, when a man hath an opportunity to compass his allow'd defires by his lawful endeavours.

Most divines hold free-will in man to do well; and where ambition tends to well-doing, pride has no power or part in him. The pride of Tarquin was so detestable, that it overthrew the title of kings in the Roman commonwealth. Cassar settled the highest degree of monarchy by the name of emperor: his ambition was carried with that temper, that he attained his end by love; whereas Tarquin lost himself by pride, and was worthily loathed.

No man that defires to be fingular, but has fome part of ambition, and yet free from any part of pride. If the common foldier did not aspire by ambition to the degree of a captain, his valour against the enemy would little appear: if a courtier had not a thought of advancement, he might better employ his time, than in the service of a prince. A thankful man ambitiously strives to requite the courtesy of another:

it unlawful, but the manner of compaffing it, and the means of employing it.

The fecond degree of ambition is accompanied with pride, envy, and hate; and obtained by corruption, flattery, and unlawfully, as appears in some English kings, who have not spared the destruction of their own blood to attain their devilish ambitious ends.

Ambition is like the unfatiable fea, that receives all other brooks and rivers, and yet is never filled. It may be compared to the monfter Hydra, which though fhe loseth her head, yet it increaseth again; for the nature of ambition is never to have an end; and as man compasseth his desire in one thing, he is not long statistical with it, but covets another, still working his own misery and woe. But he should remember the words of Plutarch, That none climbs so bigh, but he has God above him, and his actions are beled by man. Ambition is a thing conceived in the heart, and consented to in the mind.

The last and basest property of ambition, is to compass their end by corruption: this age, and this our nation is best able to testify it; for no man's virtue can advance him, nor no man's vice hinder his ambition, if he have money and means to buy his preferment; as, on the contrary, amongst the Romans, no man was advanced to honour but fuch as refused it; and none with us, but those that buy it: nor no man was preferred but by his worth; but none with us but for their wealth. I confest that as it is reputation to have it, so it is infamy to purchafe it; for a good man careth not for titles, and his good name cannot be taken from him; he may be ill used, but not dishonoured.

The next thing I commend to you is patience and temperance, as a fingular virtue in itself, and the cause of much happiness to man. It breeds content to the mind, ease to the body, and quietness to the foul. It abandons ambition, and makes one submit to reason. Plutarch advises Trajan to patience in troubles, to be gentle in bufinefs, and to bear with ill tongues, and fuffer calumnies; which time cures, when reason cannot; and it is as great wisdom to do no evil office, when a man may do good; for if he may have his ends by fair means, not to obtain them by foul; for the true property of a wife man is to think of times past, to order things prefent, and to be careful of the future. Cicero fays, that prudence and patience is the art of life, as phylick is of health; it neither deceives, nor is deceived. As for worldly fortunes, they are uncertain and mutable; for no man can account himfelf happy till his death.

then it is not the word ambition that makes

my request is no fooner propounded than granted;) which is the continuance and delight in your book ; but with this caution, That it breeds not a vain and arrogant conceit, which may cause contests and quarrels in arguing. Matters of flory depend on the author's authority that writes, and their judgments that read: many times writers differ; and readers are apt and prone to rely on him who fuits best with their particular opinion. This over-waining conceit lives in the house of will, where reason has no power, and it is the original breeding of all herefy. And if men would read with patience, with judgment confider, with humility to fubmit, and with reason to receive fatisfaction; neither would fects fo much abound, nor scholars so greatly disagree among themselves.

All men are affectionate or partial in their opinions and fports; fome delight in hunting; fome in hawking, and other exercifes; and as there are many faces that do not agree in one feature, fo there are as few that agree in all points and delights. But efteem no lefs of him that forts not with your humour, than of a chriftian that jumps not

with you in points of religion.

If reason guideth actions, learning should have the preheminence above all other fatisfactions; for he that is a lover of his book, shall learn of wisemen courage to imitate, prudence to counsel, grief to lament, mirth to laugh at, fools to jest with; yea, he shall find the good he desires, and may eschew what evil he pleases.

Barilius the emperor advised his fon not may throw stones, but do no other hurt.

to be weary of reading of books, because he would find that without forrow, which others do with great trouble; he would iee the mutability of human life; the raising of some, and the falling of others; the punishment of the evil, and the reward of the good; that he might sly the one, and embrace the other.

Good fon, for an end of all, be confiderate before you enterprize a thing; be confant in purfuing it, and patient to effect it; for nothing is compaffed with that facility but finds opposition, nor nothing spoils a good cause sooner than haste and choler. It is like an evil weed put into a savory broth, or possion into a potion.

Three things there are I would advise you to remember; the commandments of God, benefits received, and the uncertainty of your life: in the one, you will perform your duty to your creator; in the other, fhew thankfulness to the world; and in the last, abandon many vices and vanities this age

For your duty to me, let it be as God hath commanded: not that I expect more than by nature is due; and for lefs, let *Noab* be your example, who being defpifed by his fon *Cbam*, and being pity'd by his two other fons, God fent his curfe upon the feed of *Cbam*, and bleffed his other children. Remember that the clear and unfpotted life of the living fon, begets fame and glory to the dead father. And carry in mind these precepts of mine, and you need not efteem the affronts of malicious tongues; for they may throw stones, but do no other hurt.

TO SUCH

Gentlemen and Commanders as were Actors in the Wars with Spain in the Days of Queen Elizabeth.

Noble Gentlemen,

N my former book I have presented to the view of the world, the accidents and occurrences of the late war with Spain, in which you may worthily challenge an interest by having hazarded your persons in such desperate expeditions; and wherein your rewards did not equal your deserts: for time and ingratitude are the destroyers of all noble and methorable acts, and have caused you to be forgot.

The Romans had never been nobly eftermed, nor their victories gloriously atchieved, had they not respected the actors as theauthors of their conquests. They valued men not for their birth, but for their worth, accounting virtue the cause of preferment, and honour but the effect. They accounted them not gentlemen that got riches, but those that attained to reputation in war; saying, He was unworthy the praise of his ancestors, that did not imitate them in virtue and valour.

In fix hundred and forty years the *Romans* were victorious, they never gave office to men that fued for it, but to fuch as out of mature differetion they chose, whom they knew to be fit to execute it. Soldiers may plead their honours to be more ancient; for it is written in the province of *Caria*, in the *Lesser Asia*, they gave spurs to the valiantest men at arms, by which they were privileged and dignify'd. Feathers were likewise invented to distinguish soldiers from others; and punishment inflicted on those that wore them, and could give no account of some exploit in chivalry.

Inferiptions on tombs and monuments were allowed only to those that gave testimony of their valour in warlike seats.

A young man, whose valour was suspected, and son to a samous captain, besought king Antiochus to give him the reward his father had given him by king Demetrius: Antiochus answered, I reward not the virtue of fathers, but the deserts of the son.

Lycurgus, among his many laws, for the encouragement of men to imitate the virtue of their ancestors, ordained, That at the solemn and publick feasts there should be three choirs of singers, according to their ages: the first were old men, who sung their own praise of times past: the second young men in their prime, who sung, We are young and able, and be that will not believe us may try us: the last were boys, who sung, We shall be better than those that went before us.

If these three degrees were now to sing, the old men with hoarse voices might rather exclaim against the iniquity of the times; the young men with untunable notes, might renounce sollowing the example and steps of those that went before them; the boys might complain, that all hope of preferment and reward is taken from them.

Virtue was ever efteemed, and arms rewarded before all other professions; and as a man is bound to serve a prince, so has he leave to sue to him. The powerful king Abasuerus was wont to say, There was no man that did service to his prince or country, but they were bound to reward him; and because his deeds might be answerable to his words, they write of him, That one night in his bed being not disposed to sleep, he caused the annals of his country to be read to him; and finding that one Mordecai had done great service to himself and country, he asked, what reward the said Mordecai had received; and finding he was neglected, he advanced and preferred him above the rest of his subjects, saying, That prince was unworthy, who did not reward according to the service be bad done.

Numa Pompilius commanded those to be reverenced that overcame in battle. Solon

ordained a reward for fuch men as deserved well of their country.

But now you see, and with grief must consess, we make more account of the word honour, than of deserving it. In ancient times none had titles of dignity but those that sought to avoid it; and sew with us, but such as will buy it: we value honour by riches, not by de-

fert, as it was first instituted.

But what shall we say of inconstant time, which alters and changes all things? For the Romans shourishing estate, which continued longer and more prosperous than any other nation, was at last overthrown by luxury and delights they brought out of Asia: for after Paulus Æmilius overcame them, he brought such essembles into Rome, that other nations took advantage of it, and became conquerors over them by whom they had before been conquered; and those that had been honoured for their valour, now became infamous to succeeding ages for their cowardice.

Mario Antonio observes another bane to commonw: alths; as, namely, private and particular favourites: For, says he, the importunity of favourites makes the prince give to him from whom he should take, and take from him to whom he should give; they dishonour the worthy, and honour others of less merit; they despise the experienced, and rely upon the weak and ignorant; they prefer not men to offices for their persons, but persons to offices; they give justice to the unjust, and resuse justice to the just; and value justice by their own profit.

When they are brought to preferment thus unworthily, they make their authority greater than their place: they supply that with malice which they want in discretion; they praise their own ill, no less than if it were goodness in another: but in the end they lose themselves, by adventuring into a sea they know not: they make infamous the prince they misgovern, and commonly their end is death and destruction; for their beginning was pride and ambition, and their end envy and malice.

ning was pride and ambition, and their end envy and malice.

Though it be a fcandal to a commonwealth, where princes make more of favourites than of well defervers, it behoves you not to approve or repine at it; but to hope that

act of his will not stand as a precedent.

Evil kings rely more upon custom than goodness, and desire rather to be obey'd than counselled; the devil under colour of advice deceives them: but such princes are like covetous persons, That live poor, to die rich. They please their humours whilst they live,

and leave infamy behind them when they die.

Seneca fays, That Cato deferved more glory for banishing the vices of Rome, than Scipio did for conquering of Carthage. By which you may see it is not your profession, I mean arms, that reforms commonwealths, but wisdom in grave and sage senators; for Democritus the philosopher truly says, That two things govern the world, reward and punishment. My last and best advice is, That you refer your selves and causes to time; for that must cure, when reasons cannot.

BOOK

BOOK II.

Containing some Actions of the English after King James's Accession to the Crown; and several Discourses upon that Subject.

The Peace with Spain after the Queen's Death, and some Accidents that happened.

S commonly ill news flies apace, fo the queen's death was foon divulged in all parts of Europe, every prince ftriving to be the first to congratulate his majesty's

happy acceffion to the crown.

And though Spain be generally observed, and by its friends much condemned for its long and tedious dispatches, yet this action being so rare, and importing them so much, the news was no sooner brought them, but an ambassador was immediately nominated to perform such rites and ceremonies as princes afford one another in such cases.

What fucceeded in their treaty, or what labouring by other states to keep these two great kingdoms in division, concerns me not to enquire; only I will prosecute such accidents as fell out at sea in the twelve

years I ferved as admiral in the narrow feas. Though his majefty might fay, (as few princes ever did,) That be could not estem any state in Europe bis enemy; and that his christian-like motto, Beati pacifici, declared how far his heart was from war, or to support the divisions of christians; yet he was willing to follow the example of his predecessors in keeping some ships in the narrow seas, to detend his right and jurisdictions there, which the Hollanders thought to invade, as will appear by the following discourse.

This treatife was writ by Sir William Monson, who ferved as admiral of those seas twelve years, and dedicated it to the two late lord chancellors at his deliverance

The narration shall speak for itself; and the reader may judge, if he be not too much transported in affection to the nation of Holland, to what their infolencies then tended, or may tend hereaster.

But before that difcourfe shall take place, I will entertain you with two or three acci-Vol. III.

dents worth your knowledge, and which

may challenge a place among the reft.

The peace between England and Spain being concluded, and published in the year 1604, the war between Holland and Spain still continued as hot and fierce as before. The admiral of the narrow seas was now to think to walk indifferently, and without partiality betwixt the two nations, like a careful shepherd, to keep his neighbours slocks from intruding upon one another.

The next thing that gave occasion of debate was in the year 1605, when the king of Spain fent eight ships with a thousand soldiers through the narrow seas for Flanders. He would not exceed the number of eight vessels, because the articles of peace did warrant the entertainment of so many in his majesty's harbour.

But, as I have fhewed, the bane of actions has been in the discovery of them; so this of the Spaniards being understood by the Hollanders, they provided to intercept them at sea; where they met, and there passed a cruel and bloody fight betwixt them: many of the Spaniards were slain, and some taken; but the greatest part recovered Dover, where they were defended with shot from the castle and platform.

Being now arrived in his majefty's dominions, they counted themfelves under his protection, and waited an opportunity to pass over secretly and by stealth into Flanders; or by his majefty's mediation, who laboured with the states of Holland to that

But the Hollanders having the Spaniards at a bay, and knowing they durft not venture to put out, being beleaguer'd by their fhips, for the space of seven or eight months, his majefly follicited their passage, and Sir Nevil Charoon was sent over to that purpose, but could not prevail; for the Hollanders stood more upon point of honour than

Hhh

any hurt they could receive from the thou-

Upon this answer, my lord of Salisbury sent for Sir William Monson, and imparted to him the state of the whole business, demanding of him, if it were possible to put over the Spaniards without using his majesty's authority or force, or hazarding to be intercepted by the Hollanders. Sir William told him it was a service of great importance, and the greater, because the honour of two kings was engaged in it; but if it pleased his majesty to have it done, and that his lordship would undertake his directions should be followed, he doubted not but to effect it, as his lordship had proposed.

Hereupon my lord of Salisbury imparted it to the king, and his majefty to the Spanish ambaffador; for then was Don Pedro de Sunifa come to fucceed the Conde de Villa Mediana. The king defiring the two ambaffadors to deliberate and confider of it, shewing a willingness in him to farther it, the ambaffadors took respite to give their resolutions, till they had acquainted and received an answer from the king their master; for those being his subjects whom it concerned, they could not dispose of them without his knowledge or approbation.

And thus it continued for the space of eight or nine weeks, when the ambassador Don Pedro's messenger return'd from Spain; and then he repaired to my lord of Salisbury, and acquainted him, that his master's friendly proposition was approved of, and thankfully accepted by the king his master.

Upon this my lord of Salisbury fent for Sir William Monfon once again, requiring him to perform with care what he had formerly promifed; for it was a fervice of extraordinary confequence.

The secrecy and policy that was used to contrive this stratagem, with the several passages that happened, is too tedious to tet down; only I will say, that in spite of the steet of Holland, that usually rid in the mouth of Dover peer, in the road of Gravelling and Dunkirk, to impeach the Spaniards passage, yet they arrived safe in Dunkirk the same night design of for them by Sir William Monson to be expected, without the help of his majesty's ships, or other affistance by his authority; which the Hollanders look'd upon as so great an affront, and to be thus prevented and derided, that it made them suspects, though they had no just ground to accuse him, that Sir William Monson was the director and

contriver of this stratagem; and therefore now they began to settle their hate upon him, and to urge and labour his removal out of the narrow seas, as in the following account will appear. This act of Sir William's, which he did by direction of the state, ever after procur'd him much hate and envy, not only from the Hollanders, but from their friends and sactions in England.

The next fervice Sir William was employed in, concerned the towns of Rye and Haftings, which found themselves impoverished, and almost ruined, by the French incroaching upon their fishing on the English coast, contrary to the articles and agreement betwixt the two kings.

These towns, upon just cause, complain'd of it, and Sir William was sent down to redress it; which he carefully performed, though it cost the lives of some Frenchmen: for two years he was sain to use force, and brought the French to that submission, that

the English enjoyed their usual privileges, Many other accidents happen'd in the narrow feas, that need no remembrance; and yet I will conclude with the escape of the lady Arabella, twenty four hours before Sir William Mouson had order to pursue her; which he did with that celerity, that she was taken within four miles of Calais, shipped in a French bark of that town, whither the was hound

The manner is so commonly known, that no more needs be faid, but that it was done : though the accident was fo strange and unlook'd for, that few could be persuaded but that her escape was plotted, with an intent to take her again: and it was the rather believed, because Sir William was not rewarded according to the importance of that fervice. But it may be answered and imputed to his misfortune; for fince the death of queen Elizabeth, who was both gracious and bountiful to him, he never tafted or received either recompence or preferment, more than his ordinary entertainment, according to the fervices he was employed in; for he began the wars with ten shillings per month pay; then with two shillings and fixpence per day; after with five shillings, with ten shillings, with fifteen shillings, with twenty shillings, and fixteen pages allowed him for his retinue; after with thirty fhillings per day; and laftly, with forty shillings per day. He had served as a soldier, a private captain, a rear-admiral, a vice-admiral, a captain under the general; and laftly, an absolute general,

gs and illings, illings, iges althirty i forty s a foliral, a meral; To the Right Honourable the Lord Elsmore, Lord Chancellor of England, and Sir Francis Bacon, Attorney and Counsellor, Sir William Monson, after his Imprisonment in the Tower, Anno Domini 1616. concerning the Insolencies of the Dutch, and a Justification of Sir William Monson.

DID greatly, and in a manner half promite myfelf, after I was examin'd by your honours, if ever God gave me liberty, to prefent you with fome collections of the Hollanders infolencies on the narrow feas, from the time his majefty made peace with Spain, till the truce betwitt Holland and Spain; in which interim there arose many doubts and questions, which purchased me no small hate from that state of Holland.

The first of July, 1604, the then lord Cecill signified to me his majesty's pleasure, that I should take charge of his highness's ships serving on the narrow seas; and will'd me to make such provision for transporting the constable of Cassile, who was then expected to conclude a peace, as should stand with the honour and reputation of his ma-

jefty.

After humble thanks to his majefty, and no lefs to his lordfhip, for doing me fo high a favour, without either fuit or feeking of mine, I was bold to tell him, That by my employment I was to enter into a labyrinth; for though the navigation was but fhort and eafy, yet it was both difficult and dangerous; for I was to fail betwixt Scilla and Caribdis; the one I might call Holland, the other S_i ain; and feeking to avoid the difpleafure of the one, I might as well fall into ennity of the other.

As for Holland, I consider'd, by the permission of our state heretofore, they might challenge a prerogative, where nothing was granted by us but of courtesy, their insolency was such; and therefore to curb them suddenly, that had their rein so long given them, could not be done without great envy, if not danger; for that their forces at sea did much exceed his majesty's, who had but one ship and pinnace to guard his coast.

On the other fide, I weigh'd with myfelf, if I should give distaste to the Spaniards or archduke, I should incur the displeasure of two princes, who had their ambassadors resident near the king; and whose power, in respect of their matters, was able to crush me, if I should either willingly or ignorantly commit the least error. What his lordship's answer was to this, I omit, left I should be charged with vain-glory, (a vice I ever detested.)

I departed from my lord with this refolution in myfelf, above all things to ftand upon his majefty's honour and right, to carry myfelf like a neuter, to do justice indifferently; and if there happen'd any question of ambiguity, to acquaint my lord admiral, and the lord Cecils, from whom I would be directed in all doubtful and difficult cases.

The first of August I received a warrant for my repair to Graveling, where the constable remain'd, expecting my coming. My care was to perform so much as my lord Cecill gave me in charge; and to add the more grace to this fervice, confidering the greatness of the person that was to come, and the honourable occasion of his coming, I was accompanied with fifty knights and gentlemen of good account and quality. If my expence in that journey were valued, with the rest of my disbursements for the transportation of princes and ambassadors, for which as yet I have received no fatisfaction, it is not the rewards or prefents of ambaffadors that would countervail the expence of their diet.

The day after my arrival at Graveling, I was defir'd by the constable to go to Dunkirk, to see his barks with provisions secur'd from the Hollanders, who did usually ride with a squadron of the before the town of Dunkirk, to belonger it.

town of *Dunkirk*, to beleaguer it.

At my coming thither, I went on board the admiral of Holland, who had been my old and familiar acquaintance, by reason of many actions and fervices we had been in together: I told him, That after twenty years spent in the wars, I was now become a watchman, with a bill in my hand, to fee peace kept, and no disorders committed in the narrow feas. And whereas many mifdemeanors and outrages had been offered by fhips that ferv'd under him against his majesty's subjects since the death of the queen, I intreated him, that from thence forward things might be carried with more difcretion and mildness; otherwise it would exasperate his majesty, and alienate the English hearts from them, whose love they had sufficiently made proof of. The admiral told me, That if the English did offer to trade into the archduke's ports of Flanders, his commission was to impeach them. I advised him, if it were so, to do it in a friendlier manner than had been; which he promifed, but meant nothing

For the Hollanders continued rather more than lefs cruel, in taking and burning our English ships, and sometimes murdering our men; when at the same instant, and in view of our English barks taken, they would permit and furfer their own countrymen to have free access to the harbours of Flanders, without impeachment. I made many and fundry complaints of it to the lord Cecill, who, it feems out of policy, was willing to connive at it. I endeavour'd by all gentle and courteous means I could, to draw the admiral to a more loving proceeding, the particulars whereof I hold it not fit to re-

late; and yet one I will not omit.

A bark of Yarmouth was met and furpriz'd by a Hollander, in the road of Calais, under pretence that the was to go for Dunkirk. It was my hap to meet and refeue the faid bark, and found fifteen Hollanders, mariners in her, whom I might have juftly executed as pirates; but because I would oblige the admiral, after two or three days imprisonment, I dismissed then, which a letter to their admiral, expressing my mild proceedings, desiring him to follow my example to his majesty's subjects: but all in vain; for he desisted not from his former courses.

Their flubborn carriage at my first entrance into my place, in not striking their top-sails, and other rights I requir'd as due to his majesty's prerogative, I forbear to express, though your lordship may well think it could not be redres'd without much hazard and harred to me.

The 4th of October, 1604, there arrived in the Downs a flip of war of Dunkirk, where the found three or four merchants flips of Holland, bound for France. I fent for the captain of Dunkirk, and forbid him offering violence to those of Holland, they being under my protection in his majefly's road. The captain obey'd me, and the merchants proceeded in their voyage.

Within three days after there arriv'd three ships of war of Holland, whom I forbid meddling with the Dunkirker, as I had done to the Dunkirker before. I advertifed my lord admiral of this accident, and defired his lordship's directions for my proceeding in a cafe that was like to begin a precedent. I was bound to add my opinion, which was, to refer it to the captain of the Dunkirker, whether he would retire into the harbour of Dover or Sandwich, or abide in the Downs to take his fortune, if I should be commanded thence upon any fervice with his majesty's ship; for I fear'd if I quitted the road, they would little refpect his majesty's authority; for I found they rather obeyed for fear and force, than out of duty of the place. My lord admiral liked well of my propofal, and committed the management of it to me; and to conclude, the Dunkirker retired to Sand-I confider'd that many questions were like to arise betwixt the Hollanders and the others by example of this one, if his majefty did not declare himself how har he would protect ships on either side that should repair to his harbours for succour.

Therefore I dealt with my lord of Cramborn, that his majeffy would express by proclamation fuch difficulties as were likely to arife, that all states might take notice therefor. Whereupon there was a proclamation, prohibiting all nations from offering violence one to another, within the compass of a line drawn from headland to headland, as it is to be seen by the same proclamation and map extant.

And in the fame proclamation was fignified his majefty' pleafure, That what ship, merchant, or other of the Spaniards or Hollanders, should first arrive in his majesty's harbour, the said ship first arriving, should have two tides to depart, before she should be pursued by the other.

This proclamation directed me from committing any error: now my charge was

to fee it executed accordingly.

I defir'd the lords, that befides the proclamation, which I held a fufficient authorrity for myfelf; yet becaufe I was to deaf with a people that would do no right, nor take no wrong, I defir'd it might be ratified by a warrant from their lordfhips: which they granted; and I have it yet to flew.

The 10th of May, 1605. I came to the Dovens; where I found fix Holland fhips of war newly arriv'd, to impeach the Dunkirkers going out; whereupon I fent for the Holland captains, and acquainted them with my commission, requiring them to obey the tenure of his majesty's proclamation; which I caused to be translated into Dutch for them to peruse.

After many expollulations and disputes, they were contented to abide two tides after the *Dunkirkers*, fo that I would fignify under my hand to the flates, that I compelled them to it by virtue of his majefly's proclamation; and so for that time they departed.

The next morning the Hollanders weigh'd, and went to an anchor in the mouth of the harbour of Sandwich, one excepted, which lay close to the Dunkirkers. The carriage of the Hollanders feem'd strange to me, considering their promise the day before; whereupon I immediately set fail, and anchored betwixt the admiral and the vice-admiral, that both my broad-sides might command them, expecting what they would do.

The tide drawing on for the *Dunkirker* to come out, the found that if the offer'd to move, the *Hollander* that lay by her was ready to board her; which the reft feeing, went to have done the like.

Dunkirker The offer'd by her was off feeing, The captain of the Dunkirker fent me word of it; for that he had understood the intention of the Hollanders, and therefore refused to go out: whereupon I sent for the Holland captains, and charged them with breach of their words, and their contempt to his majesty's authority. They would no longer diffemble, but told me plainly, that they had better considered of it, and concluded they could not appear before their masters the states with safety, if they confented to the escape of the Dunkirker.

Upon their aniwer I was enraged, and told them, That hitherto I had treated with them in a friendly and courteous manner, and, in any reasonable man's conceit, had given them good satisfaction with my letter to the states: but seeing they dealt so indirectly, I put them on board their ships again, and willed them to stand upon their selves, and vowed, if one shot was made at the Dunkirker, I would sink them, or they me. When they thus saw I would believe no longer in words, they permitted the Dunkirker quietly to escape, and remain'd themselves two tides, according to the proclamation.

If your lordships had seen the dispositions and carriage of the people of Sandwich, you would have thought it strange, that subjects durst oppose themselves so openly against the state; thousands of people beholding me from the shore, look'd when the sword should make an end of the difference, and publickly wished the success to the Hollanders, cursing both me and his majesty's ship.

But it was no marvel; for most of the inhabitants are either born, bred, or defeended from Holland, their religion truly Dutch, as two of the grave ministers of Sandwich have complain d to me, protesting they think that town, and the country thereabouts, swarms as much with sects as Maskevice.

Your lordships must give me leave a little to digress, and express the state of Sandwich, and the use Holland may make of it, ever they become enemies to England; therefore it behoves us to prevent all dangerous advantages, which is the more in them, because they neglect no occasion wherein they may benefit themselves with the loss of others.

The first and principallest advantage all enemies have that invade a country by sea, is the safe harbour or road for the arriving of shipping; and though Sandwich be but a barred haven, and that ships cannot enter but upon a slood, and at no time any great vessels of burthen, yet is our Downs within two miles from thence, where thousands of ships may ride as safely as in any harbour of Europe; and if ever the Hollanders Vol. III,

be differed to give an attempt, now that Flufbing is in their possession, it is but one night's sailing from thence to Sandwich.

The town is more naturally feated for ftrength than any I know in this kingdom, and a place of little defence as it is ufed. An enemy having the command of an harbour, as I have fhewed, approaching a town of no defence, which may be made impregnable, being fure of the hearts of the men within it, and to be reliev'd within twelve hours by fea, I refer the confideration thereof to your lordships, and return where I left off.

The 20th of April, 1605. I landed the earl of Hertford and Sir Thomas Edmonds, in their embaffy to the archduke: the one of them paffed with me in the Vanguard, the other in the Lyon's-Whelp, a pinnace of his majefty. The pinnace falling a league aftern, was faluted by two Holland ships of war, in which salutation they put a differace upon her, by the trumpeter's blurring with his trumpet, which is held a form at sea.

Sir Thomas Edmonds being much moved at this ufage, caufed a piece of ordnance to be shot off for my stay; at whose coming up he acquainted me with the wrong offered. I immediately commanded the Holland captains on board me, which if they refused, I threaten'd to compel them; but they seeing themselves over-master'd, made no question to obey me.

I befought my lord of Hertford, with the reft of the gentlemen of his train, to be witneffes of my proceedings with the captains; and told my lord, if I carried myfelf otherwise than became me, he should have power to over-rule me.

Before I entered into capitulation, I requir'd their answer to one question, (which was,) whether they had command from their masters, the states, to impeach his majesty's ambassadors passage, or no? if they had, I requir'd to see their commission, the copy whereof I would take and send to his majesty, and let them depart without violence.

They answer'd, they had no such directions, neither was their intention so to do. Then I told them, that seeing the afform was offered as proceeing from themselves, and not from the states, I would right myself upon them, and after acquaint their state upon what reason I did it. But upon their vows and protestations to clear themselves, imputing it to the lewdness of their trumpeter, and submitting themselves to my censure, at the intreaty of my lord of Hertford, I dismissed them, they promising to punish the offenders severely. One of these captains was he who since that time committed a foul murder upon his majesty's

subjects in Ireland, that were under protec-

The next thing that comes to my mind, is a repetition of that I delivered to your lordships in the Tower, concerning the admiral of Holland's retuling to take in his flag: I deliver'd it not with those circumstances that were convenient for your lordship's understanding; and because I know your weightier occasions may very well make you forget what was said, I will presume to reiterate the same again.

In my return from Calais the first of July, 1605, with the emperor's ambassador, as I approach'd near Dover road, I perceived an increase of six ships to those I left there three days before, one of them being the admiral: their coming in shew was to beleaguer the Spaniards, who were then at

Dover, as you have heard.

As I drew near them, the admiral struck his flag thrice, and advanced it again: his coming from the other coast at such a time, caused me to make another construction than he pretended; and indeed it fo fell out; for I conceived his arrival at that time was no other end, than to flew the ambaffador, who he knew, would fpread it abroad throughout all Europe, as also the Spaniards. that they might have the less esteem of his majesty's prerogative in the narrow seas, that by their wearing their flag, they might be imputed kings of the fea, as well as his majesty. I hastened the ambassador ashore, and dispatched a gentleman to the admiral to intreat his company the next day to dinner, which he willingly promifed.

The gentleman told him, I required him to take in his flag, as a duty due to his majefty's ships. He answer'd, that he had struck it thrice, which he thought to be a fufficient acknowledgment; and it was no more than former admirals of the narrow

feas had required at his hands.

The gentleman replied, That he expected fuch an answer from him; and therefore he was prepared what to say to that point. He told him the times were altered; for when no more but striking the slag was required, England and Holland were both of them in hostility with Spain, which caused her late majesty to tolerate divers things in them; as for instance, the admiral's wearing his slag in the expedition to Cadiz and the islands, where the lord admiral of England, and lord of Essex, went as generals; and that courtefy they could not challenge by right, but by permission; and the wars being now ceased, his majesty did require by me his minister, such rights and duties as have formerly belong'd to his prosenitors.

The admiral refused to obey my command, saying, he expected more favour

from me than from other admirals, in respect of our long and loving acquaintance. But he was answer'd, that all obligation of private friendship must be laid aside, when the honour of one's king and country is at stake. The gentleman advised him in a friendly manner to yield to my demand; if not, he had commission to tell him, That I meant to weigh anchor, and come near him, and that the force of our ships should determine the question; for rather than I would suffer his slag to be worn in view of so many nations as were to behold it, I resolved to bury myself in the sea.

The admiral, it feems, upon better advice, took in his flag, and flood immediately off to fea, firing a gun for the reft of the fleet to follow him. And thus I loft my guest the next day at dinner, as he had pro-

mifed.

This paffage betwixt the admiral and me was observed from the shore, people beholding us to see the event. Upon my landing, I met with Siriago, the general of the Spaniards, who in the time of queen Elizabeth was employ'd under Mendozd, the ambassador of Spain. He told me, That if the Hollanders had worn their stag, times had been strangely altered in England, since his old master king Philip II. was shot at by the lord admiral of England, for wearing his stag in the narrow seas, when he came to marry queen Mary.

I told him that he was mittaken; for neither the Hollanders, nor any other nation, durft contend with his majetty in his prerogative of the narrow feas; and the accident that then fell out, was by a boy's error, who thought he had been commanded to take in the flag, and to put it out again, when he was order'd to take it in for altogether; which en the admiral underflood, he caused it to be taken in, and defir'd I would not impute it to him as an affront offer'd. Thus I excused their intolency, left it should be divulged his majefty's prerogative had been questioned by the Hollanders. Had I yielded to a bare ftriking their flag, as other admirals had done, his majesty had not reconciled his right again without bloodshed.

Within few years after, an earl, who then came in company of the emperor's ambaffador, paffed the feas with me again, when I transported prince Vaudemont; to whom he recounted at large this paffage of mine and the Hollanders, and afcribed great honour to his majefty, in maintaining his right and privileges on the feas, which he faid the Hollanders went about to infringe.

The first of September, 1605. I received a warrant for transporting the Spanish ambassador Don John de Taxes, and all his train for Flanders, excepting the lord Arundell,

his right

who was to pass with him into the service of the archduke.

Though the lord Arundell was prohibited to go over in the company of the ambaffa-dor, because the Hollanders pretended the world would take notice his majesty maintained their enemies against them, which would much prejudice the reputation of their state, yet notwithstanding the ambaffador was promifed, that within ten days after his arrival, the lord Arundell should have a free and fafe paffage; which did as much fatisfy the ambaffador, as if he had

gone with him.

Left the lord Arundell should attempt to go, notwithstanding his prohibition, which I much feared, because he absented himself that he might not receive this command, I forbid all ships and barks, as they would answer it at their peril, to receive him aboard them; which he hearing, corrupted a captain of the king's, and in a difguife convey'd himfelf over in his ship: he did it more to gain reputation with the Spaniards, than out of any doubt he had not to pass; for he knew, though he defired not to take notice of it, that his go-

ing was fecured within few days after.
When I faw him upon my arrival at Gravelin, and understood his practice with one of my captains, I spake of it with some bitterness, and expostulated the matter with the ambaffador, fuppofing he had known of his indirect proceeding: but the ambaf-fador with many protestations disavowed it, and blamed my lord's indifcretion as much as myfelf, faying, he was as much wrong'd as the flate; for he confessed by his humble fuit he had obtained his fafe paffage within a few days after, which he accepted as a great favour from his majefty; and my lord behaving himself so unadvisedly, he feared might breed a jealoufy against

My lord Arundell knowing I had fpoken fomewhat liberally of him, devised how to requite me, and took an opportunity upon the following occasion.

The fame night, a little before supper, news was brought the ambaffador, that the barks which carried his provisions were flay'd by the Hollanders as they were entering Dunkirk, and, as it was to be feared, they would not difmiss them.

My lord Arundell took advantge of this, and privately perfuaded the ambaffador I had betray'd them to the Hollanders. He could not carry his complaint fo fecretly, but I came to the knowledge of it: I might perceive a strangeness in .he ambassador, as though he retained a kind of jealoufy; and therefore the supper ended, and my leave taken of him for that night, I belought the governor of Gravelin, that the port might

be opened, and I provided of horses; for that I had occasion to go with some speed to Dunkirk; both which he courteoully granted, and I immediately passed thither, where I arrived at the opening of the gates in the

I found, as it was reported, the barks detained by the Hollanders, but upon what occasion, and how I caused their release, your honours shall understand hereaster: but I must return once more to Sandwich,

Whilst the ambassador stay'd at Sandwich to fee his horfes and baggage shipp'd, there arrived fourteen or fifteen thips of war from Holland in the Downs; a number not usually feen thereabout but upon a greater occasion then I could imagine; though I mistrusted they would have obstructed the ambassador's paffage, and fent for the principal captains, of whom I required if they had commission to impeach his landing: they anfwered No; and feem'd to make a frivolous excuse for their coming.

Then I required them to stay in the Downs after I was gone, or to depart before me; for avoiding both rumour and fuspicion. They made choice of the latter. and stood over for Gravelin Road, where I found them upon my arrival, and discovered that the cause of their coming to the Downs was to have an eye on the lord Arun-

dell's paffage.

During the time of the ambaffador's flay at Sandwich, those of the town thought to have put an affront upon him; which, if I had not prevented, had more difgusted than all the favours he received in England had contented him.

His horses being shipped, and the bark ready to depart the harbour, an informer went aboard one of them, and made feizure of a fardel of bays, to the value of ten or twelve pounds, which belonged to one of the ambaffador's fervants; which he took for fuch a difgrace, knowing it, as he faid, to be a practice of the offspring of the Hollanders within the town, that he refolved not to depart thence till he was righted by his majesty's own order.

I laboured to give the ambaffador fatiffaction, and as earneftly perswaded the in-former to restore the fardel; but could prevail with neither; for the value was not fo much looked upon, as the injury offered.

At last, by threatning the informer to complain to the lords, and perfuading him how ill his majesty would take such a wrong done to an ambaffador, he restored the fardel, but writ to the farmers of the cuftom. that I countenanced and carried over uncuftomed goods under the colour of the ambaffador's provisions.

When they of Sandwich faw they could not detain the fardel, they fecretly practifed

Boo

fu

coa

him

tha

oth

with the Dutch fleet then at the Downs, that and honour; and did their best endeavour upon the arrival of the barks at Dunkirk, they should intercept the fardel, and gave intelligence in what bark, and what part of the bark it lay.

The Hollanders accordingly detained the veffel as they were directed, and took out the fardel; and upon this occasion was the stay made of the ambassadors goods, as I have shewed before.

At my arrival at Dunkirk from Gravelin, upon the news of the arrest of the ships, as your lordships have heard, I wrote to the admiral of the Hollanders, that he had exceeded his commission in intercepting the ambaffador's provisions, having order from their state for a free passage; and that the injury was no less to his majesty; and therefore I required the discharge of the ships, and his answer to the contempt.

He answered in writing, that it was true, his directions from his mafters the states did import fo much, which he did willingly obey; but in his commission he was authorized to intercept any merchandize that should be transported under colour of the ambassador's furniture; and that in one of the barks he had found a fardel of bays, which he might justify the taking of, and fo difmis'd the bark.

I returned answer, that if he went to the ftrict letter of his commission, I confessed he might do it; but I told him the value was fo small, and it having been questioned at Sandwich, that I would think myfelf beholding to him, if he would either reftore it, or keep it in his cuftody fourteen days. To my latter request he consented; whereupon I gave affurance to the ambaffador, who was then much enraged that a letter should be procured out of England that should compel the delivery of the fardel.

Within four or five days after I arrived in England, I acquainted the lord treasurer Dorset with the affront offered the ambassador at Sandwich, and the complaint made to the farmers of the custom against me. I informed my lord admiral and my lord of Cranborne with the lord Arundell's paffage, and the contempt of the captain, whom I displaced and detained prisoner, as also of the fardel feized on by the Hollander.

My lord treasurer sent for the informer by a pursuivant, and committed him ten weeks prisoner in the Gatebouse, refusing to release him, till I became suitor for him. The captain was handled in the same manner, being long imprisoned, and the fardel restored to the governor of Dunkirk by a letter from Sir Howell Caroone.

I am the more tedious herein, to shew the genius of the men of Sandwich, who made more account of venting their spleen and revenge, than of his majesty's reputation

to make a breach betwixt the Hollanders At that time they had thirty and me. fhips for two in the narrow feas.

I observed at all times that I was to transport a Spanish ambassador, the Hollanders labour'd to shew some point of infolency; as I remember at the return of the marquis of St. Germains, I met a Dutch fleet in the midft of the channel. convoy'd by a man of war, who would not take in his flag, till I was forced to use violence. I could entertain your lordships with a volume of these discourses; but what I have faid is fufficient to shew the arrogant and unmannerly carriage of the Hollanders, who ambitiously defire to incroach upon his majesty's jurisdiction. Had I connived at them, I had purchased less hate of them, and their well-wishers. And not long before my commitment there fell out an accident, which, perhaps, might haften my imprisonment. Sir Howell Caroone, their agent, coming over in a man of war, was thot at by a pinnace of the king's, for not striking his topfail to her, which I understood he took in ill part, and cast it upon me.

If I had transgressed, or given the least advantage to have excepted against me in the twelve years I ferved on the narrow feas, it is very likely his majesty or the state should have known it; but seeing I was never questioned for any action, publick or private, I did no more than became a fubject and a fervant to his majesty, to defend the honour and reputation of him and his kingdoms, though it had been with the loss of my life.

And fince I have made my apology for twelve years, I will add eighteen more to it, and begin with the wars of Spain, where I was an actor in the first ship, and general of the last fleet queen Elizabeth ever im-

ploy'd.

If it shall appear by records in the admiral's court, or by petition in the council chamber, that ever I was questioned for any unlav ful act, or fo much as my name used for a witness, I will willingly receive my due punishment; or let it be proved in all my imployments by fea, which has been more than any English gentleman, that either directly or indirectly I deceived either of my two fovereigns, and I will defire the reward of a traitor.

I well remember the first time I was examined by the chief justice Cooke, and secretary Winwood, at Hatton-House, I befought them, That they would be pleafed to enquire into my behaviour, and the course of my life from my infancy, and I hoped it would prove loyal, honest, and spotless.

Now

Now I humbly defire, as a fecond fuit, that either they, or any other, would examine the fervice I have done to the flate in the time of the late queen, when there was greatest occasions for men to shew their abilities and deferts; as also what imprisonment I have endured in Spain; what famine, hurts, and other casualties I suffer'd; what wealth has been brought into England by my means; with what hazard and fortunate success I have obtained both wealth and victory; as in particular, and which is freshest in memory, the last carrack, valued at almost two hundred thousand pounds, and disposed of by his majesty at his accession to the crown.

When all these things shall be consider'd, and my rewards valued, the integrity of my heart will appear, and how much I preferr'd the service to my prince and coun-

It y above my private or particular interest. I must confess my folly and misfortune: the one made me too forward in complaining, and wishing a reformation of his majesty's navy, which has purchas'd me much envy: the other procur'd me as much hate in taking the lady *Arabella*: and then perhaps the cause of my imprisonment will more plainly appear.

Some have obtain'd their defires in ruining my eftate, made me infamous to the world, taken from me my imployment, feized by way of forfeiture upon my land, denying to account with me, which they have long practifed; and, above all, caff fuch an afperfion upon my children, as all hope of preferment is taken from them: but my comfort is in the faying of David, That my defence is in God, who faveth the upright in heart.

Thus have I briefly run over fome particulars that happened in my imployment; wherein I have fhew'd in what condition I found the narrow feas, how with envy and hate I reduced it, and in what form and

condition I left it.

And as I have given an account of twelve years imployment on the narrow feas, I can as well derive myfelf from the year 1585, when the war with Spain began; for then made I the feas my profession, being led to it by the wildness of my youth. And because the two barks in which I then served, had the fortune to take the sirft Spanish prize that ever saw the English shore, and the rareness of the fight in taking her considered, I thought it not unworthy of repetition.

In the month of September 1583, and about eight a-clock in the evening, being upon the coaft of Spain with two finall ships aforefaid, we met and boarded a Spanifo vessel of three hundred tuns burden, well manned and armed; all our men with one consent and courage entered her, and we left sighting aboard her all night, the seas being so grown that our barks were forced to ungrapple and fall off.

The Spaniards betook themselves to their close fights, and gave two attempts by trains of powder, to blow up their decks on which we were; but we happily prevented it by fire-pikes. Thus continued the fight till seven in the morning, when the Spaniards found they had so many men killed and disabled, that they were forced to yield.

When we came to take a view of our people, we found few left alive but could few a wound or fhot through their cloaths in that fight: we were a woeful speckacle, as well as the Spaniards; and I dare say, that in the whole time of the war, there was not so rare a manner of sight, or so great a slaughter of men on both sides.

I confess it exceeds the bounds of good manners to trouble your honours with this impertinent discourse; but I do it, that it may appear I had no thought but to imploy my pains and travel to serve my prince and country; and so I humbly take my leave.

A Voyage by Sir William Monson during the Time he served as Admiral in the Narrow Seas about England, Scotland, and Ireland. Anno Dom. 1614.

HIS majefty being earneftly importuned by his Scotifb fubjects to have the affiftance of fome of his fhips to redrefs the spoils committed by the pirates on their coaft, out of care to them, and honour to himself, he dispatched Sir William Monson and Sir Francis Howard in great haste upon that service, commanding such victuals and other things as they stood in need of to be fent after them.

They departed from Margate-Road the 14th of May, and arrived at Leith in Scotland on the 23d of the fame; thence he

immediately went to Edinburgh, and prefented himfelf to the lords of that realm, acquainting them with the cause of his coming, and the charge he had from his majesty to defend that coast from pirates; and therefore desired to be informed by their lordships concerning their strength, their number, and place of abode. He desired to be furnished with able pilots; for his majesty's ships were of greater burden and value than usually had been employ'd on those coasts; and besides, that the navigation to the northward of that place was K k k

Now

unknown to us.

It pleafed their lordships to recommend the care thereof to the Trinity-House of Leith, expresly commanding them to appoint the ablest pilots that could be chosen amongst them. This command of theirs was accordingly obey'd, and their pilots repaired aboard the next morning. Sir William immediately fet fail, leaving instructions for his victuals to follow him to the islands of Orkney; which the lords of Scotland took into their provident care, and

performed it accordingly.

The first of June Sir William arrived at Sinclare-Castle, the house of the earl of Cathness, the utmost promontory of Great Britain. Here he found neither the number nor the danger of pirates fo terrible as report made them; from twenty they were vanished to two, and both of them men of base condition; the one of them not long before my boatfwain's mate in the narrow feas; the other of as mean quality and rank, and first made a seaman by Sir William: neither can this man be properly called a pirate; for being amongst them, and misliking their damnable courses, he with three others, left their fociety, and in an English bark they had taken, stole from them, and put himfelf into the hands of the earl of Cathness; where I found both him and the bark, which I brought away

The day before I came to Cathness, I was disappointed of meeting the boatswain's mate, the pyrate, Clarke by name, who had been ashore with the earl, and friendly entertained, because his house and tenants lay

open to his fpoil.

That day there arrived a Scotist bark from the Frith, which gave an account of Sir William's coming to Leith, with an intent to purfue fuch pirates as he could hear of. This news made Clarke quit that coast, and fly into the island, where he refreshed

himself amongst the sishermen.

But Sir William being now out of hope of him, and out of doubt of any others thereabout, stay'd not at Cathness, but the fame night passed to the island of Orkney, where he found more civil, kind, and friendly utage, than could be expected from fuch kind of creatures in shew. Here he left Sir Francis Howard for guard of the coaft, and profecuted his intentions against Clarke, not sparing any place to feek him in, where there was a possibility to find him. After fome time fpent at fea, he put into the island of Shutland, and from thence to those of Hybrides, where he defign'd Sir Francis Howard should meet him.

The brutishness and uncivility of those people of the Hybrides exceeds the favages

not frequented by our nation, and therefore of America; and it may be well faid of them, that education is a fecond nature; for there cannot be greater difference betwixt day and night, than betwixt the conversation of those of Orkney, and those of the Hybrides.

Being out of hopes of meeting with Clarke, Sir William directed his course for Broad-Haven in Ireland, a harbour frequented by pirates, in respect of the sccurity thereof, and the remoteness, few knowing it, and the relief fuch people find by a gentleman there dwelling, who fpared not his own daughters to bid them wel-

The danger Sir William ran into was great, and worse to think, that two ships of his majesty's of that consequence should be hazarded on fo flender an occasion, as the

pursuit of so sew pettit pirates.

Betwixt those islands and Ireland he met with so great a storm and ground-seas, that it were fit only for a poet to describe. Or four vessels he had in company, one was fwallowed up in the feas; the other three were separated, and saw one another no more till they met in England.

When the feas had spent their fury, the form began to abute, and the 28th he arrived at Broad-Haven, a place unknown to any one in his ship but the pirate he had taken from the earl of Cathness, as you have heard, of whom he made use to execute this

Being now come to the well-head of all pirates, and defirous to be fully informed of the condition of those people of Broad-Haven, as foon as he came to an anchor he made choice of fuch persons of his company as formerly had been pirates, to give the

less suspicion of his purpose.

These men he sent in his boat to the gentleman of that place, and took upon him to be a pirate, and the name of captain Manwaring. The man he trufted in this fervice, extolled the wealth he had on board him; his royal disposition and liberality to those that shew'd him courtesy. This hope of wealth and reward fet their hearts on fire.

He used the commendations and names of fundry pirates, their acquaintance; and feigned messages to the women from their fweethearts, who he made believe had fent them tokens, which he had on board for

The filly women conceived fo great a joy at it, that it took away all suspicion of deceit.

The gentleman of that place, like a wilely fox, absented himself, and left his wife and hackney daughters to entertain the new welcome guefts, till he beheld the coaft clear; and when he faw his time, he reBook II.

place, like a f, and left his o entertain the cheld the coalt time, he returned turned; and to make his credit and reputation feem the greater with captain Manwaring, expressed the favours he had done to fundry pirates, though it was to his eminent peril, which he did not efteem, if he might do captain Manwaring any service; fo much he was devoted to his person, when he heard the report of his wealth; and to endear him the more, he promifed to fend two gentlemen of trust the next morning on board him, to give him the better affurance of his fidelity; and in the mean time, because he should not be unfurnished of victuals, he directed him to fend his men ashore armed, and in a warlike manner, that it might appear their cattle were taken by violence, which he would appoint in a place with their ears flit, to be diffinguished from other beafts.

The meffenger being fully fatisfied, and having executed his ftratagem, return'd aboard that night. At the dawning of the day the play began, for that was the hour appointed for the wolf to feck his prey; and captain Cbeffer, with fifty armed men, in a diforderly manner, like pirates, went on fhore, and acted fo much as was agreed on; and the cattle being kill'd, he was, in a fecret manner, invited to the houfe of the gentleman; but at his intreaty was to make it appear publickly, that he came not by invitation, but of his own accord.

Here he was welcomed, and friendly entertained by the daughters, whose desire was to hear of their sweet-hearts, and to receive their tokens; but all in general coveted to see captain Manwaring, who they confidently believed would enrich them all. The gentleman, Mr Cormat by name, was punctual in all his undertaking, and the two ambassadors he promised came aboard, and delivered a friendly (though in a rude manner, like their country) message of their love, and affurance of their service to captain Manwaring.

Their meffage ended, Sir William wished them to observe and consider, whether they thought that ship and company to be pirates; for they could well judge of pirates, because of their familiarity and acquaintance with them.

It was a folly to diffemble any longer; for though they would, yet they could not betray Sir William's defign; and therefore in as rough and rude a manner as they delivered their meffage, he told them how they had transgreffed, and the next thing they were to expect was death, and commanded them to be put in irons, in dark and several places, being careful to permit neither boat nor man to go ashore until his own landing.

The time approached Sir William promifed to vifit them; and for his greater honour they had drawn down four or five hundred people to attend on the fhore fide, which he perceiving, and feeming to be jealous of their number, pretended to be fly of going afhore, for fear of treachery: but if oaths, rows, or any kind of proteflations would ferve him, he had them; and when they faw him thus convinced of their fincerity, and that he put himfelf upon them, three of their principal men run up to the arm-pits in water, ftriving who should have the credit to carry him ashore.

One of these three was an Englishman, a late tradesman in London, and attended the arrival of pirates. The second had been a schoolmaster, and a man attended like another Apollo amongst those rude people. The third a merchant of Galloway, but his chiefest trade was to buy and sell with pirates.

These three gallants, like gentlemenushers, conducted Sir William to Mr. Cormat's house, and the meaner fort followed with acclamations of joy. At his landing, happy was he to whom he would lend his ear. Falling into discourse, one told him hely knew his friends, and though his name had not discovered it, yet his face did shew him to be a Manwaring. In short, they made him believe he might command them and their country, and that no man was ever so welcome as captain Manwaring.

Entering into the house of Mr. Cormat, his three hackney daughters rose to entertain him, and conducted him to the hall newly strewed with rushes, as the richest decking their abilities, or the meanness of the place could afford. In the corner was a harper, who played merrily, to make his welcome the greater.

After some discourse, and several questions asked by the three daughters concerning their acquaintance and friends; but above all, being defirous to handle the tokens promifed, and laughing and jeering at their two messengers aboard, who they did not suspect were detained prisoners, but drinking and frolicking in the ship, as the use was upon the arrival of pirates. After these passages the women offered to dance; one chose Sir William, which he excused, but gave free liberty for the rest of his com-The Englishman was so pleasant and merry, that he scemed to have new life infused into him: he told Sir William, the heavens did foresee he was born to serve him, and to relieve him: he shewed him a pass procured upon false pretences from the sheriff of that county, authorizing him to travel from place to place to make inquifition of his goods, which he falfly pretended he was robbed of at fea: he laughed at the cheat he had put upon the sheriff in getting his pass, and urged the advantage that might be made of it, in fending to and fro in the country without fuspicion.

Boo

he

to

rat the

He proffered Sir Willians the service of ten mariners of his acquaintance, that lay surking thereabouts, expecting the coming in of men of war, which seafaring men he had power to command.

His antick behaviour was enough to put the melancholieft man in good humours, fometimes he played the part of a commanding fheriff; then he acted his own, with many witty paffages how he deceived the fheriff. Sir William embraced his offer of ten mariners, with a promife of reward, and caufed him to write effectually for them, as may appear by this that follows:

Honest brother Dick, and the rest, we are all made men; for valiant captain Manwaring, and all his gallant crew are arrived in this place. Make haste; for he shourisheth in wealth, and is most kind to all men. Farewel; and once again make haste.

This letter being writ, and the pass inclosed in it, Sir William took it into his own hand, offering to hire a messenger to carry it; but night drawing on, which required his return on board, and having drawn from the country all the secret he defired, he caused the harp to cease playing, and commanded silence, because he was to speak.

He told them, That hitherto they had played their part, and he had no part in the comedy; but though his was last, and might be termed the epilogue, yet it would prove more tragical than theirs. He put them out of doubt that he was no pirate, but a fcourge to fuch, and was fent from his majesty to discover, suppress, and punish them and their abettors, whom his majesty did not think worthy the name of subjects: he told them that he had received sufficient information of the protection given to pirates in that harbour, and by Cormat; and that he could find no better expedient to confirm what had been told him, than by taking upon him the habit of a pirate, and one of their affociates; and that they had made themselves guilty in the law, without farther accufations: and now there remain'd nothing but to proceed to their execution, by virtue of his commission; and to that purpose, he had brought a gallows ready framed, which he caused to be set up, meaning to begin the mournful dance with the two men they thought had been merry, dancing aboard the fhip.

He told the Englishman he should be the next, because his offence did surpass the rest, being an Englishman, who should be a pattern of good life to those people we have fought to reduce to civility, since we first possessed that country; and seeing man naturally is rather apt to follow evil example than good, he should be hanged for example.

He told the schoolmaster he was a fit tutor for the children of the devil, and that he had apt fcholars to follow his damnable instructions; and that as the members are governed by the head, the way to make his members found, was to shorten him by the head, and therefore willed him to admonish his scholars from the top of the gallows, which should be a pulpit prepared for him. He asked the merchant, whether he imagined there could be thieves, if there were no receivers? And as the contriver and plotter of evil is worfe than he that executes it, fo is the abettor and a receiver to be condemned before the thief. He told him that pirates could no more live by their occupation, were it not for buyers, than a poor labourer work without wages; that the offence in a merchant was more heinous than in another man, because his trade must be maintained and upheld by peace: his time he told him was not long, and wished him to make his account with God, that he might be found a good merchant and factor to him, though he had been a malefactor to the law.

Here was feen the mutability of the world; their mirth was turned into mourning, and their dancing into lamenting, each bewailing and repenting, as is the cuftom of offenders. The night calling Sir William away, he appointed their guard to a boat, and left the carpenter afhore to finish the gallows; which was done by morning, and the prisoners ready to receive their doom; but being sued to by the whole country, with a promise never to connive again at pirates, after four and twenty hours fright in irons he pardoned them.

The Englishman was banished, not only

In Engliman was banified, not only from that coaft, but from the fea fide, throughout Ireland; and a copy of his pass fent to the sheriff: with advice to be more cautious for the future in granting his safe conduct. Here the master died; and all that country could not afford a pilot; so little use those people make of God's blefings in those parts; for were they industrious, as in other countries, both land and sea would afford them as great plenty of trade and commodities as any part in Europe.

The next morning as Sir William was at anchor in Broad-Haven, he efpied a ship bearing into that harbour; which seeing him forms her luff; and came to an anchor under the weather-shore: by her working he judged her to be a pirate; and though blew much wind, he put himself into his boat, having the opportunity of a great fog, thinking to steal upon her at unawares; but finding the fog, like other weather at £a, unconstant, when he came within salcon shot of her, it clear dup; which she perceiving, cut cable, and stood off to sea, where he pur-

and the feventh arrived at the island of Enescey, feven leagues to the southward of Broad-Haven, where she was out of fear of any attempt to be made upon her, by rea-

fon of the wind.

In the dark of the night, when there was least danger of discovery, the pirate found means to have a letter fecretly conveyed to Cormat, their agent and truftiest friend; but Cormat being lately burnt, did dread the fire; and no fooner received the letter, but he brought it to Sir William, which was to this effect:

Dear friend,

WAS bearing into Broad-Haven to give you corn for ballast, but that I was frighted by the king's ship, I supposed to be there. I pray you, fend me word what ship it is, for we stand in great fear. I pray you, provide me two kine, for we are in great want of vietuals : whenfoever you shall make a fire on shore, I will fend my boat to

This letter pleased Sir William, hoping to make good use of it, as he did. first thing was to conjure Cormat to keep secrecy, charging him, upon pain of life, to follow his directions. He writ an anfwer, which he caused Cormat to fign as from himself: the purport of it was,

"That he rejoiced to hear of his health, " and defir'd to fee him: he bid him be " confident this ship could not endanger " him; for she was not the king's, as he imagin'd, but one of London that came "from the *Indies* with her men fick, and many dead. He promifed him two oxen and a calf; to observe his directions " by making a fire; and gave him hope to " fee him within two nights.

A man could not be too cautious among the people of the country, who in their hearts were piratically given; and therefore he cloathed three or four of his company in Irish habits, to accompany the messenger, commanding them to lie in ambush not far off, as well to take a view of the bearer, as to defend him from any violence of the pirates, fearing they might furprize him, if they mistrusted any deceit.

The pirates kept as good a watch to obferve the fire, as the country doth a beacon upon fuspicion of an enemy, and espying it, were not long a rowing to shore, and as

Vol. III.

little a while on shore; for it was the letter only at that time they coveted; and having it, they haftened aboard to read

The letter gave them great content, because they found themselves free from danger of the ship they took to be the king's; as also because they were promised relief in their extremity, by the two oxen to be fent them.

This day they were frolick and merry, to make amends for the fix before fpent in foul weather at fea. In the mean time Sir William contrived a stratagem the pirates neit'er dreaded nor dreamed of: for understanding that at the end of the river where they lay, and not above feven miles from him, there was a nook of land two miles in breadth, that parted it from another river, which opened it felf into the fea over against Enescey, where the pirates lay: Sir William kept his design secret from the Irish, who he knew would not much further his defign against pirates, and on a sudden took to many of those Irish, with the help of his own company, as drew his boat and another over land; and having recover'd the next river, with no little aftonishment to the Irish, they were to row thirty miles to the place defign'd for the fire to be made.

Having pulled hard to be at the place by midnight, as foon as the boat arrived they kindled a fire; and by the time they conjectured the pirates boat might be a shore, who, they made account, would weaken the ship of so many men as she should carry, they row'd off with speed, and came within fight of, and furpriz'd her before they could be suspected, which did fo much amaze the pirates, that they had not power to refift, but yielded like fo many wolves caught in their own fnares.

Being thus circumvented and apprehended, they were brought to Broad-Haven, where Sir William executed the chief of them, shewing mercy to the rest so far as he durft; for he was commanded in his instructions to execute justice with some vigour. Examining the behaviour of all the pirates, of many he picked out the worst, who had tasted twice before of his majesty's gracious pardon. This fevere justice gave a terror to the people of that country, and no less satisfaction to the owner of the ship, whom they kept prisoner aboard them, and who might fee his majesty spared not his own subjects if they offended.

The pirates ever after became strangers to that harbour of Broad-Haven, and in a little time wholly abandon'd Ireland; which was attributed to the execution of that

Bo

man; for before that time they were in king James's time, and the last year but those parts rather counived at than pu-

From hence Sir William went groping along the coaft, the country, as was faid, not being able to afford him a pilot. On the 12th of July he came to the Vintry, a place that had twice reliev'd him before.

Coming from fea in great extremity, on the 28th to Bear Haven, the 1st of August to Plimouth, the 8th to the Isle of Wight, and the 10th to the Downs, after fetching a circuit round his majesty's three kingdoms of England, Scotland, and Ireland.

And here he bid farewel to the fea, this

being the last voyage Sir William made in

one he ferved on the narrow feas, which wanted not much of twelve years; in which I will boldly and truly fay, there was never fervice neglected, omitted, or unperformed, that he was commanded upon; which I look upon as strange, and not to be paralleled by any that enjoyed his imployment before; and if the time be confidered, fix years of them twelve bred many doubts and differences, how an English admiral should carry himself betwixt the Hollanders and Spaniards, the wars continuing between them, yet fuch was his hap and care, that he committed no error for the one or the other, justly to except against him.

A Confultation before the Lords of the Council in 1617, to which I was called, and a Proposition made, How the Pirates of Algiess might be suppress'd, and the Town attempted. My Advice to it was as follows:

1. First, because an expedition against the pirates could not be the impleyment of one fleet for the space of six months only, but that it is rather like to prove a work of years, it is necessary that all the maritime towns of Europe do contribute towards the expence and charge: for considering the profit will be universal, if the pirates be destroy'd, there is no reason but the charge should be as general.

2. Because every nation is not provided with swift ships and strength alike for such an action, which are the the principal things, it is sit the fleets that must second one another, consist of English, Spaniards,

and Hollanders, as most able to perform the service, in respect of their strength and swift failing, as aforesaid; and all other towns and countries bordering upon the seas, that cannot furnish able ships, to pay their quota in money.

their quota in money.
3. This being agreed upon, it must be likewise resolved, That as the charge is general, so the gains may be equally shared and divided, which must arise from the sale of such Turks and Moors as shall be taken for slaves, and of such goods as shall be recovered out of the pirates hands, where no proprietor can challenge it.

BOOK

4. The ships imploy'd to be rated after the proportion of men and tonnage: As for example; fo many fhips of his majesty's as will carry three thousand tons burthen, and twelve hundred men, Spain and Holland fending thips proportionably, will be a force fufficient to encounter the whole number of the the Turkish pirates.

5. It is not convenient to imploy any fhips under two hundred and fifty tons, nor above three hundred, the king's ships excepted; because a leffer ship losing company, will be a prey to an enemy; and if bigger than three hundred, it will fill up the quantity of tonnage and number of men, and be able to do little more fervice than the leffer fhip; for the more number of ships there are of three hundred tons, they will be the abler to purfue the pirates, if they be forced to featter; for every thip must undertake a pirate; and if there be more pirates than thips of ours, the overplus in number to ours will escape for want of ships to follow them.

6. The generals to execute martial law, and to determine their authority before they meet, to avoid questions and differences that

otherwise may happen.

7. To have fafe-conducts to all christian ports, and authority to be fupply'd with necessaries they shall want; as also provifion for the fick and hurt men; and fuch ships or prizes as they shall take from the pirates, to be left in fafe cuftody in the faid

8. To carry money or commodities to revictual, and all manner of provisions to trim and careen their ships, with one mafter-carpenter to have the overlooking and ordering the state of the shipping. It is better to carry commodities than money for their occasions, because of the loss between our money and theirs; and besides, it will be a gain to exchange commodities,

9. To have a treasurer to look to the payment of money, and a flock for the disburfement of all necessaries for the voyage.

10. To be extraordinary well provided with muskets and ammunition, and efpecially with chain-shot for the ordnance; because, where there are many people, as commonly in pirates, chain-shot will make a great flaughter amongst them, and such confusion withal, where there are so few failors to tackle their fhips, that they will be taken upon the flays, or lie upon the fea at our mercy.

11. To make the mips musket-proof, which will be done with little charge, and no burden to the ships, and to have all the fpare decks and other things of weight taken down, and only put up; which will be a great ease to the ships failing.

fea-action confifts in keeping the deligns fecret, this voyage requires special secrecy; for there being feveral Englishmen, who have been too bufy in trading with pirates, and furnishing them with powder and other necessaries, it is to be fear'd those same Englishmen will endeavour to give the pirates intelligence, left their being taken, their wicked practices should be discovered: for prevention whereof, it is necessary that our fhips be provided under another pretence than pirates, and the captains themtelves not to know of it till they are at fea.

12. Forafinuch as the chiefest care in a

13. That the French king do prohibit his fubjects, and especially those of Marfeilles and Toulon, to trade with pirates, who now make it a common and daily course, and from whom they will have notice of our preparations, if they be not pre-

14. The place of rendezvous to be at the iflands of Bayon, the hithermost part of Spain, as most convenient for all squadrons to meet without fuspicion. England and Holland may pretend several enterprizes, without knowledge of one another till their meeting. The squadron of Spain coming thither from St. Lucar, Gadiz, or Lisbon, will make the pirates of Agiers and Tunis think the preparations cannot be against them, the Spanish squadron being furnished in the nighest part of Spain to them, and carry'd to the furthest from them.

15. The time of the year to be in August or September; for in those months the pirates usually put to sea, because of the vintage, and other great trades: commonly in those months the fleets from the Indies return into Spain; as also in those months the Spanish gallies retire into harbour, so that

they need not fear them.

16. Our fleet not to appear within the streights until they hear of the pirates being at fea; for having intelligence of it, they

dare not put out.

. One great advantage we shall have, is, That if they are at fea, we shall still know where they are, by ships we shall meet that have feen them: and observing the winds, can conjecture where we shall have them: or, if we shall her; that they are fcattered, we will do the like, and have figns to know one another.

18. Another advantage we shall have, is, That no harbour can entertain or defend them from their going out till they return home; for all christian shores are their enemies; and they will have none but Tunis and Algiers within the streights, and Sally and Santa Cruz without the streights, which are wide and open roads, and apt to be fur-

pris'd or burnt.

If we happen to mifs them at fea, they cannot escape at their return, if we spread two squadrons ten or twelve leagues from Algiers, for they can have no intelligence of us from the shore, because we cannot be descry'd from thence.

20. That no mariner or failor we ranfom'd or fet at liberty after they are taken; for taking away their failors, they cannot fet a fhip to fea; and we know their numbers cannot be great, because it is not above twelve years fince the English taught them

the use of navigation.

21. Such renegadoes as shall be taken, or such christians as have willingly ferv'd the Turks, to be executed immediately, for the terror of others; for if christian sailors can be kept from them, their piracy will cease, which otherwise will prove a great detriment to the christian commonwealth.

22. That fuch an English general be appointed, and the ships with that care fitted, that may give reputation to the action; for considering the reputation we have had in sea affairs, it behoves us, upon such an occasion as this, because we shall join with other nations, to carry it with honour.

23. That fuch a general be appointed as shall have more care to perform the service, than to nis own ease, pleasure, or ostentation: That he keep the sea, and avoid seeking harbour, unless necessity compels him, and then not to let it be to the leeward of Algiers; for so pirates may go in and out at their pleasure: and moreover, That he enter no harbour but such as have good outlets, lest the service be neglected, and he not able to get out.

24. And lastly, as the ships shall grow foul, and be forced into harbour to trim, that he do it with this consideration. That he keep a squadron out at sea, whilst the others are fitting in harbour; and upon the return of the clean squadron to sea, whilst the other squadron is in trimming, to put himself into one of those ships; for it is not the part of a general upon any occasion to leave his sleet, the for a time he may leave his ship.

icave ms mip.

The Danger and Uncertainty in surprizing Algiers, or taking it by Siege, or otherwise.

WHofoever knows Algiers, cannot be ignorant of the strength of it: the inhabitants consist principally of desperate rogues and renegadoes, that live by rapine, theft, and spoil, having renounced God and all virtue, and become reprobates to all the christian world. This town is, and has been, of so great annoyance to the christians lying over-against it, that they have been oftentimes forced to attempt it by surprise; but still have fail'd of their Vol. III.

defigns, either by intelligence the town has had, or by their carefulness to defend it; for no man but must think that a town which depends on its own strength, being in continual danger of stratagems, and sudden surprises from the bordering enemies, both Moors and Turks, who have the conveniency of galleys to transport and land an army at pleasure, will be extraordinary watchful and circumspect to fortify it felf, and withstand all dangers that can befal it.

And if those christian countries that lie open to the places aforefaid, could never prevail in their fundry attempts, being nigh them, and having conveniency to embark and transport an army without suspicion or rumour, and to be succoured by the iflands of Majorca and Minorca, if necesfity requir'd, but especially having intelligence with fome of the town for the delivery of it, as about fourteen years fince it happened, by the practice of a renegado, called Spinola, which failed; what hope have we then to prevail, who cannot fo fecretly furnish an army and fleet, but that all the world must ring of it in gazettes and other intelligences? Or if it be once known in Marseilles, it cannot be conceal'd many hours from Algiers, there being a fettled trade and correspondence between those two cities.

But allowing our defigns to be kept fecret til! the very time we arrive upon that coaft, yet the warning will be fufficient for a garrifon rown of lefs force, and fewer men than Algiers, to prevent a furprife.

men than Algiers, to prevent a furprife. In fich a case as this the time and wind is principally to be regarded; for a large wind that is good to carry a steet into a landing place in an open bay, will be dangerous if it overblow upon a lee shore; and it will make so great a sea, that it will be impossible for men with their furnitures and arms to land without apparent danger; and what resistance a sew men are able to make, I refer to consideration.

On the other fide, if we ply into the bay with a fcant wind, and it gives us a good entrance to land, by reason of the fmoothness of the sea, yet the defends shall have these advntages; They will defcry us from the shore a long time before we can draw near, and confequently have time fufficient to withstand our landing. With their galleys they may cut off our boats with our men, if ships ride not within command of the shore; besides many other casualties the fea and weather afford. Besides, our boats can land but the third part of our men at once; by which means we shall attempt to land but with the third part of our army; and if we do it near the town, they will still have warning enough; or if it be

far off, the march will be inconvenient, to an

and they warned by fires.

But if we fail of furprifing Algiers, and attempt it by fiege, we have neither necefaries to land our ordnance, nor to draw it to a place fit to raise a battery, wanting ingines, cattle, and other conveniencies for that purpose. It must be considered how to relieve our fiege, and defend our befiegers against the falleys of the town, which have ten men to one of ours. We must likewise forecast, if we fail of the attempt, to bring off our men with safety, as a point of great providence in a commander.

Whosever shall enterprize Algiers, his

Whofoever shall enterprize Agrees, his greatest strength by sea must be in galleys, which can run near the shore, and command the landing-place with their ordnance: or if an enemy draw down his forces there to withstand him, he may soon bring about his galleys, quit that place, and land where he shall see no danger: ships caunot do so when they are at anchor, but must have wind and tide for their purpose.

But all I can fay is nothing to what follows; for you must understand the Algerines are a fort of outlaws, or miscreants, that live in enmity with all the world, acknowledging the great Turk in fome meafure for their fovereign, but no farther than they please themselves. Now that part of Barbary where Algiers is feated, is a spacious and fruitful country, and abounds in numbers of people; and though the king of it be a Mahometan, as well as the Algerines, yet they live in perpetual hatred and war; but fo, that if either of them is attacked by Christians, they will presently join as partners in mischief; and we shall no fooner land, but be welcomed by threefcore or fourfcore thousand of those ungodly people.

Having flewed the impossibility of taking Algiers, either by surprise or siege; now shall follow the little use we can make of it, either to annoy the king of Spain, or any other potentate; as also the small profit we shall make of it; no, not so much as to defray the tenth part of the garrison, or any hope to go farther with a

conquest.

If it be conceived to lie conveniently to annoy the king of Spain, or any other enemy, it will prove otherwise, confidering the distance from England to be relieved, and the many casualties we shall undergo at fea, having neither the Christian nor Turkish shore to friend, and yet we must shall in the Mediterranean, where we cannot pass unseen or unmet, because of its narrowness.

The harbour of Algiers, which must entertain us, is of so small a compass, that it will not receive above twenty ships; which number, and no more, we must allow both

to annoy and defend ourselves from all enemies, either Christians or Turks.

The place affords neither victuals, powder, mafts, fails, ropes, or other necessaries that belong to ships; and if there be but a want of the least of them, England alone must supply them. Then consider the charge and danger that is like to follow to this little purpose; for the expence is certain, and less than five thousand men cannot be allowed for garrifon, and the twenty fail of ships aforefaid. The profit and advantage that can be made of it, must be by theft and rapine at fea, which the Turks cannot afford us, they having little or no trade in shipping. The princes of Italy are in the same condition; and therefore our only hope must depend on the spoils of Spain, which we cannot expect in the Streights, they having no trade of importance upon those coasts; and what we shall take without the Streights, we shall sooner do it from England than Algiers; and prizes fo taken will be fooner and fafer brought for England, than carried to Algiers, where they must pass so many dangers, as I have said before.

When this following action against the Turkish pirates was in agitation, it was solicited by the late lord admiral of England, the earl of Nottingham, who not long after refign'd his office to the duke of Buckingham, who being young, and infected with the disease of youth, to hearken to base flattery, gave ear to those that thought to make use of his favour with the king, and advised him to promote this voyage, promifing it should redound to his everlasting honour at the first entrance into his place: but the event of it shall appear to be caused by the ill management of it; for no doubt but the intention was to be commended, and the management was to be blamed.

Besides this, there were two other ill undertakings, and as ill managed, which sell out in the sollowing years, 1625, and 1628. whereof I design to give an account one after another; the one was to Cadiz, the other to the sile of R: wherein our rashness appear'd greater than our discretion, in bidding desiance to the two mighty and potent princes of Europe, Spain and France, both at one time, without help or assistance from abroad, and under the uncertainty of money the then parliament opposing his majerty's demands.

To the Spaniards we only shewed our teeth, with a desire to bite: France provided for us, and plucked out our teeth before we could bite, as is to be seen by the unfortunate and unadvised expedition to the isle of Ri, which left such a mark of dishonour upon our nation, as former times could never be taxed with.

y shewed our France proour teeth bebe feen by the edition to the mark of difformer times The ill managed Enterprize upon Algiers in the Reign of King James, and the Errors

BEING to treat of the two unfortunate undertakings in the reign of king Charles, occasioned by ill advice and couniel, I must observe our dishonour at sea began the way to future misfortunes in the enterprize against the pirates of Algiers, in the reign of king James, though I must fay it was really undertaken by his majesty with a noble, gracious, and religious intention; but through ill management it prov'd no better than those that enfued.

His majefty confidering the daily complaints, not only of his own subjects, but of all other christian people in Europe, many thousands or whom grouned under barbarous flavery, and were most cruelly treated by the Turkijh pirates, ranging abroad without any oppolition, was moved to compaffionate their calamities, and out of a true christian tenderness resolved to endeavour to redrefs this publick grievance, as appear'd by the chargeable fleet he fet out to suppress the infolencies of those miscreants, who were the ruin and bane of the

christian commonwealth by sea.

This fleet, by contract, was to receive fome affiftance from the king of Spain, when it once appear'd on his coaft. But fuch was the milgovernment of those ships, and the negligence and vain-glorious humours of some to feast and banquet in harbour, when their duty was to clear and fcour the feas, (for indeed they carried themselves more like amorous courtiers, than refolute foldiers,) that they loft the opportunity which offered ittelf, of destroying those hellish pirates; as may be collected out of a pamphlet published at their return, to which I refer you, but with this observation, That besides their going and coming, they spent not twenty days at sea whilst they continued in the Streights, but retired into harbour, where the pirates might find them, but not they the pirates.

This ill-carried action was a fufficient fubject of fcorn for all nations to laugh at, confidering the reputation this realm had gained in their former expeditions by fea. And yet the chief actors in that voyage, like men naturally given to excuse their errors, gave out to justify themselves, and it was afterwards believ'd by all men, That the want of authority, and their limited commission, was the cause of their ill suc-

This report was fo univerfally credited, that I have often wondered with myfelf, that the state did not except against it for their own honours and reputation, if it had

not been really fo; for commonly, in fuch cases, if a state do err in their directions, they will cast it upon those that had the execution, rather than that the imputation should light upon them; and, indeed, this was the reason that carried me into the general error of believing as others did, until I reflected upon the following reasons.

The first was, That a fleet of his majesty's could not depart England without a commission under the great seal. Secondly, I know that all generals of fleets have special directions and instructions to guide them: I know the managing of fuch great affairs by land or fea is committed to one man alone. Thirdly, I confidered that there were but two ends of this imployment, (viz.) either peace or wars if peace, I maivel that fo great a fleet should make an overture of peace, when a pinnace and a letter from the king was as authentick as the greatest person, or the greatest seet his majusty could fend to treat. Fourthly, I law, that notwithstanding this friendly overture of peace, thips used hostility, took and destroyed some prizes, made an attempt to deftroy their ships with fire in harbour, which failed, and whilft our fleet remain'd upon that coaft, they carried themselves as

And feeing, as I have faid before, that either peace or war must be the ground of their imployment, that they attempted both, and prevailed in neither, I know not he they can lay the blame on their want of commission, but rather on their unprovident, negligent, and unconftant behaviour. But too true it is, that fince that time, our poor English, and especially the people of the west country, who trade that way daily, fall into the hands of those pirates. It is too lamentable to hear the complaints; and too intolerable to fuffer the mifery that has befallen them; and all occafioned, as they suppose, by the miscarriage of this unlucky voyage of 1620.

This making up three unfortunate voyages, as you shall foon hear, as many more were performed with no better fuccefs, two of them under the command of the lord Willoughby, and the third under the lord of Denbigb. These three had no advantage of one another; for there was nothing done worth remembering; and therefore I can fay no more, than to join with others, who defire, that the subject may have fatisfaction what the defects, ignorance, and errors of this voyage were, that upon examination all may appear, and every man receive his reward as he justly deserves.

His majefty and state could not have been more honoured, nor all in general better pleased; for people are persuaded that the realm never enjoyed braver and more warlike thips than now, commanders of greater antiquity and valour, feamen of greater experience and skill, more abundance and choice of ammunition and arms, greater quantity of victuals, and all things elfe to turnish such an action; as I shall have occasion to make out hereafter.

Then would have appeared the weakness of a great person in authority, when being spoken to by one of greater blood than himself, who friendly told him, he did not see a man of experience imployed in the sleet to Gadiz, which made him doubt

of the good fuccess thereof; he answered, not like one that thinks example of more weight than conceit, but rudely, rashly, and difrespectfully, That they were all sools who commanded in the queen's time, in comparison of those now imployed. But it might have been more truly told him, That men in authority, who govern more by will and chance, than by reason and advice, are dangerous in a state; for nothing is so great a weakness, as for a man to think he knows much, when in effect he knows nothing at all.

A Resolution of War with Spain; and what followed upon the second Expedition to Cadiz in 1625, and in the Reign of King Charles I.

KING James dying on the 25th of March, 1623. left his kingdom doubtful, whether peace or war should be embraced, having just occasion of unkindness offered, which was likely to turn to hoftility. For the noble prince his fon, then our bleffed king, was difgusted at the dilatory courfes Spain used to defer the marriage then in treaty with his fifter; and his highness's journey into Spain, gave him not the fatisfaction he expected; wherefore, being fentible of the injury done him, he could do no less in return to it, but let Spain fee its error in the ill ufage given him; and accordingly in the year 1625, fent a fleet to fea to revenge himfelf upon them. But the winter feafon approaching, (an ill time taken for fuch an enterprize, befides fome other miscarriages, which may be imputed to the want of experience in the commanders, as is to be feen in the answer to a book published by the general at his return,) it had no better fuccess than the author hereof foretold before their going from hence.

The Author's Opinion of that Expedition, which he writ to a noble Friend of his hefore the Fleet failed, as also what he conceived of the first News brought of the taking of the Fort of Cadiz, with Hopes to possels the Tovon, and keep it.

Noble S I R,

I HAVE addressed to you my opinion of this secret and concealed seet, whose design and unknown orders, give cause of admiration, and consequently of censure; every man judging as his sancy leads him, but all concluding of victory to us, and ruin to Spain, whither it is conceived to be intended by the rendezvous of ships and men in the western parts; some threatening Portugal, some the islands, others the bay of Cadiz, and city of Seville; others the

flate of Genoa, and islands adjacent; some the West Indies, and the fleet from thence expected.

I will begin with *Portugal*, as the country nearest us, and upon which most mens opinions are fettled, having experience of the force of that kingdom by an attempt formerly made in the year 1589.

You must conceive that Portugal fronts upon the heart of Spain; and that Spain hath fundry entrances into it, as namely by the fouth and west sea upon the east Castile, upon the north Galicia, and towards the fouth Andaluzia. Portugal is far inferior to those countries in strength; and a means not only to keep the people in obedience, but to give prefent aid and affiftance against foreign invafions. I confess, if our actions in 1589, had been well carried, we had spoiled and ruined the city of Lisbon, where they had been furprised before we had been fuspected. But we could expect no other advantage befides taking and deftroying the city; for though the merchandize in it was of an estimable value, yet neither could we transport them to our ships, nor our fhips repair to receive them, the paffage being stopped by the castle of St. Julian and Belem.

Our hope was as little to fettle Don Antony for king, the Portuguese being a multitude of poor-spirited people, without arms or hearts, that further than in their tongues and wishes, would not afford a finger to

And besides, the barrenness of the country is such, that it affords not corn enough, nor other provisions, were it not for the help of the sea. And I dare boldly aver, the kingdom had better sail of their trade to the East-Indies, than of their fishing for pilchers upon their coast: and let this be the first consideration, How an army can subssite in that country; and the rather, by the proof we had of it in 1689.

s of the country rn enough, nor for the help of over, the kingr trade to the ing for pilchers is be the first can subsist in r, by the proof Moreover, by possessing Lisbon and the northern part of Portugal, we were nothing nearer enjoying the south part, which yields greatest plenty of food, cities, and nobility for from Lisbon we were to begin, as it were, a new conquest, and to pass three leagues to the Alenjeto side, over-against Lisbon, where the Spanish galleys, which were then there, would have been our destruction in landing.

The State of Portugal in the Year 1625. compared with the Year 1589.

IN our enterprize of 1589, we had no cause to complain of fortune; for she gave us a happy entrance into the kingdom by the surprise of *Peniche-Castle*, that afforded us a landing; and after a peaceable march to *Lisbon*, where we found the city unarmed and unprovided, the castle excepted; but yet our success proved miserable and unhappy.

We can fearce hope for the like fortune now, their forts being better armed, and their forces better order d by the late warn-

ing they have had.

I perceive, the river of Tagus excepted, there are but two places which advantage us in landing, which if we fail of, our enterprizes are fruftrated. The one is Peniche, the other Cascais. The ports to the northward of Peniche are in the bottom of the bay of Pertugal, a place all ships will shun and avoid, and too far distant from Lisbon to march. Those to the fouthward of Cascais are on the other side of Lisbon, and the river Tagus, which I have shewed the impossibility to pass over; and had not the duke of Area provided to pass his army in galleys upon his taking of Portugal, he might at that time have possessed the footh parts of Portugal, and have left the north part to the Portuguese themselves.

Peniche has a fmall harbour only capable of barks and fiftermen; the other two are open roads, and not fecure from a foutherly or wefterly wind. Our landing muft be in one of these two open bays, where ships lie subject to foutherly winds, which will hazard the destruction of them, if they come with violence.

The nature of the shore is disadvantageous to the invader in landing, and advantageous to the enemy in resisting.

Our means to land must be in our own boats, that cannot contain the number of our foldiers at thrice ferrying, and thereby we shall not bring the third part of our men to fight at the time of our greatest need.

A fleet coming to an anchor that diffance from the fhore, that fhips cannot command their landing with their ordnance, the gal-Vol. III.

leys will cut off our boats, and utterly defeat us, as they had done at St. Schaftian's-Point, in our journey to Cadiz, if we had attempted it as it was directed.

We neither having cattle nor harbour, our field-pieces cannot be landed, which must be the strength to force the castle the want whereof was our loss of Lisbon in 1589. All these reasons have I given in the instance of our landing at Algiers.

My second observation is the state of Portugal since the year 1589, when we attempted it. The Portuguese nation in their nature are better reconciled to the Spaniard than they have been, and not without reason grounded upon necessity; for they have no hope ever to recover their loss in the East Indies or Brasil, or to enjoy what they possess, but by the help and force of Spain.

Secondly, The nobility, gentry, and others in *Portugal*, that were most discontented with the managing of things in those days, are consumed and dead; and their descendants, who never knew other times, have framed themselves up to it, and obtain favour of the king in their imployments; nor does the king himself make any difference betwirt them and his other subjects.

Thirdly, The Portuguese are more exasperated against the English than they have been, by the spoils done them at sea, and the ill usage of them in the East Indies.

Fourthly, Many Portuguese in those days were transported by their love to Don Antony: others believed in Lis title; but the most dissiled to be under the Spanish government. Since which Don Antony is dead, his iffue gives little hope for them to rely on; but especially the children of the now preended prince; and the father himself, since this was written, is repaired to the archduke; which takes away all comfort from the discontented Portuguese.

Fifthly, It is worth observation, that in our voyage to Portugal in 1589. our army consisted of sourteen thousand brave soldiers, four thousand choice seamen, our design being to settle that king, who had been formerly crowned in that kingdom; and yet such was the condition of the people of that country, that there was neither duke, marquis, earl, viscount, baron, knight, or gentleman, repaired to him, or shew'd himself of his party, except only a mean knight in calling, named Dusarte Pais, with whom I was after sellow-prisoner in Lisbon, his commitment being for that offence, (viz.) for slying to Don Antonio: he would often complain to me of his folly, and commend the king's mercy.

 $\mathbf{B}_{\mathbf{C}}$

The Islands.

FROM Portugal I will shape my course for the islands, as well the Canaries as Terceras, though I will fay little of the Canaries, it being an action fitter for ten ships and a thousand foldiers to attempt, than so glorious an army as is now intended. I may fay less for the island of Azores, the impregnable ifle of Tercera excepted, which giveth reputation to the raft

All these islands, as wen the one as the other, cannot boaft of one harbour to entertain ships, but open bays, subject to all dangers, and outerly winds, which many vefiels of great value have felt, that have there perished.

The island of Tercera, by nature and situation, exceeds all other islands in the Streights, being encompassed about with mighty high cliffs, a few bays excepted, which are fortified by art, to prevent an enemy's landing.

As well that island as the rest are shore deep, and no possibility of anchoring, but close on board the land; the ground rocky, that if it fret the cable, the waves of the fea will force a fhip on shore; or being near the land, and a gale of wind coming off from fea, that a ship cannot claw it off, but must of necessity be wrecked; both which my lord of Cumberland had proof of in the Victory, a ship royal of the queen's, which being at an anchor at Flores, and the weather calm, his cable was cut with the rocks; and had it not been for the help of his boat and mine that towed him off, he had been forced to shore.

After that, being at an anchor at Fayall, which island he took, one day, many of the principal men on shore being at dinner with him, suddenly the wind chopp'd up southerly, which forced him from his anchor, and with great and apparent peril he doubled the point of the land, or else he had perifhed.

No man that knows those seas will advance an enterprize upon the iflands now towards winter; for in August begin their ftorms, and commonly last nine months with great violence; for which cause they are held the most unconstant seas in the world; and I fay nothing that I will not

aver by proof and precedent.

Don Pedro de Valdes, who was taken prifoner in the action of 1588 for England, was commanded with certain ships and fix hundred foldiers, to repair to the islands, before Tercera had yielded to the king of Spain, there to guard and defend all the thips coming from either of the Indies, Guinea, and Rrafil: his commission gave

him no abfolute authority to land; but yet finding an opportunity to put his foldiers ashore, with a determination to fortify a landing place, which feem'd to lie open for his advantage, immediately thereupon the wind shifted, and forced him to sea, leaving his men to the mercy of the islanders. As the wind role, the furges did the like on shore, that his boats durit not put in with the land, nor he approach so nigh it with his fhips, as to give fuccour to his men with his ordnance, by means whereof they were pitifully maffacred, not one of them returning.

In my lord of Effex's voyage to those islands, he landed and took Villa Franca, a town in the island of St. Michael, which afforded him not fo much as his trouble was to land. But when he came to embark his men again, the wind began to blow; which if it had done but three hours former, it would have forced his ships to sea, and lest his troops ashore, both he and they being flenderly provided of victuals, and uncertain of the ships return, the weather being so unconstant and outrageous at that time of the My felt was witness of this, as well as of that of my lord of Cumberland's in

The marquis of Saneta Cruz had failed of taking Tercera, if he had not had more help by his galleys in landing his men, than by his ships and boars. But to speak the truth, June and July proved extraordinary fair, to his great advantage

The twelve galleys he carried from Spain were the first vessels of that kind ever seen fo far in the ocean; the prows of those galleys difmounted a piece of ordnance on fhore, that fecured their landing, and were ready upon that accident with celerity to land their men, which was the first step to their victory that followed.

The town of Angra, which is the head and principal of all the rest, by help of the point of Brafil, is made the most impregnable situation in the world; then what hope have we, if we were ashore, to surprise it, or by fiege to take it, the feas being, as I faid before, fo unconstant, our ships keeping so far off that should yield a supply? efpecially the Spaniards having the road of Angra, they may always relieve the town in defpight of us, or any force we can make by fea.

The Coast of Spain.

Eaving the islands, I will repair once more to the main land of Spain, and arrive at the bay of Cadiz, a place fatal to the Spaniards, and fortunate to us, by two attempts made upon it, the one in 1587. by

land; but yet ut his foldiers n to fortify a to lie open for thereupon the to fea, leaving islanders. As id the like on ot put in with nigh it with ar to his men s whereof they

ich is the head , by help of the e most impregld; then what hore, to furprise the feas being, fant, our ships ald yield a fuprds having the always relieve or any force we

vill repair once of Spain, and place fatal to to us, by two one in 1587, by

Sir Francis Drake, the other in 1596. by the two lords generals, the earl of Effex and the lord admiral.

These two expeditions alone, did twenty times more prejudice, and impoverish'd the Spaniards more than all other attempts of ours in our wars : Drake had the spoil, facking, and burning of thirteen thousand ton of shipping, most of them laden with provision for an intended fleet against England; which being this year by Sir Francis Drake's good fortune diverted, was the following year, 1588. attempted.

In the fecond, the lords had the deftroying of fifty five great ships, the galleons of war excepted; all the rest were richly laden, and ready in two days to fail to the

I love not to tax dead men, though, in truth I must say, there was great negligence, that those ships were not as well possessed and enjoy'd by us, as deftroy'd by the

But I must tell this pretended sleet of ours, that though no place gives us better advantage to annoy the king of Spain, then the bay of Cadiz, because of the breadth thereof, which cannot be fortified to impeach our entrance; yet shall we now vain-ly undertake an attempt upon it, the ships of the Indies being long before they can arrive departed; for commonly they let not Midjummer-Day pass before they set fail.

I must a little digress, and shew how much our two great lords were abused in their attempt upon Cadiz in 1596.

They were made believe the taking of it was feafable, the honour great, the wealth inestimable, and the damage of the enemy beyond all the reft; never dreaming of that which gave glory to the enterprize, which was the shipping we there found; for had it not been for our destroying the fleet, though otherwife no profit to us, the lords had returned with the bare taking of Cadiz, which had given them no reputation, but rather have brought their judgment into question for so mean a defign.

As for the feafableness of taking it, if we had landed at St. Sebastian's, where our projectors of the voyage directed, not a man had returned; for befides the ftrong fortifications made against us, four galleys were appointed to have cut off our boats and men, as we should have landed, our thips lying without command of them or their shore.

The wealth found in Cadiz was fo small, confidering it was carry'd away the day before in the galleys, (the two galleons we brought from thence excepted.) the queen faw not one penny towards her charge;

nay, I dare be bold to aver, the meanest of twenty ships there burnt, was of more value than the whole town, and by us neglected, as I have faid before; for upon my reputation I avow, that I advised my lord of Effex, the same morning he arrived at Cadiz, to feek rather to poffess himself of the ships than town, alledging that it was the ships afforded both wealth and honour; for that riches in thips could not be concealed, as in towns it might; and that ships being brought for England, they were always in the eyes of the people to behold them, and put them in remembrance of the exploit in gaining them; as perhaps the town foon won, would not be long enjoy'd, and quickly forgotten. All this I have declared where I treated of the voyage to Cadiz, 1596. in the former book.

Andalufia and Seville.

I F an invalion upon the continent of Spain be intended, and especially upon Andalusia and Seville, as the country of all Spain, that flows with milk and honey, in respect of the foil and trade, there ought to be confideration of the place of landing; the distance and wearisomeness of the march in an unfufferable parching fun, which our unexperienced foldiers can never endure: besides, the provisions of victuals, of carriages, and all other necessaries, must be thought of, which we are wholly unprovided of.

I will not much infift upon the attempt, because I think it is much less reasonable than any of the rest; first, in seeking to invade a country where we have neither friend nor faction, but shall find their hands and hearts all join to repulse us; a country populous, and the more for their mighty and continual trade, fronting upon their enemies in Barbary, which makes them ready to receive every alarm, and put them-felves under arms. If we believe history, and not above a hundred years before Spain was grown great by their Indies, the moors of Granada had often more men by five degrees to invade Andalufia, out of their bordering territories, than we carry, and could not prevail; then what hope can we expect, Spain being fince that time fo mightily increafed in greatness and wealth?

It feems we make lefs account of the ftrength of Spain, than of any other country of Europe; for I am perfwaded no kingdom having warning of the approach of an enemy, is to unprovided, that they will fuffer twelve or fourteen thousand men to march quietly forty or fifty leagues into

their country.

The Streights.

Rom hence I will fail into the Streights towards the port of Genea, which it is suppos'd the French, we, and the rest of the league, will possess our selves of, and give a further entrance into Italy.

If this be intended, as indeed it is not probable, the invader ought to have two principal confiderations, without which a fleet and army goes in perpetual peril: The one is to be defende by a fafe port to entertain their ships; the other, that it be not far from home, but with care to be continually supply'd and reliev'd; for where foldiers are transported far by sea, ships cannot contain victuals to maintain them; and to hope for fuccour in the country invaded, were too desperate a thought.

The fervice I conceive the ships could perform, our foldiers being landed, is to beleaguer *Genoa* by fea, fiding with our fhips in the face of the town. This, as all things elfe, I refer to confideration, my drift being no more than to relate the true state of things, for men of better capacity

than my own to judge of.

Whereas I advis'd, as a main thing of providence, not to attempt the invalion of a country, without gaining a port for the fafety of shipping; therefore I must say our defign upon Genoa is not without great hazard and danger, being hopeless of a harbour nearer than Marseilles in France, one hundred leagues diftant from thence.

In anchoring before Genoa to beleaguer it, we shall lie open to the sea and a southerly wind, which makes the hazard no less than the two attempts upon Algiers, opposite to it, the one by Hugo de Moncada, the other by Charles V. both which were overthrown by storms at sea; and there is no difference betwixt the two actions, but that the foutherly winds are death upon the christian fhore, as the northerly upon the coast of Barbary; and the greatest conflict our fleet is to endure, is against the rage of the

I do not conceive we shall either hurt or damnify the city of Genoa by this adventure of ours; for in anchoring near the thore, the lanthorn of Genoa will beat us from the road; if further off, we cannot hinder the galleys going in and out, but they will be able to relieve the town in spight of us; besides, other stratagems may be us'd by galleys to fire us: I confess, if Corfica or Sardinia could be furpriz'd, they would yield us relief and refreshment, with good harbours for our fafety

We have found by our unlucky and un-

bodies are to endure that coaft. by the fickness we found, though we had the help of the main land of Spain, and the bordering islands, to give us relief, which now we shall fail of : the excessive heat ashore, the change of the air, and the alteration of food, will cause a most lamentable mortality and sick-

And if the king of Spain, in the mean time, upon the return of his fleet from Brafil, shall arm to sea, and take advantage of our weakness and want, and in such narrow feas as the Streights, which are like a pond, where fleets meeting cannot be avoided; or if with that navy, or any other, the Spaniard shall fend to attempt Ireland in the absence of our ships, I hold it dangerous, and worthy to be had in confideration.

The West Indies.

Will not leave my voyage till I have vifited the West Indies, that I may relate my opinion of those parts, as well as of the rest that went before: Many are ignorantly carried away with the name of India, and the spoil we shall there commit; thinking it will afford wealth and riches to the king and kingdom to maintain a war, and preferment and gain to the undertakers, not valuing nor fearing the king of Spain's force in those parts to resist us.

But for the better fatisfaction of the ignorant, who are thus vainly carried away with the conceit of our actions, I will thew the true state of the Indies, and the Spamiards inhabiting; thereby comparing times past, when we had wars, with the time pre-

fent, when we covet wars.

I confess that in the year 1585, when the war began, and Sir Francis Drake poffeffed himself of Santo Domingo, Carthagena, and St. Jago, her majesty had a notable opportunity, by keeping those places to annoy the Spaniards, and encroach upon their Indian territories.

First, In respect her majesty in those days was rich, and her subjects no less able than willing to contribute to what she proposed, they were so much devoted to her in

their hearts.

Secondly, In point of reputation, as well as profit, it behoved them to maintain those places after they were taken, as a motive to encourage them to go on with a victory thus begun.

Thirdly, Her majesty in those days might have drawn such conditions as she pleased from the states of Holland, who were then at her mercy; for prefently enfued the earl of Leicester's going over to proteel them; fo that she might have bound them to her with their own enterprizes upon advised voyage to Algiers, how unable our the Spaniards; whereas from that time till

by the ficki the help of he bordering now we shall re, the change of food, will lity and fick-

in the mean eet from Braeadvantage of in fuch narrow is like a pond, a avoided; or ther, the Spa-Ireland in the it dangerous, fideration.

the till I have viat I may relate is well as of the y are ignorantly e of India, and nmit; thinking ches to the king a war, and preindertakers, not g of Spain's force

action of the ignly carried away ions, I will shew ies, and the Spacomparing times with the time pre-

year 1585, when rancis Drake pofingo, Carthagena, ty had a notable those places to d encroach upon

majesty in those bjects no less able to what she prodevoted to her in

putation, as well tem to maintain te taken, as a mogo on with a vic-

in those days conditions as she of Holland, who for prefently engoing over to prohight have bound to enterprizes upon om that time till

the year 1602, when the queen died, we see, that notwithstanding we were drawn into the war by them, yet they traded peaceably into the king of Spain's dominions, and never offer'd to annoy the Spaniards by any acts of hostility at sea, but supply'd them with ships and intelligence against us.

Fourthly, If we had kept footing in the Indies, it would have shaken the sidelity of the Portuguese in the East Indies, Guinea, and Brasil, which countries where lately become obedient and subject to Spain; but withal, so discontented in each place, that it had been an easy thing to have made a combustion in these several countries, whilst the Spaniards had been taken up in the Indies and Holland.

Fiftbly, The king of Spain in those days was altogether unfurnish'd with ships and mariners; for till we awaked him, by the daily spoils we committed upon his subjects and coasts, he never fought to increase his forces by sea.

Sixtbly, He thought himself so secure in his Indies, no enemy having ever appear'd in those seas before, and thought them so far from any hostile enterprize, that he little fear'd what would be there offered.

But leaving our opportunities and advantages as negligences or ignorances of times path, let us enter into the flate and condition of our attempts as they are now to be undertaken and followed.

Whofever makes an enterprize on a town in America, with an intention not to keep it, will do no more than a malicious person, that feeks the destruction of his neighbour, in setting his house a fire, without any other prospect in so doing, but mischief

and revenge. I confess we shall damnify the inhabitants of the town fo facked and fpoiled, as the owner of a house burnt will be damnify'd; but it is no more loss or prejudice to the king of Spain, or to the bordering countries, than to the neighbour of the man that shall have his house burnt; for every one bears is own particular loss. And whereas the master of the house and people in it, are often so sud-denly surprized, that they have not time or leifure to fave any part of their goods, after the fire is kindled, it is otherwise in a town that is to be surprized by sea; for the inhabitants will destroy ships, before they approach the shore, and either provide to withftand them that land, or to leave and quit the town, and bury or carry away wealth; for notwithstanding the several towns taken by us in time of war, as well in the Indies as other places, I dare be bold to fay the wealth found in them did not countervail the twentieth part of the charge of the voyage; as I have shewed in the first book, Vol. III.

The state of the towns in the West Indies near the sea, is as follows: If they be of strength, they arm and fortify themselves so, that they do not sear a sudden assault of an enemy; and for a long siege, they well know the invaders cannot be provided, because it is so far from home, where victuals and all things else will quickly waste and be consumed.

Or fuppose, upon their first landing they possessed themselves of some cattle, which is all the victuals they can expect in those parts, you must understand that no flesh in the Indies will take salt, or continue man's meat above three or sour hours, so that our present relief will be little; and in the mean time we shall spend our store on board, and become miserable for want of sustenance.

Such towns as are weakly provided for defence in those parts, they never trust with wealth of value, but are ready to quit them, and carry or bury their goods; so that if the town be taken, their loss will only be of a few slight houses, which are soon reedify'd again.

If we think to inhabit and dwell in fuch towns as shall be furprized, we ought to consider the following mischiefs and inconveniencies

1. The first is the distance from England, and to compute the time they may be supply'd and succoured from thence.

2. The casualty of the sea, and the danger of sickness, which northern bodies are subject to in hot countries.

3. The number of *Spaniards* in those places, their strength, and in what time they may be drawn together.

4. The keeping us from victuals, and driving their cattle up the country, where it will be in vain for us to pursue them.

it will be in vain for us to purfue them.

5. The building of fconces, and keeping us in towns like prifoners, that we shall not be able to make any sallies upon them, or to pass into the country to annoy them.

6. The small distance from Spain to give them succours, and the certainty of the winds from thence to the Indies, which many times makes the journey shorter and easier than from Dover to Plimouth.

7. The country, the ftreights, and the byways, all known to the *Spaniards*, and not to us, will much advantage them.

8. But perhaps all men will not be fatisfied with truth or reason; for some are of such a nature as to rely more upon opinion and fortune, than upon proof. But for the better satisfaction of such, I will collect and repeat the success of our enterprizes upon towns in time of war, as well in the Indies as other places, and make them judges of their future hopes, by looking back upon times past.

And I will begin with Santo Domingo, Carthagena, and St. Augustin, surprized by Sir Francis Drake before they could be warned or armed, and yet (the ordnance excepted) the wealth of them did not countervail the fortieth part of the charge of the sect.

Puerio Rico, taken by my lord of Cumberland, proved so poor, that the adventurers had good cause to repent their designs upon towns; for it afforded them little in

comparison of their expence.

There was a town surprized in the island Trinidad by Sir John Burrowes; and another in the Margarita by Sir Walter Raleigh. Comenagota was taken by captain Presson; all which did not afford to much wealth as would reimburse the adventurers.

Porto Bello and Nombre de Dios were taken by Sir Francis Drake that voyage when he died. Instead of riches, they afforded him a most miserable and insectious sickness; but for wealth they yielded none: the fame town of Porto Bello was after taken by captain Parker, with as little profit to him as the other; the same captain also took Campecby in Now Spain, which afforded him no more wealth than the rest.

There were divers towns taken at Cape Verde in several voyages, and in the West Indies, Rio de la Hacha, Capoia, Sama Maria, Puerto Santo, St. John Bellona, Tapuecco, Vera, and several houses and farms

burnt or ranfomed.

Sir Walter Raleigh, in his unfortunate attempt upon St. Tome and Guiena, which was his own ruin, and his fon's death; and yielded only flinking tobacco, a commodity that could not be convey'd away, because of the bulk; and his voyage proved much

less than smoke,

And if we fail further, and through the streights of Magellan, and pass into Peru, thinking there to find silver and gold, as the vell-head, from whence it springs, let us ask Mr. Candich, if he were now living, what wealth Marmaramo, Areca, Sania Maria, Pisca, Ferruca, Cherepa, Paita, the island of Pona, Maralia, the port of Navidad, the port of St. Jago, and the island of St. Andrea, and other places yielded him, which he burnt, because they would not be ransom'd, though he required not much more than victuals for their redemption: which proves my sormer discourse, that the Spaniards little esteem'd their houses, and may easily convey away their wealth upon the approach of an enemy.

And if we come nearer home: I pray you, what did the fack of Cadiz afford the queen? or the Canary Islands? or St. Tome the Hollanders? or the island of Fayal my lord of Cumberland? and after the earl of Essex? for it was twice taken: or Villa

Franca, or Faro by him taken? or two or three forts taken upon cape \$s. Vincent? or cape \$sacre by Drake? or Peniche, and other towns in Sir John Norris his march to Libon, and the fuburbs thereof? And in the fame voyage Drake with his few forces took Cafcais: I omit Lancarote, and many other places, feiz'd upon by private fhips: and we may conclude that our actions proved the ruin of fome, without any great advantage to our felves. And this "hall fuffice for our attempts upon towns in the queen's time.

But indeed, if ever England will annoy the frates of Spain, and make them feel the fmart of a war with us, it must be by obstructing their trade by sea; for all other spoils are nothing in comparison of it, as I have before shew'd: for wealth in ships can neither be conceal'd nor imbezell'd, as we have had proof by three several carracks by us taken, the wealth of each of which was equal to the value of all the towns, putting them together: and how to effect it, you will find in my first book, to which I refer you.

Thus much I writ to an honourable friend of mine, as I formerly faid, before the fetting out of the unhappy fleet to Cadiz, in 1625; which friend of mine is ready to justify and produce, if need require. The copy of this I have here inferted word

by word.

Upon the News of the arrival of our Ships at Cadiz, with the taking a Fort, and afterwards the Town, intending to keep it, I added this as follows:

THE fort I conceive to be *Puntal*, the place where we landed when we formerly took *Cadiz*, above three miles distant

from it by land.

I should be glad to hear they had taken the bridge of Swazo, which passes between the main land and the island where Cadiz stands; for by that bridge succour must come to relieve the island and town, or obstruct any such relief, if an enemy get possession of it; and therefore we having no news of the surprize of that bridge, I doubt the truth of the taking the town.

We know Cadix is ftrongly fortify'd fince we enjoy'd it, and the rather out of a fear they conceive of the Turkis pirates; who, fince they have learnt the art of navigation, which before they were ignorantin, have of late made many attempts upon the continent of Spain, to the great hurt and

fpoil of the inhabitants.

And if the Spaniards have not carefully fortify'd Cadiz, which lies near and more open to the Turks than all other towns in Spain, they deferve all the mischief that can betal them.

1

ave not carefully arand more open towns in Spain, ef that can betal If we fail of furprifing Cadiz, and be of times past we had to hold it, with the forced to beslege it, these dangers following time present, if we had it. may enfue:

1. The force of Andolusia, and all the bordering countries, which yield more good men and horses than all the other parts of Spain, will come down upon us.

2. Secondly, the Spaniards keeping the bridge of Swazo, will bring multitudes of people to beliege us; and with their horse cut off all fuccours fent from our ships, which must only afford us relief; for the island yields nothing of itself.

3. If we so begirt the town by land, that we permit no entrance into it that way, yet we cannot do the like by water; for with their galleys they will daily relieve it in despight of us, port St. Mary in the continent lying opposite to it, which makes me hopeless of taking it by siege, if we fail of

4. One other reason I have to mistrust it is not taken, which is, That the news of taking the town and fort would have come all together; for if all were not done at one instant, I much fear the success, for the reasons aforesaid, and by the example of us in 1596.

The second rumour was, of keeping Cadiz when taken.

THE question of keeping Cadiz in 1596. was long debated by the two lords generals, and the most experienced soldiers of that time, whom I think all men will allow this age doth not equal. The manner how to supply it out of Barbary and England was chought of, and Sir Edward Hebby was to undertake an embaffy to the king of Morocco to that purpose.

But to use the words of the author who writ that voyage, as it is fet down in the chronicle, he fays, There was a great difpute about the keeping of Cadiz, and the opinion of all old foldiers and feamen asked; but because it appeared not how it might at all times be relieved with men, ammunition, and victuals, and other causes best known to the generals, it took not effect.

It was then discussed and disputed by men of experience, as I have faid, and concluded upon mature deliberation, That it was not possible to keep the town. I would gladly know what reason men have to induce them to it more now than at that time, but especially when I see never a man called upon for advice, whose opinion was thought worthy to be taken at that time.

If it was then held impossible to relieve it, I now compare and collect the reasons

1. Our army was then stronger, in that most of our men were old foldiers, and better experienced than those that are in this

2. They were healthful in body, and victorious in taking the town and bridge with little lofs, which is a great encouragement to people that undertake an enterprife.

The bridge of Swaze was taken, and possessed by us; so that we might keep the town from relief by land, as we had done with our fleet by sea.

We knew the king of Spain was unfurnished with shipping to hinder our de-figns, we having burnt and taken nine and fifty vessels of his and his subjects in that harbour.

5. The kingdom of Barbary was then in peace amongst themselves, and would have rejoiced at the occasion to have aided us against Spain; and fince there have mortal wars continued betwixt the fucceeding kings of that kingdom, to the wasting the mest part of their people and food the earth affords.

6. In those days the king of Barbary had three maritime fronting towns upon Cadiz, as namely, Alarache, Salley, and Mamora; fince which time two of them are possessed by the Spaniards, and only Salley remains to that king, forty or fifty miles further from Cadiz than the other two, and has a harbour only for small vessels, with a dangerous bar at the entrance of it.

I must now say, as I said to the earl of Essex, when himself, Sir Francis Vere, and I, stood upon the castle of Cadiz, and saw the galleys in their flight to Rota, after their escape through the bridge of Swazo. told him he had loft his opportunity of keeping Cadiz, shewing how much the galleys would have availed him, if he had kept the town, and the annoyance he would find by their escape; for with these galleys he might have transported all necessaries from Barbary, whereas they would now be able to cut off fuch fingle and finall ships, as should be sent thither for relief.

In the year 1596, and many years before, the French king and we were in war with Spain, and aided one another; and if the king of France had feen us have footing in Spain, it would have been a motive to have diverted him from his peace with Spain, which in less than two years after he concluded. Our defign was to keep Cadiz, to exchange for Calais in Picardy, not long before taken by the Spaniards; and no doubt but the king of Spain would willingly have consented to it; as thinking it better policy that England should enjoy Calais than France; for they well knew they

Bo

th

ha

th

en fqu

co

ap

could no longer hold it, than the wars continued between them and France, and that peace would cause the restitution of it.

They likewife knew, that if England poffeffed it, there would be a perpetual jealoufy and diflike between France and England, which would prove their fecurity.

Befides, a treaty being fet on foot, though but to exchange those two towns, yet it might be an introduction to a peace betwixt England and Spain; which if it had taken good effect, her majesty had not needed to have reliev'd Ireland with so grea. hazard and charge, as afterwards she did, by reafon of the aid Tyrone had from Spain, when he was ready to sink, and almost forc'd to yield to her majesty's mercy; which enterprize from Spain brought the queen into since the straight before her death, that she was compell'd to pardon him, though much against her will.

And this shall suffice by way of comparison betwixt our holding Cadiz in times past with the present, and the advantages that might have ensued by keeping it.

I doubt not, but as the keeping of Cadizs was thought of before the departure of our fleet, (if it fhould be taken,) fo the reasons for keeping it were no less discuss of for it is a maxim, That no place in another country far from home, is worth keeping, that will not defray the charges of maintaining it, unless it be for security, or to give a farther entrance into a country.

In my discourse, where I treat of our attempt upon Genna, I advis'd, as the principal thing in an invader, to possess himself of a harbour for the fasety of his shipping; wherein I mean not only from the weather, but for securing themselves from an ene-

I will therefore diftinguish betwixt an harbour that is to be fortify'd on both fides by him that possesses, and an open bay, such as *Cadiz*, that is ten or twelve miles in breadth; so that whosoever is master, and strongest in shipping, has the command of it, and the ships within it.

If we intend to keep Cadiz, we must be fure in our supplies to master the Spaniards in ships, by reason of the breadth of the bay, which cannot be fortify'd.

The relief we give Cadiz must either be from Barbary or England; and the distance from England is four hundred leagues at the least; a long navigation, subject to storms, the uncertainty of winds, loss of company, the danger of the enemy, being separated, and many other casualties the sea is subject to: as on the contrary, the Spanish steet that shall oppose us, is surnished nearer home, and runs no such hazard.

We are to expect no other help or fuccour after our departure out of England, till our return, but what we carry with us; and on the contrary, the Spaniards will be fupply'd from their own shore, and that with speed.

Suppose, as we ride in the bay of Cadiz, the Spaniards attempt us with a sleet, and that by accident or force they drive part of us assore; then are we out of hope to recover either ship or man: whereas, if the Spaniards run ashore, their danger will not be great, it being their own country where it happens, which will afford them present succour.

I have shewed, where I treated of galleys, how easy a thing it is to endanger us, by towing fireships amongst us; because those vessels have a great advantage over us, and will either burn or force us ashore; as our fireships did among theirs in eighty eight, when we had done them more hurt, had we been affisted by calleys.

had we been affifted by galleys.

If the *Spaniards* affault us with a fleet in the road of *Cadiz*, it will be with a large wind, and a leeward tide, to keep themfelves to windward of us, and confequently in their power to board us, and we not to board them.

Whereas our advantage over the Spaniard is in our excellent failing in open fea, where we may take and leave at our pleafure; the only edvantage in fer. fervice: here our failing will not avail us, we lying in the channel of a bay, where there is no space to fail in.

If you will enter into the true state and ftrength betwixt the king of Spain's ships and ours, laying ande the advantage of fwift failing, and according to the old phrase, They are bound to fight, Fight Dog fight Bear, till one fide be overcome; which cannot be better decided than at the anchor in a harbour. Let us judge the difference of ships: the Spaniards are bigger in burthen, and by consequence have the advantage to board; more spacious within board, and the efore contain more men; more decks, and therefore carry more ordnance: then confider that the greatness of vessels, the number of men and ordnance, makes the strength of ships. I refer it to consideration, and will conclude,

That if we do not relieve Cadiz from time to time with a stronger sleet than Spain can make, we shall undergo great hazards, dangers, and disgraces; which ought to have been well consider'd and argu'd before undertaking the last enterprise upon it. And this shall suffice for our attempt upon Andalusia, or the city of Cadiz; and so I will proceed to the answer of the pamphlet.

Book II.

elieve Cadiz from tronger fleet than all undergo great difgraces; which confider'd and arthe last enterprise fuffice for our atthe city of Cadiz; the answer of the The Voyage ended, there was published a Book of the Proceedings of that Expedition; which Book was not long after anfwer'd, as appears by what follows:

HE 8th of October, 1625, they departed from Plimouth, and the 9th fell in with my lord of Effex, the

vice-admiral, who had put into Falmouth.

Answer. That month and day had been fitter (if the action had been carried with reason and discretion) to have sought England after a voyage, winter approaching, than to have put themselves and ships to the fortune of a merciless sea, that yields nothing but boifterous and cruel ftorms, uncomfortable and long nights, toil and travel, to the endless labour of the poor mariners; and what was no less than the rest, I fear, an unexperienced general, by his phrase in saying, He sell in with my lord of Essex the 9th day; when the proper word of illing in was with the land, and not with ships: he should rather have faid, We met my lord, or, We and my lord met together: and the reason is, the land is a stedfast thing, and a ship is ever moving, not certain to be fallen in withal, but accidentally to be met with.

Author. The 11th he called a council, and fettled the instructions for a fea-fight, as appear'd in the 7th and 10th articles, viz. If the enemy's approach be in fuch fort, as the admiral of the Dutch and his fquadron, or my vice-admiral of our fleet and his fquadron, may have opportunity to begin the fight, it shall be lawful for them fo to do till I come, using the form,

method, and care, as aforefaid.

Answer. This instruction in my opinion was unadvis'd, and should have been conditionally, (as thus;) If the enemy had offered to fly, then not to lose any opportunity, but to affail him; but if they meant to abide it, prefuming upon their force, it was great folly to hazard part of the fleet to all the enemy's, but rather to have flaid for the admiral and the reft of the ships, to observe the working of the enemy, and then to have directed every fquadron accordingly how to have ordered themselves; for it were a madness in a single combat of fix to fix, or more, for two of them to charge their opposites before the approach of the rest.

Author. If any ships of the enemy do break out and fly, the admiral of any fquadron that shall happen to be next, and in the most convenient place for that purpose, shall fend out a competent number of the fittest ships of his squadron, to chase, asfault, and take fuch thip or thips to break-

Vol. III.

ing out; but no ship shall undertake such a chase without the command of the admiral, or at least an admiral of the squadron.

Answer The general's want of experience shall appear in this article; for if no ship shall undertake the chase without order of the admiral, or admiral of the fquadron, what if a ship that is chas'd be near fome of your fleet, and a good diftance from your felf, shall your ship or ships lose the opportunity of chasing, and repair to you for orders? by that time the ship chas'd will be out of fight, or fo far off, that it will be a folly to follow her.

For your instruction another time, these

are the directions you ought to have given in fuch a case; If there shall happen a chase, the next ship to her to follow her; and if there be more than one chas'd, the rest of our ships next to her to fingle themselves as they shall think themselves able to overcome them; and if you be brought to leeward by that chase, then to ply into your height again. This article contains as much as the admiral or vice-admiral of a fquadron can give, after the loss of so much time as by a ship's coming to him for his directions: and time in such case is the principal thing.

In your article there was no provision how far fuch a ship should be chased, when to leave the chase, or whither to repair after the chase; but confusedly, and to the loss

of the advantage a forefaid.

Author. The 12th day the wind northnorth-west, the seas grown so high, that the long-boats were lost, and many other

damages fustained.

Answer. At that time of the year you are fure to find that weather, and to look for fuch difasters; and therefore it is a folly to undertake a fea journey towards winter, as I have faid. If in that storm the wind had been foutherly, you would have returned into the harbours of England, where would have been found fuch defects in ships, that you had seen the end of your voyage; and amongst wife men it is a great question, whether your going or staying would have proved more honourable to the

Author. The 18th a council was cal-1.d, and Sir William St. Leger writ a letter, that he suspected the plague in his ship; but it proved not so: and here the general gave special order for the ships to come near together, and hail their admiral every morning, reproving their former negligence, and gave them their instructions, which should have been done before, but was hindred by storm.

Answer. Sir William St. Legerdid ill to fuspect the plague in his ship upon such uncertainties, which was enough to put the

rest of the fleet in fear, and a means to make them quit one another, and feparate

If the fhips were negligent in keeping near together, they deserved blame, but no punishment, as not having received their instructions: the blame was worthy to light upon the general, when in winter, and the weather to uncertain, he delay'd giving his orders, which should have been done in harbour, and fealed up, until occasion of foul weather at fea, or lofs of one an-

I will let pass many trivial things not worth answering or excepting against; as namely, the defects of ships, the losing company and meeting again; the winds, victuals, fickness, and other things of that nature.

The 20th he called a council, to debate how he should put into St. Lucar, according to an intention of the council held at Plimouth; when his majesty was prefent; where the matter being very doubtful, it was referred to be decided upon the fpot when we should be arrived; but upon better enquiry of the inconveniencies and disadvantage for going into the harbour, and landing our army, it was quite laid afide.

Then follows a long circumstance, of the impossibility of going into St. Lucar.

Answer. I dare undertake, never enter-prize at sea was set out with such doubtful directions, as to take their refolutions when they should come to the place. The port of St. Lucar, and the danger of the bar, being as well known to the masters before their going from home, as after they came thither: and if they did not inform his majesty with it at the council held at Plimouth, they descrived to be hanged there; for no man that had heard of the bar of St. Lucar, but knew the danger expressed in the pamphlet.

Author. The general demanded both of the captains and mafters, why they did not fpeak of these difficulties before his majefty: they answered, It was now the depth of

winter, and stormy.

Answer. If the masters knew no more than the captains, I think they knew little; for I am informed few of the captains had any experience and skill in sea affairs: and the malters answer was as ridiculous to the general's demand, why they acquainted not his majesty with the difficulty at Plimouth; for, fay they, It was the depth of winter, and formy

What was this in answer to the impossibility of going to St. Lucar? could the fummer remove the bar, and give them a fafe entrance? could the fummer feafon give them more knowledge of pilotship than they had before their coming thither?

or did they not know that winter was approaching, when they were called to the council at Plimouth, for it could not be above twenty days more winter, than it was when they were at Plimouth? I could fay no more to them, fays the author, being I was no great seaman. And in the 16th Leaf, he fays, he made no account but the ships were ours; for speaking of seamen, (he fays,) they knew more than he did how to fet upon them.

Would any man thus confess his ignorance in a command he undertook? or would any man ever take upon him the charge of a general by fea, 'at had never past further than betwixt ungland and Holland? It were good to know, whether he fought the imployment, or, whether it was put upon him against his will: if he was led unto it by ambition, let him anfwer his error, and that with feverity: if it was procured by others, they ought to have the fame chaftisement he deserved. Betwixt the one and the other, it is pity the kingdom should bear the dishonour, which in truth cannot be justly taxed; for England affords as good ships as ever it has done; men of as great experience and va-lour, if they had been imployed; and no reason therefore, but that every horse should bear his own burthen; and that the defect be not laid upon ships and men, but upon those that should be found culpable.

Author. In the same council it was determined, that the whole fleet should bear into the bay of Cadiz, and anchor before port St. Mary: it was appointed how every ship should anchor, (viz.) that the general and Dutch admiral should anchor together, and give directions to the vice-admi-

ral and rear-admiral.

Answer. It was a most ridiculous resolution, to anchor and land at port St. Mary; first, in respect of the danger of the road, if the wind came foutherly or westerly; fecondly, their galleys would have cut off our boats and men, if we had attempted to land; thirdly, fuch Spanish ships as were in the road of Cadiz, would have had leafure to have faved themselves, and convey away their wealth; fourthly, the town of Cadiz had space to prepare for its defence, and the country would quickly have given relief to it, as well as the place where they pretended to land.

My next observation is the place they chose to anchor in, that he might give directions; and yet before he excus'd himself as unexperienced, and by consequence unfit to direct. He that shall read this little pamphlet to Cadiz, shall find more directions, more councils, more letters writ, and more abfurdities committed, than in any

action a man shall read of.

be ready to fight.

Auftuer. This every ship would have done without directions: still directions to little purpose, and nothing came of it.

Author. I writ to my lord of Essex, to

Author. I writ to my lord of Effex, to make all the hafte he could; and that I would command his fquadron to follow him, (which I did;) but I must confess they went the most untowardly way I ever saw men; ior they did not host up their sails as they were commanded.

Answer. This was not a time to write,

and I marvel your leifure would admit of it; for what you were to act was now or never; and if you had not directed before you came to the port what ships should go in, and what ships should second one another, you were very unfit for the command you had; for this did the two lord generals, in their expeditions to Cadiz: they confulted and resolved what ships should attempt the enemy the next morning; and when it came to be executed, never greyhounds strove to overcome, or outstretch one another in a course, as those ships did to draw near to the Spaniards; and if you had had but one man that had known the affairs of that voyage, you needed not but to have walked in the path they had trodden out before you.

You urge, you could not learn by all the feamen in your ship, who were those that were so backward: And in the 13th Leaf you say, Because I would lose no time, I went from ship to ship, crying out, Advance for shame; but I found them not very hasty to do it.

Shall a general fay men were backward to fight, when he had authority to compel them? or that he was not obey'd, having martial law to execute upon them? No, no; but they knew who they had in hand, when they rraifed to tell what ships were backward we fight; for a general that had known the fea, would have known every ship of his sleet, being so nigh them.

But indeed, if all your directions had been converted into this one direction following, you had faved your felf from writing, fending, or your labour in going to give the command, (that is to fay,) if before your coming to Gadiz you had appointed, if you would not have been the leader your felf, as my lord of Effex was in his voyage to Cadiz, I fay, if you had commanded an admiral, and all the ships of his fquadron to follow him, and they had not obey'd you, then you knew who was backward, and whom to have punished; but your direction and execution was all of a sudden, without form or deliberation;

then what could you expect but confu-

Author. When all the fleet came to an anchor, and I faw the Spanish ships fly before me, I immediately called a general council to lose no time; and the opinion of seamen was, to clear the two forts for securing the fleet. Then I demanded, what kind of forts they were. They told rate, that twenty of the colliers, and some of the Dutch, would beat them to dust by the morning. Whereupon I commanded, the ships warned should go up to the fort, and that they should receive directions from my lord of Essex, who had orders from me.

Answer. If my lord of Essex had orders from you, what need was there to call a council, and lose time? or why should you give order to my lord of Essex beforehand, and not to the ships that should second him till the very instant: still writing, there is a still writing, but no acting.

directing, but no acting.

But for the advice in clearing the forts: furely the advifors were not well advifed therein; and in this case you should have enquired what my lord of Essex did upon the same occasion, when he attempted the shipping: and it would have appeared to you, that he followed the Spanish galleons, sighting with them six or seven hours, and overcame them before he landed or took the fort. He made Puntal no impediment to his design; he would not lose his opportunity for sear of a fort, nor refer his enterprize to a farther council, but acted what was resolved on before.

Author. I commanded that upon fight of my billet, they should be ready to affault the fort of Puntal in the morning, and to pursue the ships: I advis'd with the most experienced captains and masters to conduct the ships to Port Royal, which was difficult, for want of water; and at three of the clock in the morning, I arose, and received the communion aboard the Ark Royal: after which I commanded the master to carry up the ship to Puntal; but he excused it, for want of water.

Answer. Here is still direction, writing, and communion, when there should be sighting; and because he speaks of the communion, it is not improper to set down what queen Elizabeth said upon the like success in 1590. Sir John Hawkins being sent general of a season of the sent seven months without taking one Spanish ship. At his return he writ a long apology to the queen; and for his conclusion, told her, That Paul planteth, Apollo watereth, and God giveth the increase. God's death, (said the queen, upon reading his letter,) this fool went out a foldier, and is some bome a droine.

But

Author.

But now in answer to the excuse, in not carrying up the ship for want of water; it served not my lord of Essex for a reason in his voyage in 1596; for he sound water, though his master and others made the like allegation: he would not trust mariners in that case, but appointed a sufficient captain at the helm, and the captain of his ship to stand aloft, as he saw other ships go afore him, having his lead on both sides continually heaving.

But had the general been experienced, he might have answered the excuse of want of water, as Sir Walter Raleigh was anfwered in the fame place, and upon the fame occasion. Sir Walter Raleigh being ordered over-night to lead the van, and Sir Francis Vere to fecond him, Sir Walter came to an anchor at such a distance from the galleons, that he could not reach them with his ordnance: he returned aboard my ford of Effex, excusing it for want of water; a gentleman well known flanding by, faid, It was strange that the Spaniards, who drew much more water, and had no more advantage of the tide than he, could pass where his ships could not follow. I protest Sir Walter was much abashed at this speech, and thereupon went aboard his ship, causing his mafter to weigh again and go nigher, where he perform'd the part of a noble and valiant gentleman.

This answer from the general had stopp'd the mouths of the masters exceptions; and they would have found this channel as deep for their ships, as the Spaniards did, going up before them, and the same channel my lord of Essex did when he was there.

I will leave taking *Puntal* by the land forces, with which he fills two or three leaves, directing and ordering things, my intention being only to profecute the enterprizes by fea.

Author. The 24th I went by fix a clock in the morning to my lord of Denbigh, and fpake thus to him: You are no old feaman, and therefore I would defire you make all the bafte, and get all the feamen together to council; and I defire you to think upon the best way bow to burn and destroy the enemies ships. He went upon it without delay, which he did very earnestly and punctually.

Answer. Though the general wanted experience himself, yet he made choice of one of sufficiency, who performed it carefully and punctually; (but what did he perform?) for hitherto nothing was performed, and yet there was commendations of a lord for his punctual performance, that did nothing punctually at Puntal, or the ships in Cadiz.

If any men deferve honour for this voyage, it is those that disfuaded it at

that time of the year; for indeed they had faved a great deal of dibonour this kingdom now undergoes; they had inriched this kingdom with much money, thus unadvifedly spent; they had preserved many a brave man's life, that might have lived to have done their country service; and lastly, the Spaniards had not been heartned and imboldened as now they are.

But for all the general, council, and directions, or the careful and punctual carriage of the other lord, the ships escaped without firing or finking. The general's design, it seems, was not to take Cadiz, as he contest in the 16th Leaf; for the king before he went was acquainted, that it was extraordinarily fortify'd; and so he found when he came to view it.

I hold up my hands and eyes to heaven, when I confider the poor defign and weak carriage of this laft voyage to Cadiz; for now it appears it was intended for St. Lucar, though the impossibility of it was known before their going from home. He likewife confessed the strength of Cadiz to be impregnable; and yet notwithstanding they were both enterprized. They could not have a design upon ships, because they knew not of any being there, or those that were, to be so few, as they were not worthy of such an expedition: Then what man can excuse it? or the absurd carriage of it?

Most men, I confess, had an ill opinion of the voyage before their going, a worse after their return, but worst of all upon publishing the pamphlet; for it has ftopp'd the mouths of all those that could force arguments to excuse it: some out of charity and good nature forbore to think the worfe of it; some out of judgment did no more condemn it than an action that failed by fortune in the execution; fome that would feem wifer than others, faid, there was a greater mystery in it than the ordinary people conceived; fome faid, they had intelligence with Cadiz, or other places of importance, but took no fuccefs. But this book has discovered all; for they find the project was as ridiculous as the execution of it.

Author. The 25th there was a motion to march four or five miles to recover fome boats, to ferve inflead of their long-boats they had loft at fea; and fo they marched forward and back again, brought away their boats, fpoiled the fisherman's nets, masts, and other provisions they there found.

Answer. Here was marching forward and backward, which we may properly call a fet dance. These boats, I consess, faved your honour; for something you did upon them,

though you did nothing upon the ships; and for your attempt upon the fishermens nets, you made the enemy have a feeling of it, they being tied to observe fasting days from fish, which now they must want.

Author. The 26th the colonels met at

Puntal: and here it was refolved, that nothing could be done upon the ships, because of the wind and tide, and for that the Spamiards had funk themselves, and the channel was fo narrow, which was the rea-fon my lord of Effex in his journey, 1596, could fend no ships to do the enemy

I confess, that if my lord of Answer. Effex had followed your example, to be talking three or four days of what he per-formed almost in as many hours, he had done the enemy no more harm than you; but what he did, and by the good advice he did it, I have shewed before; and if you call it no harm to the enemy, to have the best ships Spain ever enjoyed burnt and taken, to the number of nine and fifty fail, with a mass of wealth in them; and this to be done in despite of your fort, which takes up three leaves of paper in your book of difficulties; I fay, if this be no harm, and your taking of fishermens boats and nets be a spoil and harm, I confess yours was the honourable action, and that of my lord of Effex of small consequence in respect of

Author. The council of war did confider, that going to the bridge of Swazo was no great defign, but to meet with the enemy, and fpoil the country; and that when my lord of Effex took Cadiz, Sir Coniers Clifford was taxed by Sir Francis Vere for miltaking his directions, which were to go no farther than within shot of the town, where he might be feconded and relieved; but Clifford went to the bridge; fo in regard there was no fuch necessity, he return-

ed back again.

Answer. Here was a strange consultation, a strange consideration, and as strange a council of war, to conclude the taking of the bridge to be nothing more than to meet

the enemy, and spoil the country.

I must tell you, That in that journey of my lord of Effex, which you fay did the Spaniards no harm, there was a confultation, and a refolution before their landing, to possess the bridge, as a prime service to be executed: whereupon, at my lord's landing, he divided his army; three regiments he sent to the bridge, the rest he led him-felf to the town. Both these directions had good fuccess; the bridge was possessed, and the town surprised; and yourself abused by him that told you Sir Coniers Clifford had no order to go the bridge, or that Sir Francis Vere was angry with him for fo doing.

Vol. III.

I confess it was not Sir Francis Vere alone, but my lord of Effex, and all in general were angry for quitting the bridge, as they had reason; for the main business of the fervice depended on it: but it feems they wanted reason in comparison of you and your council of war; for by that bridge all fuccours was to pass from the main land to the relief of Cadiz; by that bridge we were to attempt other parts of the country, as we intended; by that bridge the galleys were to pass and escape us, which otherwise they could not have done: and if this be no great defign, let you and your council confider it.

But that you may the better understand it, I will lay before you a comparison that may be made to concur with it. Suppose an enemy fhould land in Surrey, with a defign to take Wimbleton, and that there were a bridge to pass the Thames at his barony of Putney: do not you think that a council of war would advise to take that bridge, to hinder the fuccours that might be fent from Middlesex, or the counties thereunto adjacent, to the aid of Wimbleton? this advice would not have been followed, the council of war were fit for you, and not for my lord of Effex.

Author. And I have been fo long in the wars, (leaf 19.) that I dare undertake they who think Cadiz was to be taken, cannot tell how to come at it with cannon, if there

were none but women in it.

When you speak truth, I will Answer. concur with you; for I believe there was little reason to attempt it: but, indeed, your want of experience in fea-affairs, your frequent councils, which loft time and opportunity; your multitude of directions to no purpose, and the carefulness of your captains to disobey your command, was your blemish and shame; but more especially your want of expert men to advise what had been practifed in fleets; for every man that can manage a fmall bark, is not capable to direct a fleet: you should not have relied upon failors put into the habit of gentlemen, and made knights before they knew what belonged to gentility, nor were ever expert but in poor petty barks. This was the bane of you and your reputation.

Author. The one and twentieth I imbarked again, thinking to have landed at port St. Mary, if the wind should not serve the fleet to go out of the bay of Cadiz; but as ill luck would have it, the wind came good even as we were in council; and if we had not taken that wind in the inftant, perhaps we had not come out in a long time.

Answer. That which was good for your coming out, had not been ill for your landing at port St. Mary, though I confess it had been a rash attempt, as I said before.

Qqq

Author. Monday the last, the wind came westerly, and we could not come out of the bay.

bay.

Anfiver. And yet you faid before the contrary: no wind, no counfel, no directions, would answer your expectation after your loss through your delays, negligence, and carelededs of the opportunity upon the ships.

Author. The third day, by general confent, we were to flay, and expect the fleet from the *Indies*, till the 20th of *Novem*ber; but it pleafed God fuch fickness came, that we had not men enough to handle our

fails.

Answer. You must know it was strange to hear of a steet from the Indies at that time of the year: but suppose it had been fo, and you had taken them, what would you have done with them, not having failors enough to bring home your own ships, as yourself confess'd?

Author. The fixth day (and twenty fourth leaf) we took a man of war of Algiers, who had taken two prizes; one of them John Ifack, a Scotchman, that dwelt at Dover, laden with wood and iron from Bifcay for St. Lucar, by the king of Spain's fubjects; which shews the great want that king has of timber and ships to carry it.

Answer. This was as wife an observation, as if a Dunkirker had taken a Frenchman freighted with coals by an Englishman from Newcassle to London, and should say, the king has great want of coals and shipping to carry them: I should have made enother construction, That it shewed the Spanish ships were employed upon better voyages, than upon such base commodi-

Author. On the tenth Sir Michael Geere, who had been five days wilfully wanting, came again to the fleet: his mafter told him of it, and he beat him with a cudgel: his mafter had bore better command than ever he did; and in the twenty fifth leaf he fays, he fent aboard the Dreadnought for ten tuns of beer that was left in her for the ufe of the Anne Royal; but the company mutinied, and would not deliver it; neither would the captain nor mafter confefs who were the mutineers.

Answer. Would ever general set down the contempt and abuses, and not shew the punishment inflicted upon them? It is no marvel you were no better obeyed in weightier things, that could digest these petty disgraces; surely Geere might have come home a knight, though the strangest that ever was made; but he should not have come home a captain, nor made capable ever to bear office in any imployment.

Honour was wont to be conferred on men of defert, for fervices done by them before they received it; but this knight and others were made knights so unworthily, that it bred not only an admiration, but a contempt to that order.

As backward as you were in the affairs of Gadiz, you were as much too forward and liberal in giving and taking honour: to delay it before your going, had been to fome purpose, for a noble mind would not have received it, till the world had taken

notice he had deferved it.

As there was great difference in the management of fea affairs, betwitt the quern's time and thefe, fo there was in the beflowing of honours for though my lord admiral was the fon of a baron, and the grandfon of a duke, though he had the office of lord high-admiral of England, and many other dignities and preferments, though he had gained fo great a victory in 1588, by repulling an enemy that might have endanger'd the kingdom, though he fpoiled, beat, funk fhips, and deftroyed cities of the enemies in their own countries, yet had he obtained and performed all these exploits, before he could be admitted to the degree of an earl.

Author. In the twenty feventh leaf. The defects of the ships were such, that he called a council for going into the islands of Bayona; and here he sets down the losing of company, breaking masts, splitting fails,

and shifting of winds, &c.

Answer. These things were impertinent for a general to relate: such observations are only proper to mariners; and he might as well have set down the seething of the kettle, the companies dining, or the setting

of the watch.

Author. Now was I arrived at Kinfale in Ireland. On the nineteenth of January came in a Dutehman from Lishon, who reported he saw letters from Cadiz, that the plate fleet came home within three days after my coming away, and that an hundred carvels were sent to stop them, but none of them could meet the said sleet, for they came upon the coast of Barbary; insomuch, that if any of these accidents following had happened, we had been masters of the plate sleet.

The first was, if the council had confented with me to keep Punial sourteen days. The second, if the wind had not changed as it did. The third, if the plate sleet had but kept the same course they have for this forty years; for they had no manner of news of us: But man proposes, and God disposes. And moreover, the Dutchman said, that on the last of July there were not four barrels of powder in Lisbon.

Answer. Could the plate fleet arrive in Cadiz, and not be vulgarly spoke of in Lisbon, but by some few letters, the arrival of

late fleet arrive in ly fpoke of in Lisers, the arrival of that that fleet being of fuch confequence, that not only Lisbon, but all Spain would ring of it? And unlefs you had better affurance of their arrival than by this poor Dutchman, that was in your cultody prifoner, you were ill-advifed to print it; because every merchant upon the Enchange was able to contradict you; wherefore you should have first considered it, as thus:

Was it likely that a hundred carvels fhould be fent to meet the fleet? a number of carvels never employed, nor to be found in all Spain. Could they be fo improvident as to hazard fo many vessels, the taking of one of which would discover the heighth the fleet came home in? or could the fleet be met and stopped at sea, that was both foul, weak, heavily laden, wanted victuals, and must be compelled out of necesfity to feek a harbour? or could a hundred carvels fpread themselves at sea, and your fleet not fee any part of them? or could the fleet come home in four days after your being at Cadiz? and computing the time, you could not be above twenty leagues west from thence, and to have no news of them? or could the Spaniards be so mad at that time of the year, to venture to keep the coaft of Barbary, being subject to northerly winds, and to fall in upon Cadiz road, just at your quitting it? To wife men these things seem improbable.

And moreover, for the fatisfaction of the reader, you should have set down your reafons, why you advised the keeping of Puntal fourteen days: all the reatons you had would not have given fatisfaction to a reafonable man; for it is to be imagined, you must have one of these reasons in it; as namely, That you had correspondence with Cadiz for the surrendering it; or that you expected a revolt in the country; or that you knew of the Indies steets repair thither in that time. One of these I conceive the the search of surrendering.

to be the end of your perfuafions. Then on the other fide, I think with myfelf the mischief that might have ensued upon it in the space of them fourteen days; your victuals would have been much wafted, for it feems then you began to want; your people being fick, as they were, it is probable they would rather grow worse than recover health. In that fourteen days the Spaniards would have had leifure to prepare fresh ships and men to encounter your feeble and weak army. Your supposed hundred carvels might have met in those fourteen days with the imagined plate fleet, and have conducted them to Lisbon, whilst you were propping up of Puntal. You had proof that the lingering of fourteen days might have brought you and the fleet to, by the mifery you found in your return,

It was no lefs ridiculous, that you should believe the *Dutchman's* report, that at the last of *July* there should be but four barrels of powder in *Lisbon's* for whosever knows *Lisbon* and the castle, knows the great quantity of powder there is still kept in it.

Author. I put to fea three times againft the fearmer's opinion: they defired to fee the winds fettled before we should fet out; but I did not hearken to them.

Answer. It will appear by this rashness of yours, how unsit you are to take charge of such a sleet. In the fixteenth leaf you consels your ignorance in sea affairs, and refer yourself to men of experience, in an attempt of much lis consequence than this, that concerns the fasty of his majesty's ships, to venture them to no end but a desire you had to be at home. This was a rash hazard of your own, against the approbation of mariners, who could only judge what was convenient in such a case.

I confefs, nothing in your difcourse doth make it appear to be writ by a soldier at land or sea, but a plain and abfurd stile, the unproper terms used by sea and in ships, and the often repetition of some words, which is not proper in oratory. From soldiers, neither eloquent words nor forms is required; their actions must give matter for scholars to amplify upon; and though this may excute the writing of the pamphlet, yet it can no more clear you of blame in your carriage of the action, than the projector of it; it being hard to judge whether of you two deserved the most shame, the one in advising, or the other in executing.

But if this journey had been undertaken by men of experience, undertanding, and reason, it had more annoyed the state of spain, than any enterprise of ours heretofore, either in the queen's, or king Charles's reign, as it shall appear by what follows.

How to have ruined Spain by the Fleet of

PLEEN, paffion, and envy to fome they love not, and the want of knowledge in themselves, are the bane and deftroyers of all warlike actions, either by sea or land, which could not be better verified than in this last unfortunate sleet to Cadiz I have spoken of; for I must say, that in many ages (or rather in no age) we shall have the like opportunity again to annoy the state of Spain, as was then offered us, if the enterprise had been well projected and directed, as it was rashly begun and prosecuted, as may appear by what follows.

If our land forces had been discharged at the beginning of summer, when they were first raised, and the seet employed upon a fea action only; for take it for a maxim, That sea and land enterprizes together, are the bane of one another, as experience has made it appear.

At this time that the expedition was undertaken, we well knew the Spanish fleet had disposses'd the Hollanders of the town of Baye in Brazil, a little before taken by them; we likewise knew they were to return to Spain with a million of pounds in wealth; which after proved true.

And yet this was not all, and the worst that Spain was to receive from us: this happen'd when they had no fuspicion of us as enemies, nor any flew of holtility made, to give them warning or diftruft.

If therefore we had employ'd our fleet then in readiness to the Tercera islands,

where we affuredly knew the Spaniards would touch in their return, as indeed they did, all fcatter'd and ill provided, we had without all doubt or question intercepted them, and possess d so much wealth of theirs, as would have maintain'd a royal war against them, till his majesty had been reveng'd of the affronts offered him, as was conceived at his being in Spain.

Besides this wealth, we had cut off his fleet, which confifted of fifty or fixty of his best galleons, which in an age could not be restored, whereby he would have been unable to undertake any action against us. This was discover'd to some, before the fleet's going out; but either neglected or

not believed.

The Errors committed in the Expedition to the Isle of Rec.

IN my examination of the voyages in the reign of guest Eli the reign of queen Elizabeth, I make often reflection, without fear or flatrery, upon the errors then committed, as well by us, as by the Spaniards our enemies; which kind of proceeding, I follow in these two last expeditions, the one to Cadiz in 1625. which I have treated of; the other to St. Martins in 1627, which I am to treat of, as well in number and goodness of ships, as in

proportion and quantity of men.

Though I was no actor myfelf in the two last expeditions, there being no relation that can give a more true account of them than those publish'd by the authority of state, I have, upon view of these pamphlets, collected fuch errors as the actions themselves have given just cause to except against.

Let it not be imputed to me that I do it out of a carping or detracting humour, or a malignant disposition, or an evil or contesting nature, or out of a vain or phantastical curiofity, or pride, or arrogance, to make fmall errors feem greater than they are; for I have no other end than what I have often expressed, viz. by discovering the faults and overfights past, to make them ferve as a warning for time to come.

I would not be so bold and presumptuous as to examine the grounds of this last design upon the island of St. Martin's, or the carriage of it upon their arriving and landing; for I never doubted, but that a matter of fuch great confequence, as the breach of peace between princes, and wherein his majesty's honour was to be engaged, and the reputation of the chief commander confidered, was not only discussed and argued by the grave and wife fenators of the state, but advice taken of the most experienced captains both by land and fea this kingdoin could afford; which being fo, the fuccess must be referred to him who is the giver of all victories: for I am like the Carthaginian, who did not esteem the less of the general that loft a battle, but of fuch as fought against reason; for success is the measure of fools; whereas conduct proceeds from judgment.

This expedition to the island of St. Martin's was begun from Portsmouth on the 17th of June 1627. a place defign'd for the rendezvous; and to that end the ships of provisions that attended the refort of the army to Plimouth, were drawn together at Portsmouth, though with ill fuccefs: First, in respect one of those ships miscarried, and others were in danger to have done the like. Secondly, I must make the rendezvous at Portsmouth the ground of my argument, to except against the carriage of the action, and the chief cause of the mischief that en-

You must understand that Stokes Bay, where our ships rode, is forty leagues from Plimouth, by the way of St. Helen's Point; and the course of the channel is east northeast, and west south-west: Ushant, which is the head-land of France, and by which you must pass either from Plimouth or Portimouth, if you will fail to St. Martin's, is twenty fix leagues from Plimouth fouthwesterly; so that there was forty leagues run to fetch those ships which could have brought themselves; and a ship lost, which had not so happen'd but by their going to fetch them.

Now should they have held a grave confultation, if they had done well, how to proceed afterwards, which should have confifted of three propositions: The one, whether to keep the fea with that easterly wind, or no; which in little space would bring them to leeward of all. The fecond, whether to land in Co. A Road, or fome part of France. The taird and last, was, whether to return to Plimouth or Falmouth, there to attend a better opportunity of wind. But, to

that Stokes Bay, rry leagues from Vt. Helen's Point; neel is eaft north-Ufbant, which, and by which limouth or Portifict. Martin's, is Plimouth fouthforty leagues run ch could have I fhip loft, which their going to

neld a grave conne well, how to
fhould have con: The one, wheat eafterly wind,
would bring them
cond, whether to
if, was, whether
dimoutb, there to
of wind. But, to

be fhort, unadvifedly they took the worst of the three, and kept the sea till they were to leeward of all French shores; in which space they had pursuit of certain Dunkirkers, whom indifereetly they chased a whole day, when in two hours they might have discerned whether they could fetch them up, or no.

If they had anchored in France, or any part of that coaft, notice would have been taken of it by the French; and it would have given a fudden alarm, and been a cause to arm all places they might suspect

we would attempt.

If they had repair'd to Plimouth or Falmouth, it would have put a doubtfulness in the French, whether our defign had been againft them, or no; and they would have made the less preparations to resist us. Spain would also have taken the alarm, being in as great a doubt and danger of us as France; but drawing the ships from Plimouth to Portsmouth, Spain could not conceive that it was intended against them; and France was in as great assurant that it was design'd upon them.

Thus you fee from Portsmouth they were to attend the uncertainty of two winds, and give warning to France to provide for themselves; whereas from either of the two ports of Plimouth or Falmouth, one wind would have carried them directly to St. Martin's, which might have been run in two or three days, without fear of scattering, or other disafter. These inconveniencies should not have been only foreseen, but prevented, if experience and discretion had guided the

action.

Now follows the mischief that ensued upon keeping the sea. The first is, That they were brought so far to leeward, that if they would, yet they could not recover either *Plimouth* or *Falmouth*. Secondly, they were subject to foul weather, which they afterwards found. Thirdly, their men not being accustom'd to the sea, and pestered in ships, brought a great inconveniency amongst them. But the greatest was the soul weather which parted them, and was the chief cause of the missortune that followed: for above fixty of the ships being scattered, came to the island of St. Marsin's the 10th of July, and the rest the day following.

The fixty ships first arriving put the French out of doubt, but that was the place we intended, and gave them opportunity to do as much as the time would permit.

And here you may observe the true overthrow of the expedition to the isle of Ree; whereas if our fleet had come together from Plimouth or Falmouth, and landed together, they had suddenly surpriz'd the island, and possessed all the victuals in it, which in that short time we gave them, they carried into the castle, being before but ill provided either of victuals, or any thing esse.

Thus have I run over fuch errors as I have briefly collected out of the ill-carry'd action to the illand of St. Martin's, withing that generals may not only fee, but forefee, that they may with judgment determine what they fhall put in execution, before they attempt it with force and courage; for great actions ought to be refolv'd on by leifue, and perform'd with fpeed: they should not fay and stay, but say and do: they must consider, that the first enterprize in war gets the best reputation; and a thing well begun, is half ended.

As I have fet down the Names of the Ships the Queen left at her Death in my first Book, now shall follow the Names of those that were built by King James and King Charles; and the present Rates for Seamens Wages, according to the Ranks of Ships and Officers, increased Anno Dom. 1626.

If I were worthy to advise his majesty, heshould follow the precedent of the earl of Lincoln, late lord high-admiral of England, who two years before he died, and in the year 1582, caused a general muster to be taken of all ships, their burthen and mariners, belonging to the ports of England, as here follows.

And withal, I wish there were a computation made from the year 1582, till the end of queen Elizabeth's reign in 1602, all which being compared with the increase of ships and mariners since that time, and their greatness in burthen, it will seem wonderful to all his majesty's subjects, who shall understand ir, that since the first year of

king James's reign, till this, which is the 13th of king Charles, the navy of England is fo much increased and augmented; and thereby they may conjecture what wealth hath been imported and transported since that time, to the infinite inriching of all people in general, which will make them repine the less at paying ship money; for they must truly consess, how much the kingdom is, since the year 1582. strengthened and fortisted by sea, and the commonwealth enriched by trade; for though the merchant only runs the hazard of ships and goods that go to sea, yet the whole kingdom receives benefit and profit by it, from the handicraftsman to the labourer.

A Muster of Ships and Mariners throughout England, taken two Years before the Death of the Earl of Lincoln, Lord Admiral.

Somersetshire.

THIRTY feven ships, whereof ten above eighty tons.
Mariners, masters, and fishermen at home,

Abroad, 40 In all 502

Chester.

Fourteen ships.
Mariners, masters, and seamen,

Lancaster.

Fifty three ships, whereof ten above eighty tons,
Masters and mariners,

They were, upon forty days warning, to furnish these ships for fifteen days, upon their own charge, after setting sail; and to do it every year, if they were demanded; the rest of the time the king to pay them.

The privilege of the cinque ports was first granted by St. Edward the Confessor, and William the Conqueror, and continued by the succeeding kings. VOL. III.

Sff

Of the Sovereignty of the Seas of England, and of the Right belonging to Admirals in the fame, as is to be feen in the Records in the Tower.

O you lords auditors, deputed by the kings of England and of France, to redrefs the wrongs done to the people of their kingdoms, and of their territories fubject to their dominions by fea and by land, in the time of peace, and in truce, the procurators of the prelates, nobles, and admirals of England, and of the commonalties of cities and towns, and of merchants, mariners, merchant strangers, and of all others of the faid kingdom of England, and the territories subject to the dominion of the faid king of England, and other places, as of the coast of Genoa, Catalonia, Spain, Almany, Zealand, Holland, Denmark, and Norway, and of divers other places of

the empire, doth fhew;

That whereas the kings of England, by reason of the said kingdom, from times whereof there is no memory to the contrary, that it had been in peaceable possession of the fovereign dominions of the fea of England, and of the ifles in the fame, in making and establishing laws and restraints of arms, and of ships otherwise furnished, as fhips of merchandize to be, and in taking furety, and affording fafe-guard in all cases, where need shall be, and in ordering all other things necessary for maintaining of peace, right, and equity, between all manner of people, as well of other dominions as of their own, passing through the faid feas, and the fovereign guard thereof; and in doing juffice to high and low, according to the faid laws, flatutes, ordinances, and reftraints, and in all other things may appertain to the exercise of sovereign dominion, in the places aforesaid. And A. de B. admiral of the said sea, deputed by the king of England, and all other admirals ordained by the faid king of England, had been in peaceable possession of the faid fovereign guard, with the cognizance of justice, and all other appurtenances, except in case of appeal, and of complaint made of them to their fovereigns the kings of England, in default of justice, and for evil judgment; and especially for making of ftay, doing of juffice, and taking furety of the peace of all ships aforefaid, otherwise furnished, and set forth otherwise than appertains to a merchant's ship; and in all other points, where a man may have reasonable cause to suspect them of robbery, or any other misdemeanor. And whereas the ships of the faid kingdom of England, in the absence of the faid admirals, have been in peaceable pof-

feffion of taking cognizance, and judging of all actions done in the faid fea, between all manner of people, according to the faid laws, flatutes, reftraints, and cuitoms: And whereas in the first article of alliance lately made between the said kings, in their treaties upon the last peace of *Paris*, are comprized the words following in a schedule annexed to these presents.

" First, It is treated and agreed, betwixt " us and the messengers and procurators " aforefaid, in the names of the faid kings, That the faid kings should from this time forward be, one to the other, good, true, and loyal friends, in aiding and affifting against all men, save the church of Rome, in fuch manner, That if any one or more, whatfoever they be, would difinherit, hinder, or moleft the faid kings, in the franchifes, liberties, privileges, rights, duties, or cultoms of them, and of their kingdoms, they shall " be good and loyal friends, in aiding against all men that may live or die, to defend, keep, or maintain the franchizes, liberties, privileges, rights, duties, and cultoms aforefaid, (except the king of England, monsieur John duke of Brabant, and his heirs descending of him, and of the daughter of the king of England, and except to our aforefaid lord the king of France, the excellent prince John earl of Hainault;) and that the one should not be of council, or aiding, where the other may lose life, member, estate, or temporal honour."

Monsieur Reynault Grimbault, who stiles himfelf admiral of the fea aforefaid, deputed by his lord the king of France in his war against the Flemmings, contrary to the faid alliance, and the intention of him that made it, wrongfully affumed the office of admiralty in the faid fea of England, by the commission of the said king of France, and used the same one year and more, taking the people and the merchants of the kingdom of England, and of other places, paffing through the faid fea, with their goods; and delivered the people fo taken to the pri-fons of his faid lord the king of France, and caused their goods and merchandize, by his judgment and award, to be brought to the receivers deputed by the faid king of France in the ports of his faid king-dom, as to him forfeited and accruing; and the taking and determining of the faid people with their faid goods and merchandize, as also his faid judgment and award, hath justify'd before you lords auditors in writing, by virtue and authority of his faid commission of the admiralty aforefaid, by him usurped, and during a re-ftraint so generally made by the king

Book II.

and judging fea, between the faid and customs: le of alliance ings, in their of *Paris*, are ing in a sche-

greed, betwixt nd procurators of the faid s should from e to the other, ends, in aiding men, fave the manner, That tfoever they be, or molest the , or customs of loms, they fhall ds, in aiding ay live or die, to in the franchizes, this, duties, and ept the king of n duke of Bracending of him, the king of Engur aforefaid lord ne excellent prince and that the one incil, or aiding, lose life, member, nour."

imbault, who stiles a aforefaid, depug of France in his contrary to the imed the office of of England, by the ng of France, and more, taking the s of the kingdom er places, paffing their goods; and taken to the priking of France, and merchandize, d, to be brought by the faid king of his faid kinged and accruing mining of the faid ods and merchangment and award, u lords auditors ind authority of e admiralty aforend during a rede by the king of England, by reason of his power, and according to the form of the third article of the alliance aforesaid, which contains the words underwritten, requiring that he might be acquitted and absolved of the same, to the great damage and prejudice of the said king of England, the prelates, nobles, and others above named.

Wherefore the faid procurators, in the names of the faid lords, do pray you lords auditors aforefaid, That you cause due and speedy delivery of their said people, of their goods and merchandize so taken and detained, to be made to the admiral of the faid king of England, and to whom the cognizance of the same of right appertains, as is before express 1; for that without the disturbance of you, or any other, he may take cognizance thereof, and do that which appertains to his office aforesaid.

And that the faid Monsieur Reynault Grimbault be condemned, and constrained to make due satisfaction to all the parties dannify'd, so far forth as he shall be able; and in his default, his said lord the king of France, by whom he was deputed to the faid office; and that after due satisfaction made to the parties damnify'd, the said Monsieur Grimbault be so duly punished, for the violation of the said alliance, that his punishment may be an example to others in time to come.

Thus much for England's authentick proofs of her fovereignty on the feas in thefe latter times.

A more ancient Proof of the Sovereignty of the Seas.

DUT England may plead a more ancient fovereignty o'er the feas; and not only the narrow feas that divide France and her, but also all other seas that encompass her, as well east and west, as north and south

Julius Agricola was the first that fail'd about England and Scotland, and subdued the islands of \$\cdot\)²ney, when England was called Britain.

King Edgar made his fummers progrefs, as appears upon record, by failing about the whole island of Albion, and was guarded with a navy of four thousand fail, which he divided into four squadrons, and appointed one thousand ships to every squadron.

King Artbur fubdued Ireland, Izeland, Norway, Golbland, and many other kingdoms; which he could not have done, if he had not been mafter of all the then known world by fea, and in shipping.

And if we speak of our English conquests since William of Normandy, we shall find

that Richard I. in his expedition to Jerufalem, in 1090, had with him two hundred and fifty four tall thins, and fixty galleys.

and fifty four tall ships, and fixty galleys. Prince Edward, son to Henry III. in his voyage to Asia in 1270. had a gallant navy of ships, which God blessed above other princes that joined with him in that expedition; for he lost never a ship by tempest, when the others had one hundred and twenty sail cast away.

Edward III. had a fleet at one time of one thouland one hundred veffels; and because it shall the better appear, I have set down the particular numbers of them and their men, with the names of their ports from whence they were furnished, immediately before these two discourses of the sovereignty of the narrow seas.

And as for the time of queen *Elizabeth*, I have fet down her offenfive and defenfive fleets in the faid first book: and comparing the strength at fea in the days of king *James* and king *Charles*, we may very well fay and conclude, that they are treble to those in the queen's time, both for the number, greatness, and goodness of ships.

number, greatnels, and goodness of ships.

The ruftical people that go about to impugne the prerogative due to England by sea, are the Hollanders, not only by calumnations and malicious practiles, but by scandalous pamphlets, which they divulge to prove the liberty of the sea.

But the nature of those base people ought to be confidered, who turn all things topfy-turvy, and make it their business to alter and change the course of the world, and the laws antiently fettled in it: They withfland the rightful power of kings, established by God himself, and cast it upon beer brewers and basket-makers, whom they obey as kings: they make the chiefest offenders judges, and the justest judges delinquents; and therefore it is no marvel, if they use his majesty malepertly at fea, that treat their natural prince rebelliously on land: but mark the end of fuch actions, wherein they offend God more than man; and commonly fuch injuries never escape without cruel revenge in the

Prefidents, known to the Author, of Princes, as well Turks as Christians, standing up for Prerogatives in their Seas and Ports.

THE prerogative of princes, within their own dominions, is without limit, and ever received and practifed by confent of all kings and monarchs; for which reason, princes are bound to maintain one anothers rights in that point.

And to put the case in the accident lately happened in the *Downs*, through the

infolency of the Hollanders furprizing certain finips of Dunkirk, I confess, though the injury and loss be great to the king of Spain's fubjects, whose finips were taken, yet the indignity is much more to his majesty than to the others, because they were forced away from under his protection and safeguard.

All ports and harbours of princes are called their chambers, and as dutifully to be observed and reverenced by strangers reforting to them, as the others are 3 and therefore the Hollanders might as well have seized on the person of a Dunkirker within his majesty's chamber and presence, as have offered this inexcusable observed a sin any of his majesty's ports.

And because example and the rules, in such cases, and uphous that good princes rights, and uphous that happens in the reign of queen Elizabeth, of famous memory, and Henry III, then king of France; I will prosecute the like cases in the time of king James; and lattly, of the king of Barbary, a Mabometan, who yet stands as much upon the prerogative of his ports, as though he had power to maintain them by shipping.

In the year 1588, when the Spanish fleet was put from its anchor by our firefilips in the road of Calais, the admiral of the four galleafts, Don Hugo de Moncado was arced ashore, and there wreck'd: whereur on my lord admiral commanded her to be attempted with fome ship-boats manned out of his fleet; and making an attempt upon her, the governor of Calais, monsieur Gurdon, thought it such an indignity to his master, that he shot at the English, and defended the galeafs, which otherwise had been in our power to have burnt.

That fame year, and in the fame action of 1588. one of the galleons of Spain put into Newbaven in Normandy; which queen Elizabeth understanding, sent some of her ships to surprize her in the harbour; and as her ships were bearing into the said port, they were forbidden to meddle with her, with shot from the castle; which we obey'd, though it is well known, that in those days the French king did much more savour the queen and her proceedings, than the king of Spain: but it is true, that princes are always more jealous of their honours, then private persons.

King James, after his accession to the crown, finding that many occasions of controversy were like to arise betwixt the Dunkirkers and Hollanders, who were then at war, and the king a friend to both, he directed by his proclamation, how far he would protect either of them that should

first arrive under his protection, commanding fuch thips as thould arrive first in any of his ports, that they should have liberty of two tides to depart before they should be purfued by the enemy: and because he would have the extents of his chamber declared, for all nations to take notice of its limits expressed therein, he caused it to be drawn by a line from headland to headland, by the advice of the Trinity House, who could best determine it. This act of his was duly observed during the time of the wars betwirt Spain and Holland; though at the beginning the Hollanders found themfelves much grieved at this decree of the king's, when they could not have their wills upon feveral ships of Dunkirk that arrived in the Downs 3 for Sir William Monson was very careful and watchful to observe and obey his majesty's commands, without regard or respect to either of

And whereas a fhip of Dunkirk arriving at Portsmouth, through some defect the captain fold her, reserving her tackling, ordnance, and rigging, which he shipped in an English barque for Dunkirk, but by contrary winds the barque put into the Dovons at a time when none of his majesty's ships were there riding, an Holland ship, having intelligence of it, against the honour of the king he seized upon her, and carry'd her into Holland: but this affront being made known to his majesty by monficur Habuck, then ambassador for the archduke, his majesty caused restitution of ship and goods to be made; and the states seemed offended with the captain that did it.

Laftly, For as much as concerns the king of Maracco, all fuch Englifmen as trade into Barbary can teftify, That if any fhip, abiding in any of his ports, be affailed by any ftrange nation, (as I will make comparison betwirt an Englifman and a Spaniard;) If an Englifman shall offer to furprize a Spaniard in any of his faid ports, the best revenge he can take, and as I have known him offer to do, in a case of my own, Anno 1587, he will instantly seize upon the persons and goods of all those English that are resident and trading in his country, and confiscate both lives and merchandize; so much regard he has to the reputation and state of monarchy.

And befides these precedents of prerogatives of princes aforesaid, the civil law which is universal, and decides all controverses at (viz.) If a ship taken by an enemy, be brought into the port of a friend to both, the prize not having been at home with him that took her before arrival in a

A Discourse directed to the Subjects, exhorting them to pay Ship-Money, and contribute with their Fortunes and Persons to punish the Insolencies of the

TUstom becomes law, which can plead no ancienter right, especially where that custom is maintained by force and power; for it is an old faying, That custom has taught nations, reason men, and nature beasts. Tyrants will not admit of custom, nor submit to the justice of their cause, but to their own proper power and will: but, God be thanked, this kingdom never admitted of tyrants titles, but of their true inheritors, descending from their ancestors; and if this descent were at any time impugned by usurpers, the violence lasted not long, but right took place, like the true religion, which pestiserous heresies could never darken or suppress.

And as antiquity, descent, and justice, have crowned the kings of this land with lawful authority, from our first William to this very day; so have the seas given as authentick privileges and prerogatives to the kings thereof, by confent of foreign nations, asthe former record doth declare; and ever fince we have held an undoubted fuccession, which makes our title the more ftrong and potent. For, first, we plead confent and allowance of other countries. Secondly, the long use and execution of it. Thirdly, a continual possession without contradiction or opposition. And, lastly, our force, that in all ages has been able to maintain it, in the spight of any that should

gainsay it. And as we have received this prerogative from our forefathers, from whom all other goodness descended, as both tradition and records do witness; who should doubt of the truth thereof? or who may not as well question the clemency of Julius Cafar? the magnificency of Alexander? or the goodness of Trajan? If actions and accidents of times past be not allowed, all things that are gone before are like a dream, which when we awake we remember not, nor know any thing of it. Cicero faith, That if a man knew no more than when he is born, he should be always a child; for history and monuments make he-roical deeds to live again, which otherwise would be buried in everlasting forgetful-

But can there be a more approved testimonial, than that we live and enjoy the an-

cient right left to the crown of this kingdom, as many ancient families have done their lands and possessions to their heirs and succesiors, who since, through the lewdness of the times, have prodigally confumed them, and made themselves the scorn of the world: therefore let the greater mifchiefs be shunned by example of the less, that we may avoid the difgrace, imputation, and shame, the Hollanders endeavour to put upon us, by questioning and denying the sovereignty of the sea, as is apparent by their late infolent carriage to his majesty's ships serving in the narrow seas; an injury without fatisfaction, unless we be publickly righted by open proclamation, not only in the excuse of the fact, but is right; which, if they deny to do, the must be made to know, That the way to wipe out old offences, is not to offer new

But if ambiguous words, or feigned promises, will give us satisfaction, no doubt they will think it a little lip-labour for their tongues to pronounce it; but in that point they are like spies, that will diffemble one thing and fay another; it will be all one to us to be deaf, as to hearken to what they fay, unless we compel them per force; for the nature of them is to be proud when fuccessful, and to become difloyal, and base withal; as on the contrary, when cast down they will yield and fink under calamity, which is the right property of cowards.

Here is an occasion offered for all true Englishmen, to have a feeling of a publick and national wrong; for a reproach to a discreet man, is more than the lance of an enemy. What affront can be greater, or what can make a man valianter, than a dishonour done to one's prince and country, especially by a people that was wont to know no more than how to catch, pickle, and feed upon fish, till now they are made drunk with our English beer? and so rude and unruly, that they strike at us their next and best neighbours and friends?

But fince our English beer has that operation on their brains, let us keep it from them; and let them find the effect of our laws against drunkards, which is the

Воок

nu.

whipping-poft, as not worthy of a better revenge; for a prince that punishes publick offences, and forgives private injuries to himfelf, has true honour.

Towards this defence of our reputation, it is requifite fome be aiding with money, and others with their perfons. They that have not the one, must fupply the detect with the other: let the rich affift in liberal payment; and leave the rest to the valour of foldiers, who will think of nothing but revenges suitable to the wrong: and nothing claims revenge more than a contempt of our prince.

This done, the next thing to be recommended is celerity, as the principal advantage in war; and therefore let us difdain, and not dally with the Hollanders; for it gives a coward courage: our houses are not made of glass, that we need fear their throwing stones; we shall find them like a lion, not so fierce as he is painted, nor themselves so terrible as they are imagined. Let us strike, and not threaten; for that is womanish; and it is an old saying, That a threaten's man eats breast.

Yet let not what we do, be done in fury; for fury admits no reason: let our actions be governed with discretion and temper; for rashness causes repentance; and

he that feeks not to avoid danger, and with valour to encounter it, tempts God more than he trufts in him. The greateft glory of a commander, is to obtain a victory with the leaft lofs; for fratagems of war are the products of wifdom; and fecrecy is requi-

fite to conceal all defigns from the enemy, who is better overcome by policy, than dint of valour.

The property of a foldier is to be couragious in fight, and free from fear; for the true valiant man loves life, and fears not death: he is spurred on by revenge when injuries require it, and knowing that death cannot be avoided, is the less afraid of it. We fee daily what little value life is of, fince every foldier will venture it for fix-pence. The badge a foldier should bear, ought to be writ in his forehead, For my God, my Prince, and Country, I adventure my Life. Then feeing death is of fo little value, and the honour of one's prince of fuch high efteem, let us not fhew ourselves to indifferent, as to regard whether we die or live: let us feek to imitate the Lacedemonians, among whom a matron being told they only had the rule of their husbands, anfwered, It was no wonder, because they only brought forth valiant children. I need fay no more to this point, fince you are Englishmen, and therefore brave: you fee your prince and country injur'd and affronted; which your ancestors were never wont to put up, without bitter revenge. The people that do this wrong, are fo inferior to you, that they are unworthy the title of gentlemen, or the name of a nation; their original being drawn out of the fea, as by the etymology of Zealand it appears, that is to fay, sea and land : their lives, their religion, their education, and breeding, differs as much from the fociety of civil people of other nations, as they differ from one another in diverfity of fects and schisms. They live more by false same and fortune, than by any truth spoken of them; their same is gain'd by the intestine war they maintain against their prince and country, and by the peo-ple of the feveral nations that ferve them, who spread abroad their own glory and praife, because they are the actors of their wars. Few judge rightly of the cause of their renown; for if we take it truly as it is in itself, it is the situation of their country, their rivers, the fea filled with the multitude of their ships, and the jealouty other nations have of the greatness of Spain, that are the true grounds on which they erect their monuments of fame.

As for their fortune, I do not marvel at it; for fortune often favours the unjult; and God, who is the difpofer of fortune, as all things elfe, can change their good into bad; and many times he luffereth a wicked man to climb, that he may give him the greater fall when he is at his highest: therefore let nothing difmay your heroical spirits, but go on with your undertakings.

Now will I apply my felf to men of means and estates, who must bear the burthen, as the foldiers do the brunt of the war. There are two mctives that lead you to revenge: the one is honour to our nation; the other a general and particular fecurity to yourselves and country. The affront done you is often repeated, with he qualities of the people that did it, which are fuch as can claim no honour to themfelves by the rules of christianity; which makes the affront greater than from a king or prince, who can diftinguish concerning giving or taking affronts. A difgrace to few, is born by a few; but when it is done to a country, all men of that country ought to have a feeling of it, by the law and rule of Solon; and whereas a private man's reputation is as dear to him as his eyes, fo ought (in a higher degree of comparison) the honour of our prince and country to be, as the noble acts and deeds of the Romans have taught by fundry examples.

Let not the meannefs, the baseness, and the situation of the Hollanders make us despise their force and abilities, to endanger us; for we want not precedents, that all the sourishing and civil commonwealths of the world, have been subdued and conquered by as mean and rude people as they are. > afeness, and make us deo enclanger that all the alths of the onquered by are. Bren-

mus was enticed to the conquest of Italy by the fweet and delicious wines that country afforded, which neither he nor his foldiers had ever taited. The air, the foil, and plenty, drew the Goths, the Hunns, and the Vandals, from out of the habitations of fnow and ice, to people the delightforne fouthern parts, where the fun spreads forth his beams and heat. All goodness that is comprehended in these southern countries abounds in England, and is much defired by the Hollanders, who well know the state of it and us.

You are not ignorant what will enfue by their labouring to exceed us in shipping; for if they prevail, you shall find our laws and government obnoxious to them: your fair buildings without, and ornaments within, will give better accommodation to Haunfe than a mean cabin in a fisherboat, which is their ordinary abode. There is nothing fo unjust or cruel, which they will not find a text of scripture to execute upon you, they are fo perfect in the interpretation of it. Our danger is the greater by our neighbour having, as it were, but a pond-betwixt us; but especially through the ignorance of our vulgar people, infatuated with their republican government, with their ridiculous and phantaftical religion, and with their imagined integrity and fincerity; but principally out of faction and discontent against the time we live in, not having fense to confider the benefit they receive, nor ever ceasing to flander the actions of others. But let them beware; for it is better for the mouse and frog to agree, than for the kite to be umpire. It will be better for you to contribute now whilst you have fomething, than to be bereaved of all you have. He that hath nothing adventures nothing, and is as ready to make havock of you as an

The question will be, whether fear or covetousness shall prevail? Fear makes you prevent the worst; but covetousness keeps you from preventing it, when money is required. Fear is not fo grievous to a miferable man that only hears of it, but does not see it, because he presumeth his wealth will defend him. But let him beware; for where law ferves not, weapons have power over him and his wealth; and then he will have cause to say, That poverty was bad, but riches much worse; when it brings him into that thraldom which he will be forced to confess was not caused by poverty, but by too much plenty, and want of difcre-

tion and grace to employ it.

You are like a covetous man, who, out of avarice, will not be at the charge of mending his chimney, to avoid the hazard of burning his house; or the stopping of

cafting up of a bank. But here you will meet with worfe than fire or water, that is, with a merciles unavoidable war, where all comfort fhall be taken away, but only that you shall see your enemies in as ill case as yourselves. Do like the matrons of Rome, in case of necessity, who wanting a cup of gold to present to Apollo, contributed towards it with their jewels and bracelets; for which they received the reward of virtue, honour, and fame. And to conclude, thefe changes will make you confess and find, That man is the pattern of frailty, the spoil of time, the game of fortune, the image of inconstancy, and the trial of envy: therefore trust not the world, for it pays not what it feems to promife.

The Author's Reasons why the King did not sooner resent the Wrongs offered him by the Dutch; and for his fetting out the Fleet in

HE king, out of his great providence and wildom, weighing the state of things, as they then flood abroad, thought not good by force and strength to right himself upon the Hollanders for their insolencies committed in the narrow feas, though all the world knew he had a power by the force of his navy to revenge himfelf on them; but his majesty graciously rather imputed the Hollanders carriage to the rude, ruftical, and unmannerly behaviour of fome of their captains, who were never taught morality, civility, humanity, or honefty: wherefore his majesty held it fitter in this case, that their masters the states fhould know their errors by a fharp reprehension, declared by his majesty's resident there abiding, than by any way at present to chastize them. He also saw that his neighbour princes were distracted, and strove underhand to join in league one with another, for the best advantage of their state, wherein he was to behold and expect the fuccess and event of things then in hand, and to be no more affured of one's friendfhip than of another's, till this year 1635. his majesty had trial of the Hollanders inconstancy and unthankful proceedings; for contrary to the rules of common honefly, they neglected his majefty's repeated offers of peace, to make an end of those long and intestine wars, both themselves and their redeceffors had long fuffer'd under: but, I fay, they little regarding or esteeming his favours in that kind, rather cast themselves upon France, that offered to support and maintain their ancient and unlawful divi-

After much working, and ambaffadors often paffing between them and France, at an inundation of water, with the cost of last they concluded on an offensive and de-

fensive league, by which France was to de-clare war against Spain. The consequences of fuch a league being dangerous, and an unlimited ambition never with fafety to be trusted, his majesty had just cause to be fuspicious of these innovations: he had reafon to weigh these things, and to consider why Helland and France should so strictly combine and league together, both of them being neighbours to him; and why it should be now hastened more than in former times, when France and England gave an indifferent and a sufficient relief to Holland by confent.

The king also seeing the ambitious enterprizes of France, affilted and animated by Holland, to disturb the christian and peaceable commonwealth of Europe, and unjustly to feize upon his neighbouring territories, without cause given, yea, not sparing by treachery and force to enjoy the countries of his weakest and nearest friend, the ancient state of Lorrain, which lay in his way, to hinder his unlawful defigns; thefe were fufficient motives and reasons, for the king's majesty to behold his own case with an eye of prevention. But especially find-

ing a combination betwixt France and Helland, to divide and devour the provinces of Flanders betwirt them, and to possess the maritime towns, as Dunkirk, and others, opposite to England, this made his majefty to think how to quench the fire that might flame into his own house: and having intelligence that they were both of them to join in one fleet, a thing not usually done by the French; and they making no publick declaration of the defign of their ships, as commonly princes use to do in such cases, his majesty could make no less construction, than that they intended to deprive him of his ancient and allow'd prerogative of the narrow feas, which behoved him as much to defend as his kingdom; for he that covets the one, will do as much by the other, if it were in his power to effect it: wherefore his majesty armed these fhips following to fea, to inquire reason at their hands; not intending to injure any nation, but to keep himself and subjects from being injur'd, and to curb the infolency and pride of any people that should go about to infringe his royal prerogative.

A Navy set out by his Majesty in the Year 1635.

The Mere-bonour, a ship royal, The James, The Swiftfure, The George, The St. Andrew. The Henrietta Maria, The Vanguard, The Rainbow, The Lyon, The Reformation, The Leopard, The Mary Rose, The Adventure, The Swallow, The Antelope, The Lyon's Second Whelp, The Lyon's Third Whelp, The Lyon's Eighth Whelp, The Lyon's Tenth Whelp, Merchant ships.

The Sampson, The Royal Exchange, The Freeman, The Pleiades, The William and Thomas, The Minikin Catch,

Commanders.

Robert earl of Lindsey, admiral. Sir William Monson, vice-admiral. Sir John Penington, rear-admiral. Captain James Mountague. Captain Walter Stenart. Captain Thomas Porter. Sir Francis Siddenbam. Captain Thomas Povey. Captain John Menns. The lord Pawlett. Captain Lewis Kirke. Captain George Cartwright. Captain Parramore. Captain Henry Stradling. Captain Richard Fogge. Captain Anthony Penruddock. Captain Peter Lindsey. Captain Thomas Price. Captain William Smith.

Commanders.

Captain Thomas Kirke. Captain John Hyde. Captain Richard Feilding. Captain David Purrey. Captain John Fletcher. John Barton master.

HIS glorious and victorious fleet departed from Tilbury Hope the 26th of May, with direction and resolution to

give no occasion of hostility, or to make any nation enemy to his majesty; only to defend his and his kingdoms honour,

ice and Hele provinces d to possels , and others, his majesty that might d having inof them to ufually done king no pubf their ships, do in fuch e no less conended to deallow'd prewhich beho-his kingdom; ll do as much s power to ef-y armed these quire reason at to injure any curb the infode that should

iral. dmiral. miral.

that had been lately and lavishly taxed by the vain boatting of a fleet of French and Hollanders, which joined off Portland the last of May: their bragging pretence was to question his majesty's prerogative on the narrow seas; and they stuck not to proclaim wherefore they came: but it is to be observed, that the greatest threateners are the leaft fighters; and fo fared it with them; for they no fooner heard of our readiness to find them, but they plucked in their horns, and quitted our coaft, never more repairing upon it; which gave great fatisfaction to the shires we passed, that before were struck with a terror. And because we would be the better informed where the fleet was, and what it did, we fent a bark upon the coast of Britany, whither we knew they were retired, and by it understood their defigns, the weak condition of their ships, heart, and abilities, any more to look upon the English coaft.

From the time of the return of this bark, till the first of October, we made good our leas and shores, gave laws to our neighbour nations, and restored the ancient sovereignty of the narrow seas to our gracious king, as was ever due to his majesty's proge-

Whilst this fleet was preparing, and money raifing to furnish it, there were many idle, factious, and fcandalous reports invented, and spread abroad by disaffected people. Their speeches tended to the dishonour of the king, and no lefs to the reproach of his ministers of state, saying, That the fitting out of fuch a fleet, was but a colour to draw money from the multitude, to be otherwise employed than was pretended: but when they faw the end in arming fuch a royal navy, and the necessity of it, to give terror to the world, after so many imputations cast upon our nation, by our former unfortunate actions at fea, it bred a great alteration in the disposition of people, as well at home as abroad.

It appeared at home by the readiness and willingness of those that before seemed to oppose it, and were most averse unto it; who now being fatisfied as to the mistrust they had, shewed themselves more ready and willing to contribute to it shan others, being fatisfied it so nearly concerned the honour of their king and country.

We may fay it had the like fuecefs abroad; where, at the beginning of our preparations, the gazetteers fluck not to divulge in all languages many falfe invented reports, which no doubt they received out of England, as namely, the difcontent of the fubjects, and their general denial to contribute towards it with moneys; befides many other invented calumniations, which now they find themselves abused and de-

ceived in; for whofoever will fpeak with travellers lately come from beyond fea, or confer with merchants and others that have weekly intelligence and correspondence by letters from all parts of Europe, will find what the world conceives of this fleet, and the fear all nations apprehend of it, not knowing which of them it may bring into danger. They now acknowledge what wife men in England knew before, That the king and his kingdom could not be more honoured, than by this noble expedition: the terror of it has made them that did not love us, at least to fear us. It has stopped the mouths of detractors, who now impute our former ill-governed actions, to the true and infallible causes, when witless partiality, want of experience, and the vain ambition of men in authority, more than reafon, had the disposing of them.

The Hollander's by this time I doubt not find, that this royal fleet of ours is able to make the feas quake under us where we pass, and themselves to tremble when they call to mind the intolerable affirmts they have put upon us, fearing they may require revenge; for there is no nation naturally so base, so soon elevated with good fortune, and dejected when they see themselves overmaster'd: they are rash and mad in their fury and drink; but want valour or courage to justify their actions, when they are tober, and call'd to an account for them.

But if the threatening shew will not abate their insufferable insolencies, then let us consider the state of their country, their harbour, their depths, or what advantage essew can take of them by stratagems, or otherwise, if they offend us. I will begin with the north part of Holland, and take Zealand and the portsof Flanders in my way, till I arrive at Calais in Picardy, in the dominions of France.

I will not speak of the port of *Embden*, because it cannot be accounted *Holland*; for properly it belongs to the earl of that name, called the count of *Embden*; but this town imitating the precedent of rebellious *Holland*, whose doctrine is to cast off the yoke of monarchy, and to live under the rule and government they have begun and taught, the subjects of the said earl have deprived him not only of his estate, but of his life also.

But God, who is the revenger of all evil actions, and commonly inflicts the fame punishment on the actors they offend in, has made an example of that city and country since they practifed their foul treachery against their prince, insomuch as they are now become most slavish to the Hollanders, who tyrannize over them with an irresistable garrison; and thus they are oppressed, without any hope of redemption.

Unu There

y, or to make ajesty; only to gdoms honour, that

Book II

tween this harbour of Embden in the east of Frizeland, and all others from Brest in Britany, till you come to it. Next to it, to the fouthward, is the Texel in Holland; it lies north-east and fouth-west, forty seven leagues from the Foreland in Kent, and from Yarmouth in Norfolk thirty two leagues; not to speak of the channel of the Fly, nor another channel betwixt the Spanish channel and the Land-Deep, which are for small fhipping. I will defcribe the two main channels, that is to fay, the Spanish Gut, and the Land-Deep aforefaid; they are both of one fort and goodness, though not for all winds; they flow at a fpring-tide twenty four foot, and fall fixteen at an ebb; they lead at a road under the island of Texel, which defends them from the fea: this island is poorly inhabited, and of finall flrength, as it is used; but he that has it, has the command of all the towns in that part of Holland, Gelderland, and Frizeland, who can neither pass in or out without the permission of the island; and this is my first

There is no comparison for goodness be-

of Holland. The next port of importance to Texel, is the Nass in West Holland, twenty four leagues South-west and by south from thence, and to the Foreland west and by fouth twenty four leagues. The Nass has three channels, two better, and the third like the Texel; all three meeting at the Bril, which commands all thips of Skedam, Roterdam, Delph-Haven, Dort, and all other creeks thereabouts. My fecond observation for our advantage, is to get possession of the Bril, as formerly we had. Two leagues from the Macie, fouth-west, lies the Goree, the same course and distance from the Foreland in England that the other is. This harbour exceeds all the rest before named, having eighteen foot at low water, with a large and broad channel; but not frequented by great Thips but out of necessity, when they have not water fufficient to go into the Maefe, till

observation of the advantage we can take

they have unladen part of their goods at The cause why this harbour is no more in request, is, by reason that Roterdam and

the other towns before named are far diftant from thence; and fuch merchandize as is brought in great ships to the Goree, must be transported in fmaller veffels through a creek called the Spy, which is a great delay, trouble, and expence to the merchant.

Six leagues west from thence lies the ifland of Waterland in Zealand, where Flujbing is feated. There are three channels likewife better than the rest, except the Gorec. The inconveniency of these channels, is, that they are long and narrow, and yet I have known at feveral times most part of the king's ships turn in at the Weelings. This is fo well known to the English, that there needs no other repetition of it.

The next good harbour to Flushing, laying afide Sluce, which is not worth naming, is Oftend, twelve leagues west-fouth-west from thence; and eight leagues farther is

Dunkirk.

The king of Spain makes great use of these two towns for annoying the Hollander. by fea; but a league and a half from Dunkirk, there is lately another harbour erected, called Mardike, that will entertain a whole fleet of the greatest ships that fails on the feas, and lies more to the hurt and damage of England, than all the reft of the harbours aforefaid; and therefore if ever wars should happen betwixt us and Spain, it would behave us to get possession of it, for we have had a late trial of the mifchief is hath done us by our late fhort war with Spain.

I confess it will be a hard thing for us to effect it, because of the extraordinary fortifications to feaward; and to think to keep in their ships by finking veffels in the mouth of the channel, is a folly; for the qui fands are fuch upon that coast, that as often as a fhip shall be funk, the will be fullinly fwallowed up in the fand; fo that this

stratagem will not serve.

An Introduction to the Earl of Northumberland's Voyage in the Tear 1636.

HIS majefty finding that the last year's fleet of 1635, produced both fame and fasety to himself and realm, as is apparent by the voyage of that year, he retolved to perfevere in his former refolutions, that it should not be looked upon by other nations, as a fudden unpremeditated determination, or a vain needless oftentation, to thew what he could do, if put to it by an enemy: therefore he prepared this year 1636, a fleet nothing inferior to the others, to make good what he had declared before, viz. To maintain the fovereignty of the

feas due to the crown of England in all ages, and left him by his progenitor; as also to defend the peaceable commerce and traffick that had evermore belonged and continued to his jurifdiction, but had lately been diffurbed by the Dutch, committing hostilities upon the Dunkirkers under his majesty's protection.

But as this fleet could not be furnished and prepared without great expense, it was thought convenient to carry it equally betwixt the king and his fubjects, in regard the expedition was for their good, facty,

and reputation, as well as for the honour of the king; for as the office of a king is to be careful of all his provinces, countries, and fubjects, to be partial to none, but a futher to all with indifferency; fo the part of fubjects is to pay a dutiful obedience when they shall be called upon, for the reafons aforefaid; whereupon his majetly directed his letters to every shire, to levy such a proportion of money as would suffice for the furnishing of the intended navy.

But as general demands and contributions of money are commonly distasteful to the multitude, who are divided in opinions, every one pretending a feening reason and excuse; so did it make as great a difference in mens minds and humours, some complaining of their want and poverty, some excepting against it as a needless and unnetessary charge, disapproving the design; and others excepting against the unexperienced commanders, who they faid were fit to make a good design miscarry.

But if the detractors will but weigh, and with indifferency conflider their supposed objections, it will appear rather a refractorry disposition, that defires to possess others with the like perverseness, than any just cause they have to complain against it.

If these demands seem too heavy a burden for all the subjects in general to undergo, let them look back, and with indifferency compare the times of queen Elizabeth with these, and they will find what daily demands of money were then made at their hands, and how willingly they were granted, for the maintenance of a war against so mighty a prince as the king of Syana upon his own coast, for the relief of Holland, and to affift the king of France, besides the domestick, dangerous, rebellious war in Ireland; which expences they will perceive, were, beyond comparison, greater than the present, as appears by what follows.

In 1588, the city of London being required to furnith five thousand foldiers, and fifteen thips of war, of their own accord they granted ten thousand foldiers and thirty thips; and by their example other towns within the realms furnished in thips and pinnaces thirty, befides what the nobility and country sent in horse and foot.

In the expedition to *Portugal*, in 1580, her majeffy furnished only fix ships of her own; whereof two were of the smallest rank, and adventured in that expedition 60000l. the whole number of vessels being an hundred and forty six, with fourteen thousand foldiers, and four thousand failors.

That fame year London fent a thouland foldiers to the aid of the king of France, and several fluires sent the like aid upon the fame occasion into France, under my lord Williams.

The city of *London* in the year 1594, furnished fix ships, two pinnaces, and four hundred and fitty soldiers, for three months, and the following year 1595. *London* surnished a thousand foldiers with all forts of provision, and fent them to *Dover*, to the relief of *Calais*, when it was taken by the cardinal. Many other forces were sent out of the country upon that service.

The following year 1596, was the expedition to Cadiz, and the year after the ifland voyage; to which two exploits, not only London, but all England contributed

very largely.

In January 1598, a great tax was laid upon London for Holland; and our foldiers there were fent into Ireland. The like was done in February following. The fame year London furnished fixteen ships and fix thousand men, besides a great number of horse and soot that were sent out of the country, at the time that my lord of Essex was in Ireland; and in the year of 1600, London sent sieve hundred men into Ireland, and surnished them; besides great numbers sent out of the country.

That fame year the city of *London* built and furnished five galleys to fea, and was at a great charge for the earl of *Esfev*'s entry into *London*.

One thousand foldiers were sent into Holland, and every one allowed then three pound ten shillings per man, besides shote that were sent out of the country. Moreover, there were sour hundred soldiers sent in October out of London; and in May sollowing there was a great press in London for Ostend; and in the last year of queen Eizabeth, London sent and furnished two thousand soldiers into Ireland, and two ships and a pinnace, which stood them in Good!

If these benevolencies were granted to willingly, and without repining or gainfaying of the subjects, as well appears, let us consider of times, and judge withal of the estate of men in chose days, compared with the present. First, in the mens forwardness to serve their prince and country, which their hearts and minds are now alternated from. Secondly, it is to be considered how much more able men are now to contribute, than at that time they were, by their increase of wealth and riches, which they have gained by king James's bringing peace with him into this realm, as shall appear by these particulars following, that shall be by the way of queries.

Quare, Of the flate of London in the days of queen Elizabeth, compared with their preient, as namely, the buildings, with the number of inhabitants in them, and by confequence the riches increased.

Book II.

Quere, Of our trade and commerce betwixt the time I speak of, and now in being, as namely the traffick with Spain, and all the dominions thereunto belonging, which we were then debarred of by reason of our wars with Spain; the profit whereof may be in value to the subject ten times as much as the king's custom comes to, as may be apparently made out by the custom books.

Quare, Of our trade to the East Indies, and the gain thereof, begun and followed fince king James came to his crown; as also a late trade we have found into Guinea for gold.

Quere, The flate of Greenland, and the whale-fifting there, that hath been difcovered and profecuted with little charge and great profit to the merchant, fince king Janes possesses this kingdom.

Quare, Of the feveral plantations and colonies fince that time, with the imployment of people which otherwife would have been a burden, and a confuming of victuals to this commonwealth.

Quere, Of the abundance of fhipping that hath been imploy'd in that navigation, as alfo of the increase of ships fince the days of queen Elizabeth, which is no hard thing to know; for when she died, there were not above four merchants ships in England of four hundred tons each.

And reckoning but the increase of ships fince then, it would cause admiration, and be a reason for men to contribute to shipmoney, when they shall consider the wealth increased by the trade of those ships that are never idle, but continually failing from place to place.

Quare, Of the peaceable flate of Ireland, and the long continuance of war before king James came to the crown; as also of the exceffive charge England was continually at to maintain that kingdom, that now is not only able to uphold tielf, but to afford great profit to his majesty.

But whereas our refractory men alledge for their excule, in denying his majefty's demands of money, and comparing the times together, fay, they were forced to it in the queen's time, out of necessity, being drawn to it by a dangerous war with Spain, not weighing with themselves that his majefty's actions have been to anticipate and prevent a war, as is to be seen in my next narrative; and no man can be so ignorant, but he must consess, it is less hazard to prevent a war before it is begun, than with valour and courage to resist after it is begun.

Wherefore are our castles seated on the sea-coast, but to prevent the invasion of an enemy, or other insolencies offer'd by stran-

gers? or why are people train'd in feveral fhires, but to be in readiness to prevent foreign and domestick attempts? Whereas if castles were to be built, and foldiers trained after the time the enemy shall appear upon'the coast, in what estate were England to make a defence? And this imployment his majesty now has by sea, may be paralelled with the other two comparisons: and I will therefore conclude, that the wit of man doth not consist on much in seeing, as in foresteing and preventing peril and danger that may sall upon him.

But whereas poverty is made the excuse for people's not giving what his majefty require, the true cause shall appear, that hath bred your want, as you shall confess, and that it is in your powers to redrefs it; as, namely, Your pride, and other needlefs and unnecessary expences that depend on it. The fecond is your gormandizing and ex-ceffive feafting, lately crept in amongft you, not formerly used. The third is the hateful and loathfome cuftom of drinking, which begets all diforders, and is the increaser of all vices. The fourth is a vain and ambitious defire of titles, which after they are purchased with money, draws on a greater expence upon their effates, to maintain that port fo dearly bought. The fifth is the fumptuous buildings, and ornaments of houses; all men striving for oftentation to out-do their neighbours, with whom they are in faction and emulation. The fixth is the miferable covetoufness of some, and the lavish prodigality of others. The feventh is the want of care to have things fold according to their just value, in equity of law; but that every man rates his own commodity according to the necessity of the buyer. The eighth is the extortion taken by griping usurers, from people that are necessitated. But, above all, the number of base lawyers that cause suits, not with a charitable intent, to end, but knavishly to multiply them; and with that expence to the client, as no question can rife, of what value foever, but a bill, answer, and order, will be of more charge, both to the plaintiff and defendant, than what is demanded of most of you towards the furnishing his majesty's royal navy. These are the true causes of want in commonwealths, which proceeds from your own fuperfluities, vanities, and your revengeful humours.

Most of these abuses were foreseen by Licurgus, the great law-maker, who made decrees against them: he also forbad pompus burials, and banished the use of filver and gold, as things most prejudicial to commonwealths; which law of his continued five hundred years, and no man found him.

But that which you term want, proceeds not from poverty, but from plenty; for he that hath much defires more, covetoufness being never fatisfy'd. The true use of riches is in him that hath most and desires least; and the best riches is to abstain from

In old times he was efteemed rich that was of a fair, upright, and good behaviour. He that shall except against the honourable defign of this fleet, may be accounted an arrogant and ignorant person, and a contemner of the king's propolitions, exculing it under colour of want, and with little reafon. Those that repine at princes actions out of stubborness, or refractoriness, are within a degree of impugning the fovereignty; and in fuch a case they want nothing but power to carry on their conceived trea-fon. They do not confider that princes are born not to obey any but their own laws; and the subjects are born to submit to the wills of princes, where reason shall be required at their hands, for the good of the commonwealth; and that nothing deferves fuch fevere chastifement from kings, as such contempt as opposes them or their ontho-rity. Marcus Pelio says, That commonwealth is everlafting, where the king feeks obedience, and people labour to get his love

by their carriage.

Latter times have taught us a most woful and lamentable precedent, in the like case, to parallel with this: Lewis II. king of Hungary, being threatened with the power of Soliman, the great and magnificent Turk, required aid of his subjects to withfland fo puiffant an enemy, that was like an inundation of water to overflow him, them, and their country; but most of his fubjects, whom you too nearly imitate in obstinacy, refused to contribute to his demands, standing upon the priviledges of the law fo long, till it was too late to give fuccour; and in conclusion, the king and his army were deftroy'd, and his people and country became flaves to the Turkifb government, under which they now live.

Herein appeared the ingratitude of the vulgar fort to their king; and how eafily they might have met with this danger, betore it lite to heavily upon them: they regarded not the benefit they had received, or might receive at their prince's hands, if they had been willing to have yielded to his defires; for that subject that will not yield to obedience, may as well renounce the name of king and his authority, and by confequence relift laws, juffice, and peace; and then follows a continual war, without hope

VOL. III.

felf agrieved for want of money; for it of reconciliation, and the commonwealth is destroy'd.

I observe, that nothing breeds this wilfulness in subjects so much as jealousy, that thinks princes have other ends than they pretend, not confidering that kings affairs must be kept secret; for their designs being discovered, are disappointed and ruined.

The Romans fuccefs was imputed to nothing so much as secrecy in their expeditions. They were wont to fay, That when they discovered their fecrets, they gave away their liberty, accounting fecrecy as the guardian of their affairs; and it is an old faying, That a secret is bard for one to keep, enough for two, and too much for three. Of all things, a subject should not desire to know the fecrets of princes; for Philip of Macedon bid a philosopher to demand any thing at his hands, and it should be grant-The philosopher humbly befought him, as his greatest fuit, That he would not discover to bim bis secrets: and yet you would be wifer than philosophers, to murmur at kings actions, when you should with obedience feek to gain their love; for no king can be fo unnatural to himfelf, or fuch an enemy to his people, as not to govern to the profit of both, because he receives equal gain or loss with his fubiects.

Nothing deceives men more than a false conceit of themselves, which makes them run into unavoidable dangers; but let fuch men learn, that wifdom is life, and ignorance is death; the one understands what it does, as the other is dead for want of understanding. Much langer ensues for want of reason, and much good is left undone by too much folly.

If this refractory counsel you embrace, proceed from others, and not from yourielves, despise it; for it has another defign than they think fit to let you know, which may enfnare you, like a bee that is often hung in his own honey. Therefore be not enticed with fair words, doubtful hopes, or feeming probabilities; but remember that a man has power over himself and tongue, before he speak or promise; but after his words are out of his mouth, they have power of him: and you will find that perverse and desperate counsel is full of perturbation, where men are embracers of evil advice; and therefore think an hour before you answer to their propositions, and a day before you yield to uncertain things that may bring danger.

You must likewise think and consider of the condition of them that counsel you, the occasion of their counsel, and the probability of what they counsel; for if it be out of private ends, out of anger, out of dif-

content, out of revenge, or to the prejudice of kings defigns, conclude such to be evil counfellors, and flun them as you will a ferpent, that never flings to deadly as when the hiffes not.

If you suspect their counsel proceeds from ambition, beware of it; for ambition teaches one to become difloyal, and he defires to draw others to confent to him in his ill purposes: if you be young, to whom this feditious counsel shall be given, follow the advice of Solomon, who fays, That folly is tied in the hearts of young men, and cannot be untied but by good instruction; for indeed young men want experience: they are incredulous of good advice, wanting years to judge; and as poor in their judgment, being apt to delight in the musick of their own praise.

Let the warning of our late parliament admonish you; for there cannot be a more perfect precedent than by things lately done, and in your own remembrance; then you shall see the fruit of self-conceited subjects, that oppose the king in his demands, and the reward they have reaped by it; you have beheld the imprisonment of some, and the diffrace of others, which still lies as a heavy burden upon their shoulders, and cannot be discharged without submission, and acknowledging their errors, which fome have done; and yet for all their obstinacy they have produced no good to the commonwealth; for the wifer fort cenfure them as giddy, rafh, and inconfiderate, to offend so highly with their tongues, or to meddle with affairs above their reach, or what they could pretend to as members of parliament; for parliaments are called by authority of the king, who has power to diffolve them as he pleafes, which puts an end to all they can fay: wherefore a man should be filent, unless filence hart him, or his speech be profitable to others.

Your part in a parliament is to give way, and obey fuch laws as shall be made by confent of the house; which laws have no authority till the king confirm them; neither can you challenge any privilege after the confirmation, till it be warranted by commission from the king, either in office or imployment; for it is the king that rewards or punishes at his discretion; and by proof you have found, and ever will find, that after your rangling and jangling, no-ching will get more favour than obedient diligence; for kings are not drawn by violence, but by humility and meekness. The ripture tells us, That the way to get love of our princes, is by fuffering, and not forcing; for fo they may tafte of his goodnets and mercy. It is a great virtue and wildom in man, not rafhly to enterprize a thing bove his reach, or to be led by per-Lastion of fair words, fort speeches, or for- regard the justice of the quarrel, honour

ward threats, that deceive none but fools: and if you rely upon the infligation of others, that are of your fraternity and familiarity in parliament, who have no thing but words for their best witness, it is infolent madness; for what can they do but shew passion, like filly women, whose tongues are their best weapons.

All you can do for the present, is, to challenge the priviledge of the parliament, of which you are members; but when that is over, you are brought to account for the indifcretion of your tongue, which is the best or worst member in a man's body; but not to be fo much used as the ear or mind, which in reason should rule the tongue

Another observation I collect, that wife men impute to your inconfiderate folly, That your words have produced no profit to the commonwealth, but great prejudice to all; for thereby you have incented the king, and given him occasion to stretch out his prerogative to the uttermost; a: also to awaken laws that have been many years fleeping, to his advantage, and inconvenience to the fubject; for laws are effablished to bridle the haughtiness of mens minds, and the stubbornness of their condtions; and therefore it is dangerous to year and anger princes upon fuch occasions.

The best thing subjects can do, is to live peaceably; for by concord fmell things increase to the good of all; whereas by difcord all is leffened, and in the end nothing

comes but repentance.

The third exception against those two fleets, generally fpread abroad, is, the unfufficiency of the captains and commanders wanting experience, as they suppose; which I suppose rather to be divulged without truth or proof, than on any good ground they ceeding from difcontent and ill nature; and after that rate any man may be flander'd, if calumny pass for truth.

But if there were any fuch cause of exception to their fufficiency, there were none fo like to know or find it as the king himfelf, or his lords, that have trial of their abilities; and therefore it is a great male-

pertness to infift upon this.

The ground they have to confirm their belief may be our long peace, which has given no occasion of war, and no means to gain experience; and the death of fo many commanders, who lived and were imployed in the queen's expeditions, a time when they failed with victory.

The common fort of people, who are Ed by flew and ignorance, efteem no man valiant but fuch as can flew fears and hurts, as tokens of their courage, like lewd bullies, or quarrelfome roifters, who never

wife co withou of a w about t had as neither

The last year's fleet was set out on account of the French and Hollanders vying with his majesty as to prerogative and power, which in a fhort time would have blazed out into open war, had it not been prevented by a speedy fleet, which some of our refractory men repine at; not confidering that it was better and less chargeable to meet danger before it fell upon them, than to expect the coming of it; for the first enterprize in war gains the best reputation, especially when our enemy sees he is neither feared nor dallied with, which will make him think how to escape danger, rather than to go forward with force and courage; and we must account that victory most honourable that is obtain'd with least loss and effusion of blood.

The Saxon king Edgar left a brave reputation to all pofterity, and to this day we look upon it as an act of renown and fame, that he failed about England, Scotland and Ireland, with thousands of fhips, not once, but often; and yet no hiftery makes mention of any conflicts or encounters he met with, but only did it for the fafety and reputation of his kingdoms, and to daunt his enemies, if they had appeared: which case may be paralelled with his majesty in these our days, who is lord of the same seas, enjoys the same right king Edgar did, and has a greater strength and force than he to maintain it.

If it were not for the honour and fovereignty of the feas due to the king, who knows not but that it is more fafety and cafe to pass out of the kingdom in a small vestel, than in a royal ship of the king's; for every harbour is able to entertain a bark of little draught; but it is not for his majesty's reputation to accommodate a prince or ambassador in such a vestel, who comes courteously to visit him, which every man may hire, and lies open to all dangers

of enemies and pirates.

We have many precedents of emperors, kings, and queens, paffing our feas, that have been honoured and accompanied with the feets of England for their fecurity, and to flew the king's magnificency on the feas, and yet no hofflie act appeared: I would ask the detractors in this cafe, Whether in reason or reputation the king should not have shewed his greatness for the guard of the feas, and the subjects should not contribute to that extraordinary expence, fince they are interested in the dignity of it? for all succeeding ages, when they shall

read of it, will look upon it as an honourable and noble action; and though the king and fubjects be all dead, their honour will never be forgotten.

In 1588, when the Spaniards threatened a conqueft of England, if they had happened to have been diverted, as it was once thought they would, can you believe it had been fafe or pendent for us, upon a bare fuppolition, to have ftopp'd and ftay'd our fleet from going to fea? or to have called it back when at fea? or do you imagine the fubjects at that time would have thought it diferetion to have faved their moneys laid out in fitting our navy, and have made excufes of want, or diflike of the defigns, or the lack of experienced commanders, who I will undertake were fewer, and knew lefs than they now do?

In the year 1599, the queen, with admiration to all her neighbours that beheld it, rigged, victualed, and fet to fea, the most part of her thips, in fewer days than any of her progenitors had ever done, expecting an invalion from Spain; the rather believed, because the Spanish preparation was at the Greyne, the next harbour to her; which fleet of the Spaniards was the fame year diverted by the pursuit of a fleet of Holland, that had lately furprized the island of Canaria: and though the queen was made fecure by this accident, and that her fleet returned from the Downs without feeing the enemy, yet did not a man in the realm repine at the expence demanded towards the furnishing of it. By this you may fee the difference of times, and the difference of mens conditions, and how providence and forefight in war are as much to be approved and esteemed, as the active part when men flew their valour in fight.

If you were as willing to know, as you are apt to judge the difference of times, you would find, that the great and fortunate victories in the days of queen Elizabeth were not atcheived fo much by force and fighting, as by fortune and providence, and the fear the Spaniards conceived of us; for unless it were in the year 1587, when Sir Francis Drake made an attempt upon Cadiz road, and quelled the enemy that was preparing for an invalion of England; in 1588 when we were put upon our own defenc., in 1596. when my lord of Effex and my lord admiral took Cadiz, and defeated fifty nine ships of great value and burden; and in 1601, when Sir Richard Lewfon and Sir William Monfon took a carrack, deftroyed and feized upon certain galleys defended by the caftle; the rest of the fleet employ'd by the queen had never cause nor opportunity to flew their valour or force in a naval battle; though I confess there were many other famous and fortunate voyages

with wealth and reputation to our nation, as namely, and in my first book I have treated, Drake to the West Indies in 1585. Portugal expedition in 1589. the earl of Cumberland the same year to the Tercera, where he met with many encounters by land, and prevailed, and what ships fell into his hands was without refiftance: many other voyages were worthily performed by him; the lord Thomas Howard in 1591. the taking of a carrack by private ships in 1592. being a ship of great value; Drake and Hawkins to the Indies in 1595, where

they both died; Sir Martin Fortusher to Brest in 1594, the earl of Essex to the islands in 1597.

And to make a fhort repetition of the Hollanders actions, fo unworthily boafted and bragged of, it cannot be found that they ever made a fight with fix ships to fix, fince their wars with Spain, which is nigh feventy years; though it is not to be doubted, but that they have many able and fufficient captains amongst them, bred from their youth in fea affairs, that would have shewed themselves sufficient commanders, if there had been occasion; and in the same manner would those of ours, you call unable captains, have done the like; for they are of the condition of the Hollanders I fpeak of; they know as much in thips, and how to govern or fight, as the longest-experienced captain that has had the fortune to exchange most bullets, with the

loss of their blood. I wonder that this can be an exception to our captains; but that fuch envious perfons will feek all pretences to flander them; for how can you think that without practice of war men can become experienced captains? And their purfes will tell them they have not fo much furthered their imployment fince the death of queen Elizabeth; which shews not only an evil disposition, but a dangerous consequence that may lite upon this kingdom, by refusing their reasonable and convenient payments; for they mean thereby that we shall not only live in ignorance, but to take away all occisions to breed soldiers and commanders : for war is not to be

followed for pleafure, if men fee not the means to maintain it, or hopes of prefer-

Let them confider that in natural bodies, the longer one lives in health, fickness is the more dangerous when it comes; and fo it is in war falling upon a fruitful country, that has long enjoy'd tranquillity: and therefore though no likelihood of war appear, yet do you like a skilful phyfician, who prevents a difease before it feizes his patient, rather than struggle with it when it has taken possession of him, and his remedies come too late; for dangers by wife men may be fooner avoided, than overcome by force and courage, fo they be prevented in time.

Let these people I have spoke of pretend what they lift, or frame notions to please their fancies, yet I am persuaded all ancient English men of honour, blood, and name, will contribute to the prefervation of the narrow feas, from the violence of oppreffors, who feek unjuftly and outragiously to commit diforders, which cannot be refifted but by numbers of ships to equal their forces; and if people out of perverfeness deny to contribute to a defign so just, noble, and of fuch reputation, when the matrons of Rome voluntarily offered their jewels and bracelets, which obtained great privileges, what shame will it be in you to

deny it upon fuch flender and ill-grounded

reafon. Let us compare our feas with our flourishing cities in England, that are orderly and carefully governed: think you it were well done of people to repine at the charge of their watches, as a needless expence in our peaceable commonwealth, where our laws give authority to punish offenders? we may well relieve that murders, thefts and diforders, vill follow, if fuch watches should be taken away and abolished. And the like, or greater, would enfue, if the fame providence and care were not had in the government of our feas. Now will I proceed to the management of the expedition in 1636, where the earl of Northumber-

f Northumber-

the beginning continued till upon me, a freedom to except against the ill-carried actions of that time, and shew the way how they might be amended, and better ordered; for fmall faults at the beginning may be eafily prevented by admonition, if it be well followed.

What I did was not out of fear or flattery; and, as I have faid before, I walk'd fo uprightly, that if the commanders deferved well, I gave them their due; if ill, no man can fay I spared them; nay, I was so bold, that if there were any error or fault committed by the state in their directions, with modesty I reproved it, and shewed my reasons for so doing, to give the better light to fucceeding enterprizes; for experience is the mother of knowledge, and to be valued above authority or opinion.

This royal fleet being all furnished and re. ly for the fea, but not without fome defeet in the ships, as appear'd by the disafters that befel many of them, his majesty made choice of the earl of Northumberland, a gallant and hopeful young gentleman, to command as general; though there could be no exception to the lord of Lindsey, the former commander, his carriage giving no distaste to the king, that ever I could hear of, as appeared by his majefty's own words, declaring, that the reason of electing him, was because he defired to breed up his nobility, to give them encouragement to take a liking to the fea, by former precedents, as men principally to be chosen for great imployments; and that he meant to make it a yearly custom to keep a fleet to guard and defend the feas.

The ship appointed for vice-admiral, was the Anne Royal, equal in greatness and goodness with any of his majesty's ships, and one that had made trial of her fundry fortunes; the first in the year 1588, where the was honoured as admiral, and carried the arms of England, as due to the lord admiral; and this was the first time of her

appearing at fea.

The next action of hers was in the enterprize upon Cadiz in 1596, where my lord admiral commanded in her, with no less victorious and honourable fuccefs than the first. She was chosen as much for her goodness, as for my lord's affection to the ship;

for in truth the was worthy of all honour. But as fortune is of that perverse and uncertain temper, that she never sheweth herfelf constant, but mutable; and what the gives is not to continue long, but only lent; fhe has that power of herfelf, that no body can hold her against her will; so this paragon of thips was attended with the worll fate that ever befel thip belonging to the crown of England, and far unworthy her former exploits; for in her way from Chatham to Tilbury Hope, (a thing not to the one being natural to all eyes to behold, Vol. III.

be believed, if the lamentable truth did not put it out of doubt,) whether through the negligence of the officers of the navy, or their indifcretion, or of the master, or the unskilfulness of the pilot, (for in such cases every one will lay it upon another, to excuse himself,) she run aground, and was loft; an accident so rare, that it made many ignorant and superstitious people divine and fear, that some ill fortune would attend the voyage.

It was the more wondered at, because in the eighteen years war under queen Elizabeth, no such disaster befel any of her ships, who had gone through more dangers and hazards in the open and spacious ocean, where their business was, than ever happen'd fince; but I thank God, (excepting the loss of her, which with the charge of another ship will be recovered, and that of a Whelp that miscarried by the insufficiency of the pilot,) the rest of the ships returned fafe, though not without fome peril, which is naturally incident to fea affairs, and the rather in this, because some men imputed it to careleffness, others to the insufficiency of officers, and fome to deftiny.

My lord arriving in the *Dozons*, expected his vice-admiral, the *Anne Royal*, who you have heard unluckily mifcarried; however, he fet fail with the rest of his fleet, for the west country, and the St. Andrew was appointed by the king to supply the

want of the Anne Royal.

As there was occasion, my lord imploy'd fundry of his ships in several services; and the Victory, one of the principallest, was fent into Spain, and returned an ambaffador from that king into England, he being forbidden the paffage through France, because of the wars betwixt the two kingdoms; and not then adventuring to fend him by fea, unless it were under the guard of one of his majesty's ships.

The Errors committed in this Voyage.

OW to proceed to the exceptions of this voyage, with which I will end this fecond book, and collect fuch errors, miftakes, and overfights, as feem worthy of reprehension, hoping it will give no more offence, or be imputed to prefumption in me, any more than those I have excepted against in my first book, and part of this fecond; with whom I have been free, not out of defign to discourage, but as a friend to warn them; for, according to the old faying, he that is warn'd is halfarm'd, and prevention is as much to be commended as valour in execution. It is held far greater wisdom to foresee, than to see ; X y y

the other proceeding from judgment, care, and discretion.

Callicratides, general of the Lacedemomians, might have faved himself and his army, had he hearkened to advice, in forbearing to charge the Athenians; but by his improvidence he was overcome. Quintus Fabius, the Roman, through his forefight and carefulness, did the contrary, and re-tired for his advantage. Here appear'd the wisdom of Fabius, and the headstrong wilfulness of Callicratides, the one lost life and honour, the other purchased the name of Maximus, given him by his country.

Nothing can be a better inftructor to a general, than admonition by precedent, for which cause I bring these examples, to give light to fucceeding times and fucceeding commanders. The first exception against this expedition, I observed, was, as I have faid, the lofs of the Anne Royal, which was neither blemish nor blame to my lord general; for the tollowed the directions of others, before the came under the command of him. The officers of his majefty's navy are the men only worthy to bear the rebuke of it, who, for want of experience in fea affairs, are led principally by precedents of former times, too lamentable to behold, that their government must depend upon the example of times; and yet, if they had but walked the paths of them that went before them, they fhould not have introduced this innovation, to direct our fleets to Tilbury Hope, there to prefs men out of colliers, and other merchant fbips; when two fmall pinnaces might have done the fame fervice, and as they were press'd, have put them presently on fhere, where they were to travel but three or Gar miles by land to Chatham, there to be entertained and entered into pay.

And whereas in going from Chatham to Tilbury Hope we passed by the Nesse, which we must also do in going directly to sea, with the fame wind that carries us out we may be fooner at fea from the Nesse than at the Hepe, whither we must go. Thus you fee, people that governed by precedent, fail'd in not following precedents; and this unhappy mishap that fell upon the Anne Royal, came by a precedent of their own, which otherwise had not happen'd: this new precedent, I will undertake, was never with advice or confent of any captain; for they were put to an extraordinary expence by it, being a means to draw their friends and acquaintance aboard, whom they entertain with coftly banquets; which proves a greater charge to them than the whole voyage; and till of late his majesty did strictly prohibit it, more powder was wafted by their vain oftentation in shooting, than they spent otherwise.

My lord of Northumberland being now at fea, and having ranged and fcoured the shores of Irance, where it is most likely

that fleet would have appeared, if there had been any to have opposed him, he returned to the found of Plimouth, to be further inform'd of the flate of things thereaboutes and finding no thips, nor thew of opposition to his defign, he left the shore, having received intelligence of certain Turkiff pirates that lay hovering thereabouts, and had committed fome fpoils upon his majefty's fubjects.

My lord loft no time to haften the purfuit of those pirates, as he could be informed of them at fea; for in truth both his care and celerity were to be commended, though his hafte had little availed to have fubdued the pirates, if he had met them; for by reason of their swift failing, they have the advantage of all other thips they meet in the spacious and open sea: this may seem strange to them that know it not, that ships can be built to fuch advantage in failing, all of them being built with one kind of iron and timber; but what follows will demonstrate it to any that doubt of it.

You must understand, that all the Turkish pirate ships are vessels of christians, taken from them by violence, which when the Turks are possessed of, they use all art and industry to make better failors than all other ships; and to this purpose they first cut down their half decks, and all other weighty things over head, which makes them wind tite and burdenfome: they take out most part of their knees and binding works, to make them nimble and fwift. like a man that is tite truffed, and has his doublet buttoned, that by loofening it he is able to run the faster. They never regard the strength of their ships more than for one voyage; for they want not continual prize; which they take of christ ans, and thus use, Every fortnight or three weeks they grave their ships, and make them clean, to go the better: they carry no weight over head, or in hold, but victuals; by means whereof, and all these things confidered, no ship is able to equal them in going.

The only hope I confess my lord had, if they had met them, which in truth was very uncertain, was in over-bearing them with fail, and the others would have been forced to take in their fails. The fecond, if there happen'd a calm, and the pirat featter'd, that they could not help one another, with the number of his long-boars he might board and mafter them with the multitude of his fmall fhot. The third was to furprife them in harbour, where they could not get out and escape. The fourth, that with less and nimble thips they might have the hap to board fome of them, and fo keep them employed, to hinder their way till greater ships could come to relieve them. But all these are uncertain.

no thip is

My lord being now at fea with his fleet, and looking out diligently for pirates, he met with an Irifb ship, lately come from France; and being asked for news of that coaft, he did affure him, That the Irench fleet, which made to great a noife, was fitted, and gone to the castward of the channel, and that 'twas generally supposed they meant to beleaguer Dunkirk by sea: this intelligence made my lord immediately bear up, and take that wind to follow them; but arriving at the Downs within few days after, he found himfelf imposed upon, and abused by this salse information; for neither was there any fuch fleet arrived, nor any likelihood of their coming. At this time the wind continued to long wetterly and foutherly, that my lord was not able to recover the western parts again, by which means the pirates committed great infolencies and spoils upon the coasts.

The error and overlight of the carriage of this business, was in giving over much credit to the report of the Irishman, it being the ground my lord was to proceed upon afterwards; and had he waited but a few hours before he flood to eastward, he might have been informed of the totah thereof, by ships that continually passed the channel; or whether the Irishman might not have been corrupted by the French to give false intelligence, to divert my lord's purposes, could not speedily be determined by only asking questions: for the like hap-pen'd heretolore in our war with Spain; the Spaniards subtilly causing a carvel of advice to be taken with counterfeit letters, directed to the general of the West Indian fleet, requiring him to come home in thirty five degrees; which we finding by the letters, haftened into that heighth to expect them; but the true and former directions to the general was, to hail in thirty fix degrees and twenty leagues to the northward of it, whereby he avoided as fo many leagues.

It should have been likewise considered. and men of greater experience than my lord should have made it known to him, that there was no great occasion to pursue the French with that unadvised haste; for their anchoring before Dunkirk, to beleaguer it at fea, is no more to the taking of the town, than if they had kept their ships in the ports of France; for the coust gives no liberty to land, being a plain flat, and fandy fhore. Befides, they run a great hazard, both to ships and men, being there at an anchor; for if a northerly or northwest wind take them with a storm, they cannot avoid both fhipwreck and death of men. Befides, why should the king of France put an army in peril to invade Flandra by fea, when his territories lie within nine miles of Darkick by Lind? And to

prove the danger the ships were to undergo, had they brought themselves to an anchor on that coaft, I will shew, as it were in a glais, an accident that happen'd on the like case, wherein their folly would have appear'd.

When our wars of 1525, began with Spain, some men, out of singularity to get fame, which proved but their fhame, with certain ships of war, undertook to surprise the enemies veffels lying t Mardike, a new harbour near Dunkirk; and though this overture was much opposed by experienced feamen, who alledged unantwerable reasons against the enterprize, yet wilfulness had that predominate power over wit and reafon, that the contriver of this stratagem attempted his idle project, and commanded the ships to anchor where they were directed; but before they had lain there long, they were furprifed with a florm at northwell, fo that they could not claw off the fhore; and in fhort, three of the ships, with all the men wilfully perifhed, the enemy on land beholding it; which made a doleful cry and complaint in the port of Dover and Sandwich; for there appear'd flocks of widows bewailing their miferies, through the mad and filly undertaking of ignorant

If the French had thought that the beleaguering of Dunkirk with thips would have cut off relief and fuccour from fea, their weaknefs and want of knowledge in fea affairs had appeared, not in words, but by example, precedent and proof of the hundred Spaniards at Dover before spoken of, who notwithstanding there were forty or fifty ships of war of Holland placed to intercept them, some in the road of Dover, others in the road of Gravelling and Dunkirk, yet by my advice and counfel aforesaid, arrived safe in the port of Dunkirk, the hour and tide affign'd by me for the town to bid them welcome.

And because this shall be a light to aftertimes, (if there be the like occasion,) this knowledge they shall receive from me, that with a leeward wind, and a leeward tide, ships may pass into the ports of Flanders, in defpight of any force that shall forbid them.

My lord lying at the *Downs*, waiting a north-east wind to carry him to the place where the fouth-west wind first took him, in the mean time his majesty resolved pon an imployment for his lordship of greater importance than this was, viz. to send him to the northward amongst the fishermen that fish'd there, to make good his majesty's proclamation not long before divulged, to prohibit and forbid any such fishing upon his coast of England and Scotland, by all forcign nations that would not acknowledge

his unjefty's prerogative on those kars.

Book II.

fervice, as his commission gave him authority to do it, and with speed repaired to the places of fifthing aforefaid, where he met many buffes of Holland, which he took, and caused them to deliver, by the way of tribute, (acknowledging his majesty's regality,) a certain fum of money from each of them; but some other fishing vessels efcaped by flight, fearing they should have been worse used than the rest of their fellows were; but neither do I hear that the states of Holland do approve this act, as allow'd, or allowable by them; fuch is the pride and ingratitude of popular states.

But if I may speak without offence to this point, or that my opinion had been demanded what to have done herein, I should have advifed, that my lord should have repaired to Brasound in Shutland, an island belonging to his majesty by his kingdom of Scot-

My lord was as ready to perform that land, there to have arrived the two or three and twentieth of June, a time limited by the Hollanders to make their abode in that port; and in the day following, the four and twentieth, they have liberty by their own laws to put out of harbour to east their nets, and to profecute their fifhing.

Thus had his majefty brought the Hollanders to his mercy, possessed their strength, their wealth, and indeed their whole provinces, which he might have releafed and reflored afterwards, if he had pleafed, upon acknowledging a fovereignty, and obliging them to pay a yearly acknowledgment. This would have shewed a commanding power over them, and yet directed by good ness and mercy. And thus much of the voyage in 1636.

I will now address myself to advise such great perfons as shall take upon them the command of generals by fea-

Advice to Great Persons and unexperienced Generals at Sea.

Ommonly great perfons of authority, place, and blood, are elected and chofen crief commanders in great expeditions and actions at fea, to give the greater honour and reputation to fuch enterprizes as they shall be employ'd in: and therefore, as a fervant to fuch great perfons, I will advise, by way of caution, tome things, before they accept of fo weighty and important a charge, who cannot challenge it out of experience, or other deferts, more than their prince's favour and their own greatness: and many times perillous dangers and uncertain cafualties depend upon fuch uncertain employ-

Many examples, both antient and modern, shew, That the best-deserving generals have bitterly tafted the displeasure of their employments; for no man's carriage can be fo clear without blot or blemish, or his fuccefs prove fo uncontroulable, but there may be found some cause of exception by evil and malignant spirits they shall leave behind them, and who, perhaps, will be made judges to centure their actions; fo dangerous a thing it is to come under the hands of ire and wrath: for that we call ire, the Grecians term'd a defire of revenge, which is fometimes increased upon provocation, and fometimes proceeds only from ill nature. It has that evil and canker'd disposition, that it believes not a friend; it speaks with malice, and will not admit of reason; commonly the greater the defert, the greater malice attends it from fuch perverie defamers; and the worst is, there is no defence against such envy; for we are all the fons of envy; we are born, live, and die with envy: she spreads herself and poifon against those that fortune raiseth highest,

and fets her thoughts to difpraise defert. There is an old proverb amongst good men, That good will defend them from wicked persons, and the tumult of the common peo-

The fecond cause that makes men covet employment, is to thine above others in authority, as a means to obtain their haughty ends, which may be truly termed ambition; for ambition is of that nature, that it fees not what is before her eyes, nor confiders the flate and uncertainty of man's life; for if he be of low degree, he stands upon brass; if high, he treads upon glass; he climbs by fteps and degrees, but falls fuddenly when he least looks for it.

There are three things that make a man's way dangerous to walk in, ice, glory, and ambition. There is no affection fo great as ambition, though naturally it is infatiable: like a hungry dog, that will leave his first prey, and fall upon another ; so is ambition, not respecting what one hath got, but still feeking more. Nothing doth more nourish this humour of ambition than base flattery; and a man had better fall amongst thieves, than flatterers.

Your best natures are observed to be apteft to embrace flattering counfels, like worms that eafily creep into foft and fweet wood; but the difficulty is, how to know fuch flatterers from others; for wolves refemble dogs, and flatterers look like friends. The cunning of a flatterer is how to entice good natures with hopes; for there is nothing more fweet to man than hope, nor any

thing more displeasing than to be debarr'd his hope. Therefore time will be the difcoverer of fuch deceitful fycophants; for when a man thall suspect such a one, let

him but t to per decei his ov ing w tered to be is like into e fure. The

refemble ls. The ice good nothing nor any debarr'd the dif-

nts; for one, let him not connive with his untruths or delays; into error, and yet with a feeming plea-

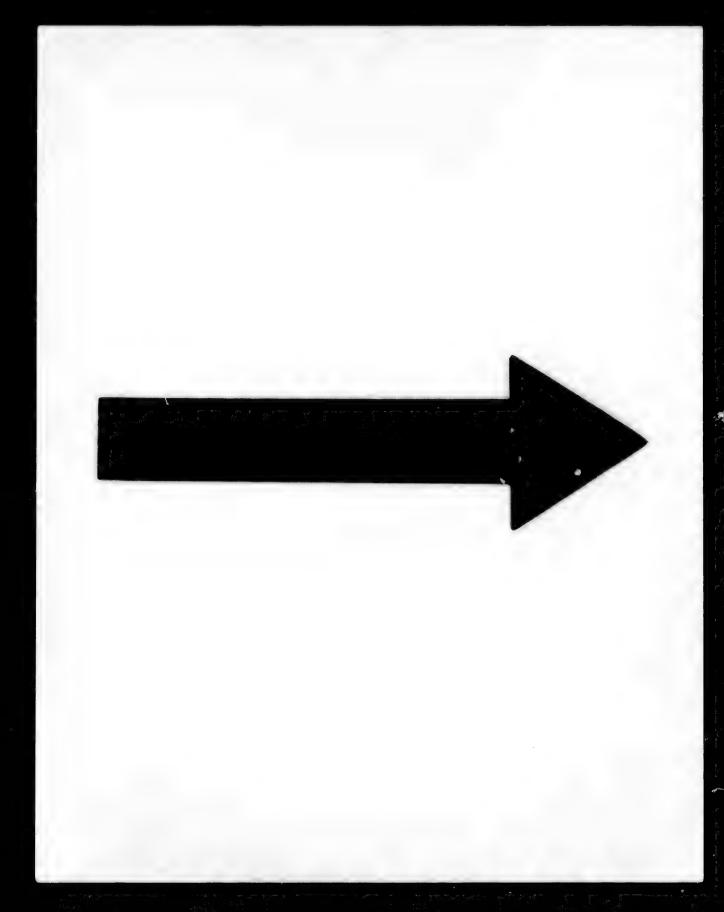

The third thing an unexperienced commander is to fear, is the doubtfulness and deceitfulness of fortune, in whose ship he must imbark himself, to try the unconstancy of the fea; for the power of fortune is fo univerfal, that fhe rules kingdoms, and overcomes armies; fhe destroys princes, and raifes tyrants; and indeed the is to obstinate and perverse, that no art can prevail against her, or detain her by force. The evil she gives we fee not; fhe pinches, and we feel it not; what fhe fays we hear not, and when we think we have her, she is farthest from us. Her property is to bereave us of fense, that no fight or example shall help us; as we fee by many men that lofe their money at play, and yet cannot forbear it; and though some marry and repent, yet they will not be warned by it; and though people be daily drowned, yet it will not terrify others from adventuring to fea, ftill hoping for better hap: like desperate game-flers that put their fortune upon a chance at dice; whereas, if they would duly confider, the best hap at play, is, not to play at all; for though fortune give the luck to win one day, she revokes it the next with double lofs. Beware of her therefore; for the never truly favours, but flatters; the never promifes what the intends to perform ; fhe never raifes one fo high, but the plucks him down as low again; the thews herfelf not fo fickle or wavering in any thing as in accidents of war, where fuccess is uncertain. Hercules who escaped so many dangers by land and fea, at last died by the hands of his friends: Alexander ended not his days in the war, but was supposed to be basely posson'd: Julius Casar, who won fifty two battles, was killed fitting in the peaceable fenate-house.

The way to revenge one's felf of fortune, and to avoid the evil in her, is rather to fubmit to reason, than to rely on her. The Carthaginians would never judge of fortune, effect, or fuccels, but according to wildow,

i idgment, and diferetion; they would not be raifed by good fortune, or dejected by bad a but like a tree well rooted, that no wind or weather could move. For my part I think the wisdom of man is to be temperate, mild, and patient, and to take in good

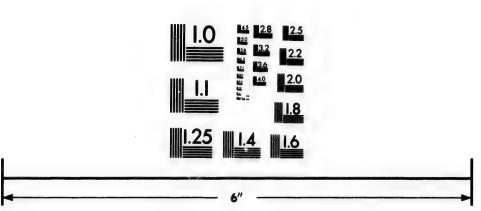

part what fortune fends.

You may fee by what is gone before, the property of malice and fortune; fo that a great commander is not to encounter with an enemy alone to shew his valour against; but the other two will have an interest in him, which wildom cannot prevent: but the fafest way in a general, is to observe the admonitions following for the best securing of himfelf and action. The first, is maturely to examine his own ability, and whether he covets the employment himfelf, or not, or that it was imposed on him by the king. If defired by himfelf, it is the more dangerous, and what errors he commits are the less excusable; and he put to rely on the favour of the prince : let it be the one or the other, his fecureft way will be humbly to crave his majefty that fuch a vice-admiral may be appointed, as is approved for his fufficiency and integrity; but not to give him that authority and command, as to derogate from his honour. And for the better conveniency and performance of the fervice, it is necessary that the viceadmiral be abourd the general, and ftill ready and at hand to advise; and for him to appoint an able man in his own ship, till they come to battle. This did Philip king of Spain to his natural brother Don John of ria, in the famous battle of Lepanto: Don John being young, valiant, and forward, it was thought convenient to temper him with a grave adviser, which was Don Lewis Reguezines, commander major of Spain. In the action in 1588. for England. the fame king employ'd the duke of Medina Sidonia for general, but gave authority to Don Diego Flores de Valdes, a man of great experience, to advise and counsel him, which proved a happiness to the duke; for the enterprize failing by the council of Valdes, as is to be feen in my first book, the blame lighted on Valdes, which he worthily deferved s and the lefs fault was found with the duke for it. I would not fay thus much, if I were not a friend and fervant to nobility, and defired their fpirits might be nourish'd in fuch brave employments; and will be ready with my best endeavours to do them all the honour that lies in my poor power.

STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE OF THE STATE

How a King should elect a General by Land or Sea, a Counsellor of State, and a Governor over his People and Provinces.

HAVING declared in my third book the office of a general by fea, and in this fecond, admonished such generals as take upon them fo weighty and important a charge, without experience first gained, to be cautious and wary before they accept of fuch a command; now shall follow the care a king ought to have in the choice of a general, either by land or fea. And because generals are commonly guided by instructions from a king, refolved on by his council of state; to which consultation generals are feldom called, till the charge of the expedition be committed to their management, I will now give my private opinion what kind of man a king should make election of for a counfellor of state, to be affilling to him with his advice; of a general, who has the rule and government of his forces and actions; and of a governor, whom he fends into feveral countries and provinces to rule over his subjects; for the prosperity of his kingdoms depends upon their fufficiency, viz. a counfellor to advife, a general to execute, and a governor to rule.

I will begin with the counfellor of flate, as the first considerable thing a prince ought to think of. A king's election must be according to the proteffion the party is bred in, as artificers tools are chosen to do their office and labour; for a king is abused, and his judgment question'd, that shall be made believe all men are capable of all places and employments, when indeed fome of them are of no more use than an ax to an auger, or a knife to a fickle; and it is as unfeemly a thing to prefer fuch a counfellor, as to prefent armour to a woman, books to a clown, or nets to a scholar. Kings therefore must have a care to whom they commit the affairs of the realm, either domestick or foreign, civil or ecclefiaftical, and not refer all to one man; for they are diffinct things, that require several counsellors, and not to be executed by him that thinks a king's favour adds knowledge to his conceived un-

Kings and princes ought to have two especial cares in the government; the one, how to rule in peace; the other, how to carry their affairs in war; both which must depend upon the choice of counsellors, who must be provident what they advise, and affured that what they say is honest, necessary, profitable, and possible. They must not quickly determine, left they repent at leiture: they must advise flowly, but exe-

derstanding.

cute fpeedily: they must not rely on the name and false word of fortune; for to great persons she is deceitful, to good men unstable, and to all unsure.

A good counfellor ought to have these properties, to be good and just; for such have weight in their words; to be virtuous and speak truth, as well in absence as in presence: they must be plain in business, and reprehend with love; they must praise the good, and admonish the bad; they ought not to speak much; and when they do, to let it be to purpose; for what they have in their mouths must be the picture of their hearts.

If their opinion be asked in point of war, they mult be cautious what to answer; for the fecurity, honour, and good hap of their master, depends on it, and the man's reputation of wildom will appear by it; which, when it shall be known to his enemy, will breed terror; for when king David had war with Absolon, he pray'd, That God would blind the understanding of his principal counsellor Achitophell, whom he more feared than the force of Absolon's host.

A counsellor cannot give a better answer to his master's demand in point of war, than Augustus Cæsar did in the like case, who said, That a war ought to be commanded by gods, justified by philosophers, maintained by princes, and executed by wise castains, and ouragious soldiers. And moreover he advised, That neither battle nor war be undertaken, unless there evidently appear more bope of gain than sear of danger. He compares it to him that angles with a golden hook, which if it be snatched away, the fish that is taken cannot countervail the

Cafar would not fo much rely upon himfelf, as upon the opinion of Virgil, how a commonwealth should be best governed; who answered, If wife men bold the helm, and good men be feated in place over the bad; if the best men bave due benour, and the rest be not injuriously dealt with; if judges and men in authority will not be led by malice, friendship, anger, or love: For nothing ruins commonwealths but hypocritical and covetous counsellors, that support their deceitful credit, and make a prince believe he cannot err.

But a wife king will foon know fuch a counfellor, by observing his words, which will discover his intentions, and lay open his conditions; and a just king will reward him that shall thus fallsy seduce and cor-

now fuch a ords, which and lay open will reward e and corrupt, rupt, as in reason he should be rewarded that poilons a publick fountain or spring, whereof all people drink; for both king and subject have part of this pernicious counfel.

A king therefore ought to be careful of three things; the first of himself, the second of his subjects, and the third of his counsellors, officers and servants; for Cafur in his time complained of the miseries of princes, saying, They are subject to perfidiousless, to imaginations, to detestable treation, deceiful conspiracies, and destructive poisons; some deceive, and others stater and betray them; so that they are made the subject of all discourse.

For the honour of the fex, I will mention Zenobia, a queen of Alia, and will make her the miftrefs of counfel, for counfellors to imitate. They write of her, that the was conftant in her enterprizes, faithful in her words, liberal and juft, fevere in punishment, discrete in speech, grave in determining, and secret in her doings.

The indifferent man to make a counfelfor to a prince, is neither to be too old, nor too young; for youth flews lightness; and if a prince take absolute power to himself, it shews a bold rashness, and will be subject to be feduced by flattering fervants, that will make his will their authority; but with this caution, That it be done with honour, duty, and reverence to their mafters, and fecurity to themfelves; for it is not the name of a counfellor that gives repatation, but the due execution of his place; he must be an equal distributor of justice to all people alike in the commonwealth, left, in comparison of land, by labouring to make one part too fertile, he leave the other part barren.

A counfellor ought to be wife, and cautious withal, what advice he gives: For there are two principal things that make a prince beloved; the one, is defending his people against oppression; the other, to have peace and alliance with those countries and princes that afford them trade and commerce, which war feldom produces; and yet I confess, that war well made, produces a more perfect and firm peace; and the best time to make fuch a war is in peace, that moneys may be best raised. And though all war of it felf is unjust, yet a good cause may make it lawful, but not when it is out of humour, out of fpleen, or out of private respects; and yet let it come when it will, they cannot propose any war to a prince, but it is better to accept of mean conditions of peace than endure the fortune of it; for Aristotle tays, Fortune shews berself most favourable where there is least hope.

The Athenians hearing the council was dishonest which Athistones gave Themosto-

cles, though profitable, with one voice cried, If it be not just, it cannot be commodious nor commendable: whereupon Them!-focles commanded, it should be no more talked of. Let this be a caveat to counfellors, that they either hold their peace, or speak things that are probable and honourable to kings and kingdoms, and take it for a maxim, That peace is the nursery for bappiness.

The folidest advice a counsellor can give his mafter, is, to win the affections of his fubjects; for then he will have their hands, their hearts, and purfes, which is the marrow and finews of war; and yet, as I have faid, all things confidered, it is better to avoid war; for the nature of it is to bring one into bondage, and peace makes him free; the one is a tyrant's will, the other a prince's decree : but if the necessity of a war cannot be avoided, the first thing a prince must provide is plenty of money; it will encourage foldiers, terrify enemies, and imbolden alliances, when they shall see no likelihood of want thereof to go forward with their enterprizes. The next confideration, is to have a grave confultation for the profecution of the war, not at once, but often; but let them beware they rely not upon paffionate advisers; for choler is an enemy to counfel, and never to be allowed of but in extremity, when desperateness is the last and best remedy and help; for great actions ought to be refolved on at leafure, and executed with speed; and it is better to escape with judgment, than to go forward with courage; and to use victory wifely, than to get it happily. The victory Hannibal obtained was attributed to the direction and advice of his council; and many who are brave in the field, want maturity to direct themselves or others; which flews all men are born, as well in war as other faculties, to support one another.

When princes are provided of counfel, money, and all other things for the war, let not them nor their generals prefume upon their multitudes, fitrength, or power of men; for God orders battle, and beflows the victory when he pleafes to fitretch forth his arm, which is of greater force than all princes, powers, and armies: but commonly he does not use to do it but in defence of equity; for generally the chance of war is like a cast at dice, either good or bad, and may be spoiled by overlight, or mended by

Now shall follow the sufficiency, and next the election a prince should make of a counfellor; for many men sty with the wings of others, and seem outwardly to be what inwardly they are not; and if he hearken to the praise of others reports,

they are uncertain, because delivered out of hate or affection; for good words deceive both the wife and the foolish.

It behoves a king therefore to enquire after fuch a man's birth, education, and reputation; though I confess his birth is the least exception; for all ages preser virtue before blood: Caius Marius, a great captain, was born of base parentage; the emperor Valentinian was the fon of a ropemaker, and divers others little better.

The philosophers did not account the lives of men by their degrees and callings, but by the good they did, and the virtuous name they held. Silence is a great light to discover the discretion of a counsellor; for haftiness, anger, and wrath, are the properties of a fool; the empty veffel makes the greatest found; and the least wits are the greatest talkers: but the greatest folly is to rely too much on a man's own fenfe, and to be proud when he is praifed. Learning is a great help to wildom; it makes young men fober; it is a confolation to old men; it enriches the poor, and adorns the rich: it is evil to difdain learning, but worse to impugn it; and the want of it is the worst of all; for indeed there is as great a difference between the learned and the unlearned, as betwixt the living and the dead, or a physician and his patient; though fearning can no more help a dull wit, than labour make a barren ground fertile.

There is a furer method (for a king) to chuse a counsellor, than by his birth, education, or hearfay; for a man may have all, or most of these parts, and yet want judgment, or be of a peffilent temper, that shall destroy the rest; for there are some who can give good advice, and not fol-low it; like a harp, that's pleafanter to others, than to him that plays on it; or a bay-tree, that is ever green, but without fruit. Therefore judge not of gold by the colour, no more than of a man at first fight, till you prove him: but the fureft rule for a king to try the fufficiency of a counfellor, is to examine him in private and fuddenly, and to propose to him things of the greatest importance and wisdom, for the government of a commonwealth; then to command him immediately to write his opinion to all the particulars propofed, in his own presence, not suffering him to return, or have conference with any others; which will be a furprize upon him, and the king will fee and discover his abilities, and whether he be a worthy minister for his service, or no, or commended for kindred, friendthip, bribes, faction, or other false pretences, and effeem him accordingly that commends him. And thus much for the king's knowledge, how to elect a counfellor of state.

How to elect a Governor.

THE next that follows shall be the choice of a governor a king fends to rule over his countries and provinces. Let Plato be the adviter in this point, who fays, A governor must be loved of many, and feared of all; be must endeavour to do good allions, and deceive none with words; be must be constant and pitiful; for the clemency of a governor makes a man ashamed to commit offences. Seneca fays, That clemency is a great ornament in a governor; and that mercy, which is not accompany'd with justice, is a fault reprebensible; and that justice without mercy is not justice, but cruelty.

When Augustus Casar fent his governors into feveral countries to rule, he was wont to tell them, I trust you with my bonour, and commit my justice to you, that you envy not the innocent, nor be a butcher to offenders, but that with one hand you be a belp to the good, and encourage the evil to amend: my meaning is, to fend you to be a tutor to the fatherless, a support to widows, a physician to the fick, a staff to the blind, and a father to

Alexander found the country of the Sidonians in much diforder, and the people defired a just and upright governor to rule them; which being granted, the chief of the nobility expected preferment, and to be advanced in the government; but Alexander deceived all their hopes, and appointed one Abdolonymus, whose virtues he was informed of, and who was a poor labouring man, though of regal descent.

A governor in all his actions must be fecret, pleafant, and liberal; he must sear nothing, but be ever feared; he must imitate Alexander and Adrian in justice. A man complaining to Alexander against another, he stopped his ears, faying, He must keep them for the party accused. Adrian the emperor, upon an information made to him, the accuser brought his complaint in writing; the emperor told him, It was but paper and ink, and perbaps forged; therefore wished bim to bring witnesses. A philosopher advised princes not to fend children, fools, malicious or covetous persons, or that are revengeful, to govern.

He that is appointed governor of a country, is little less than tutor of a prince's person, or instructor in his breeding; he is the pilot of his ship, the standard of his army, the keeper of his people, the guid: of his way, the treafurer of all he has; because all is put into his hands to govern. Agefilaus exhorts his deputies rather to study justice, and to govern well, than to give way to the infatiable defire of riches; for a king lofes much love by

others corrupt dealing; and as injuftice provokes delpair, fo revenge is the executioner of injuftice. An ambitious governor, who covets and affects greatness over the people he rules, is like a rat, that would make himself lord over mice; but such high minded men must know, That there is nothing so great as to tread salte greatness under soot.

Above all others, never chuse a melancholy man counfellor to a prince, governor of a country, or general of an army; for commonly they are basely minded, vain, enemies to noble thoughts, malicious, fuper-fittious, and phantaftical; as on the contrary, a fanguine complexion is witty, has a good memory and judgment, can difcourfe well, is loving, affable, loyal, liberal, and of great courage; and yet all these parts and properties are nothing without fecrecy, which is the guardian of great affairs: fecrecy was wont in antient time to be pictured as a goddess, with her hand stopping her mouth. I confess it is a difficult thing to keep counfel, and dangerous to reveal the fecrets of a king. It is an old faying, That a fecret is hard for one to keep, enough for two, and too much for three. Plato fays, Whofoever reveals his fecrets, gives away bis liberty; and a fool being fecret, is beld wife; an open man is like a clear glass, rebieb can bide nothing that is put into it. Counsel without secrecy is like an abortive, brought forth without life, that was imprisoned in the womb of secret thoughts. Secrecy is the key of the cabinet where counfel is enclosed; and the reward of fecrecy is, That it is without danger. And thus much for the election of a governor; and to proceed to my third point, which is the choice of a general for war.

How to make Choice of a General.

It is necessary that a general have these properties following; knowledge, valour, authority, fortune, and a ready wit; for the fairest tilter is not the best foldier, nor a favourite at court more fit to make a general, than a sheep to have the leading of lions.

The first man that brought war into discipline was Besorus, king of Fgypt, who made not war to conquer countries, but to spread abroad fame and renown. The person of a general is as much to be seared by his soldiers as his enemies; for too much clemency and familiarity towards his soldiers, breeds a neglect and contempt.

The Romans were ever strict and severe in their commanders; they never entertain'd foldiers they could not maintain and govern; for a great army has more weight than force: they are ill to rule, and worse to trust: neither would they entertain an army of strangers, saying, They took a wolf

by the ear; for asit was dangerous to detain them, fo it was worfe to let them go. They chose young and generous men for foldiers, that were virtuoufly inclined; they gave them an oath, not to fly from battle, or leave their stations, unless it were to take up a dart, and throw at an enemy, or to fave a friend. Alexander rather chose expert foldiers than multitudes; for brave foldiers make glorious captains, that will exchange their life for honour: they know their bodies are subject to death, but their deeds remain to the world's end: and the greatest honour a soldier can obtain, is, That a king will confess that he has gained by his merit, what he granted him out of liberality.

The qualities of a foldier must be these. To have a good heart and brave spirit; he must not be idle or ill imploy'd; he must not give nor take wrong; he must serve God, and despise the devil; he must observe the wise, and love the good; he must let the enemy see his sace, and not his back; and give God the glory of all his actions.

Valour is not all that is required in a foldier: it must be mixed with discretion and conduct; for rushness is hot in the hand, and show in the end, that will adventure without sear or hope of prevailing; for success is but a tutor of sools, as conduct proceeds from judgment. There are many things in the war which give better counsel to men, than men to things; and therefore a general ought to be no more limited than a pilot at sea, that has the conduct of a ship.

The greatest honour and esteem a captain can purchase, is to overthrow his enemy by stratagems, rather than by hazarding; by counselling, rather than by combat; and that captain who has performed any exploit by policy, enjoys more in the fame of it, than in the salary or reward given him.

Let generals, captains, and foldiers beware their war be not against their king or prince; for that is unjust, though there were provocation: for no provocation can give lawful power to begin fuch a war, and purchase the name of rebels; whose circumftances are fuch, they are followed with threats, and kept up with intreaties: they feed upon promifes, and attempt with fear; they are very fuspicious, and live upon hope; they are not content with little, nor pleafed with reward; because they leave not the king to follow the best cause, but out of hope of benefit by robbing and spoiling: and indeed a rebel knows not what he defires, nor has a feeling what hedoth; for their fury is such, as not to admit of counsel, which makes their minds full of perturbation, because they are embracers of their own will.

A a a a A

An heroical captain will oblige his enemy by good deeds, rather than by fear; for so did Leo Africanus to those of Cartbage he took prisoners, for humility and clemency are of noble extraction: a country conquer'd is better preserved by love, than force or cruelty; for a foldier ought as well to relieve the oppressed, as to overcome his enemy. It is written of Gæsar, That he never left man unrewarded, nor offence unpardoned; whereby he grew popular: He told the council of Rome, That nothing was fo glorious, nor pleafant in this world, as to pardon an injury done; and indeed no man is victorious and conqueror, but he that uses victory with clemency. The emperor Titus pardoned one that would have flain him, which got him much love and efteem amongst the Romans. Adrian treated with those men that had been his enemies before he wasemperor; which got him no less love and respect. Soliman the great Turk, called the Magnificent, reproved John Sepafius, the new-raifed king of *Hungary*, because he would not pardon the archbishop of Gran, faying, There could not be a greater felicity than to pardon our enemies; and though they should prove unthankful, yet it were better to be requited with ingratitude, than fail of the glory of fhewing This act made his actions more famercy. voured in Hungary.

Augustus Casar proclaimed twenty five thousand crowns reward to him that should apprehend Corocota, a great robber. Corocota hearing of it, went fecretly and fubmitted himself to Cæsar; which so much moved him, that he pardoned and received him into his favour. When Scipio took Carthage, he found a beautiful woman betrothed to a gentleman called Indibilis; and the being in Scipio's hands, he fent her to her parents: in recompence whereof they returned a great quantity of money; which Scifio refuted to accept of, but commanded it to be given to the young woman in dower. This courtefy fo far prevailed erron those people, that they submitted themselves to Rome. The fame temper Psinpey used to many fair ladies he took in his war against Mithridates, which wrought the fame effect. Selim the great Turk, who was so cruel that he slew his father and brother, took many beautiful ladies, whom he used honourably, and sent to their parents; which availed him much in his victories. Josephus writes, That the cove-tousness of Marcus Crassus, who robbed the temple of Jerufalem, was the cause of his punishment; he dying miserably in his army, and in the hands of his enemies. Julius, uncle to Julian the apostate, robhed the church of Antioch, and was vifibly punished; his intrails rotting out,

and worms creeping out of them, and his excrements coming out at his mouth, Alexander, to his praife, would not fuffer hurt to be done to the temples, nor any thing within them, when he facked Tyre and Thebes.

Honour is the next degree to clemency and mercy in a foldier, and nothing accounted more difhonourable in him, than breach of his promife and word given; it makes not only himfelf odious, but it leaves an everlafting flain of perfidiousness upon his nation and pofterity. I could tax some of our christian kings with this abominable vice, if I thought example would reftore them to better grace, and wipe away their old offences; for no body can seek praise by his counterfeit virtue: for same cannot profit, but shame may hurt him in the end.

A foldier must not be stained with vice ; his care must be how to think well, and how to do well; for death is a continual watchman over him. A true foldier is of so heroical a spirit, that he had rather perish in his defires, than live in base thoughts. He should not be moved with adversity, nor elevated with prosperity; for Plate fays, That a noble and brave minded man, hath more trouble to tame his heart, than to attempt great matters; and will think it more pain to floop to a flraw, than to reach to a bough ; he will fcorn to defire honour, and not to deferve it with virtue and valour, and will think it an unworthy act to have his thoughts upon base things. A philosopher fays, He dies not, who leaves a good fame; nor he lives not, who hath not a good effeem: they did not value men by their birth or age, but for their noble deeds they did. The triumphs that were fo famous at Rome, were not esteemed unless the party had done fome act of honour or renown.

I will now diftinguish betwixt such worthy foldiers as I have spoken of, and the contrary, who make others virtues their vices. The heathens had fuch regard to their oaths, that they made it death for a man to for swear himself. Hannibal gave leave to ten prisoners he took, to go to Rome, with promise to return; two of them failed, which they found afterwards to be an act of fogreat indignity, that they killed themselves. Parmenio advifed Alexander to overcome his enemies by deceit and treason; Alexander answered: If I were Parmenio I might do it; but being Alexander, he would not offer it. The phylician of king Pyrrbus, made overtures to Fabricius to poison his master, if he would reward him: but Fabricius was fo far from confenting to fo foul an act, that he discovered it to Pyrrbus, and writ to him. That it was not the custom of the Romans to overcome their

enc-

enemies by treason. Justinian the emperor being at war with the Persians, hired the Flunnes to serve him; but they fally put themselves into the pay of the Persians. Justinian inform'd the king of Persia of it; who justly commanded the Hunnes to be strangled for breaking their words, to the fhameful example of a christian king. Uladiflaus, king of Hungary, being at war with Amurat the great Turk, he swore the articles of peace made betwixt them, but falfly and perfidioufly broke it. Hereupon the battle follow'd, and Amurat took out of his bosom the articles fworn to by Uladislaus, and lifting his hands and eyes to heaven, faid, These are the conditions sworn to by the christians, which falsly they have broken; but if thou be'ft God, as the chriftians do esteem thee, revenge this falseness they have done me. He had fearcely fpoken these words, but Uladislaus was flain, the Hungarians routed, and Amurat got the victory. Here Uladiflaus perfidiously broke his faith; and though he had lived, yet he had loft all by lofing it.

But to redeem this treachery by a chriftian emperor, of more fame and worth than the latter times have fent forth, I mean Charles V. he being in the wars of Tunis in Barbary, the baker of Barbarofa his enemy, the titular king of Algiers, repair'd to him, with offer to poison his mafter with a loaf of bread of his own baking; which the emperor worthily rejected, and told him it was an act of a Turk, and not of a christian, and gave him leave to depart

like a villain as he came.

God is fo angry with unjust actions, that many times he punisheth the intentions of those that defire to commit unnatural cruelties. To instance in Charles king of Sicily, who after his subjects had rebelled, and maffacred the French at the Sicilian verpers, befieged the city of Mellina, and put it to fuch itreights, that the people begg'd mercy; but with great anger and paffion he refused it; upon which they grew so desperate, that they made choice rather to die than fubmit, and couragioufly fallied forth upon the king's army, overcame him, and became free. This rafhness made the king afterwards subject to the government of don Pedro king of Arragon.

In the like manner Lewis earl of Flanders was used at the city of Ghent; for being before it with thirty thousand men, and it being put to a great extremity and pinch, the people of Ghent craved mercy, as Meffina had done; which the earl refused, unlefs they fubmitted themselves to his mercy with ropes about their necks; but they finding his obstinacy and wilfulness so great, fix thousand of the citizens fallied out of him fly in difguife to a little cottage near Bruges; and upon this defeat, many other places revolted from him.

Had these princes had any grace, or sense of their religion they outwardly profess'd, they would have known what a father of the church had taught them, That to pardon many for the merits of one, was chriftianity; but to punish many for the fault of one, was tyranny. Out of conscience one should be more fearful to injure a poor man, than a rich; for a rich man revenges himself, as those of Ghent and Melfina did by force; the others with tears,

Let cruel and perverse natures think what they please of themselves and actions, they will find the pleasures they do to a friend; it will make him more friendly: and a courtefy done to an enemy will be a means to make him become a friend; but the ground thereof must proceed from God; for Cicero fays, That take away the piecy towards God, and you'll take away all fi-

delity and conjunction of human fociety.

To conclude this point I treat of, I think that prince most happy who has the three forts of people aforefaid to ferve him, viz. wife and grave fenators to counfel, just and upright magistrates to govern, and valiant, young, and discreet soldiers to execute: The one supports the other in convenient time, like fruit which comes not altogether, or ends altogether; fome learning, others obeying; or like antient and fage fathers, that leave their tender fons to fucceed them in their professions and virtues.

And now I will end with the imployment of the king's ships, from the year 1635. till this year 1640. wherein you have feen the cause of their imployment; for then his majesty began to have a feeling of the infolencies committed on the narrow feas; which he redreffed by those fleets aforefaid, and fince has fo quelled his neighbours, that they dare not but do reafon to his majesty's subjects; as appears by thefe particular benefits following it has produced,

The first, is an acknowledgment of his majesty's sovereignty of the seas, which of late years feemed to be questioned. The fecond, is the peaceable trade we now enjoy into the ports of Flanders, which the Hollanders were wont to forbid, though they were warranted by the articles of peace in 1604. which trade of Flanders hath turned to great profit to his majefty in cuftoms, and ten times as much to his subjects, by the commerce of that province; for I must confefs with grief, that our nation was much injured till now of late, by those base people of Holland; for they fluck not to interrupt the town, overcame the earl, and made our trade, feizing of our English barks, at the

instant they permitted ships of their own to enter the ports without impeachment; and though I have made often and fundry complaints thereof, yet no remedy could be obtained; and as I conceive, it was con-

niv'd at out of policy, which these seets aforefaid have now order'd for the liberty of the subject, and reputation of the king and country.

The next that followeth is,

How to make IV ar upon Scotland, if they follow their rebellious Courfes.

HOUGH this discourse of Scotland is fitter for the fifth book, which contains projects and stratagems of war, yet because it is an active time, and concerns the fea, which is the chief drift of my narrative, I have annexed it to those actions that are gone before, and will proceed to make war against Scotland, with most conveniency, and least expence and charge.

The proportion of his majesty's ships to be employed, I would not wish to be above three, for these reasons: the world should not think it a fervice of that importance, as to require a greater force; and to these three fhips to have an addition of ten or twelve colliers, of two or three hundred tons burden, that trade to Newcajtle.

It is not fit for above three ships of his majesty's to be so far from the narrow seas, Fran: Holland fronting upon us, which ps, nor readiness to arm to sea, they should intend against us; wha but mall prevent any fuch defign of theirs, when our ships shall appear at fea upon our own coaft.

In the colliers ships aforefaid, to transport a regiment of fourteen or fifteen hundred foldiers; and to ease the charge, to allow every thip but thirty feafaring men, which will not amount to the third part of charge of victuals and men, and yet do the fame fervice as fo many of the king's ships would perform.

Besides the colliers aforesaid, I would wish that as many fisher barks may be preffed, to arm them with fmall guns, and every man to have his musket and pike, and to be furnished with all other provisions, as falt, and hooks to fifh, that when they are not otherwise imploy'd, they may continue their fishing, and supply the army, both by sea and land: we shall find these veffels of great importance, as well to fend from port to port upon any occasion, as to transport our men from one shore to an-

At our first arrival, that we have care to poffefs and fortify very ftrongly fome town near the fea, on the north fide, and the fame on the fouth and Lowdon fide, and to put into them a fufficient garrison out of the fifteen hundred men aforefaid, and the rest of the soldiers to keep as a running camp to forage the country; for by help of the fishing vessels aforefaid, they may be speedily transported from the north side to the fouth, or from the fouth to the north, and havock and fpoil the country as they lift; and the two towns possessed and fortified, will ferve them for a retreat; and the country of Scotland thereabouts will be forced to maintain four thousand men continually for its defence; two thousand on the one fide, and two thousand on the other; for the Frith fo divides them, that one cannot fuccour another under an hundred miles march, by the brilge of Sterling.

Befides, these towns being fortified and made ftrong, will ferve fuch Scots for places of rendezvous, as shall fly from the covenanters, and fubmit themselves to his majesty's obedience; which no doubt many will do, if the former proclamation be published, which his majesty set forth when he was in Scotland; for all tenants to leave their landlords upon the condition expreffed in that proclamation; only I would have this added to it, That whofoever shall thus fly, bring with them their arms to the places of rendezvous, where they fhall receive ready money for fuch arms as they shall bring, to the attermost value: and this will be a ready way and means to difarm great part of the rebels.

The next care must be to supply the army with corn; for the boats will be of great help to fuccour them with fifh, the corn to be baked into bifcuit, either in Ilay Island, or at Berwick, and thence fent to the army; which for want of ovens, mills, and perhaps of wood to bake it, cannot be

fo well furnished with bread.

How to carry the Action at Sea with least Expence to his Majesty.

MPRIMIS, To take away the ancient abuse of pursers, commonly known, whereby neither king nor subject shall be wronged: this I will make apparent, when there is occasion to treat of it by the council of war.

Item, Whereas every four men are meffed with equal proportion of victuals in the king's fervice at fea, we have often uled in the queen's time, in our fouthern expeditions, to make our victuals go the further, to bring five men to the allowance of Book II

jesty.

n are meflictuals in often ufed hern expeo the turlowance of four four, and fo we have got a week in every month.

Rem, The fame course we may now take, and with more content to the company; for in those days, and those voyages of the queen's, we could never be supplied with victuals, no, not so much as water, till our return; as here we shall have plenty of tish and water.

liem, That one of the best colliers ships be appointed for the officers of the ordnance, to carry such provisions as properly belong to that office, which will nothing hinder the transportation of such foldiers as the carries.

Item, To carry in her ten or twelve culverins and demy culverins, to fortify the island of Eskiffe, which is the guard and defence of the harbour of Leib.

hem, Befidee plenty of all kind of ammunition, that they carry a thousand arms to supply the king's party, if there be occa-

fion; as also good store of seasoned deal boards, spikes, all manner of iron tools for carpenters and smiths; provision for pioneers; and every pioneer to have a pike-staff to lie by him, whillt he is at work, that he may take himself to it, if he be afficied by an enemy; to carry good store of fowlers, as of great importance many ways; to carry twenty pitched pots of iron, with all kind of ingredients, to be used in a stratagem to set on fire their coal-pits; to be careful that the mould for their bullets do fit the bore of their musket.

liem, Befides the spoil the English soldiers shall make in the country, that they be careful to defroy their corn, as the next way utterly to ruin them; for befides that they will take away their bread, they will utterly defroy their straw, which is the food of their cattle and horses; for hay they have none.

How to provide for the West Part of Scotland.

THERE must be as great a provision made for the west part of Scotland; as for the east, I have spoken of: and how to do it with the least charge, and most conveniency, I will here set down.

Imprimis, To turnish three ships of an hundred tons each; and to be provided and fitted in Barnstable in Devonshire, with forty mariners in each ship; we shall save thereby five hundred miles failing, by furnishing them at Barnstable, or that part of Devonshire, or Cornwall, and not at London; besides the shift of three several winds, as from Barnstable, a southerly, westerly, or an easterly wind will carry us directly to Ireland, or opposite to Ireland; to that there will be much time gotten, and great expence saved.

Item, There must be the same provision made of fisher-boats, corn, salt, arms, and all other necessaries, as is set down for the east part of Scotland.

liem, To command, upon pain of death, that there be no manner of trade betwixt Ireland and Scotland, or betwixt the Isle of Man, or any other place whatsoever and Scotland.

Rem, That the three ships and boats aforefaid do seize upon all barks and vessels whatfoever, great and small, on that western side of Scotland, and carry them into the ports of Ireland, there to put them safe ashore, taking out of them their fails, masts, ropes, rudders, that they may not steal, or be stolen away; and if his majesty have occasion to transport an army from Ireland to Scotland, their ships and boats will be able to do it, which otherwise on a sudden all Ireland cannot furnish.

Item, That a different gentleman be cho-Vol. III.

fen to command this action to the west part of Scotland, and so to order things, that there be one ship in a port of Ireland, and another in a harbour of Scotland, to send and receive intelligence of the state of the two kingdoms, and what help and affiftance is required from one to another.

Hem, That a four royal be built in the island of Arran; and such a place to be chosen where the water and channel is deepest for ships to ride and shoat: this fort will be able to defend such ships of ours, as we shall imploy on that coast, if it happen that France, or any other nation, shall give the Scots affistance by sea.

Item, To make the castle of Dunbarton impregnable, which may be easily done; and there to keep a magazine for all provisions of war. Dunbarton is so seated, that it keeps all the northern parts of Scotland in awe; and that Frith of Arran, where it lies, goes as far to the eastward as Glascow, and wettward to the cape or mull of Cantire; so that betwist Glascow and Cantire there will be no passage over the water, having no provision of boats.

And from Glascow to Sterling is but ten or twelve miles, from whence the river runs into the eaft Frith, and so into the sa; in which space likewise there is no passage for want of boats and bridges; infomuch, that we shall have but ten or twelve miles to fortify, viz. from Glascow to Sterling, which if we do, we secure the south part of Scotland to England from any incursions the northern parts or highlanders can make against either of us; and so we shall pale them in their own bounds and country, where it is not fit for civil men to live.

Bbbb

Thi

This being done, if his majesty please, he may join that fouthern part of Scotland with England, and make it but one entire kingdom, allowing the inhabitants the fame privilege the English enjoy: and this is no more than has been in former times; for fome while Northumberland and Cumberland belong'd to Scotland, and fometime to

England.
If his majefty shall please to do it, and make himself absolute master of Scotland, let him raze the castles and fortifications of Edinburgh; for we may fee by example of all ages, that the castle of Edinburgh is the place (in all combustions) that either king, rebels, or foreign enemies covet to take; for whofoever possesses it, is not so quickly or eafily beaten out of it; for, indeed, the castle is the defence of the whole country,

being supply'd with victuals.

And instead of Edinburgh, which is the fupreme city, and now made the head of juffice, whither all men refort, as the only fpring that waters the rest of the land within the kingdom, I would wish his majesty did fortify, ftrengthen, and make impregnable the town of Leith, and there to fettle the feat of justice, with all other privileges Edinburgh enjoys, referring it to the choice of the inhabitants of Edinburgh, whether they will make their dwelling where they do, or remove to Leith, where they shall enjoy the fame liberties they did at Edin-

burgh.
His majefty may do it out of these refpects; Leith is a maritime town, and will fave a great labour and charge in carrying and conveying their merchandize to Edinburgh, which no man but will find a

conveniency in.

Leith is a fea town whither ships refort, and mariners make their dwellings; and the Trinity-House there settled; and lies more convenient for transportation and importation, it being the port-town of Edinburgh, and in time of war may cut off all provifions betwirt the fea and Edinburgh, and

bring Edinburgh to the merry of it.

From Leith to Murro-Frith, and from Murro-Frith to the islands of Orkney, there is never a harbour in that part of Scotland that will entertain any ship of great burden; infomuch, that if his majesty fortify the town of Leith, and the islands of Inskiffe, it will fecure the whole kingdom of Scotland; for by fea no enemy can attempt it. and by land we shall be provided to defend By famine an enemy can have no

hope to force them to yield, because we shall supply them by sea; if the people within the town prove mutinous and rebel. lious, with our ordnance out of fhips, we shall be able to beat their houses about their ears, and make them fubmit their lives and goods to our difpofal. As I advite the castle of Edinburgh to be absolutely razed. fo would I in like manner wish, that all the caftles in Scotland were fo terved, except Leith and Inskiffe, as aforefaid, Dunbarton, the new erected caftle in the ifland of Arran; and, if there be need, to continue fortified the two towns, the one of Lowden fide, and the other on Fife fide. These places excented, it were good there were a law enacted, That it should not be lawful for any one piece of ordnance to remain in Scotland, under any pretence whatfoever; then shall the fortifications aforefaid be without danger, either by siege, or otherwise; and of strength sufficient to defend chemselves against all enemies, domestick or foreign, especially when the sea lies open to us to be relieved with fifh or food, and in our power to forbid others to take benefit of the

For the northern part of Scotland, (which I have paled out from the reft of the country, as unworthy to be reckon'd with thele fouthern parts, both in respect of the foil, as also for the brutishness of the people,) I wish considering their qualifications, that they may be only taught fo much civility and breeding, as to acknowledge his majelty the true fovereign king over them, without imposing any kind of tax on them; for the country cannot afford it. And because their natures and dispositions are turbulent, and never free from quarrels and tumults among themselves, I would wish that they should be encouraged in that factious way with one another, that their thoughts may be employ'd otherwise than in plotting and contriving mischief against the fouthern and civil part of Scotland; this would in time either reduce them to civility, or by divisions quite extirpate them.

This western part of Scotland, I have treated of, is the most dangerous place of all the kingdom to receive relief out of France by shipping; and the more dangerous, because from many parts of France, as namely Brest, Rochel, and all that coast thereabouts, one wind will carry them out of their harbours, without ever striking fail, till they arrive in that part of Scotland.

An Admonition to Gentlemen to beware how they engage in Sea Voyages, or give Ear to Projectors that put them upon fuch Actions.

AN for hope of gain is apt to be led into many inconveniencies, when he has an opinion of the wifdom or honefty of him that periuades y and this no where appears plainer than in fea adventures, into which fuch impoltors and cheats have drawn gentlemen, to the ruin of themselves and posterity.

I know fome who have perfuaded gentlemen, that the *Indies* afforded nothing but gold, and that for fetching, and that they tilled their own purfes with gold; and those gentlemen ran headlong to deitruction, without giving ear to advice, or believing any friend that advised them to the contrary.

But that such gentlemen may see their militake, I will touch upon the state of the West India trade, by which they may perceive what they are to expect by robbing at sea, for I have already made out what they are to get by pillaging ashore; and I wish this may reme to the hands of those who are in danger of being drawn in by such unhappy projectors.

fuch unhappy projectors.

He that will undertake a voyage, either with fleet, or private fhips, must consider, that in the Weft Indies he is out of all hopes of carracks, ships from Guinea, or Brafil, and all other trade, and must expect only such as are bound thither, or trade from place to place.

They must also confider, their ships will soon grow foul, and not be able to fetch up those that have been lately careen'd. Fires made associately earning of an enemy being on the coast, and so prevent him. And, lastly, the wind and current sets with that violence and constancy, that it is impossible to keep to windward of any port, if we keep the sea, or to recover a heighth, if we are put to leeward of it.

Therefore the error of our planters in Virginia and Bevnudas shall appear, who were drawn principally into those enterprizes, in hopes to annoy the Spaniards trade in the Well Indies, not knowing that the current sets with such force from cape

Florida to the northward, that it is impossible to bear it up.

They were fo ignorant as not to know, that if they go from those places to the West Indies, they must first setch the Canaries for a wind, which is a thousand leagues from them, and but five hundred from England, so that they are five hundred leagues nearer the West Indies going out of England, than out of Virginia.

Nor do they confider, that the water does not rife fo much in Virginia, as to grave their fhips; or the small conveniency that place yields to careen them; or the sudden gusts that come from the land, and will endanger them in their careening.

But suppose Virginia to be nearer, and no impediment for our ships to fail from thence to the Indies, I would ask, what possibility there is, rather to meet a seet in the open seas there, where I have shewn the force of wind and current will put them to leeward, than on the coast of Spain, whither they are bound, and must repair, and where there are capes and head-lands, which they must make before they put into the shore or ports?

Reason will make any one confess, it is more likely to find a man one looks for at the door he must certainly go in at, than on a wild heath, where he has many ways to go by; and so it is with ships, it being better to wait for them at a cape or headland, which they must make, than in the spacious and open sea. And thus much for this point.

But feeing I have run over the cafualties or uncertainties, or rather the impossibilities to annoy the Spaniards in the Indies, I will shew the inconstancy of sea affairs, by precedents of the English sleets that were employ'd against Spain in time of war, wherein the wealth taken in the voyages will appear; and by it let us judge, what profit we are to expect by such actions, which are governed by unconstant winds and fortune.

TO ALL

Captains of Ships, Masters, Pilots, Mariners, and Common Sailors.

N all reason the dedicating of this third book is more proper and due to you, than any of the others to whom they are commended: forasmuch as what is contained in them, you and your profession are the principallest actors and authors of, as the wheel from whence the rest receives their motion.

For what would it avail that all boughs of trees were oaks, or every flalk of hemp a fathom of cable, or every creature a perfect artift, to frame and build a fhip? what were all these more than to the eye, were it not for you, your art and skill, to condust and guide her? She were like a sumptuous costly palace nobly surnished, and no body to inhabit in it; or like a house in Albens, Laertius writes of, in which all that were born proved sols; and another, in the field of Mars near Rome, whose owners ever died studenly; be high which were commanded, the one by the senators of Albens, the other by the empero Mark Antbony, not only to be pulled down, but the timber to be burn!

How should we know that France, Italy, and Spain, produced wine out of the grape, or England other commodities not heard of by them? how should we know the Indies, and wealth therein, or the means to receive it from thence, were it not for your skill and labour? how should we know that all nations differ from us in language, or one from another, but by your navigations? all islands, how little soever, would be in the error of the Chineses, who thought there was no other world nor people but their own, till the Portuguese, by their travels and mathematical art and learning, made it apparent to them. All these secrets must be attributed to your art, adventures, and painful discoveries.

What fubjects can make their king and country more happy than you, by the oftenfive and defentive fervices you may do them at fea? what wealth is brought in or carried out of the kingdom, but must pass through your hands? what honour has England of late years gained, and all by your adventures and valour, which has made you excellent above all other nations? Who knows not that your parts and profession deferve favour of the state? who knows not that the whole kingdom has use for you? and that there is a necessity to nourish you?

But whether it be the fea that works contrary effects to the land, or whether it be liberty you feel afhore, after you have been penned up in fhips, like birds in a cage, or untamed horfes, when they are let lofe; certain it is, neither birds nor horfes can shew more extravagant lewdness, more disorder of life, and less fear of God, than your carriage discovers when you come ashore, and cast off the command your fuperior officers had over you; for though in desperate perils at sea, you promise to your sidves amendment of life, and perhaps yow never to try that kind of fortune more, as women in labour do, never to have to do with their husbands; yet when they are past, they are stoon forgot of both, and you return to your old accustomed yomit, without tends of promise, or danger escaped, but rather improve in your wicked courses.

The that could as ealily reduce the common failor to civility and good behaviour afhore, as to be under the government of a different commander at fea, were more than man; for the nature of failors is to fland in more awe of a mean officer at fea, whom they love and fear, than of a great person on land, whom they neither fear nor love; and therefore the way to reduce them to goodness must proceed from the commanders that govern them; their words must be as well mixed with honey as gall; they Vol. Ill

The EPISTLE.

must tell truth, and not please with flattery; for a man cannot be both a friend and a flatterer.

This advising office is only fit for men that have been bred and trained up in the school of looseness and liberty, and recalled by years and grace to civility: they must teach them to embrace the good, and eschew the evil, and must use the terror of God's justice, and the reward of repentance: they must shew the hate God bears to wickedness, to lying tongues, to hands that shed innocent blood, and a heart that devises mischies: and on the contrary, the love God has for virtue and goodness, advising them not only to be good, but to take away the occasion of being evil. This will be the hope to make them leave sinning, when they shall be assumed and afraid to commit in; for Seneca says, That the clemency of a governor makes many assumed to offer offence.

But now let me apply my self to you, the men of command and authority over these untaught and untamed creatures, to whom this charge is committed. Beware that your counsel be good, and that you sollow it your selves; if not, you are like a harp, that sounds pleasantly to others, and enjoys no part it self; or to Cripianus, a servant of Trajan the emperor, whose words were sweet and effectual to persuade, but he never acted any thing but what was worthy of reprehension and punishment. Remember that example is of greater force than persuasion with many men; and when these men shall fee your life concur with your admonitions, it will be the strongest force and motive for their conversion: for indeed he is not worthy to live, that takes not care to live well; and Cicero says, He dies not, who leaves a good same; and he lives not, that bath an ill reputation.

OOK

BOOK III.

Containing the Office of the Lord High Admiral of England, and all Ministers and Inferior Officers under him, and what belongs to each Man's Office; with many other Particulars to that Purpose.

The Office of the Admiralty of England.

HE master of the office is the lord high admiral of England, who holds his court of justice for trials of all fea causes for life and goods, being affifted by the doctor of the civil law under him, intitled, the judge of the admiralty, a marshal, and other inferior ministers of justice, proceeding in all affairs according to the civil law. advocates, proctors, civilians, in all great causes and trials of pirates, especially the lieutenant of the admiralty of England, and the four principal officers of the navy, were wont to fit on the bench as affiftants to the judges; which officers of the navy used to commit fuch offenders as imbezzeled the king's goods, or had otherwise misbehaved themselves, to the prison belonging to the court, to receive their trial there, unless in the mean time they were released by the lord admiral.

Every lord admiral substitutes his deputy or vice-admiral in every maritime shire

in England, except in fuch places where the lords of manors challenge a right formerly granted by the kings of England, as will appear by their grants.

Theie vice-admirals are carefully to look that all things be performed that are ordained by the lord admiral, and yearly to keep a court in their feveral countries, where every man's complaint may be publickly heard.

Another branch of this office confifts merely in the government of his majefty's navy, which fince the beginning of queen Elizabeth's time has been of great confequence, and has diversfeed-officers paid out of the receipt of his majefty's exchequer, being patentees under the great feal of England for performance of the fame, (befides many other inferior officers, who hold their places by the lord admiral's warrant only,) who are the prefent fubject of this difcourfe. They are as follows.

It now remains to give an account, by way of collection out of former proceedings and cuftoms of this office, what may be the general and particular duties of these officers in the execution of their places for his majefty's service.

And, first, for the lord high admiral himfelf, who is great master and comptroller of the office, I neither can, nor will presume to intermeddle therewith, being sufficiently known by the extent of his letters patents, and former precedents.

The lieutenant of the admiralty is a place not extended to any late precedents, to manifelt itself, and therefore omitted.

The four principal officers of the navy, and of late times the committioners that executed their places, are the conduit pipes to whom the lord admiral properly directs all his commands for his majetty's fervice, and from whom it defeends to all other inferior officers and ministers under them, whatfoever.

First, their general duties are, as I conceive, to attend the lord admiral, as men for their experience and reputation fit to advise his lordship in all causes and confultations for the advancement, furtherance, and managing such undertakings as they are commanded by his majesty and the state, as well for service of his highness's ships at fea, as for the building and maintaining them at home; and likewise to advise his lordship, from time to time, of all occurrences tending to the ordering and managing of his majesty's service, whatsoever, for the naw.

for the navy.

Secondly, They are to observe weekly meetings, or oftener, if the service require it, at London, as well to attend the execution and direction of such warrants as shall come from the lord admiral, as also for the ordering of all business furthering his majesty's Vol. III.

fervice; and to give fatisfaction to the fubject for all materials delivered, or workmanship performed by them for his majefty's use.

Thirdly, They are jointly to agree with each merchant, from whom any great provision or bargain of cordage, hemp, timber, planks, mafts, great anchors, and all forts of materials, which are bought for the price, at that prefent, ordinary fold betwixt man and man; and thereupon to make them bills or contracts for the fame, according to the course of the office, which is the debt from the king, being first vouch'd from the inferior ministers, in the proper places for the quantity and quality.

Fourthly, they are to use the uttermost to procure moneys for the maintaining all his majefty's ships, pinnaces, and other veffels, and boats useful, in compleat equipage, building, and furniture; and as any of their number happens to decay or perish, to supply them with new, and repair their wants.

Fifthly, They are to proportion a convenient magazine of timber, feafon'd planks, great mafts, and all forts of outlandish commodities, as pitch, tar, rosin, hemp, anchors, fails, canvas, and cordage for twice moorings, and once fetting forth to sea all his majesty's ships, and to see the same supply'd at all times, to surnish his majesty's stores, and whatsoever is wanting, to acquaint my lord admiral, and never to cease labouring to the state for money, till those main provisions be furnished; which cannot be had in the kingdom at all times, nor sufficient quantity made ready, when the materials are not had, in many months.

Sixthly, They are, as time and bufinefa can permit, to be present themselves, or when more important business hinders them, their clerks, at all payments of all forts of workmen and labourers, to the end they may be witnesses to the real payments made; and that his majesty be not abused by the employment of more numbers than is necesfary for works on fhore, nor for longer time than the fervice requires; nor that boys and young prentices be paid fo much per diem as able workmen. Likewife at iea, and in harbour, to fee that no more men be paid than have truly ferv'd; and in case they either find clerks of the check, or purfers faulty in their places, in keeping their books ill, to punish them as their offences deferve.

Seventhly, They are to be careful that no workmen or labourers be received or entered into his majetty's pay, for any words to be done by the day, till there be materials first in store, whereupon to employ them, nor to use more than is necessary, nor to continue them longer than the stuff lasts

Dddd

to fet them on work; wherein if the mafter shipwright, or any other mafter workman, be found faulty by conniving, to suspend such from his place, as an unworthy member, till my lord admiral be acquainted with the offence.

Eighthly, They ought to be very careful in the choice of interiour ministers, as any happen to die off, recommending to the lord admiral able experienced men, according to the places; the want whereof has bred much detriment to his majesty's service

both by fea and land.

Ninthly, They are to obey my lord admiral's warrant, as well for direction of his majefty's fervice in all things concerning this office, as also for extraordinary payments according to usual precedents; as by virtue of his lordship's warrant, to direct theirs to the subordinate ministers under them, for the execution of so much as concerns their particular places respectively.

ly.
Tenthly, They are to overfee all inferiour officers and minifters; and as often as they can, by themfelves, or their authoriz'd fubflitutes, to mufter all men that are employ'd by fea or land, and paid damages out of this office, and to check all defaults they find, by muftering for his majef-

ty's best advantage.

Eleventhly, They ought to foresee that seasonable payment be made to all men employ'd in his majesty's service, and not to keep them nor ships longer in pay than the service requires; and to this end, they should use all frugal courses to save his majesty's purse.

Twelfthly, They should make quarterly payments to the ordinary, and half-yearly to the ships on the narrow seas, as has been accustom'd; for want of which, his majesty's charge is much increased, and the sub-

ject discourag'd.

Thirteenthly, They ought to take a yearly account of the victuals of the navy, comparing the pay-books in the treafurer's office with the warrant for victuals; and according to the muster of the men ferving, to allow of the iffues, with such accidental wastes, as by ancient precedent hath been usual, and no more.

Fourteenthly, They ought to fign eftimates for money, as well for the ordinary fervice, as extraordinary, to the end the lord treafurer may fee the charge his majefty is at, and continuing the fame, that the payments may be feafonably provided.

Fifteenthly, They ought to take account of all ftore-keepers once every year, at the leaft, to the end his majefty may fee what provision he has in ftore, and what has been expended that present year.

Sixteenthly, They ought to appoint a

furveyor at the feafon of the year, to mark out and fell timber for his majefly's fervice, for fupply of flore; and to cause the sense to be converted into moulded and meet timber, and cut into several forts of planks most useful for his majefly; and to see that the summer be not let stip for land and sea carriage of the same into his majefly's stores.

Seventeenthly, They ought upon my lord admiral's warrant, requiring the preparations of any ships or fleets for the fea, immediately to make warrant from themfelves to the victuallers, to make a due proportion of fea victuals, according to the fervice and number of men; and in the mean time for harbour and victuals for fo many failors as shall be employ'd to rig the ships, to be delivered by petty warrant to any one offi-cer, or to the clerk of the check, as will appear upon muster to be present in the work : likewife to the mafter attendants, the mafter shipwrights, clerk of the check and furvey, to take notice of the fervice in hand, and to require a prefent certificate from them of all wants to perfect the halls, rigging, tackling, and furniture of those ships appointed to be made ready for the feas; and thereupon to take immediate order likewife for the providing of all materials wanting, and appoint workmen and failors to go in hand with them with all expedi-

Eighteenthly, That one of the three officers (not the treasurer, in regard of his continual attendance for moneys at London) do, in their turns, quarterly reside at Chabam, for the expedition and oversight of the works there, and for providing of necessis, and directing of all the inferior officers; and the rather to prevent the imbezzelling of the king's goods; as it was in the time of the late commissioner's government, who had always one of themselves, or an able assistant dwelling at Chatham, to order the business there, no doubt, for his majesty's great advantage; the neglecting whereof is no small damage to his ma-

Particular Duties.

The Treasurer.

HE is to make estimates of the charge of all his majesty's navy, both ordinary and extraordinary, and to present them seasonably, being sign'd by the lord admiral and the other principal officers, to the lord treasurer of England, who allowing the same, does of course give order to the clerk of the signet, to draw a bill for the king's signature, warranting the payment of so much money as the estimate amounts

chequents and longer in the their and firmone ject for to pany like energy in the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the total and the tota

to out of the receipt of his majesty's exchequer, which he is to iffue to those several heads for which it has been demanded; and in case the ships happen to continue longer in employment than was mention'd in the first, then to make their estimates for their furplufies, as long as the fervice endures, and follicite for privy-feals and orders for money till it be received, to fatisfy the fubject for materials to be bought before-hand, to furnish the ships and wages to the company at their return. He is to make a like estimate of building of new ships, or repairing the old; likewise for the repair of his majefty's dry docks and ftore-houses; and for a magazine of stores, when occasion

He is to take due care to get money feafonably to pay all workmen, called to any extraordinary works in his majefty's yards, or for reparations aboard the fhips, and to clear them as foon as the works are ended; likewife for payment of fhips companies returning from fea, that his majefty's charge of victuals and wages be not longer continued than the neceffity of the fervice re

He is to take care to pay the ordinary of the navy every quarter, and the ships serving on the coasts every six months, (viz.) March and September.

He is to give convenient notice to the officers, who are vouchers of his account, of all pays to be made, to the end they may call for books of the clerks of the check, and purfers, for their clerks to take notice of every general and particular pay to workmen and feamen, taking the officers hands to the books of the total of the abstract, or

number of men paid. He ought within fix months next after the month of *December*, every year, to make up his former accounts; which being fairly ingroffed in a larger book, he is to procure the other officers hands to every page thereof, cancelling the particular bills or books first paid by each, then to deliver the same with a prefs certificate from the auditor of the receipts of the exchequer, to the auditor of the preft, and after follicit them to examine it, and procure a declaration under the lord treasurer and chancellor of the exchequer, one of the barons and auditors hands, within fix months more, to the end it may appear how he stands charg'd on his accounts to the king for the money he has

He is to keep his office conftantly at Deptford or London, that the fubjects may certainly know where to find him, to receive their moneys for provifions delivered to his majefty's ufe, or for wages due, upon lawful demands, Contra Rotulator.

He is to keep counter-books with the treafurer of all manner of payments; and likewife a ledger-book written verbatim, as the book delivered to the auditors for every year's account, to the end he may upon all occasions witness as well the payments made by the treasurer, and the state of his account with the king, as also to fatisfy the other officers at large of such precedents and payments as past by his and their vouchers in the execution of his majesty's service.

He is likewife to keep like counter-books with the furveyor of marine victuals, and more efpecially than any of the other officers. examine and keep a note of the remainder of victuals return'd by purfers at the end of their voyages, and to charge it on account for the king on the victualler.

SURVEYOR: The first Part of his Duty.

He ought to furvey the quantity and quality of all manner of provifions deliver'd for the use of his majesty's ships or navy, to the end he may as well satisfy himself as his fellow-officers at their meeting, what prizes are fitting to allow for that which is good; as also to see that no bad and unserviceable ware be thrust on the king for the merchants advantage.

He is once a year to take survey of all the hulls of all his majesty's ships, pinnaces, and boats, remaining in harbour at Chalbam, Depsford, Woolcoich, Portsmouth; and at the return of any ship from sea, to view and examine what defects happen'd in the hull or masts, and to note them down particularly under the title of every ship; wherein the king's master shipwright, and his affistants, with the master carpenter, and the master attendants, ought to affist and testify, under his and their hands, in what condition every ship was, expressing their wants at the time the survey was taken

He ought likewise every year to survey the defects of reparations of all his majesty's storehouses and wharfs, calling to affist him such master workmen as are experienced, to view the same; and then to add in the next estimate a due valuation of materials and workmanship that must be us'd and employ'd to repair the same.

He ought likewife, after the launching of every ship new built or repaired in any of his majesty's dry docks, to take an exact furvey of the quantity and quality of all forts of timber, planks, boards, trumels, masts, nails, and other iron works employ'd

about

about the faid fhips, remaining in flore; to the end it may appear upon account fince the laft general furvey, before the fhip came, into the dock, how much of each fort of provision has been expended on her.

. The fecond Part of bis Duty.

He ought also once a year to take a general survey of all the new cordage, fails, canvas, boats, masts, and all other forts of materials, whatsoever, under the charge of the several store-keepers in every of his majesty's yards and ships that lie long in harbour; and thereupon to examine what has been supplied since the former survey, and ballance the receipts and issues in exact form of account; to take the store-keepers hands feverally to the surveyors books, charging themselves with what remains.

He, or the clerk of the furvey allowed under him, ought, at the return of every hip from fea, with the affiftance of fuch matter attendants as are prefent at the place, or may be had, to take an exact furvey of all the rigging, ground-tackle, and furniture belonging to her, noting under every particular dimension their prefent quality, to the end he may shortly after account with the boatswain and carpenter of that thip for their expences in that voyage, and be ready against their next going out to furnith her wants, that so reasonable demands may be made to supply her in compleat equipage for further service.

He is likewise to take the yearly survey of all mooring anchors, other straggling anchors lying spare at the river side, or in any of his majefty's yards not formerly charged: he ought, in case it fortune that any of the king's thips should put into Plimouth or Bristol, or any other unusual har-bour, by reason of leakiness, or any other apparent defect, to go himself, or fend a fufficient deputy, to take an exact furvey of the flate of her hull, mafts, and yards with all her furniture and tackling; and after prefent an estimate of the charge in repairing, and supplying of their wants with all convenient speed, and procure the lord admiral's warrant to proceed, to make her able to come about to Chatham, unless the were fitted for further fervice, if cause required.

The Clerk of the Navy.

He ought to register his acts, agreed and performed at their publick meeting, and to note the days of every meeting, and what officers were then prefent.

He ought to keep notes or remembrances of all business that is material for the furtherance of his majesty's service, and to call on them first to be debated and ordered, before any new propositions be received, or any private person's business handled at their meeting.

He ought to keep records verbatim of all the warrants fent from the lord admiral directed to the four principal officers, and to keep them fafely in a cheft lock'd up for all their fafeties, if any occasion should after happen.

He ought to take particular notice of all warrants or deputations, thought fit to be made for purveyors, prefs-mafters, and fuch like minifters, and to prefent them in a readines to be figned by them all at the next meeting.

He was formerly imployed in taking up all outlandish provisions, as pitch, tar, rosin, oil, and other small stores provided for present dispatches; likewise of nails, baskets, compasses, lead-lines, and leads, running-glasses, &c.

In all these several duties of each officer, in case any of the rest desire to be put, or to have copies of any records, or matter that more properly belongs to the other places, they are to have it without denial; and being equally interested in the king's service, every of them ought to perform each other's places in the upper officers absence, in case the fervice required it.

The Officers Affiftants.

The next in place to the principal officers, are the three affiltants, who in extraordinary employments in time of war, were, upon the lord admiral's command, to give their advice in the confultations about the affairs of the navy; and in the absence of the officers, to execute their business in places remote: but in the last thirty years, it seems, there has not been much use of them; I suppose rather in respect of the officers jealouses to have competitors, than for want of employment fit to further the king's service.

The Keeper of the great Stores.

He has, by his letters patents, the keeping of all the ftores belonging to his majefty's navy; but in refpect his falary was not fufficient to maintain deputies in all places where the king has cause to use them, necessity of times has together several store-keepers in all his majesty's yards where the king's works are managed; and at Wool-wich and at Portsmouth they have grants for their places under the great feal, and see paid out of the Exchequer.

He at his first coming receives his charge upon furvey, and puts his hand to the surveyor's book, acknowledging to be charged with all the provisions therein contain d. Book II

ind or-

He ought not to receive any thing into his charge but by warrant, nor deliver any out; and properly, in regard of his account, the furveyor of the navy should be one to direct his warrant to him for all business.

Surveyor of Vietuals.

This officer, who, it feems, was at first instituted to survey the quantity and quality of all victuals, to the end neither his majesty may be deceived in goodness, nor the fubject of his due, is now become victualler himfelf; whereupon there are many abuses crept into the office, fit to be re-

The King's Merchant,

No doubt this office at the first institution, was of notable good consequence for his majefty's profit, when he was employed only for his understanding, to inform the officers of the rates of all outlandish provisions, as hemp, cordage, tar, pitch, oil, masts, deal boards, &c.

But fince it has been converted from advifing for the king, to merchandizing for himself, which of late has been quite out of use; but in case it were reduced to the first quality, without question, his service would be very beneficial, for providing of those maio materials at the best hand, when the feafon may afford 't at the cheap-

The Grand Pilot.

This man is chosen for his long experience as a pilot on a coast, especially to carry the king's great fhips through the king's channel, from Chatham to the narrow feas; as also for his knowledge to pass through the channel called the Black Deeps.

Three Master Shipwrights.

These men ought, in their turns, to have the new building and repairing of all the king's ships; and when it happens, by order of the state, any ships are built by contract with strangers, yet some of them ought always to attend the overfight of all timber, planks, and other materials, put in them, that they be of fit feantlings and fizings, well featoned, and of strength and quality sufficient, according to the burden agreed on, and fo finished in all points workman-like.

Four Mester Attendants.

These men attend at Chatham, quarterly, one after another, as well to direct and over-Vol. III.

fee the boatswain and ship-keepers in harbour to perform their ordinary fervice of the fhips, as also to carry in and out of the river fuch ships as happen to be ready for sea, and to fee them rigged and fitted compleatly: also one of them is allowed fix pence per diem for his particular attendance at the grounding of the king's great ships.

Clerks of the Check.

These men are of great trust, and much business committed to their charge, viz. the entring all feamen into pay aboard the ships in harbour, and the shipwrights and other workmen in day work: the first he must muster once a month, and the other twice a day: his ticket ferves in the abfence of an officer to the victualler, for the victualling of the ordinary ship-keepers, and other feamen employed in rig-ging of the ships bound to fea: he keeps likewife a book of the receipts of all provisions received into the stores, and prepares quarter books for the four officers, for ordinary and extraordinary men's

Clerk of the Survey at Chatham.

He is to certify the want of every ship prepared for the fea, and to fend the certificate, under the mafter attendants and his own hand, to the furveyor of the navy at London, to the end he may take prefent order to supply all the provisions wanting, to be fent with all speed to Chatbam; which being come down, he is, by ticket under his hand, to direct the storekeeper to deliver to every boatswain and carpenter their due proportion of all kinds, as well to furnish the ships in compleat equipage in harbour before they go out, as for fea-store for the voyage: he is to make indenture betwixt the furveyor, or boatfwain, and carpenters, confirming all manner of ground tackle and furniture belonging to the ship, and for sea-stores to the carpenters, and to take their hands feverally to the one, and to put his hand to the other part, which they are to carry with them to fea, to shew their carpenters what stores are in the ships.

At the return of any ship from sea, he is, with one of the mafter attendants and mafter shipwright, for things in their elements, to furvey the remnant of all stores return'd, and to note down all particular qualities, to be half worn, or fourth part worn, or decayed, according as the mafter shall judge them to be useful for the king's service; and thereupon he is to make up the account of wafte in the voyage, and to difpose the remainder to be returned into the king's

ftore, or left in the ship, as shall best accommodate the king's service.

Clerk of the Rope-Yard

Receives into his charge all the hemp, har, and other necessaries for the making of new cordage, and delivers the same to the master workman, being first dressed and heckled, to be spun into yarn for ropes: he also keeps check, by calling all the workmen twice a-day to their labour, and keeping them to their strict hours.

Master Workmen over the Rope-Makers.

There are two of these at Chatham, and another at Woolwich, to direct the labourers and spinners of yarn; and afterwards in laying in several sorts and sizes of cordage, and in stowing the most part at Woolwich, and taring it only at Chatham.

The Boatswain, Ganner, and Purser, are Officers aboard the Ships.

The Boatswain

Has the chief charge in looking to the fafe riding of the fhip at her mooring in the river, and to under-run them as often as need requires.

He has the keeping of all the fhip's flores, rigging, and furniture, charging himfelf on account to the furveyor of the navy, by acknowledgment under his hand to a book mentioning all the particulars, whereof he has a copy delivered him: he is alfo to come himfelf, and bring the fhip's company with him to the dock, or to fuch other places as the flag is hung out, to flow where the works of that day are to be perform'd.

The Gunner.

The gunner has the charge of the ordnance, their carriages, with fuch stores as appertain to them, accounting for all to the office of the ordnance. No other service is required here but his attendance on board, and being found faulty that way, is checked of his victuals for that time.

The Purfer.

He is to give his continual attendance, and to fee that the company's victuals in harbour be brought them aboard weekly in their proportion, and well conditioned.

Gunner: of Sconces.

They have feveral houses, and some pieces

of ordnance and ammunition under their charge, and are required to give their daily attendance in them.

Boatswain of the Yard.

He commands the labourers to their feveral works, and fees the provisions taken of hoys, or return'd from the ships, and carried safely, and orderly laid in the store-houses within the yard.

Porters of the Gates.

They attend to open and thut the gates morning and evening, and to wait at the doors all the day, to keep in the workmen, and to prevent carrying away or imbezzling any of the king's provifions; and one of them attends every morning as foon as the watch is broke up, till the workmen come in.

House-Keeper.

He takes charge to look to the king's house at Chatham-Hill, and the officers lodgings there, and the king's stuff, against their coming to pays, or other meetings for the king's service: he keeps the orchard and garden belonging to the house in good order likewise.

Surgeon.

He attends daily to cure fuch hurt men as happen among the ordinary fhipkeepers,

Messengers of the Navy.

He attends the officers at their meetings, and provides horfes and victuals for the pay-mafters, at fuch time as they go to make payments: he is alfo, at the officers directions, to fetch any delinquent before them, and to keep him under cuftody till they give order for his releafe.

What kind of Men are to be chosen four principal Officers of the Navy.

Conceive that the treasurer of the navy were fit to be either a merchant or a mariner, that is or has been an owner of ships, and can judge by his own experience both of the goodness and use of all the materials belonging to the building and tackling of ships, and may, upon special accidents of service, cut off his majesty's charge, take up a good sum of money for his majesty's ease, and to content the subjects, that otherwise will be grumbling for their wages when the service is ended.

the navy nant or a owner of xperience the maind tackcial accis charge, this maects, that eir wages The furveyor's place being too much for any one man to perform, to be feparated into two diftinct offices: the one a fhip-wright, who, for his experience in building new fhips, for the king or merchants, the precedent part of his life, may be abfolutely enabled to make choice of materials of timber, planks, and all other incident provisions in feafon; and can both command and direct workmen of all forts to be imploy'd in the building and repairing of all his majefty's fhips and veffels; which cannot be so perfectly performed by any other man that has not had use of the mechanick part of that art, and is a full imployment for any one to act, besides the publick meeting for general dispatch necessary.

The other a mariner bred, that has had the charge as mafter, and greater place, as captain, if fuch can be had, of ships of bulk and strength, knowing all the furniture and tacklings of a ship, and can well judge and rate the materials of all kinds, and so be able to make choice, and recommend to the lord admiral such persons as he finds fit to execute the boatswain's place; and can, of his own experience, judge of all wastes expended at sea, and take the accounts of the ships returned from sea, besides other general and particular duties mentioned under

the title of the furveyor's place.

The comptroller and clerks places to be reduced into one, who should be an experienced clerk, long bred in the office, and understanding throughly passages of all demands, accompts, and allowances, usual and of right appertaining to all particular places throughout the office of the victual-ler and treasurer of the navy; which a stranger, though never so good an accomptant or clerk, cannot in many years attain to, if he has not been brought up in the execution thereof.

Provided always, That befides their experience and abilities to perform the active part of his majefty's fervice, these men be of good substance and esteem in their estates; otherwise the inferior officers will scorn to be commanded or directed by them; besides the obligation his majefty will find from men of means to perform his highness's service faithfully, rather than from needy mean qualitied persons.

Now it remains, that every one of these officers, from the highest to the lowest, under the lord admiral, should be limited and ordered by particular instructions to perform the duties of their places; for want of which, some have incroached beyond their right for private profit, and the most have been negligent in performing what they ought and of necessity should be done for the furtherance of his majesty's service, which has suffered much on this account.

Places granted by Warrant from the Lord High Admiral.

All captains and mafters in his majefty's fhips and other veffels, and in all other fhips in his majefty's pay.

A brief Collection out of a Discourse of a principal Seaman touching the Shipping of England, and Officers of the King's Ships.

HE native shi of this kingdom has been alled (through the almighty provider ... walls of brafs, to fecure it from foreign invafions or incurfions, as long as we remain mafters of the feas.

Besides the great riches and honour the crown and fubjects of this kingdom have gained in peace, by transporting our native commodities into the remotest parts where any known trade by fea has been, bringing home the chiefest wealth and commodities thereof, and beating our proudeft enemies, even at their own doors. It may therefore eafily appear, how necessary it is, as well for our honour and welfare, as for our fecurity and fafety, to maintain the fhipping of the kingdom.

In the year 1588 there was not above one hundred and twenty fail of men of war to encounter that invincible Armada of Spain, and not above five of them all, except the queen's great ships, were two hundred tons burthen, and did not exceed those rates in all queen Elizabeth's time; fo that our feamen were, by their experience and courage, rather the cause of our victories, than the

Then in the beginning of king James

Then in the beginning of king James

Then with Spain and all our neighbouring countries, our merchants, in regard the Hollanders and Easterlings had greater ships than our nation without ordnance, being able to transport commodities to and fro at far cheaper rates than the English, freighted strangers, and neglected our own shipping; infomuch, that our owners fuffered their ships to decay, not regarding to repair them; fo that in thirteen years of king James, there were not ten ships of two hundred tons left belonging to the river of Thames, fit for the defence of the kingdom; whereupon, the Trinity-House men complained to the king of the state and decay of shipping, entreating his majefty to revive divers antient statutes against transportation of English goods on foreign bottoms; producing for example likewife, That the Venetian state finding the decay of their fhipping, prohibited their merchants to transport or import any merchandize but in shipping of their own country, or to freight any ftrangers ships in toreign parts, if any Venetian thip were in that port wanting freight.

But 'the merchants opposing the mariners, prevailed against them, so that no redrefs was then had; and not long after it happened, in the fourteenth year of king James, That two great Holland ships of

two or three hundred tons apiece, came to London from the Levant, laden with currants and cotton-wooll upon the account of Holland merchants refiding here, which our merchants apprehending it might endanger their trade, immediately became petitioners to his majefty and the lords of his council for redress, and to prevailed with the flate, that a proclamation was publish'd, That no Englishman should carry out, or bring into this kingdom, any manner of goods but in English ships.

Hereupon the mariners and owners of fhips of this kingdom began to build fhipping again; and finding profit by them, and because the turks and pirates of Algiers and Tunis were many and strong by fea, able to overcome all fmall ships, they built thips of greater burden, viz. three, four, or five hundred tons each, and furnished them with ordnance and ammunition proportionable to their burdens, and plenty of men for their fafety in failing outward and homeward; infomuch, that within feven years after, the flate finding fo many great Thips built, thought fit to fave his majefty the five shillings upon every ton, which Henry VIII. and his fuccefforsto that time, had allowed their fubjects, for building of fhips of one hundred tons and upwards, and took it quite away; which, notwithtlanding, did not difcourage the owners to build, finding the benefit of trading in thips of ftrength.

And in the fifth year of king Charles, befides the ships trading to Newcostle, and on the Eaftland trade, being two hundred at leaft, at two hundred ton each, the most part whereof were afterwards fitted with ordnance for men of war, there were found belonging to the port of London one hundred fail of merchant ships, furnished with ordnance; a number, in the opinion of most feamen, fit to parallel the forces of any state or prince in Christendom.

The number and strength of the subjects fhips, built and maintained without any charge to the state, on the profit of trade in time of peace, or the advantage of reprifal in time of war, preferves the ftrength of fhipping and feamen in England, and not only the power of his majesty's navy royal, though it be conceived to be of more force than any other king's in the christian world.

On the contrary, if there be no benefit of trade to support it, of necessity it must decay as fast, being always decreasing, where fhips bring in no gain.

y it mult cereafing. The experienced valiant fea-foldier and mariner, who knows how to manage a fhip, and maintain a fea-fight judicially, for defence of himfelf and offence of his enemy, is only fit to be a captain, or commander at fea; for without good experience, a man otherwife couragious may foon deftroy him-

felf and his company.

The fea language is not foon learned, much less understood, being only proper to him that has served his apprenticeship: befides that, a boifterous fea and ftormy weather, will make a man not bred on it fo fick, that it bereaves him of legs, flomach, and courage, so much as to fight with his meat. And in fuch weather, when he hears the feamen cry, starboard, or port, or to bide alooff, or flat a fheet, or haul home a cluling, he thinks he hears a barbarous fpeech, which he conceives not the meaning of. Suppose the best and ablest bred seaman should buckle on armour, and mount a couragious great horse, and so undertake the leading of a troop of horse, he would (no doubt) be accounted very indifcreet, and men would judge he could perform but very weak fervice; neither could his foldiers hope of good fecurity, being under an ignorant captain, that knows not scarce how to rein his horse, much less to take advantage for execution, or retriat: and yet it is apparent to be far more (fy to attain experience for land fervice than on

The bred feaman is for the most part hardy and undaunted, ready to adventure any desperate action, be it good or bad; as prodigal of his blood, whatever his commander order him, if he loves or fears him.

The fearman's defire is to be commanded by those that understand their labour, laws and cultoms, thereby expecting reward or punishment, according to their deserts.

The feamen are flubborn or perverse when they receive their command from the ignorant in the discipline of the sea, who cannot speak to them in their own language.

That commander who is bred a fearman, and of approved government, by his skill in choice of his company, will fave twenty in the hundred, and perform better fervice than he can possibly do that understands not perfectly how to direct the officers under him.

The best ships of war in the known world have been commanded by captains bred searner; and merchants put their whole confidence in the sidelity and ability of seamen to carry their ships and goods through the hazard of pirates, men of war, and the danger of rocks and fands, be they of never so much value; which they would never do under tha Vol. III.

charge of a gentleman, or an unexperienced foldier, for his valour only.

The United Provinces, whose fatety and wealth depends chiefly upon their sea affairs, and who for some years past have had great employment, and enlarged their dominious much in remote places, use only their expert seamen to go captains and chief commanders in all their thips of war and trade.

Great care must be had to chuse a commander or captain of diferetion and good government, who is to be preferred for his skill and experience; for where the seamen are left without orderly discipline, there can be nothing expected but confusion and thame.

The feamenare much difcouraged of late ones, by preferring of young, needy, and unexperienced gentlemen captains over them in their own thips; as also by placing lieutenants above the mafters in the king's thips, which have never been used till of late years.

The featman is willing to give or receive punifhment defervingly, according to the laws of the fea, and not otherwife, according to the fury or paffion of a boilterous, blafphemous, fweating commander.

Punishment is fittell to be executed in cold blood, the next day after the offence is

committed and discovered.

A captain should chuse able and honest men for his company, as near as he can; but especially his master and master's mates should be of good government, whereby he is like to have a prosperous and good younge.

Punishments at Sea.

A captain may punish according to the offence committed, (viz.) putting one in the billbows during pleasure; keep them fasting; duck them at the yard-arm, or haul them from yard-arm to yard-arm under the ships keel; or make them fast to the capstan, and whip them there; or at the capstan or main-mast hang weights about their necks till their heart and back be ready to break; or to gagg or scrape their tongues for blasphemy or swearing. This will tame the most rude and savage people in the world.

Discouragement to Seamen.

When they have unexperienced needy commanders; bad and unwholfome victuals, and complaining of it, can have no redrefs; cutting their beef too fmall; putting of five or more to four mens allowance; want of beer; long flaying for their wages.

fet .

The Election of a General or Admiral by fea, and what is requisite in such a Commander for the Government of the Fleet under

N O fleet can be well-governed without a head; no flock of fleep without a shepherd, no army by sea or land without a general, or supream commander, who must be authorized, either by immediate commission from a prince, or his substitutes that holds his place by patent from him; as, namely, for matters of the fea, from the

lord high admiral of England.

There have been often disputes, whether the title of admiral or general were more proper to a fea commander; and though I dare not prefume to conclude of either, yet I think it is as unproper to call an admiral general by fea, as to call a general admiral by land; though I confess their authorities are alike in command of mens persons, yet is the jurisdiction of the admiral by sea greater than the other, in that he ruleth and guideth a fleet of ships, which are of more importance to the king and state, than the lives of men are that serve in them.

The authority of a general being granted, the next confideration is in his election, that he be a man of experience, valour, conduct, temper, constancy, and discretion; that by his clemency and good carriage he gain love; and by his justice, fear, as well from his foldiers as enemies, after the example of Julius Cafar, who, to his great praise, is faid, never to have forgot the fervice done him, or every remem-

bered injury offer'd him.

Such a general is to make election of his captains, to be of the same temper; and out of them to make choice of three or four to be of his felect council, upon whose judgment he may prefume and rely, not trufting altogether to his wit and will; for wilfulness and want of experience in generals are the utter overthrow and bane of actions, as may be collected out of fundry of those which I have treated of in my first and second books.

The next caution I give a general, is, That neither ambition, covetousness, vainglory, nor honour, make him feek employment, till the prince command him; but especially, that he be no projector of voyages, where princes are not the only undertakers. Let Sir John Norris and Drake be an example in their voyage to Portugal, and Drake and Hawkins to the Indies; for he that defires to undertake an action which does not absolutely depend on the prince, must examine the state of himself and friends, who engage themselves with him;

and if he is to have the whole disposal of the action, to forecast that there be no want

of things necessary.

But above all, he must take care that his project be grounded upon fuch affurance, that he fail not in the performance of it; though this is impossible: it is only in the power of man to promife, but in the hands of God to dispose; for if any of his defigns fail, it will prove the overthrow of his ac-tion, the lose of his reputation, and shew the weakness of his judgment; whereas on the contrary, he that is called to a place of command by his fovereign, shall perform the fervice with a good confeience, be furnished with all his wants for the action, and follow the directions prescribed him; so that whether the event be good or bad, he shall keep his credit, and be thought worthy of employment; for the principallest thing of a general, is to follow the directions of his prince; and of an inferior officer, to perform the command of his general; which Sir Richard Greenville neglected, to his own destruction,

Amongst the Spaniards, private men undertake no publick actions, but the king is the whole adventurer and difpofer of them himfelf; and generals are appointed as they are efteemed; who if they disobey the king's directions, answer it with life or diffgrace; as to inflance in Don Diego Flores de Valdez in 1588. Don Alonfo de Baffan; Don John de Puerto Carrero, and Diego Soto, the one commander of the galleys, the other of the ships, in our voyage to Cadiz, in 1596. Don John was banished into Barbary; the other committed to prison, where he died: this makes them not defire employment, as amongst us, and more careful to perform the fervice for their own fafety when they are employed.

A general is to examine the state of his thips, men, and victuals, before he put out of harbour; and finding any impediments, he is to punish the offence where it deferves, and to fee himfelf provided of all wants before his departure; for when at fea, it will be too late to be relieved; and herein Sir Francis Drake, though an old captain, shewed himself but a young general, in his voyage to the Indies in 1585.

and to Portugal in 1589.

The next care of a general, is to give instructions to his captains in as brief and plain a manner as he can, that no ambiguities may arife, as, namely, the place of meeting, if they lofe company. Secondly, how to govern their men. And, thirdly, how to work upon any occasion that shall happen at fea, as by shewing of lights in the night, by shooting of ordnance day and night, or striking their topfails by day; for the better understanding whereof, I have

o give inbrief and no ambie place of Secondly, rdly, how fhall hapnts in the day and day; for f, I have

fet down fome particulars touching that point, joined to their directions. After a general is provided of all those things I have related, the next thing is to expect the opportunity of a wind and fair weather, and not to put out of harbour but with a fettled large wind, and being at fea, he must be as provident to flack fail for his fleet, as he shall see occasion; for it is a great weakness in a general, upon a contrary wind to bear a prefs fail, feeing the reft of the ships must strive to do the like, though it be to the hazard of their masts and fails; for if they miscarry in either, they must of necessity be forced home, whereas in bearing a slack fail, they will not lose two leagues in four days, which will be recover'd in less than two hours with a large wind. And herein we may blame the unadvisedness of my lord of Essex, in teeping the fea in his voyage to the islands in 1597. with a contrary wind, foul weather, and a prefs fail, till his fleet were featter'd; when in three hours he might have harbour'd in Falmouth, and avoided the rigour of the storm.

A general must have a care to affign a place of rendezvous where his fleet shall meet, and especially to provide, as the neceffariest thing in his expedition, to have intelligence of his enemy, and to keep them from intelligence of him, by example of

1588. and 1595. A general that is only appointed for fea fervice, not for land, ought to be careful not to carry gentlemen, more than some few for the reputation of himself and action; for whatloever gentlemen promise or pretend to the contrary before their going out, when they have been long at fea, and are tired with the tediousness thereof, and find the want of victuals, they are apt to be the first to cry home, whose examples will make others do the like; as I have fhewed in the voyage to Cadiz, and the year following to the islands.

A general that is to enterprize a fervice of importance, ought, before he propose it to his council, to require the opinion of his best and trustiest captains in writing, who shall have sufficient leisure to debate all circumstances before they give their judgments; for a man that is fuddenly and rawly taken, cannot give that resolution, as upon mature deliberation: it is like a confultation, which ever proves the best; and a general, out of their writing, will be able both to judge and determine what to do.

And this did my lord of Effex in his voyage to the islands, requiring a captain he relied on, to give his judgment in writing. First, whether he should attempt the king of Spain's ships in Ferrol, or no. Secondly, whether before or after his being at the

Terceras. And laftly, the manner how to affail them. The captain's answer you will find in the fecond book, with that voyage.

The Directions of a General to bis Ships, ij they lofe company.

I F you happen to lose the fleet, you shall seek to get yourself into the heighth of and there lie off and on leagues for days; and if you meet not the fleet, nor with directions, you shall ply to the heighth of and keep fome leagues to feaward; and if you hear nothing in days, you shall get yourself into the heighth of and lie off and on till you meet the fleet, or di-

Instructions from a General to bis Vice-Admiral, Rear-Admiral, and Captains, to be observed by them at Sea.

MORE than the reputation of a vice-admiral, is to be fecond man in command; and that in absence or death of the admiral, he has the absolute charge; yet in prefence of the admiral, he is to follow the instructions given by him, or resolved on by council, in which council he is the ferend person, and is to have all rights done to him next the admiral.

As he is vice-admiral, so is he admiral of a fquadron; and as he wears the flag in the foretop, being vice-admiral, fo he is to wear what coloured flag he please in the main top, as admiral of his squadron.

He is to have a vice-admiral and rearadmiral of his fquadron, though the use of a rear-admiral is but a late invention, and is allowed but the ordinary pay of a captain, but the vice-admiral of the fleet has half the pay of the vice-admiral: thefe two are to wear the fame flags; the viceadmiral does the one in the foretop, the other in the mizen, and every ship of the fquadron besides, is to wear a streamer of the same colour in the forehead or mizenyard, to be diftinguished from other squa-

The inftruction for his fquadron is to hale them once in twenty four hours; and how to gather them together out of the fleet, when he pleases to call them, and many other observations, are to be expressed in the general articles from the admiral; and because every ship in the fleet receives the fame inftructions, it is fit that the captain under the vice-admiral, and the mafter of the ship, be perfect, and have, as it were, by heart, all the articles before mentioned, that as foon as they fee a fign made by the admiral, they may prepare to work accord-

It is requifite that the captain under the any part thereof to be wasted or embezadmiral, or vice-admiral, be a man of great experience in sea affairs; for he is always ready at hand to advise, when council cannot repair on board; and yet this place is of fo little efteem among us, that there is no allowance for it, though amongst the Spaniards it is a place of great reputation, and has the title of Capitan de la Capitana.

Such Instructions as were given in the Voyage in 1635. by the Right Honourable Robert Earl of Lindsey.

I. FIRST, and above all things, you are to take care, that all the officers and company of fhips do offer their best devotion unto God twice a-day, according to the usual practices and liturgy of the

church of England.

2. In your own particular, you are to have fpecial care, that you perform your duty faithfully, and with diligence; and if any feaman, or other in your fhip, shall raife faction, tumult, or confpiracy, or commit manflaughter or murder, or shall quarrel or fight, or draw blood, or weapon to that end, or commit theft, or other heinous capital offence, you shall cause precise information to be brought to me thereof, that I may inflict condign punishment up-on each offender, according to the condition of his crime.

3. If any under your command in that fhip shall be a common swearer, blasphemer, railer, drunkard, pilferer, or fleep at his watch, or make a noise, and not betake himself to his place of rest after the watch is fet, or shall not keep his cabbin cleanly, or be discontented with his proportion of victuals, or shall spoil or waste them, or any other necessary provision for the fhip, or shall commit any infolency or diforder, fitting by you to be corrected, you are to punish them according to the order and cuttom of the sea.

4. You shall take a perfect account of the officers in your ships, to whom it belongs, of the receipts of the expences, and remains of victuals, ammunition, and allowance of provision and stores aboard your thip, and to weekly to continue the fame, not fuffering any spoil or waste to be made thereof, but to preferve them all the best you can, both in quantity and quality; and you shall not suffer any works to be done in the thips that thall not be needful and

necessary for the same.

5. To prevent the needless expence of powder and shot, you are to take weekly account of the mafter gunner of the expence of the powder and shot, and all manner of ammunition, provisions, and stores contained in his indentures, not permitting

zeled; nor any piece of ordnance to be shot without particular order or directions from yourfelf, and that upon very necessary occasions, and according to his majesty's proclamations, unless it be for falutes, keeping the true number and kinds of the fhot, that their accounts may be thereby examined, which are not to be allowed in the office of the ordnance without approbation under your hand.

6. You are to keep a competent number of men allowed to your ship compleat, and to have a full proportion of healthy and able-bodied mariners and feamen, and but the allowed number of your retinue, that your ship be not filled with idlers; and to take care to get such as are able and healthful bodies, and not boys, or infirm persons, to persorm his majesty's service.
7. You shall not suffer any boat to go

ashore without special leave; and then but upon necessary occasions, as to fetch water,

or the like.

8. You shall perform to me all due refpects and obedience, not taking the wind of me at any time, if you be not forced to it, but keep company with me as much as you may, speaking with me both morning and evening, to know my pleasure, and so often as you fee my flag of council in my mizen shrouds, you shall come on board me; and when I shall weigh anchor at the report of a warning-piece, you shall do the like, and anchor when I anchor, ranking yourselves under the colour of your squadron, the vice-admiral taking his place within me, and the rear-admiral without.

9. In the night I will carry two lights, which you are to observe and follow, bearing the fame course I do, without straggling, unless ftorms or tempests divide us, and then with expedition to return to the place of rendezvous, which I shall direct; but if you happen to fpring a leak, fpend a maft, or be otherwise diffressed by fire, you are to give notice by shooting off two pieces of ordnance, that other thips may haften to

your help to avoid danger. 10. If you discover any ships at sea, you are to give notice thereof by shooting off a piece, and letting fall your main topfail fo many times as there be thips; and if they appear to be Turkish pirates, or sea-rovers, you shall shoot two or three pieces, to warn the whole fleet to put in order either

to fight or purfue.

11. It must be your principal care to pre-ferve his majesty's honour, coasts, jurisdictions, territories, and fubjects, within the extent of this your employment, as much as in you lies, that no nation or people whatfoever intrude thereon, or injure any of them; and if you shall chance to meet in

exp in a reign mag do it and i difho roga feas; fhall to fli ty's f to, a a ship ment them.

to any prince, king, or flate, you are to expect that the admiral or chief of them, in acknowledgment of his majesty's sovereignty there, perform their duty and homage in passing by; and if they refuse to do it, you are to inforce them thereunto; and in any wife you are not to fuffer any dishonour to be done to his majesty, or derogation to his fovereign power in those feas; and if any of his majesty's subjects shall so much forget their duties, as not to firike their topfail in paffing his majefty's fhips, you are to inforce them thereunto, and to punish the commanders of such a fhip yourfelf, or to give me advertifement of it, that I may take a course with

12. You are not to fuffer any man of war to fight with each other, or man of war with merchant, in the prefence of his majesty's ships in the narrow seas; but you are to do the best in those seas to keep peace, for the better and free maintenance of trade and commerce through the fame; for that all men trading or failing within those his majesty's seas do justly take themselves to be in pace Domini Regis, and therefore his majesty in honour and justice is to protect them from injury and violence.

13. If you chance to meet with any ftrangers ships riding at anchor in any of his maefty's bays or harbours with counterfeit colours, which is a practice of late much used to entrap fuch foreigners as trade on his majesty's coasts, you are to apprehend and bring them unto me, or fend them fale into fome of his majesty's ports, to answer such their prefumption and offence according to

14. If you happen to take any ship and goods from any pirate, fea-rover, or other offender, you must be careful that they be kept in fafety, and that no part thereof be spoiled, wasted, or imbezzled, spiking down the hatches and holds, and bring them to me, that I may fend them to his majesty's ports and harbours for his majesty's use.

15. If you meet with any men of war, merchants, or other veffel, or ship belonging to any prince or flate, either at fea, or in any road, or other place where you shall happen to come, you are to fend to fee who ther there be any English, Scotch, or Irish, or any other of his majesty's subjects; and if any feamen, gunners, pilots, or mariners, shall be found aboard any of them, you are not only to cause such of his majesty's subjects to be taken out and brought to me, to answer their contempt to his majesty's proclamation in that kind, but also to admonish the captain, and principal commanders and officers in fuch foreign thips and Vot. III.

the narrow feas any flect or ships belonging any of their ships no more his majesty's subjects aforefaid, that his majefty have no cause to refent it at their hands; but you are to have special care, that no man be permitted to go aboard any fhip or veffel of any of his majesty's friends or allies, to search for any of his majesty's subjects, as aforesaid, for whose fair and honest carriage you will not answer: and you are not in any case to fuffer any violence, wrong, or interruption to be given by any of your company to any of his majefty's friends or allies, behaving themselves fairly and respectfully.

16. You shall do your best endeavour to hinder, that none of his majefty's fubjects whatfoever at fea, or inhabitants on the coaft, do buy, fell, or barter, with pirates, or fea-rovers, and taking notice of fuch as do or have done, fee you give me notice of it, with their names, places of abode, to-gether with a particular of their offences, and fuch examinations and proofs as you have against them, that I may acquaint the flate therewith.

17. If any man of war, or other in any of his majetty's roads, harbours, or coafts, shall offer any violence in taking out any veffels, goods, or merchandize unduly, or commit any other infolencies, you shall do your best to recover the same again from them, and reform the abuse, either by due admonition, or, if that will not ferve, by bringing the offenders to answer by justice, preferving by all means the honour of his majefty from fuch infolencies as much as in you lies, having always due regard to the

amity betwixt his majesty, his friends and

18. If we happen to defery any fleet at fea, which we may probably know or conjecture defigns to oppose, encounter, or af-front us, I will first strive to get the wind, (if I be to lecward,) and fo shall the whole fleet in due order do the like, and when we come to join battle, no ship shall presume to affault the admiral, vice-admiral, or rear-admiral, but only myfelf, my viceadmiral, or rear-admiral, if we be able to reach them; and the other ships are to match themselves accordingly as they can, and to fecure one another, as cause shall require, not washing their powder at small veffels or victuallers, nor firing till they come fide to fide.

19. You must be careful that no bed of ftraw, or combustible matter, be aboard in time of fight, nor shall permit any powder to be carried up and down in open barrels or budge barrels; but to command the gunners to lade cartrages, which may be kept covered and for prevention of fireworks, you are to cause the vessels of urine to be in readiness in your ship, and shall veffels, that they receive or entertain aboard enjoin your ship-carpenter to observe carefully in the fight, if any shot chance to fall fwered by the like fign, it shall betoken near the bulging-place of the ship, and ever to be ready to stop them with falt hides, fheet-lead, plugs, or whatfoever may be

20. Before fight you are to fee all things put in order; then to encourage the company, and not to fuffer them to board the thip or veffel that shall oppose them till the fmoke of their ordnance be cleared up, nor till the men above hatches be flain, or beaten off.

21. When we fet fail, the vice-admiral with his foundron shall fail a-head the admiral, a convenient diffance; and the rearadmiral aftern, observing the like distance. Every ship is to rank himself under the colours of his own fquadron, allowing one another fair room, for fear of falling foul, if it should happen to be rough weather.

22. In the night I will bear two lights in my poop, the vice and rear-admiral falling fomething aftern of me. but keeping their distance, shall each of them bear one light in the poop, for the rest of the squadron to follow; both vice and rear-admiral fhall fpeak with me twice aday, morning and evening, if wind and weather will permit, and having received fuch directions as I shall give them, they are to fall in their places again.

23. If I cast about in the night, I will shoot a piece of ordnance, and shew two lights one above the other, which you are to answer, that I may know you see me.

24. If I am forced to bear round, you shall see three lights on the poop of my ship, and you shall shew the like

25. If your fhip fhould happen to run aground upon any danger, (which God forbid,) you shall shoot four pieces of ordnance, one a little after the other; if in the night, you shall burn a fire-pike.

26. If by day or night you find yourfelf near any rock, fands, or shoals that may be dangerous, you shall shoot off three pieces, and cast about; but if in the night, you shall hang out two lights at your fore-topmast

27. If I shorten sail in the night, by reafon of the foul weather, I will shew three lights on my poop, one above the other; if I try or hull, befides those I will shew two in my fhrouds; and you shall do the like, that I may know you understand me.

28. If in foul weather we lofe company, and after come in fight of one another; if in topfail gale, you shall strike and hoise your fore-topfail twice; but if it be not topfail gale, you shall brail up your foresail, and let it fall twice; and if you are anthey are of our fleet; and if in the night you come up and hail one another, the word shall be Charles, and the answer Mary, whereby you shall know the other.

29. If in the night it be foul weather, and over-blow, every thip thall carry a light in his poop, that we may the better keep clear one of another; and in thick foggy weather, either by day or night, you are to make a noise with drum, trumpet, or ringing your bell, and fometimes shooting off a musket, whereby you may keep clear one of another; and if in fuch weather I cast about by day, I will shoot off a piece of ordnance; and in the night I will shoot a piece, and use the fign before mention-

30. You shall keep one continually in your topmaft head to look abroad; and if you difcover any fleet or ships, which you conceive I fee not, you shall put you ancient in your top, and bear with them, till you perceive I fee them; and let no man prefume to wear a flag, though abfent from the fleet, but those to whom it properly belongs.

31. Our principal place of rendezvous is in the *Downs*, whilst our employment is to the eastward of the isle of *Wight*; if to the westward, Falmouth; whither you are upon all occasions to repair, if you should be absent from me, except you hear otherwise where I am, and then to come to me there, to receive fuch farther inftructions as I shall have occasion to deliver to you from time to time, for the advancement of the service we have in hand; or where you may conceive wind and weather may force us for more fafety, either Wight, Plimouth, or any other port.

32. You are to be careful to keep your company in good order, peace, and unity one with another, and to fee that they have their allowance of victuals in good or-

33. When you fee the British flag spread upon the mizen-shrouds, then the council of war is to coope aboard me; if the red ancient, then both captains and mafters.

34. And when there shall be any occafion to dispose of you upon any service apart, I shall then give you such farther directions as the fervice requires. And fo God keep you, and fend us a prosperous voyage.

From on board his Majesty's Ship Royal, the Mere-honour, riding in the Downs, the 30th of May, 1635.

The

The distinct Practice, or special Duties of Officers belonging to the King's Ships at Sea.

The Captain's Office.

THE captains in queen Elizabeth's time were gentlemen of worth and means, maintaining their diet at their own charge.

A captain has power, upon just cause of missemeanor, or imbezzelling the king's goods, to displace any inferior officer, (except the master,) who has the absolute charge of conducting the ship in and out, according to the direction given by the captain, to the place whither he should fail the same. And in case the master commit any offence meriting blame, during the voyage, the captain may require stay of his wages, till the matter be heard before the principal officers of the navy, or the lord admiral himself, if the offence be criminal

The captain may require a copy of the fea book from the purfer, and mutter the company at his pleafure: likewife the boatfwain, gunner, and purfer, ought to fhew the captain what fea flores they have received into their charge for the voyage; and he may require a copy of the indenture, or bills of charge; in like fort a note of the feveral kinds of victuals from the purfer at the end of the voyage, to certify what has been in any fort extraordinarily expended in his majesty's service, or wasted, or lost by unavoidable accidents; without which the king's officers should not give any extraordinary allowance upon their accounts refpectively, provided that nothing be allowed upon fuch certificate, but what has been formerly loft, and truly iffued for his ma-jefty's fervice only. The captain must be very cautious not to remove any of the aforefaid officers that have the king's goods under their charge, unless upon urgent neceffity, for matters criminal, or neglect of the fervice; and then to take good terlingny what stores are remaining at the time of their discharge, and to commit the same to fuch hands as may be able to account for the fame to the officers at the end of the

After the ship is at sea, the purser ought not to enter or discharge any of the company, but by the captain's special order.

1. The office of a captain is to be diftinguished into two kinds, (viz.) a captain that is lawfully chosen by a general, serving under the patent of a prince, from which general the captain receives his commission for his imployment, and instructions for him to follow during the time of the voyage; and at the end thereof to be paid the entertainment of a captain, as afore-faid.

 The captain ought to have experience and ability, by his art and skill, to controul his mafter, if he do amifs, or else his mafter may willingly commit such an error as will calt a difgrace upon his captain.

These latter times have advanced captains, who only take upon them that name, holding it a maxim, that they need not experience, but refer themselves to the direction of a mafter. I must say, That the generals who place fuch captains are very careless of their master's service, and forgetful of their own rifing from the degree of a foldier to a general, and the mischiess that ensue upon it; nay, I will say, That fuch a general is improvident of his mafter's profits; for if a mafter should direct a captain, and have the managing of the charge committed to him, why should a prince allow ten shillings a day to a captain, when a mafter can execute the place of both captain and mafter for his bare allowance?

A captain of experience being thus fettled in his command, he shall fee that every officer be chosen in such places, that they may be able to execute the charge committed to them, and not to advance any unworthy person for affection. This captain, under a general, has lawful authority to punish offences committed within his ship; or if his company grow mutinous or stubborn, he may have recourse to the general, who will inflict more severe punishment, as death, if they deserve it, which no private captain can do.

If a captain shall missemean himself against his company, the like censure he shall receive from his general, whose supreme authority begets moderation and agreement amongst them, which the ships of reprifal have no means to accommodate but by violence

What inftructions the captain shall receive from his general, needs no other repetition than I have already declared in the instructions set down in this same book, to which I refer you; but with this caution, That you be careful to observe what is there contain'd.

A captain is to make choice of his lieutenant, and it is as neceffary that he be a man of experience, as himfelf; and though no fuch officer be allow'd in his majefty's fhips but of late; and that the mafter repines to have a lieutenant above him, yet do I hold it fit to have a lieutenant, and he to have entertainment from the king, as well as his allow'd fhares in a private thip of war, for these reasons;

A lieutenant is an employment for a gentleman well bred, who knows how to

enter

entertain ambaffadors, gentlemen, and flrangers, when they come aboard, either in prefence or absence of a captain.

300

A lieutenant is to be fent on a meffage, either aboard fhips or afhore, upon any occasion of fervice, though it be to great persons, an unfit imployment for a master; besides the master is not to depart out of the fhip, or leave his place, but in case of neceflity.

A lieutenant knows how to use gentlemen and foldiers with more courtefy and friendly behaviour, and will give better fatisfaétion than any other mariner or mafter can do, who have not been bred to it, but in the rude manner of a mariner.

A lieutenant in a fight is to command the forecaille, or the foldiers before the mast, as the captain does abast the mast, and to fee that every man does the fervice he is commanded.

But the lieutenant must have a care that he carry not himfelf proudly or prefumptuoufly, nor that his captain give him power or authority to intermeddle in the mafter's office; for where there is a heartburning between the lieutenant and the mafter, it will make it burst out into open discontent, and then will follow mischiefs and factions among the company.

The Second Degree of a Captain, viz. in Ships of Reprifal.

"HIS captain I shall treat of is much inferior to the authority of the other I have spoken of : First, his title is not authorized by the immediate power of a prince, but by a fubordinate; for a king of England in time of war fubilitutes his lord high admiral of England to grant out letters of reprifal to his subjects, to take and arrest by all means, either by sea or land, the veffels of his enemy; and this commission is taken out of the court of admiralty, having relation to the lord high admiral and his office.

In this quality any man may make himfelf a captain, if he put in the fecurity aforefaid; but what abuses ensue thereof, I refer you to fee in the first book.

This captain, after a fhip is furnished, is to make choice of his mafter, officers, and company; and though he be flyled the captain, yet do they not use to obey him so firietly as him that has power from a general, as I have faid before; for they receive no pay whereby to oblige them, but every one goes upon his own adventure; and therefore they will tie the captain to the fame conditions in his diet, or his part of any goods taken, as themse.ves. His authority is little better than the captain in a pirate; for the interest and division of

goods are alike, only that this captain has commission to take from an enemy, and a pirate takes without commission, and makes all the world his enemies.

Book III

The authority of reprifals, and the law to warrant and limit them, has been antient, and ever fince England enjoy'd Aquitain, if it were truly known; for the laws to this day are called the laws of Alleroone near Rochell, anciently possessed by the Eng.

And because I speak of the peculiar laws there established, I am bound to give you an account of an ancient record extant in the tower of London, wherein is to be feen, that at a general meeting of all nations of Europe, that had relation to the fea, with one voice and confent they gave England the preheminence and power over all the feas, as well those that part England and France, as also the northern seas that encompass Scotland and Ireland; by which it is apparent, the kings of England did not challenge the privilege of mafters of the fea by force, but by lawful right, granted by the confent of all the maritime towns

The law of these actions of reprisal is to divide the goods taken from any enemy into three parts, the ship has one part, the victualler the other, the company the third, and the lord admiral to have the tenths of

That which is called pillage is the loofe goods and apparel of the company on the upper deck, so that it exceeds not a certain proportion, and is equally to be divided to the whole company at the main-mast.

If a fhip fight, the captain that takes her, by ancient right, should have the other captain's cheft, and what he has in it; and every officer to have the like of other officers. The captain is to have likewife the best piece of ordnance in the ship, the gunner the fecond, and the mafter the best cable, and all the other officers after that rate, fails, muskets, &c.

The thirds due to the company is thus divided, and those that make the shares are, the mafter, or in his abfence the righthand mate, the gunner, the boatfwain, and the four quarter-masters, (not the captain.) But the captain has this privilege, to take away half a fhare, or a whole fhare, to give from one to another whom he pleases.

The younkers are according to their deferts, fome three, fume two, and fome lefs; the boys one fingle share.

A fhip of war is to keep a man or boy continually in the head of the topmaft, to defery what fails they can fee; and upon the deferying of any that shall prove prize, he is to have given him a reward, at the discretion of the captain.

If any prize they take shall fight, and make resistance, upon the boarding her, the ten first men that shall enter her shall have every one of them a reward, at the discretion of the captain.

Though these actions of reprisals yield no profit to a king, but only in his customs, as all other merchandizes that come into his kingdoms, yet it is a matter of great confequence, not only to him, but to his whole commonwealth, as appears by these reasons: the number of failors and seamen are increased treble by it, to what they are in the navigations of peaceable voyages; and they are made more couragious, and more like to ferve their prince and country, when there is occasion to use them, than any other of his majesty's subjects, although their fuccesses do not prove prosperous at fea, but that they return without spoil or gain; for I confess, of twenty such ships as go out with letters of reprifal, not two, for the most part, make a faving voyage; like a lottery, where one lighting upon a good prize, encourages others to venture in it, till they make themselves penniless, and derided for their pains.

But howfoever it fall with these adventurous people, the kingdom feels no detriment or fearcity by it; for all the time they spend at sea, they consume no more victuals than they would have done on shore: every man in the ship bears his own adventure; to that neither king or country is bound to pay them at their return: or though they fail of getting in one voyage, yet upon the end of it they are ready, and never want occasion to be suddenly employed again in another.

to be fuddenly employ'd again in another.

And lastly, The king receives benefit by these voluntary actions, by annoyance done the enemy, who is impoverished and put into great discontent by it; besides, that many times his provisions in furnishing his steets are cut off in their way to the place of their rendezvous, whereby his preparations fail, to the great security and profit of the prince their enemy. What this end of the steath produces, you will hear afterwards.

The Office of a Master of a Ship of the King's.

A mafter is to be chosen by the Trinity-House, who can judge of every man's sufficiency, as well in the point of his art as his command, which is as much to be regarded as the other in a ship of the king's: upon commendations from them to the four principal officers of the navy, he is to receive warrant for taking charge of his majefty's fhip. I utterly diflike that a captain should make choice of a moster himfelf; I fpeak it for the fecurity of a captain; for if any thing but well should befal the ship in her voyage, it will be imputed to the captain's election of his mafter, and he only shall receive the blame and imputation by it.

His place and charge is to undertake to conduct the ship safe from port to port, and to direct at sea to and fro as the captain shall require him, by virtue of his instructions from the lord admiral in the king's service; he is also to give chase, manage a sight, or retreat by the captain's directions.

He has power to command the mariners and all the company, to perform the ordinary labours in the fhip, and to keep due watch in their turns at the helm; and may by himfelf, or the boatfwain and his mates, correct and punish, according to the cuftom of the fea, such as refuse his command for the service of the ship, wherein I conceive no man is exempted respectively.

He must be likewise acquainted what furniture, ground-tackle, and sea-stores, belong to the ship, and to justify the needful expences of sea-stores in the boat-swain or carpenter's charge during the voyage, to the end there may be warrant for supply while the ship is under his charge.

There are fix things necessary and requisite in a master or mariner that takes charge, (viz.) the card, the compass, the tides, the time, the wind, and the ship's

A master must be obedient to his captain, and so carry himself, that he be obey'd H h h h

Book III

by his company; for a master that has not authority in his command, is flighted by all his men, and the inferior officers, and then the fervice goes to wreck.

A mafter ought to pass through all the offices and degrees in a ship, before he attain to his place of master; that thereby he may both direct and controul the other officers, if they commit errors or mistakes.

A mafter ought not to be arrogant, wilful or head-strong; not to presume too much on his own skill, without the advice of his mates, who are to be chosen as his feconds and helpers, to conduct the ship when he takes his rest; also to separate themselves into several parts of the fhip at her tacking about, and tackling of the fhip, giving ear to the mafter's command, and to fee it performed; and also to overfee carefully fuch business as con-cerns the safety of the ship, (viz.) the anchor cleared, the fplicing and bending of cables, that the shrowds be taut, &c. The boatswain employ'd to do these things, may not neglect to perform them ftrictly, whereby any danger may come to the

The office of a master is to guide a ship into what coast, heighth, or harbour the captain fhall direct him, who is commander of all; and in a fight is to conn the fhip, and to fee the handling of the fails,

by appointment of the captain. A master must observe the sun and star, to find out the variation of the compass, to know the tides, to prick his card, and many other things; which for the better inftruction of him that shall hereafter attain to that place, I have fet down briefly for them to learn and follow; as namely, the working of the fun, with the north and fouth declination; a rule to know the age of the moon, and fo confequently to caft the tides; how many leagues answer to a degree; the prime, the golden number, who was the finder out of the loadstone, and the wir is called Monfons.

It is to be noted, that the north-east winds, which continually blow betwixt the Canaries and West Indies, blow so from the fixth or feventh degree on this fide the line, to the thirtieth and thirty fecond degrees; and, moreover, of late it has differ'd; for fometimesthe wind blows fouthwardly in those heighths, though I confess it is strange.

Flavio, of Amalphy, in the kingdom of Naples, was the first finder of the load-stone, in the year 1300.

In October the north-cast, and east-northeast winds blow on the coast of Brafil, and from March to October they blow at foutheast; and these are called the general winds.

The Monfons, that is to fay, the fixed winds in the East Indies, have their beginning from Mosambique to Goa in the month of September; and the fecond Monfon, from thence begins the fifteenth of December. The third Monfon begins the fifteenth of August. The prime, or golden number, is the time of nineteen years, in which time the moon makes all her changes or conjunctions with the fun; and when these nineBook II

north-cast betwixt the form his side the fecond deas differ'd; hwardly in t is strange, ngdom of oad-stone,

eaft-north-Brafit, and vat foutheral winds, the fixed heir begine month of bu, from Dr. omber. enth of Auaumber, is thich time or conjunthese nineteen teen years are expired, then she begins again. As for example, the year 1579 she changed the 22d of March, and every year alters eleven days in her change, till the year 1593, and then she changeth the said 22d of March again.

Every moon contains twenty nine days, twelve hours, forty four minutes, from change to change; the whole contents of the hours of the moon, feven hundred and eight hours, and forty four minutes.

There is in every year twelve changes of the moon; and the year contains three hundred and fixty five days; five hours, fifty five minutes, thirteen feconds.

In the year of twelve lunar months there are but three hundred and fifty four days, so that there are eleven more in the folar year, than in the twelve lunar months.

From January to June you shall see the moon within twenty four hours after the change, because she has a north declination of the sun.

From July to December you shall not see the moon three days after the change, because her declination is to the southward of the sun; but you may see her in twenty four hours before her change.

The golden number was so called, because it was sent out of Egypt in letters of gold to the Romans, or the city of Rome.

The reason of calling it the prime, was, because it was the first order the moon's course was known by.

An English mile contains a thousand paces, and every pace five foot, and every foot twelve inches.

The lengthening and shortening of the days, is according to the swiftness and slowness of the sun's declination. In the latitude of London, the shortest day is the eleventh or twelfth of December; the longest summer's day is fixteen hours and a half, the shortest seven and a half, from the rising to the setting of the sun.

The 12th of *December* the fun rifes a quarter of an hour after eight, and fets a quarter before four.

The 29th of *December* the day is a quarter of an hour longer, and rifes at eight, and fets at four.

The 17th of January the day is an hour longer; the 29th the fun rifes at half an hour after feven, and fets at half an hour after four.

The 12th of February the day is ten hours long; the fun rifes at feven, and fets at five. The 20th of February the day is eleven hours long; the fun rifes at half an hour af-

ter fix, and fets at half an hour after five.

The 12th of *March* the day is twelve hours long all the world over: the 24th of *March* the fun rifes a quarter of an hour before fix, and fets a quarter after fix.

The 7th of April the day is fourteen hours kind, than the great matters and others that

long, and the fun rifes at five, and fets at feven. The 23d of April the day is fifteen hours long; the fun rifes before five half an hour, and fets at half an hour after feven.

The 15th of May the day is fixteen hours long; the fun rifes at four, and fets at eight.

The 11th or 12th of June the fun has its greatest heighth to the northward; the day is fixteen hours and a half, and the sun it's a quarter before four, and sets a quarter after eight.

The 10th of July the day is fifteen hours. The 16th of August the day is fourteen

The last of August the day is thirteen

The 12th of September equal.

The 27th of September the day is eleven hours.

The 11th of October ten hours long. The 26th of October nine hours long. The 15th of November eight hours long. The 11th of December at horself.

The 11th of December at shortest.

The Office of a Pilot and Coaster.

He is to carry the ship over certain sands, or into such ports and harbours as the master is not acquainted with, at what time the master himself ought not to controul him, but to follow the course and directions of the pilot; though the managing and tacking of the ship belongs to the master.

I give the name both of pilot and coafter to one man; for the first is comprehended in the latter. A bare pilot serves only for the port he is hired for; but the coaster serves not only for sinch a place, but for the whole coast, as I will make the comparison

This man's charge is more than in the command of thip and company, and is of greater weight and moment than the office of a mafter; for by reason of our daily experience in long voyages, the conduction of a ship is of little difficulty; for it has not been heard that any ship ever went out of England, and return'd home again, without finding the country or place she went for; and yet we have very many lamentable precedents, that coming home from such voyages, for want of knowledge of the coast, the ships have perished.

The principal thing in a pilot or coafter of our coaft, is to know where he is; by his first soundings his depth will give him light; and as he draws nearer the coaft, either of England or Britany, his depth will lessen, and by his lead he will take up sands, by which he shall gather which of the two coasts he is upon, as also if he be shot into St. George's Channel. The meanest mariner that trades to Rochell, Bourdeaux, Biscay, Portugal, and Spain, knows more in this kind, thou the great matters and others that

go to the *East Indies* and long voyages, because they make four or five voyages in and out of our channel to the othersone, by which they gain daily experience of our foundings, marks on land, and the entrance of our harbours, which the others cannot do.

The skill of a coafter is to know the land as foon as he shall defery it; and after he has made it, then to harbour himself; for all ports are alike to a good coaster. He must be likewise perfect in casting the tides, to take his opportunity of coming into a harbour, according to the draught of his ship, and the depth of the water.

In 1588, when the duke of *Medina* came for *England*, had he been furnished with a pilot that knew the *Lizard*, when he made it for the *Rambead*, he had the next morning given an attempt upon our fhips at *Plimouth*, when he was not fulpected or looked for.

Mr. Cavendift, at his return from about the world, where he made himfelf and the nation famous by that voyage, has often told me, That the first night he entered into our channel, not daring to put in with the land, he endured more trouble and danger of shipwreck, than in all his two years and odd months of navigation in the remote and unknown places where he had been.

In the year 1589. we being come in the Vittory, one of the queen's fhips, with the earl of Cumberland, (as may appear in the first book,) near Scilly, by our reckonings, were taken with a most violent storm at east, that put us upon the coast of Ireland, where, for want of a man that knew that coast and harbours, we were forced to keep the sea till we were put from shore; so that before we could recover it again, we endured such great misery and want of drink, that the like has not been known, as you will find in Mr. Hacklets' so book, treating of the English voyages. I could insert mary other examples of this nature, but this shall suffice.

The Office of a Boatswain

Is to have the charge of all the cordage, tackling, fails, fids, and marling fpikes, needles, twinc, failcloth, and rigging the fhip: his mates have the command of the long-boat, putting out the anchor, and fetching it home, wafting, towing, and mooring, and to give an account of his flore indented with a furveyor for the fame: he is to make choice of his mates to affilf him, his place being more laborious than one man can perform, in following and directing the common failors in their works. If he die in the voyage, his chief mate is to fucceed him.

As the mafter is to be abaft the maft, so the boatswain, and all the common sailors under his command, are to be afore the mast: he meffes the company four and four to a mefs, or more if there be want of victuals, and is to fee they be duly ferv'd, and good hours kept. At eight of the clock at night the watch is to be fet, and half the company watches, and the other half fleeps till twelve of the clock that they are relieved, unless foul weather force them all to help together.

As the mafter commands the tacking of the fhip, the hoifting of ftriking the yard, the taking in or putting out the fails, upon the blowing of the mafter's whiftle, the boatfwain takes it with his, and fets the failors with courage to do their work, every one of them knowing by the whiftle what they are to do.

The boatfwain is to fee the shrouds and all other ropes fet taut, the dipfiline and plummet in readiness against their coming into the foundings, and tallowed; this is only in deep water, before they make land. He is to fee the cables bent to the anchors. In a fight he must fee the yards slung to, parmers and waste cloths, the slag and pendents put forth, and call up every man to his labour and office. The boatfwain serves for a provost-marshal, to commit all offenders. And to conclude, his and his mate's work is never at an end; for it is impossible to repeat all the duties incumbent on them.

The Office of a Gunner.

A gunner at fea ought to be skilful, careful, and couragious; for the ftrength of the ship is put into his hands.

A principal thing in a gunner at fea, is to be a good helmfinan, and to call to him at helm to loof, or bear up, to have his better level, and to observe the heaving and fetting of the fea, to take his aim at the enemy.

A gunner is to be provided, befides his ordnance, with powder and fhot of all kinds, fire-pikes, cartriges, cafe-fhot, croß-barfhot, langrel-fhot, chain-fhot, arm'd arrows of wild fire, and grenadoes of divers kinds.

He is to furnish himfelf with a horn, a priming-iron, lint-flocks, gunners quadrant, and a dark lanthorn; to make choice of his mates, his quarter gunners, yeoman of the powder-room, and his company in the gun-room, who are privileged from the labour before the maft, unless by his sufferance.

A gunner must know the names of his pieces, their bores or heighth, their weight, the weight of the hot, the weight of the powder, the goodness of powder, and how far every piece will carry, both at random and point-blank, which is fittest for a ship, and which for field or battery; but because every gunner does not know these secrets.

Shoot point-blank one hundred and twenty paces.

Shoot at random a thousand paces.

Notwithstanding these proportions of powder given to every piece aforcsaid, yet there must be respect had to the goodness or badness of powder, as, namely, serpentine powder, which is weak, and will not keep at sea; the great and gross powder is for ordnance; fine corn'd powder is in goodness according to the salt-petre: and for the shot, it must be a quarter of an inch less than the bore of the piece.

No fhip commonly carries greater pieces than a demi-cannon; and the reft of her pieces ought not to be above feven or eight foot long, unleß it be in the chafe or ftern: they are easier in charging, easeful to the ship, besides better in traversing and mounting. The longer the pieces are, the greater is their retention of fire, and the danger of the piece the greater.

It is true, the longer piece will burn the powder better, and carry the fhot farther, as the shorter piece will spue her powder; the longer is better for the land, the other for the sea; for he that shooteth far off at a ship, had as good not shoot at

> burn the farther, powder; nd, the thooteth thoot at

It is a folly to try a piece, either great or fmall, with a double charge; for a piece is proportioned to her mettle, equal with the charge of her powder; and though a piece fhould endure a double charge, yet the is the weaker by the proof, and made

the crazer by it.

Taper-bored, is when a piece is wider in the mouth than towards the breech, which is dangerous, if the bullets go not home, to burft her.

Honey-combed, is when she is ill cast, or overmuch worn, the will be ragged within, which is dangerous for a crofsbar shot to catch hold by, or any rag of her wading being afire, and sticking there, may fire the next charge you put in her.

Fire-works are divers, and of many compositions, as arrows trimmed with wild-fire, pikes of wild-fire to stick burning in-to a ship's side to fire her. There are also divers forts of grenades, some to break and sly in abundance of pieces every way, as will your brafs-balls, and earthen pots, which, when they are covered with quarter bullets stuck in pitch, and the pots filled with good powder, in a crowd of people will make an incredible flaughter. Some will burn under water, and never extinguish till the stuff be consumed; fome will burn and fume out a most stinking poisonous smoke; some being only of oil anointed on any thing made of dry wood, will take fire by the heat of the fun, when it shines hot.

It is not impertinent to make repetition of a great abuse, and the greatest of all others that could betal this happy kingdom, which God has placed in fuch a place of the world, that all the enemies of markind cannot annoy it from abroad, if the kingdom be well governed, the people encouraged, and the arms and ftrength kept from

being carried abroad.

But fuch has been the overfight of fome magistrates in times past, that they have connived at the transportation of our English ordnance, which exceeds all other in Europe for goodness: and now no country from the hithermost parts to the uttermost bounds of the world, but is able to give testimony of it in their facts and castles, which are furnished with them, to the unfpeakable hazard and danger to ourfelves; besides that, it breeds a double charge and expence to his majesty, as shall appear by this that follows. A French ship of five hundred tons, carries forty pieces of Engtifb ordnance, for which the king has 500 l. for licence of transportation. To command this ship, the king of England must keep yearly another bigger and ftronger than she, which will cost 3000 l. per Annum at the leaft, and the charge to maintain her in harbour will stand him in 400 !. a year ; fo that for the profit of 500 ! this great charge must be maintained, which by keeping our ordnance will be avoid-

The ordnance of England have been fold for 12 l. a ton, in Amsterdam for 40 l. in France for 60 l. and in Spain for 80 l. all in one year, for it is to be noted, that th: English ordnance is of another nature than the ordnance made in Bijeay, which break and fhiver into many pieces, to the deftraction of men on board the ship.

The Carpenter's Office.

I will enlarge upon this office of more than on the reft, because he is the man that gives life to the ship; for all the works that iron or timber is used in, pass through his hands and skill.

He looks to the hull of the ship, that there be no damage by leaks within board or without, but that all be tight and flanch; likewife to the (trength of the mafts and yards, and repairing of the boats, cabins, or partitions of plank, deal, fheet-lead, nails for work, &c.

What concerns the building of a Ship.

The keel, the stern, and stern-post, is the ground on which a ship is built.

The ground and timber is the floor of the

fhip, and are called the ring-heads. Your keelfon is laid over your floor timbers, which is a long timber like the keel, and lies within as the keel lies without; from it all the upper works are

The ribs of a ship are like the ribs of a man; the fleepers run fore and aft on each fide of the fhip.

The sparkets are the spaces betwixt the timbers along the fhip's fides in all

The garboard is the first plank next the

keel on the out fide. The garboard streak is the first seam next

the keel. The run of a fhip is that which comes

narrower by degrees from the floor-timbers along to the stern-post, called the ship's way aftward; for according to her run, fhe will fteer well or ill, according to the fwiftness or flowness of the water coming to the rudder.

The fore-end of a plank under water is called the buts-end; the planks that are fasten'd to the stern, are called the wood-

The tuck is the gathering of the works upon the ship's quarter under water; if it lie low, it makes her have a fat quarter and hinders the quick paffage of the water to the rudder.

The transome is a timber that lies athwart the stern, and lays out the breadth of the ship at the buttock, which is her breadth from her tuck upwards.

The rake of a thip is to much of her hull as hangs over both the ends of her keel, it gives the thip good way, and makes her keep a good wind; the rake forward is near half the length of the keel.

The fhips bildge is the breadth of the floor when fhe is afhore; the billage-water is that which cannot come to the pump.

The main-beam is next the main-mast, where is the ships greatest breadth.

Riders are builders from the keel to strengthen all, and the orlops do not lie upon them.

The beams of the orlops are to be bound with knees, which are the best that grow crooked naturally.

Clinch-bolts are clinched with a rivettinghammer for drawing out.

A flush-deck is that which lies upon a right line from stern to stern, fore and aft.

The gun-wall is the uppermost wall that goes about the uppermost streight or stem of the uppermost deck, about the ship's waste.

The ship's quarter is from the mizen-mast. Carling-knees are timbers that come athwart the ship from the sides to the hatch-way betwixt the two masts, and bear up the deck on both sides, and on their ends lieth the comings of the hatches.

Comings are timbers that bear up the hatches higher than the deck, and keep the water he 'lling in at the hatches; and they make loop-holes in them for clote-fights; and they are an eafe to men where the decks are low.

The knights belong to the halyards.

The revels are to belay the sheets, and tacks upon them.

The fpindle is the main body of the cap-

The whelps are fhort pieces of wood made fast to it, to keep the cable from coming too high in turning about.

The geer-capitain is a help to the great capflain in hoifting and weighing.

The voyal is faften'd together at both ends, with an eye or two, and a wall-knot feiz'd together.

A manger is a plank before or abaft the main-maft. The bits are two pieces of great timber, and the cross-piece goes through them; they are placed abaft the

manger in the ship loof, to belay the cable at the anchor the lower parts are fatten'd to the rider.

The call is a fhort piece of timber over the haufe, to which is fathen'd a great hook of iron to trife up the anchor from the haufe to the forecaftle.

The bulkhead is against the gun room, the cabin, the bread-room, the quarter-deck, or other such division.

The david is a fhort piece of timber, by which they hale up the anchor's flook to the fhip's bow.

The couperidge-head are placed murderers a they make close the forecastle and halfdeck.

Lockets are the holes the pintle of the murderers goes into.

The lower counter is betwixt the lower part of the galley and the transome; the upper part is from the galley upward.

Cat-holes are over the ports in the gunroom, right with the capitain to heave the ship aftern by a cable or hause, called aftern.

A fhip of four hundred tons, requires a plank of four inches; of three hundred tons three inches; small ships two inches, but no less.

For clamp, middle-bands, and fteepers, they are of fix inches plank for building them; the rest upwards three inches.

If a fhip be of four hundred tons, lay the beams of the orlop ten foot deep in hold, and all the beams to be bound with two knees at each end.

The orlop to be laid with fquare three-inch plank, and all the planks to be travelled by the beams.

'Tis very necessary to have a square rudder carried in a ship, as is used by the ships in the South Sea.

The Burthen 145 Tons.

The Masting of a Ship.

After the proportion you may estimate the masting of ships: suppose a ship of three hundred tons be twenty-nine foot by the beam i if her mast be twenty four inches diameter, the length of it must be twenty four yards i for every inch in thickness is allowed a yard in length.

And the fore-mast being twenty two inches in thickness, must be twenty two yards in

The boltfprit, both in length and thickness, must be equal to the fore-mast.

The mizen feventeen yards in length, and feventeen inches diameter: but in a made maft, which is greater, this rate will not ferve.

The mizen-mast is half the length of the main-mast, which to twenty four will be twelve.

As you take the proportion of the mafts from the beam, fo you must the length of the yards by the keel,

A fhip that is feventy nine foot by the keel, her main-yard must be twenty one yards in length, and in thickness but seventeen inches.

The fore-yard nineteen yards long, and fifteen inches in diameter.

The fpritfail-yard fixteen yards long, and nine inches thick.

The mizen-yard as long as the mast. The top-yards bear half the proportion

The top-yards bear half the proportion to the main and fore-yard, and the top-gallants half to them.

All these observations are not exactly to be followed, but r such after this proportion; for there are many other rules to this point to be observed.

The several Ways of Sheathing Ships in Spain and Portugal.

In Spain and Portugal they sheath ships with lead; not durable, heavy and subject to many casualties.

Another sheathing, is with double planks Vol. III.

within and without, like a furring; weighty, endures but a while, because the worm works through the one and the other.

Some have done it with fine canvas; of finall continuance, and not regarded.

To burn the upper plank, till it come to be like a very coal in every place, and after to pitch it, is not amifs.

In China they fay, they have a Bitumen, or varnith, like an artificial pitch, with which they trim the outfide of the fhips: it is faid to be durable against worm, water, or sun.

Some have used a certain pitch mingled with glass, and other ingredients beaten to powder s but of no great use.

The best is with thin boards, half inch thick, the thinner the better, and elm better than oak, for it does not split, it endures better under water, and yields better to the ship's side. The manner is thus a Before the sheathing-board be nailed on, upon the inner side of it they smear it over with tar, half a singer thick, and upon the tar another half singer thick with hair, such as the white limers use, and so nail it on, the nails not above a span distant one from another.

Some impute the killing of the worm to the tar, others to the hair, that involves and choaks it; this is the beft, and of leaft coft.

The worm begins with a hole no bigger than a needle's-head, and by degrees becomes as great as a man's finger; the thicker the plank is, the greater it grows: they are the molt near freih waters and rivers.

Creatures bred and nourifhed in the fea, coming into fresh waters die; and they die prefently that are bred in fresh rivers, and come into the falt.

The pitch of the Canaries melts not with the fun; therefore good for the upper works in thips.

Neara town called *Buco*, in *Perfia*, there iffus out of the ground a great quantity of oil, which oil they fetch from the furthest part of all *Perfia*; it ferves them in their houses for lamps.

Not far from that place, tar iffues out of the ground, which will ferve for ships; proof whereof was made by the ships the Englishmen built in the Caspian sea. At cape Brea, not sar from the sile of Trinidad, in the West Indies, there is a pitch of the nature of that of the Canaries.

The Purfer.

In the nature of a cape merchant in a fhip of merchandize, that keeps an account of all things brought into the fhip, he ought to be an able clerk; he has the K k k k charge

charge of the victuals fent aboard by the victualler for the company ferving in the ship, for such time as by his warrant he is requir'd, according to the proportion allowed by his majesty, and to see the same delivered daily by the cook and fleward to all men at their meals; and at the end of the voyage to deliver back fuch cask and bisket-bags as are not fpent in the voyage. He is likewise to enter the names of all the men in a fea-book, (as we term it,) which he should originally receive from the clerk of the check of the place where the ship was rigg'd and made ready, mentioning the places where they were preffed, and the day of their entry, with fuch denominations of offices as properly belong to them: and likewife, if during the voyage any of the men happen to die, run away, or for good cause be discharged by the cap-tain's order, to enter likewise the particular day of the month against each of their names in a margent of the books: he fhould also distinguish in the front of the book, at the beginning, when the ship entred into fea victuals; for that in all the king's ships the captain and officers do then

commence into fea wages.

He is, upon any lawful difcharge, to make a pass to the party, relating the time of his service, the place where he was pressed, his office, if he have any, and the place where he went from the ship, and to vouch the same under his own hand; whereunto he is to procure the captain's also, and to deliver it to the party, to carry with him to the treasurer of the navy's office at Deptford, to receive his pay

accordingly.

The Allowance of Victuals in the King's Ships at Sea.

Every man and boy is allowed a pound of bread a day.

Every man and boy is allowed a gallon of beer a day, (that is to fay,) a quart in the morning, a quart at dinner, a quart in the afternoon, and a quart at supper.

Every man and boy is allowed a day, on flesh days, one pound of beef, or else one pound of pork with pease, that is, on Sun-

day, Monday, Tuesday, and Thursday.

On fish days every mess, which is four men, are allowed a side of salt sish, either haberdine, ling, or cod, seven ounces of butter, and sourteen ounces of cheese, Friday excepted; on which day they have but half allowance.

The purfer is allowed by every man fix pence a month to provide neceffaries, as wooden diffies, cans, candles, lanthorns, and candlefticks, for the hold. Trumpeter.

For the more reputation of this man's fervice in a fhip of the king's, and under an admiral, it is fit he should have a filver trumpet, and himself and his noise to have banners of filk of the admiral's colours: his place is to keep the poop, to attend the general's going ashore and coming aboard, and all other strangers or boats, and to found as an entertainment to them; as also when they hail a ship, or when they charge, board, or enter her: they fet the watch at eight of the clock at night, and discharge it in the morning, and have a can of beer allowed for the same. This is not only incident to an admiral, but to all captains that carry a noise of trumpets with them.

A Surgeon.

He has his mate: they are both exempted from all duty, but to attend the fick, and cure the wounded: there must be trial of his fufficiency, by certificate from able men of his profession: his chest must be well furnished both for physick and surgery, which should be viewed before his going to sea by men of skill. The surgeon is to be placed in the hold, where he should be in no danger of shot; for there cannot be a greater disheartening of the company than in his miscarrying, whereby they will be deprived of all help for hurt and wounded men.

The Corporal

Is to fee the foldiers and failors keep their arms neat and clean, and to teach and exercife them every calm day, fometimes with powder, and fometimes with falfe fires; in a fight to have an eye over the reft of the fhot, that they do their parts, and not to ftart from the place they are affigned.

So long as the fight shall last, they are to put some budge-barrels of powder in the galley, or some close cabin, whither people may refort to have their bandeliers filled, and their bullets and match supply'd; with a special care, that no matches with fire come near the said galley or cabin.

The Cockswain and his Mate.

The cockfwain is, as it were, captain of the boat: he is to fteer the skift, and to be fent afhore on all occasions, or aboard all fhips at ica he shall meet, and to be directed by the captain: he is to make choice Book I

of a well necessor bouthe man tena and

e, captain of kith, and to s, or aboard and to be dimake choice of a gang, to be able and handsome men, well cloathed, and all in one livery. It is necessary he be a good pilot for the harbours or shores he goes into, and to know the course of the tides: he ought to be a man of discretion and good shape, to countenance the imployment he shall be fent on; and if he had language, it were much the

The Quarter-Masters

Are four, and every one has his mate; they have the charge of the hold for flowage, romaging and trimming the ship in hold: they have their fquadron in the watch, and fee that every one do his office both by day and night: they have a care to look to the fteerage and the traverse-

The Cooper and his Mates

Are to look to the cask, hoops, and twigs, to stave and repair the buckets, barrels, cans, freep tubs, rundlets, hogsheads, pipes, &c. for wine, beverage, cyder, water, and other liquor; and as often as they shall fill fresh water, the cooper is to give his attendance for the fitting the

The Swabber and Lyar.

The fwabber is to keep the cabins, and all the rooms of the ship clean within board, and the lyar to do the like without board. The lyar holds his place but for a week; and he that is first taken with a lye upon a Monday morning, is proclaimed at the main-mast with a general cry, A lyar, a lyar, a lyar; and for that week he is under the fwabber, and meddles not with making clean the ship within board, but with-

The Steward and bis Mate.

His office is to be the purfer's deputy, chosen by him, and keeps always in the hold, to deliver the victuals to the cook, who is trusted to retail the victuals in meet proportions, and is only accountable to the purser, though he has some allowance from the victualler, for well husbanding and keeping the provisions from waste or putrefaction: he must not suffer banqueting or diforder in his room, but keep it clean and fweet; and, as occasion shall serve, cause the quarter-mafters to romage, for the better coming to his victuals.

The Cook

Is to drefs and deliver out the victuals. and is affifted by a mate or two; the meat being fod, either of fish or flesh, he delivers it out to them appointed to mess the company, and after to put out the fire, and fuffer none to be kindled, or people to refort into the cook-room, but in case of necessity; as namely, when the cockswain's gang comes wet aboard, or sick men have occasion to use the fire for their comfort.

All these officers aforesaid have many people under them in their rooms, not able upon any occasion to tackle the ship, or do any other work, more than that they are bred to: therefore, according to my directions in the first book, it is fit and necessary that such people be put to the use and practice of the musket, or to the labour in hawling, and doing other helps to the gunner about his ordnance in the time of fight, otherwise the ship will be weaken'd, when there is use of men, by so many people, who otherwise would do good service if

they were taught what to do. Having declared the use of every man's office and place in his majesty's ships, and how conveniently all men are provided for that fervice in them, without confusion or trouble one to another, I will now flew how England exceeds Spain in this kind, and to that purpose will set down the managing and marshalling of the king of Spain's galleons, and fhew the confusion and ill order aboard them, in comparison of the kings of England.

The ill Management of the Spanish Ships.

THE Spaniards have more officers in their ships than we: they have a captain in their ship, a captain for their gunners, and as many captains as there are companies of foldiers; and above all, they have a commander in the nature of a colonel above the reft.

This breeds a great confusion, and is many times the cause of mutinies among them; they brawl and fight commonly aboard their ships, as if they were ashore.

Notwithstanding the necessity they have of failors, there is no nation less respectful of them than the Spaniards, which is the principal cause of their want of them; and till Spain alters this course, let them never think to be well ferved at fea.

The meanest foldier will not stick to tyrannize over the poor failors, like a mafter over his fpaniel, and shall be countenanced in it by his land commander.

Their ships are kept foul and beaftly, like hog-fties and sheep-coats, in compari-

fon of ours; and no marvel, for there is no course taken to correct that abuse, by appointing men purposely for that office, as we do in our ships.

Their allowance of diet is fmall; and yet not fo finall as ill-order'd; every man has his proportion of victuals in the morn-

has his proportion of victuals in the morning to ferve him the whole day, and every man is his own cook; and he that is not able to drefs his meat, may faft. The foldiers will as ordinarily play away their allowance of victuals as money; and others, out of covetousness, will fell their victuals for money to maintain play: this makes them grow weak and lean, like dogs, and unable to perform the service they are commanded upon.

Our discipline is far disserent, and indeed quite contrary, as I have shewed before.

We have only one captain of the fhip, failors, foldiers, and gunners; and this captain had not fo much as a licutenant by the allowance of the queen, till of late; fo that matters of command, direction, and correction, depend upon his diferetion.

He fees that every officer humbles himfelf to his command, and that every ordinary man be as obedient to their inferior officers: he takes account of the expence of victuals, powder, and shot: he punishes every offence, and especially mutinies and quarrels, with great feverity: he fees no injury shall be offered the failors by the foldiers, but carries himfelf indifferently betwixt both. If he affect one more than the other, it is the failor, because of the necessity of them: he overlooks the ship once or twice a-day, that she be kept sweet and clean, for avoiding fickness, which comes principally by flothfulness and disorders: he will not exceed the proportion of his men by allowance of his victuals. and will see every man be provided of his diet at a due and feafonable time; and for the better ordering of victuals, there are divers officers appointed in fundry rooms, as stewards to give it out, meaner persons to serve it, men to look to the shifting of it in water, and cooks to the dreffing of it; fo that no man but upon courtefy is admitted to have access into the cook's room, except the officers of the room. There are fome appointed to make clean the ship within board, who are called fwabbers, and without board by the name of liars, as I have shewed before. No man is suffer'd, either to fell or play away his victuals, but to take it orderly and in due feafon, which keeps them in health and heart.

The greatest inconveniency in his majestry's ships is the placing the cook-room in the midships, and so low in hold, that many inconveniencies and dangers arise by it; if it take fire, it is not so easily quench-

ed as if it were aloft, and in the forecaftle. Secondly, it will make the fhip camberkeel. Thirdly, the continual fire that is kept in that part of the fhip, cafts fuch a heat amongst men and victuals, that it begets ficknets, and disperses such an offensive smoke in the ship, that it putrefies victuals, and makes it both unwholsome and untoothsome to be eaten.

The Difference between the King of Spain's Ships in former Times and these Days, and the true Distinction of the Strength of Ships.

HAVE heard divers fufficient men, as merchants and others that lived in *Gain*, before the wars with queen *Elizabeth*, very much cry down the king of *Spain*'s flaps in comparison of ours; as in particular, that they were huge and mighty in burden, weak and ill-fashioned in building, lame and flow in failing, fitter for merchandize than war; and I remember, that old feamen, as *Sir John Hawkins*, and others, have maintained, that one of her majetly's ships was able to beat four of them.

I confess we may the rather believe ir, because the event has shewed it; for if we examine the particular loss on both sides, her majethy's ships have devoured divers of the king of Spain's; whereas there was but only one of hers taken, and that merely by the indiscretion of the captain Sir Richard Greenville; for which one there have been burnt, sunk, and taken, twice as many as the queen has in number; insomuch, that if the queen's loss had equalled the king of Spain's, the could hardly have maintained the navy in that slourishing state it is in

But if we should attribute these misfortunes to ships, which are made all of one fort of wood and iron, and after one manner of building, it were great folly; but give Cæsar his due, and allow the ships their due; for a ship is but an engine of force, used for offence or defence; and when you speak of the surement of ships, you must speak of the sufficiency of men within her; and therefore, in comparing the Spanish ships with ours, I enter into the comparison of men; for if it were in my choice, I rather desire a reasonable ship of the king of Spain's mann'd with Englishmen, than a very good ship of her majetty's manned with Spaniards; so much account I make betwixt the one and the other.

But if you will agree of the true ftrength of ships, and the difference betwixt the queen's and the king of Spain's, as heretofore I have faid, the king's are of greater burden, which is a great advantage in boarding; spacious within, and will contain more

e firength twixt the as heretoof greater in boarditain more men than ours; have more decks, and therefore carry more ordnance.

But you will fay, all this is nothing without fwift failing, which advantage we have of them. It is true, it is the only advantage on our fide; which advantage may be compared betwixt a greyhound and a bear, betwixt a galley and a good ship in a calm, or betwixt a swallow and an eagle; that though they be of little force to hurt bear, fhip, or eagle, yet are they of agility and nimbleness to run and fly from them.

But if we will enter into the true strength of shipping, without advantage of men or failing, but that you must fight according to the old faying, Fight dog, fight bear, that is, till one be overcome, which cannot be better decided than at anchor in harbour. I fay, no man can deny but that the king of Spain's ships are stronger than ours, by the reasons before alledged, That they are bigger, and contain more men and ordnance, the number more, of greater burden, and therefore of greater strength; as I have already shewed in the voyage to Cadiz, in 1625. But according to my first argument, confidering the irrefolution and infufficiency of the men, I would rather chuse to be one of the ten of the queen's to encounter with twenty of them, than one of the twenty to encounter with ten of her majefty's.

Notwithitanding these reasons, I do not disallow the opinion of such men as defend the difference betwirt the English and Spanish finises; for to speak the truth, till the king of Spain had war with us, he never knew what war by sea meant, unless it were in galleys against the Turks in the Streights, or in the islands of Terceras against the French; which sleet belonged to him by his new-gotten kingdom of Portugal.

The choice of thips he had of his own in his expedition of 1588. belonged to Portugal; most of the rest consisted of several mations, as Levantines, Bistainers, Flemings, and merchants of his own country. Whosover since have seen the difference of their building, would scarcely know the others to be ships, in respect of them that are now.

The first time the king shewed himself strong at sea, was in the year 1591, when the Revenge was taken; since which time I will make out there have been built at the king's charge sixty nine ships, as shall appear in the ensuing and fourth book, and most of them of a thousand tons in burden, and upwards; as to instance in the two galleons we brought from Cadiz, which sufficiently statisfy us.

God has endued *England* with a fingular bleffing above the fouthern countries, both with shipping and mariners; and to speak the truth, *England* lies more convenient for

the breeding of feamen than Spain; for what makes skilful and expert mariners but dangerous and painful navigations, where the weather and feas are boifterous and rough, the coasts perilous, and the tide forceable; all which our country is subject to: then on the contrary, what makes idle, loitering, and unskilful feamen, but fuch navigations, where the feas are calm, and the weather fair, the coasts not perilous, nor the rides ftrong; all which commodity Spain has; for betwixt them and their Indies, Guinea, and Brafil, to which place their chiefest trade is, the feas are calm, and the winds certain outward and homeward, feldom foul weather, or not long, the coast less dangerous than any other, and a finall or no tide

at all to annoy them.

Where there is fo great an ease in navigation, it breeds idle and unable mariners. What makes so great a difference betwixt the *Biscainer* and natural S_i aniard for sea, but the difference of the voyage? The one I have shewed is easy and full of pleasure, the other painful and troublesome.

The Bifeainers greatest trade is in fishing on the coast of America, where, with great labour and pains, they kill the whale, and take their fish: this breeds perfect and skillul mariners, and makes them not only exceed all other Spaniards, but get a reputation and imployment in the king's ships.

There is no officer, from the degree of a captain to the meanest officer, but commonly is a Biscainer; and the Biscainers have divers privileges, not granted to any other subject of Spain, to encourage them to perfevere in their sea courses; and to give them their due, no nation is able to compare with them: few (for many there are not that in knowledge, hardness, and valour, are able to equal them; and were it not for the Biscay failors, I know not how the great armada's of Spain would be maintained.

The Allowance of Victuals in the King of Spain's Ships and Galleys.

EVERY foldier in a fhip or galley has a pound and half of bread allowed him every day.

Of fresh beef three quarters of a pound, of salt beef half a pound and an ounce.

A quart of wine a day, and a pottle of

The flaves every day half an ounce of oil, two ounces of rice, beans, or garnan-fes; one of these three.

They have fix meals of flesh in a year, two at Christmas, two at Shrovetide, and two at Easter.

The mafter, boatfwain, corporal, godfer, purfer, oar-maker, and caulker, have double the foldiers allowance a day.

The barber, two gunners, and boatfwain's mates, have but one allowance and half a day

Those that have two allowances a day, have twenty shillings a month.

Those that have but one and half, have fifteen shillings a month.

A fingle allowance but ten shillings. A pilot has four allowances, and fifty shillings a month.

A captain is allowed five ducats a month,

and two allowances,

There are allowed in every galley two flaves to row in the boat to fhore, who have one allowance a day betwixt them both.

The king of Spain pays yearly fix thoufand ducats for the maintaining of a galley, and before one be launched, the stands him in feven thousand ducats; I mean only her

All his galleys are built in Barcelona of

pine-tree.

There is in a main-fail of a galley, fifteen hundred yards of cotton; in a fore-fail, three or four hundred yards.

The Number of Ships, their Names and Burden, that have been built in Spain at the King's Charge, fince the Year 1590. to this present Year of 1600. How many of them are lost, and where; gather'd by me in the Queen's Service.

N the year 1591. Twelve Apostles, fix built in Bilboa; their names as follows; their burdens betwixt thirteen and fourteen hundred tons.

St. Philip, burnt by us at Cadiz in 1596. St. John, burnt at Havana; she was the

vice-admiral that fought with Sir Francis Drake's fleet in 1595.

St. Tadeus, lost in 1599. when the Adelantado pursued the Hollanders.

St. Barnaby, loft going into Lisbon. St. Matthew, taken by us at Cadiz in 1596. St. Bartholomew, lost in Biscay in 1597. wnen the Adelantado returned from Fal-

mouth. The other fix at St. Ander.

St. Paul, always admiral, laid up for weakness at the Horcado's.

St. Stephen, vice-admiral, the like in Lis-

St. Simon, made a carrack, and fince broke up.

St. James the Elder, loft coming to the Groyn with the Adelantado in 1597.

St. Andrew, taken by us at Cadiz in 159 St. Thomas, burnt by us at Cadiz in 1596. In the fame year two small ships of two hundred tons.

St. Urfula.

La Castidad.

The same year two ships built in Portugal, of eight hundred tons, by command of Don Alonfo de Baffan.

One of them loft upon cape vinifter. when the Adelantado went to the Groyne

In the year 1592, feven ships of five hundred tons, built in the Rantaria: these fhips use to fetch the king's treasure from the Indies. I met with them at the Tercera's in the island voyage in 1597.

Nuestra Senora de Aranca.

Nuestra Senora de Monserrate, lost on the coast of Spain.

Nuestra Senora de Guardalupe, lost in the Indies.

Nuestra Senora de Valverde.

Nuestra Senora de Alistes.

Nuestra Senora del Rosario, lost on the cape St. Mary's, and with her Nuestra Senora de la Merced; (plate most

of it faved.)

Built in the Canary Islands the same year four frigates of four hundred tons each: they fetch'd the plate from the Indies.

St. Barbara, burnt by us at Cadiz in 1596. St. Mary Magdalen, burnt herself at Puerto Rico, when Sir Francis Drake was there.

St. Helena, was burnt by us at Cadiz in 1596.

St. Clare.

In the year 1595, built in the Rantaria, feven ships of thirteen hundred tons each.

St. John Evangelist.

St. Matthias, broke up at Lisbon.

St. Mark.

St. Lucas, loft coming out of Ferrol, when the Adelantado came for England in

St. Augustine.

St. Gregory. Flor de la Mar.

The fame year, and in the fame place, three fmall ships of fixty tons.

La Justicia, lost at sea.

La Esperança, taken on our coast by an English man of war.

La Verdad. The fame year built in Lisbon three ships, by Lambert an Englishman, of four hundred

tons El Espiritu Sancto, lost in 1597. coming to the Groyne with the Adelantado.

La Fee. La Caridad.

In the year 1596 built at Fuenteravia, two ships of three hundred tons, which were fent into the South Sea.

Nuestra Senora de Loreto.

Nueltra Senora de la Pena. In the year 1597, built in the port of Portugal, two ships of fifteen hundred tons, that were made carracks.

St. Antonio.

St. Vincent.

In the fame year 1397, fix ships in the Rantaria, of eight hundred tons each ship.

St. Simon.

St. James the Greater.

St. James the Less. St. Bartholomew.

St. Lucas.

St. Diego de Guardalupe, of a thousand tons, built by a merchant in Biscay, but bought by the king.

The number of them all is fixty nine, whereof burnt, taken, and loft, fixteen; but befides these fixteen, the king has lost divers more, some of his own, some hired, and others pressed to serve. It is thought the dominions of Spain loft in time of war, fix

hundred vesicls, one with another. Now I am upon the Spanish acts and accidents at fea, I will add fuch instructions as generals of fleets use to deliver to the captains under them; and how their captains of land foldiers, and captains of ships are to carry themselves one to another, that every man's command may be known and diffinguished, and particularly in their expedition for England in 1597. where the Adelantado was general, intending to have landed at Falmouth.

Don Martin de Padilla Adelantado, Mayor of Castile, Earl of Buendia, Captain-General of the Gallies of Spain, and of the Navy Royal of the Ocean Sea, and of the Catholick King's Army, Anno Domini, 1597.

Mprimis, all fervitors, as well by fea as land, of what state or condition soever,

St. Jeronimo, lost in 1599, puriting the Hollanders with the Adelantado. fhall be always ready to keep and observe these orders that are deligred them, to live a christian and virtuous life, under the penalties contain'd in these articles.

2. You shall be ready, as well land as fea captains, with your officers and com-panies, to ship yourfelves without any delay, when you shall hear the admiral fire, to call your companies aboard; you shall muster your people, and make ready your ships to set fail, and so to follow the admiral, as well fea captains as land captains that shall be in any such ship; and shall fail to do the same, shall be punished with all rigour; and all mariners, officers, or foldiers that shall tarry behind the fleets, I from this time condemn to lose all such wages as shall be due to them, and to serve the king at on oar in the gallies four years; and the officers to be broke and deprived

of office for ever. 3. As foon as ever you are out of har-bour, as well fea as land captains of every ship, shall muster their sea and land men, and shall make a list as well of their men as their arms; and they shall give order, that they who have no arms may be provided; the harquebusiers, and musketeers that have no shot, you shall cause them to cast it presently; you shall provide them match ready; you shall carefully see your foldiers powder dry in the flasks, and those ready, as it were, to present fight; this readiness must you be in at all hours: their touch-powder alfo, their muskets, and harquebusiers must be very clean; and that they neither want vice-pins nor fcourers; that they keep their cocks and pans very clean, and in good order; and if in the muster you make, you want any of those foldiers you had ashore, then let me have notice thereof, that they be fought out and punished.

4. The captains of land men shall exercife their musketeers and harquebusiers by their companies, at first with powder in their pans, and afterwards to shoot at a mark fet up against the foremast; your serjeants and corporals must be very careful to fee them exercise, and to keep their weapons

5. Every land captain shall be very careful, and make his foldiers know how to ferve in shipping, and so to quarter them that they may know their places where they are to stand to fight; fo that at the time of need they may not go thwarting one another in the ship, nor trouble one another. The captain of the fea shall likewise make his great ordnance ready, and the ammunition must be in lockers fast by the pieces: there must be always in readiness spikes, lanthorns, cartrages, armours, corflets, to have them clean, and every man his own.

6. The gunners shall divide themselves into companies, and every man shall know his charge, what ordnance he is to look to. and to acquaint the captain withal, and he to appoint such help as shall be necessary; the captain shall be very careful to visit his ordnance, and if there be any fault, he may fee it remedied; and the gunner that liath not his piece in readiness, to be punished giving me the general notice thereof.

7. Every pilot and captain of a ship, shall have a special care to speak every day with their admiral, and to take the word, and fo coming in good order, one ship to give another room, without molefting one another, and if they cannot take the word for fome extraordinary occasion, then fol-

low this order:

St. Mary. Sunday Monday St. James. Tuefday St. Barbara. The word Wednefday St. Eugenius. of the Thursday St. Rapbael. St. Beneditt. Friday Saturday, St. Martin.

3. No fhip by day or night shall go ahead the admiral, without he have express order to do it.

9. No ship shall go to windward, nor stop in the wind, without he be forced to

it, or have order fo to do.

10. If any ship fall foul of another, whereby any of them be damnified, there shall be enquiry made, which of the pilots was in fault, and he shall pay any hurt so done; besides that, he shall be put in prison for his fault, during my pleafure.

11. If we chance to fail with a scant wind, and by night, and the admiral defigns to tack about, she shall fire a gun, and shew her lanthorn upon her poop, that thereby you may know it; and then shall every ship put out a light, that the admiral may per-

ceive you know his meaning.

12. If the admiral, by force of wind and weather, or elfe to repair or amend fomething amifs, shall be driven to strike a hull. then she shall fire a gun, and set fire upon her beak-head; as foon as ever you shall the this fign, every man shall strike a hull, and put out his light, that the admiral may tell them, and so be fatisfy'd that they know his meaning; and that they are . hull as well as the; and when this is done let the pilot take head that they give the ship scope enough, and keep good watch, that you do not fall aboard one another, and fo fpoil yourfelves.

13. When the admiral fets fail by night, she will fire a gun, and set a light on the middle of her main shrouds, and so every man shall set fail and follow.

14. If the admiral come to anchor in any

bay, or upon any coast, she shall set a light upon the head of her fore-mast; and wh. the rest of the ships see this sign, they must come and let fall their anchor, as near the admiral as they may fee they be not foul of her ground tackle.

15. All captains and officers shall diligently fearch what wants they have in their thips, and then to be futors that they may be provided in time, that when need is, they be not at a lofs. It is no reason that he who is provident beforehand, and does not only provide for his wants, but preferve what he has by his industry and diligence. should have any thing taken from him, and given to flothful captains, who do not perform their duties as they are bound.

16. All shipping that shall shoot off any ordnance, shall within two days, come to me, the faid general, with a note under the captain of the foldiers hand, drawn by the purfer, and also the captain of the ship, for what cause it was shot off, and what piece it was, that if it be found that the cause be just, he may have allowance; if he exceed the time of two days, his note shall not be received, except it be known he was not able to come to the admiral.

17. If any ship break a mast or a yard by night, the shall fire a gun, and put a light on the beak-head, and another upon the poop, that I, and the rest of the ships, may know that she is in distress; and all fhips shall make haste to succour her.

18. When the admiral comes to anchor in harbour or bay, let the pilots take good heed to give a good scope, that one may not hurt another; and he that comes lateft to an anchor, not to come foul of any fhip anchor'd; for if he do, the pilot is to pay the lofs and hurt that is done.

19. All the ships shall be careful to keep a man at the top-mast head; and he that fpies a fail shall fire a gun that way the fail bears, and strike his top-fail; and so many fails as he spies, so many times to strike his topfail; and other ships to bend them-

felves towards him.

20. If you discover any vessel in the night, and are not able to come to the admiral, then to flew fo many lights as you fpy fails, and to place them fore and aft; and he that spies the first light of the enemy, shall have a jewel given him by me for his

21. When the admiral putteth her ancient in the main-shrowds, then all the fleet is to come to speak with him; but if she fire a gun withal, then the captains and pilots are

to come on board.

22. In bearing in with the fhore, the fbip that first spies the land, shall five a gun, and put an ancient in the head of her foretopmaft; and if it be in the night, to shoot

23. If in the night there happen a storm, the admiral to put out two lights befides his ordinary lights, and every thip to thew one

light upon the poop, to avoid any hurt.
24. It ships be divided in foul weather from the fleet, and have none of the three flags to follow, they shall obey the biggest of their company till they meet with the admiral, vice-admiral, or rear-admiral.

25. Before you go from the Groine, you shall have the order of the cross, which you fhall keep whilft you are at fea.

26. When the admiral shall vail his maintopfail, and pike it a little, then shall every ship put himself into order of battle.

27. When the admiral and his fleet arrive in an harbour, or upon a coast, no man or boat must go ashore without my leave.

28. If any captain of a ship be out of his ship, though it be with licence, yet he shall appoint no lieutenant without my order.

29. If we meet the enemy, you are to make yourfelves ready to fight, and to place the foldiers in their places; if in the night, to keep their matches from being discover'd.

30. If we meet with the enemy, and the admiral and his fquadron refolve to board, other ships must do the like; but if the pilot be of another opinion, yet notwithstanding they are to do it; and another sufficient man to be put in the place of the pilot; and if there be a fault in doing thus, the general to answer it.

1. If any of our ships fetch up an enemy, and fight her, the ship that shall next come to board her on the other fide, shall share in the pillage, the jewels, and money, not exceeding an hundred ducats; the arms of them taken, and apparel to be theirs, so it be not fluff uncut: and whofoever shall light upon jewels and stuff, to make it known in three days; if not, to lose his pay, and be punished; and what he has taken to be divided, according to the king's instructions.

32. A ship that takes a prize, no other ship shall have to do with her, but follow the rest, if there be more; but if he chance to go on board her, and take any thing out of her, he shall pay the captain four times the value of it.

33. If any fuch ship yield, not to board her, but to fend on board to fetch away the prisoners; and such pillage as is in her to be divided, according to the last article; and he that puts himself aboard without leave, shall lose his pay, and be punished; and if he will do it per force, it shall be lawful for the company to kill him; and in like case, if a man shall go into a boat without leave, to be killed.

34. The first, second, or third man that enters a ship, shall have a jewel given VOL. III.

off a piece, and to come to fpeak with the him, according to the discretion of the general.

35. Whofoever enters an enemy's ship without arms, fighting, shall lose all that he gets in her, and his own cloaths belide.

36. If an admiral give chase, and suddenly tack about, or lie by the lee, it is a fign he fees many fhips, and every fhip must then draw near his admiral in order of fight. 37. The captains of foldiers and fhips

must command store of tubs of water to stand upon the deck, and blankets and coverlets in them, to be ready to quench any fire that shall happen.

38. Before you come to battle to have

your yards flung.

39. If you lose company in foul weather, and descry one another, the greater number to go to the less, if by night, the greater number to shew two lights, the one ahead, the other abaft, putting them in and out two or three times, as when they come to anchor in the night.

40. You must have a care of your powder and cartrages, and fet down the number of every cartrage, according to his piece.

41. That every carpenter and caulker be ready with his lead and other things for stopping of leaks.

42. That you make no fire till the fun rise, and then to dress the meat for the company; the foldiers to watch in the day time in the quarters, till an hour before fun-fet, and then to put out the fire, and light it no more till the next day.

43. The foldier that has the watching of the fire, shall not suffer any to be carried out of the hearth; and he that does it, to be

feverely punished.

44. To keep an ordinary light in the bittake, and a lanthorn under the spare deck, for the foldiers to watch; and he that takes away either, to be condemn'd to the galleys for two years, to serve for a soldier without pay.

45. The captain of the foldiers is to lodge with the captain of the ship; the pilot, master, ensign, and serjeant together, in the fecond cabin; and the rest of the officers accordingly; and to have an eye over the fol-

diers for brawling.
46. That no foldier, mariner, nor officer, pass from one company to another, or from one ship to another without my licence.

47. If we discover any vessels, and the admiral make a fignal of giving battle, the officers that have the keeping of all kind of stores, shall have warrant from the captain for the delivery of them.

48. For that many hulks and strangers in them are deceitful; therefore, if you find any fuch fuspicion, you shall fire three slashes of powder, and the ships next you feeing it, to repair to you with all speed, to give you fuccour.

49. And though in my inftructions I have given you fufficient order for your navigation, which must not be violated, yet the thing of greatest importance, is, That the captains by fea and land be prudent, vigilant, and careful, as I understand all are in this service.

so. I have ordered that all the fquadrons fhall carry their flags severally of one colour, that they may be known, and gotten together the fooner; and because sometimes order cannot be given by word of mouth, you are to fix your eyes upon your admiral, and when he fets upon his poop the colours of any of his fquadrons, the admiral of that fquadron is to behold which way the fign is made by the fame colours, that fo he may follow any fleet fo difcovered.

51. If any of the strange ships shall have a leak, let it be fearched by the two captains by sea and land; and if they find it to be done on purpose, let him be hanged, and his ship forfeited.

52. That no captain or pilot do fet any other course than the admiral directs; and if they do, no excuse shall serve their turn.

53. That no captain, or other, ship any woman, except she be married, and proof thereof brought from the general's prieft, upon forfeiture of his office, and ferving the king two years without pay.

him go to his captain; and if he cannot help him, then to the admiral, where he shall have help.

55. If any ship be in distress, then to shoot off a piece, and those next to her to upon any leak that shall happen in hold. haften toher; and if they fail, to be feverely

56. If we meet with an enemy, great or fmall, let none of the fleet follow him, but follow the admiral of his fquadron, and do as he does, or shall direct, except pinnaces and fmall ships, which shall be at the difpofal of the admiral.

N.B. Some of these Instructions are frivolous, some of them needless, but most of them tediou, and may be comprehended in fewer words, and to greater purpose: but for my part, I will rather defire to know what they do, than feek to follow and imitate their directions in fea affairs.

How to fight at Sea one Ship with another; or in Fleets; or Ships against Galleys; or Galleys against Ships : and the Manner how every Country preserves Men from Danger in a Fight.

Before ships and fleets encounter, or enter upon action, these things following are necessary to be done; To divide the

company into three parts; the one appointed to tack the ship, the second to ply the fmall-fhot, and the third to attend the ordnance; but not fo precifely, but that one may be affifting to the other in the three feveral places.

The ship is to be brought into its short and fighting fails, (viz.) her forefail, her main and fore-topfail; for the other fails are troublefome to handle, and makes the fhip heel fo, that her ordnance cannot be used, beside the danger of firing her fails with arrows and other wild-fire from the enemy.

The mafter is to appoint a valiant and fufficient man at helm; and to receive his directions from his captain how to order the fight, and where to board; which must be done with most advantage, and according to the placing the enemies ordnance; and therefore it is requifite to have a captain of experience.

Every officer is to do his part; the boatfwain to fling their yards, to put forth the flag, ancient, and streamers, to arm the tops and waste-cloths; to spread the netting, to provide tubs, and to command the company to make urine in them, for the gunners to use in their spunges to cool their ordnance in the fight, and all other things that belongs to his charge.

The gunner is to appoint his officers to 54. If any fervitor stand in need, let their quarters, to have care to their files, budge-barrels, and cartrages; to have his fhot in a locker near every piece, and the yeoman of the powder to keep his room, and to be watchful of it, and to have hiseye

The carpenters are to be vigilant, and to have their oakham, lead, nails, and what else belongs to the stopping of leaks in readiness. He must have a man always ready to fling overboard, if there chance a leak. Or if there be cause to take in the lower tier of ordnance, by the fudden growing and working of the fea, he must have all things ready to caulk the ports.

The Building of Ships.

There are two manner of built ships: the one with a flush-deck, fore and aft, sunk and low by water; the other lofty and high charged, with a half-deck, forecastle, and copperidge-heads.

This ship with a flush-deck I hold good to fight in, if she be a fast ship by the wind, and keep her felf from boarding: she is roomfome for her men, and yare to run to and again in; but she is not a ship to board, unless it be a merchant, or another ship that is inferior to her in strength and number of people.

wing and

all things

Thips: the aft, funk lofty and forecastle,

hold good the wind, g: fhe is to run to a fhip to or another ength and For if it happen that she be boarded, and put to her defence, the lieth open to her enemy; for gaining her upper deck you win her, having neither forecastle, nor other close-fight to retire unto; and in that case the detensive part of the ship is the strength of the forecastle.

When her deck shall be gained, and her people beaten down into the second deck, the only help is to use stratagems by fire, in making trains of divers fashions to blow up the upper deck, and men upon it; and this did the Biscainer I have formerly spoken of in my first book, in the voyage I first went to sea, and the first fight I did ever

fee, in 1585.
This ship had a flush-deck, fore and aft, which in boarding we won upon her, and her men retiring into her other deck, spent the most part of her powder in making trains to blow us up; which by fortune we prevented, and our fire-pikes took fire before it could be brought to perfection; and thus after twelve hours fight in the night, we being upon a flush-deck, and commanding their scuttles aloft, that they could not come up to us, and they commanding the fcuttles below, that we could not go to them, they grew fo weary for want of powder, and the death of their people, that they yielded, as I have before described, after twelve hours fail on board her.

As I have faid, fuch a ship that has neither fore-castle, copperidge-head, nor any other manner of desence, but with her men only; that hath no fowlers, which are pieces of greatest importance, after a ship is boarded and entered, or lieth board and board; for the ordnance stands her in little stead, and are as apt to endanger themselves, as their enemy; for in giving fire it may take hold of pitch, tar, oakham or powder, and burn them both for company; but a murderer or sowler being shot out of their own ship, laden with diesshot, will scour the deck of the enemy, and not suffer the head of a man to appear.

The advantage of a ship with a slush-deck, that boards another to windward, is this, She may with her lee ordnance shoot the other under water, and her self in abazard; the ship that is boarded to leeward of her, is at the other's mercy, and becomes weak in comparison of the other to

Whoever enters and takes possession of the upper deck of such a ship, shall be able to cut down her masts, shrowds, and all things over head; that though he take her not, yet she shall be left a wreck in the sea, and perish.

I will make a comparison of the James Regis of his majesty's, (of whom I will say,)

that for her mold and condition, the is a paragon of fhips, and not to be equalled; but in her built with a flush-deck, and her clofe-galley abaft, the is to be excepted against in a defensive part; but how it may be amended, and she be made serviceable, as well for defence as offence. I will refer to my own direction, with his majesty's approbation; though something I will say of her close-galley, that is made only for a shew, and to accommodate captains, when I shall have occasion to treat of galleys.

The only strength of the James at this present is in her broad-stide, where she hath two brave platforms of ordnance to overdare any ship to board her; nor no enemy in discretion will do it, if he can find a weaker part in the ship to attempt: but suppose she be boarded in her prow, or abast at the poop, and be entied by more men than the hands of her company can resist, she neither having forecastle ahead, nor close-sight abast, all must rest upon the strength and valour of a few men; which if they be overcome, both ship and they must fall into the hands of an enemy, in the manner I have shewed.

The best manner of a fight in a ship of a sush-deck, or any other, indeed, being to windward of his enemy, is to bring himself within pistol-shot of her, and to ply her and her parts with small-shot at that distance; to sade his ordnance, some with musket-bulkets, others with cross-bar, and langrel-shot, or billess, to be the destruction of men; but to avoid Joarding or being boarded: this I hold the best manner of sight, betwist ship and ship; it will make short work, and the quarrel will be soon decided; as sighting surther off is like a Smithsfield fray, in times past with sword and buckler, which is nothing but the wasting and consuming of powder to no purpose.

A high-built thip is the better for these reasons, majetty and terror to the enemy, more commodious for the harbouring of men; she will be able to carry more artillery, of greater strength within board, and make the better desence; she will overtop a lower and fing ship; her men cannot be so well discerned, for that the waste-cloths will take away the view and fight of them.

And lattly, to speak of a ship with three decks, (thus it is,) She is very inconvenient, dangerous, and unserviceable; the number and weight of the ordnance wrings her sides, and weakens her: it is seldom seen that you have a calm so many hours together as to keep out her lower tier, and when they are out, and forced to hall them in again, it is with great labour, travail and trouble to the gunners, when they should be sighting; she casts so great a smook within board, that people must use

their arms like blind men, not knowing how to go about their work, nor have a fight of the ship with whom they encounter.

How to preserve Men in Fight.

Several nations have feveral ways to preferve their men in fight at fea: the French use to stown half their soldiers in hold, and to draw them out, causing the others to retire as there shall be occasion or necessity. This I hold dangerous, troublesome, and inconvenient, when all men are otherwise bufy in their several places, to pass to and again with their matches lighted, which may unhappily fall on something to take fire.

The Spaniards imitate their former discipline at land; as namely, a van-guard, a rear-guard, and a main-battle; the fore-caftle they count their head-front for van-guard, that abaft the mast the rear-guard, and the waste their main-battle, wherein the rear-guard, are the rear-guard, and the waste their main-battle, wherein

they place their principal force.

This in my opinion will breed great diforders, especially if the ship should fight with all her sails standing; for the labour of the mariners in tacking and handing their sails will consound them, that they know not what to do; but if they sight with their small sails, it will prove the better; but howsoever here is no provision for safeguard of men, who lie open to their

The Dunkirkers use in fight to place their small-shot stat on their bellies upon their decks, that the shot, great or small, coming from an enemy, shall have only their head for their aim: this is to be allowed of in small ships, that carry not many men nor ordnance; but inconvenient in greater vessels, where men are ever in action, running and stirring up and down in the ship.

There is a device made with a plank of elm, because it does not shiver like oak; this plank is musket-proof, and removed with trunks from one part of the ship to the other, which is a good safeguard for small shot: but in my opinion I prefer the quoiling of cables on the deck, and keeping part of the men within them, (as the French do theirs in hold,) above all the rest; for the soldiers are in and out speedily, upon all sudden occasions, to succour any part of the ship or to enter an enemy, without trouble to the sailors in handing their fails, or the gunners in plying their ordnance.

gunners in plying their ordnance.

The Hollanders of late years have got a reputation at fea; though for their warlike affairs they have little deferved it, as I have shewed in the first book; for they never made fight of fix ships to six, as is there to be feen; but now of late, and since the truce ended with Spain, and that the Dun-

kirkers are grown ftrong and powerful by fea, they have often encounter'd fhip to fhip, or two to two, but never with fleet, and more to the commendations of the Dunkirkers than themselves.

Whereas I have shewed every country's manner of fight at fea, and their care to preserve their men from danger, and to annoy the enemy with advantage, instead of cables, planks, and other devices, to preferve their men, the Hollanders wanting natural valour of themselves, use to line their company in the head, by giving them gunpowder to drink, and other kind of liquor to make them foonest drunk; which, befides that it is a barbarous and unchriftian-like act, when they are in danger of death to make them ready for the devil, it often proves more perilous than prosperous to them, by firing their own thips, or making a confusedness in the fight, their wits being taken from them; whereas if they had been fober, they might have tought in good order.

The Direction of a Fight in a Naval Battle,

The most famous naval battles these late years have afforded, were those of Lepanto against the Turks in 1577, of the Spaniards against the French at the Tercera islands in 1580, and betwixt the armada of Spain and the English in 1588.

In the encounters, wherein the Spamiards had the chiefest part, as I have said
before, they imitated the discipline of war
by land, in drawing their ships into a
form of fight, which, in my opinion, is
not so convenient; though I confess in a sea
battle, that shall consist of galleys, in a calm,
it is better to observe that order than in
ships; for men may as well follow direction
by their hands in rowing, as an army by
words of the tongue speaking, or their legs

But thips which must be carried by wind and fails, and the sea affording no firm or steadfast sooting, cannot be commanded to take their ranks like soldiers in a battle by land.

The weather at fea is never certain, the winds variable, fhips unequal in failing; and when they ftrictly feek to keep their order, commonly they fall foul one of another; and in fuch cafes they are more careful to observe their directions, than to offend the enemy, whereby they will be brought into disorder amongst themselves.

Suppose a fleet to be placed in the form of a half-moon, or other proportion, to fight, if an enemy charge them home in any of the corners of the half-moon, they will be forced to bear up room into their main battle; and then will ensue dangers

ertain, the in failing; keep their one of anmore carehan to ofy will be hemselves. n the form portion, to m home in noon, they into their fue dangers and diforders of boarding one another; infomuch that it will not be possible for a general to give new directions, but every thip must fight at its will, not by command.

For the avoiding of fuch confusion, the instructions of a general ought not to confift of many words; for the greatest advantage in a fea fight is to get the wind of one another; for he that has the wind is out of danger of being boarded, and has the advantage where to board, and how to attempt the enemy; and thus did the marquis of Santa Cruz labour to do three days, before he could get the wind of Monsieur l'Estrous at the Tercera islands, whom he afterwards overcame, and had a great vic-

tory over him.

The wind being thus gotten, a general need give no other directions than to every admiral of a fquadron to draw together their fquadrons, and every one to undertake his opposite squadron, or where he shall do it for his greatest advantage; but to be fure to take a good diftance of one another, and to relieve that fquadron that shall be overcharged or distressed.

Let them give warning to their ships not to venture so far as to bring themselves to leeward of the enemy; for so shall they either dishonour themselves, to see such aship taken in their view, or in feeking to relieve her thry shall bring themselves to leewar, and lose the advantage they had formerly tten; for it will be in the power of the enemy to board them, and they not to avoid it; which was the only thing coveted by the Spaniards in our time of war, by reason of the advantage of their ships, as I have before expressed.

The strict ordering of battles by ships was before the invention of the bowling; for then there was no failing but before the wind, nor no fighting but by boarding; whereas now a ship will sail within fix points of thirty two, and by the advantage of wind may rout any fleet that is placed in that form of battle.

A Fight with Galleys to Galleys, and Galleys to fingle Ships.

There is no precedent of these latter times that galleys have been in use in our feas, till the latter end of the queen's reign, when two fquadrons of galleys were brought out of Spain into Flanders, the one in the year 1599, the other in the year 1602, the latter commanded by Frederick Spinola, brother to the late marquis Spinola, who after was flain in the fame galleys.

All the defigns of the Spaniards, underqueen Elizabeth, proved unlucky and fruit- der to guide her.

less, the reason thereof to wife men is not to be marvelled at; for their actions have been grounded on fo little judgment, that it was no great art to divine their evil fuccess before they were undertaken.

Let this act of bringing down the galleys aforefaid be paralleled with their great expedition in 1588, and it will appear they both failed in one kind, (that is to fay) for want of an able and fecure port to entertain them upon their arrival in Flanders; for though the galleys had the harbours of Graveling, Dunkirk, and Sluice, at that time, yet fuch is the nature of these ports, that no veffel of their draught can go in or out of them but from half-tide to halftide; for they are bare harbours, and all the rest of the tide they are dry; so as if a galley observe not her just time of entrance, she is exposed to the mercy of the fea, the danger of the shore, or to fall into the hands of an enemy; and therefore whosoever thinks to make use of gatleys, and not to be secured of a port at all times and tides, will fhew himfelf weak in fea affairs, as the Spaniards have done in this, and in their expedition of 1588. as I have before declared.

The proper use of galleys is against galleys in the Mediterranean sea, that is subject to calms, and where both turks and christians strive to exceed one another in that kind of veffels, he accounting himfelf mafter of those seas that has the greatest number, and best ordered galleys.

And fuch was the goodness of God towards the christian commonwealth, that in the battle of Lepanto in 1577. he gave a most happy and victorious overthrow to the cruel and misbelieving turks, who fince that time have not been able to hold up their hands or heads against the christian forces within the Mediterranean fea.

Next to the valour and well marshalling order of the christians navy of galleys, the next attribute is to be given to the galleaffes of Venice, which, though they were but fix in number, yet fuch is the advantage of those vessels against galleys, that they did the christian galleys treble the service of

You must know that a Galleass is built like the Vanguard or Rainbow of his majesty's, low and snug by the water, and carries the force of a ship in men and ordnance; but the thing that gives her advantage in fight, is her oars; not that there can be expected any fwiftness in rowing, but with her oars the is of that agility, that the is able to wind about as she sees occasion to damnify her enemy; whereas a fhip lies like a log of wood, not able in a calm- to taken against England by sea in the days of help herself, or to have the help of a rud-

Nnnn

If galleys be forced to fly from other galleys, and not of fpeed to overgo them, they fall into the mercy of those that chace them; for it is to be considered, that the frength of a galley is in her prow, where she carries her ordnance, as I have before declared; for unless it be some few choice ones of Malta and Florence, no other christian galley carries artillery to fire aftern; so that of necessity those galleys chased must either yield, be burnt, or sunk.

In a desperate case, where galleys in battle are in danger to fall into the hands of an enemy, the present remedy is to proclaim liberty to all the slaves, and to put arms in their hands to fight for their desence, and to deliver them out of chains, and make them freemen: this was the safety of Don John of Austria, in the great and samous

battle of Lepanto.

The chief annoyance that can be done a galley in fight, is to feek the definction of the flaves and oars; for without them galleys are of no use; and therefore who-foever fights with galleys, must seek with cross-bars and langrel-shot, to hurt and

spoil their men and oars.

And in this case a ship that carries her ordnance low, and her hull high-built, has a great advantage of a galley, for her ordnance will lie level with her oars; and if she have the fortune to take away a row of them on either side, she salls into the mercy of the ship; or if she be desperately forced to board the same ship, she will not be able toenter her, in respect of her heighth and high carving.

As I have promifed before, I will take occasion to speak fomething of his majesty's royal ship the James Regis, and her disadvantage to make a defensive fight, as

the is now built.

Ships of much lefs burden than the James have four pieces of ordnance placed to fhoot aftern, as namely, two in the gunroom, and the other two in the upper gunroom, which is commonly used for a ftoreroom, lodgings, and other employments for a generalior captain's use, and his followers, which is done without prejudice to the two pieces.

Above these two gun-rooms aforesaid, was placed the captain's cabbin, with the open galleries aftern and on the sides, that fowlers and lesser pieces might be thrust out for desence, and small-shot placed to de-

fend that part of a ship.

In these two gun-rooms aforesaid, where the four pieces are usually placed, the James carries only two, and that is in the lower gun-room; for the upper gun-room is converted into the captain's cabbin, and a rafter and two sided galleries are made close, that cannot afford so much convenience as

for a man to look out of them, but through fome narrow windows; infomuch, that if a general or captain have occasion to give or receive directions, he must do it upon the poop or the deck of the ship, to the great inconvenience, and loss of time and opportunity, what sudden occasion foever should offer.

Moreover, if a thip by mithap thall take fire, out of her open galleries water may be fuddenly drawn, and prove both the fafety of thip and men; whereas being close, as now they are, there will be no remedy to quench them. It may be compared to a round pigeon-house, into which people fly from an enemy for refuge; and what defence can such a house make, that is compassed about with foes? No more than to

yield to fire and water.

Now compare the James, by the true defeription I have made of her, but with one or two galleys in a calm, having no thip near to affift her, confidering the circies but two pieces in her gun-room, with what eafe and little danger a galley may run up in her ftern, and with her prow and fmall-fhot put her from her two pieces, for every galley carries four pieces ahead, befides her cannon in the cruzea, which piece lies more to the advantage than the other two, in that they are placed low by the water, and the galleys standing still, they may shoot as steady out of her as out of a platform.

Indeed this cannon in the cruzea is of greater danger and annoyance than all the reft; for it lies at an even flay, and not to be moved nor traverfed one way or other; and the use to be made of it is for the master to bring the mast of the ship and the mast of the galley both in one, and then to call to the gunner to give fire; by which means it is impossible to miss the ship, and

hazard finking of her.

And as the James lies open to galleys, as I have thewed, fo does the in like manner to fuch thips as thall board her, either afore in her prow, or abaft in her ftem, where the has no defence, either of her forecastle or close-fights. There are many other necessary uses to be made of an open gallery, which at this time I forbear to speak of, and will return once more to treat of the nature of galleys.

If it were in my choice, I would rather have two ships of two hundred tons each to encounter fix galleys, than one ship of a thousand tons to fight two galleys, for

these reasons;

My two ships of two hundred tons, I will bring athwart the hawfe of one another, that wherefoever the galleys shall charge me, I will have a broadfide to play upon them; whereas in one ship alone, I

vould rather d tons sach one flip of galleys, for

of one angalleys flall liide to play ip alone, I have only my ftern for my defence, where two galleys with their fmall-shot will foon beat the gunners from their ports, with little danger to themselves; for no great number of small-shot can play upon them out of the narrowness of the poop; by which means they will burn, fink, or destroy any such ship, with long fire-pikes made on purpose.

And for fecurity of myfelf and men, I will displace three or four banks on a side in my galleys, and in that space make a bulwark with gowns, beds, fails, and other things, that no shor from the ship shall do

me hurt.

And if in fight I shall happen to be shot under water, it will be an easy thing to stop

any fuch leak, by making the flaves heel all on one fide of the galley; fo that if it were as low as the keel, I will come speedily to it, and stop it.

How to imploy fuch People and their Stocks in Galleys, as are fent to Houses of Correction's and the Use that may be made of Galleys in England.

WHOEVER have the charge of these houses, seek only these own gain, not the use for which they were instituted. People are punished or pardoned as they are able to gratify their keepers: their labours or liberties are according to their abilities, for as I have said, the rich buys his case, the poor is threaten'd with cruelty, which has caused that desperaeness in men towards their keepers, that to be revenged they have suin them; and yet I see no decrease of vagabonds by the course taken in the houses of correction.

The Benefit of imploying these People and their Stocks in Galleys in England.

THE time of mens imprisonment in galleys is to be limited, some for life, some for years, more or less, according to their offence, but none under seven years; by this means there will be a riddance of lewd people for life or years.

At the end of which time they ought to procure fervices, or be bound to work in their occupations, which they shall be taught in their galleys; but if they shall refuse it, and continue still loitering, then to fend them into Virginia, or other colonies planted by us.

If they shall escape out of their galleys before the expiration of their time, to have a proclamation, That no man, upon certain penalties, should harbour or give them entertainment; and that they may be known from others, they must be shaved both head and face, and marked in the cheek with

an hot iron, for men to take notice of them to be the king's labourers; for fo they should be term'd, and not flaves; and if any such be found, that cannot give a good account of his discharge out of the galleys, to be apprehended and fent back again; which would be a means that none of them ever after will offer to escape.

This course being carefully observed, the vagabonds will be foon leffen'd; for the terror of galleys will make men avoid floth and pilfering, and apply themselves to la-bour and pains; it will keep servants and apprentices in awe; it will take away the occasion of pirates and piracies; it will fave much blood that is lamentably full by execution of thieves and offenders, and more of this kingdom than any other; it will take away the occasion of women-vagabonds, when fuch rogues and thieves shall be reffrained; for fuch men are enticers and drawers of women to lewdness. If all these mischies may be prevented, and the kingdom strengthen'd, without further expence than now it is, no min but muft commend this project, and give his furtherance to it.

Provisions to maintain the King's Labourers, and the Labour they shall be put to, Winter and Summer.

THEIR diet shall be certain, not according to the miserable rate they are allowed in houses of correction, where it is proportioned according to their earning by their labour; for in the galleys each man shall be allowed two shillings and fix pence a week for his diet, to be husbanded by men appointed by the labourers themselves for their best advantage.

Every galley shall be allowed a surgeon. a physician, and an apothecary-general for them all: their apparel to be two fuits a year, the one for lummer, the other for winter, with a gown of frize: their labour to be at the oar in fummer; and when they are not to imploy'd, they may lawfully use any means for their maintenance, as in knitting, fowing, or any other fuch kind of work; for no fummer labour, more than rowing, shall be required at their hands; and by the way I will tell you for a jest, That when I was prisoner in the galleys of Spain in 1591. all our Englishmen that were thither committed, amongst other occupations, framed themselves to the trade only of making dice, as an occasion to set the Spaniards together by the ears.

In winter they must be had affiore, and kept safe in form strong cattle, where lodgings and beds, with incessfary stocks and tools must be provided to set them to work, as namely, torges for smiths, leather for

thoe

Book

shoemakers, hemp to make ropes, mills to grind corn, or any other thing that can be thought of for their benefit : and for fuch as have been bred to husbandry, they may be hired to farmers for their winter's work, binding the farmers to return them at the feafon of the year to the galleys; which they may fecurely do, for it will not be in their powers to escape, by the course which is formerly taken.

The Use of Galleys in time of War.

I have formerly in the fecond book faid fomething concerning the use of galleys, which you will find there; and in this book the manner of fight with galleys. But having occasion to treat more largely of that fubject, I will reiterate fomething that I faid before concerning galleys.

1. Galleys are of no use to encounter a fleet at sea, in respect of their strength, but against single ships in calms, that cannot

come to rescue one another.

2. The use of galleys is to tow a fleet out of harbour which is kept in by wind and tide, which is a thing of confequence either

in peace or war.

3. The use of galleys is the conveniency to land an army, both suddenly and safely; and to take advantage in landing, both when or where they lift: by example of the marquis of Santa Cruz, who arriving at the Tercera islands, attempted landing at Angra, the chief town of that island, and whether the inhabitants drew their forces to withstand him; but when he saw and imagin'd the other part of the island lay open for his entrance, he altered his purpose, and suddenly winded his galleys about, and landed at Leplaia, five leagues from thence, without refistance.

4. The use of galleys is to annoy an enemy in his landing, by cutting off his boats and men, as they shall offer to land: and the like would have happened to us at Cadiz, if we had landed where we attempted it the day before, and where our projectors of that voyage had defigned us, if we had not been prevented by foul weather; for there we found four galleys placed, to lie betwixt the fhore and us, to cut off our boats, and thereby to have overthrown our action.

5. The use of galleys is against a fleet at anchor, who may tow fireships amongst them, and either burn, or put them from their anchorage; and it may happen in a place near shoals or fands, or upon a lec fhore, and fo destroy a whole navy.

6. The use of galleys is to prevent the like stratagem; for if such ships be set on fire, with galleys they may be rowed unto, and cast hooks on board them, and

fo tow them clear of their fleet, where they may burn without endangering the ships they attempt.

7. The use of galleys is in succouring an island that is invaded by an enemy; as for example, The Isle of Wight, with galleys, may be suddenly supply'd both with men and ammunition from the main land, in fpight of what ships or force shall lie to

hinder or intercept them.

8. They ought to be kept for reputa-tion; for as his majefty is king of all kingdoms for goodness and greatness of his navy, fo it should be said there is no kind of veffels that other princes can shew, but what his majesty has the like in use; and it will be the more strange, in that no country nor harbour in Europe, to the northward of Liston, can shew the like.

If at any time a war happen betwixt his majefty and the king of Spain, or betwixt him and the Hollanders, having the port of Flushing and Sluice for the receipt of our galleys, we may much annoy the harbours of Flanders, and their trade; or having the por of Oftend and Dunkirk to enter, we may as much, or rather more, impeach Holland, but especially the province of Zealand, and the island of Wakerland; for besides the hurt we shall do them at sea, we may watch and take the heighth of a fpring-tide in a calm, and be able to cut their banks to give the fea entrance into their country, and hazard their destruction.

But speaking of galleys and Lisbon in the eighth article, I will fay fomething that had been more proper to have been inferted in the first book, where the taking of the Carrack is treated of; because one of my fcopes, in that book, is to flew the errors committed in the warlike fea-actions be-

twixt England and Spain.

In the describing the manner of that fight, you shall find, that the eleven galleys were placed under the neck of a rock, as we should enter into the road; and that at my coming to an anchor, I routed and forced them to fly under the castle of Zezimbra, where they drew themselves into a body, as they had done before; but yet they found my ordnance of the fame nature as when they were under the rock, for when I hit one of them, my fhot passed through most part of the reft, with fogreat hurt to them, that, in conclusion, disgracefully they quitted the road, and escaped to sea, two excepted, which we took and burnt.

But if these galleys had, when they quitted the neck of the rock, as I have faid, retired, whither they did, under the protection both of the eaftle and carrack, and instead of linking themselves, as it were, together, had divided themselves one hundred paces from one another, and

which carried five guns, they had been a narrow mark for us to hit; and what hurt we could then do them, was only to her we lite upon; whereas in the course they took, hitting upon one, we pass'd through them

And moreover, where they retired, they brought themselves into shoal-water; so that our ships could not come at them; and if they had not quitted the road, they would have cut off all treaty betwixt our boats and the carrack, and given relief to the carrack from the shore, that it had been impossible for us to have taken her. The Spaniards may allow of this overfight, as one of the greatest they committed during the war.

Other Uses Galleys might be put to.

Galleys may attend his majesty's navy at all times when they go to fea, from Chat-bam till they bring them clear of the fands; and if it happen any of the ships should unluckily come aground, by the force of galleys the may be inftantly haul'd off again, without hurt to the ship; and in this case a galley might have been the prefervation of his majesty's ship the Prince Royal, at the time the queen of Bohemia went over, who struck upon a fand at the Ness, and put her into great peril, if it had not been for present help of boats of other ships of the kings that rid there.

Galleys may pass the seas in a calm, when ships and barks cannot, and boats dare not for fear of enemies; and so prevent the furprize of packets or intelligencies, as lately we found, to the prejudice of merchants affairs, and dishonour to the king.

The galleys may at all times, both winter and summer, carry provisions for his majesty's ships from London to Chatham, and ease the charge of transportation; as also in summer they may do the like to his majesty's ships at Portsmouth; for barks often go in danger, and more especially if we have wars with France, Holland, or Dunkirk.

The fittest Place in England for Galleys.

Because I have formerly named the Isle of Wight by way of comparison, I will say of that island, that it is not only the best and sittest place in England, but in Europe, to entertain galleys, confidering the two harbours within it, the one Newport, and the other New-Town; befides three others in the main land opposite to it, viz. Ports-mouth, Hamble, and Hampton, where galleys may ride and float without coming aground, which no other harbour can do betwixt the river of Thames and Portsmouth.

For suppose the galleys coming betwirt the Thames and the Isle of Wight, are taken VOL. III.

play'd upon us with their prows, each of with a ftorm at fouth, or being chafed by an enemy, and forced to feek an harbour for fuccour; if they bring not the tide with them they perish, either upon a lee shore, or upon the pursuit of an enemy: and as I have flew'd, there is no place to compare to those aforesaid for the receipt of galleys, fo there is no place fo commodious for the labourers to refide in the winter time as those; adding to them the castle of Porchefter, two or three miles from Portsmouth by water, being a place fecure for the labourers to abide in; room fufficient to entertain five or fix hundred of them, with their manufactures, inftruments, and tools, that may be fet up to get their livings withal.

A Proportion of Soldiers and Sailors for five Galleys, and the Charge to maintain them.

You cannot allow less than fifteen foldiers and an hundred labourers for each galley, every labourer to have allow'd him 2 s. 6 d. per week, for his diet, two fuits of cloaths, and a gown; one physician general, and every galley its furgeon, with ten failors to hand the fails; the foldiers not to have any allowance of pay but in victuals; for they should be such soldiers as have entertainment for hurt and lame foldiers in the shires.

How this Money may be raised.

A certificate from all the shires in England, what the contribution of the houses of correction do amount unto by the year, and to have it thus employ'd in galleys; and what shall want thereof to maintain them, to be faved out of vain and superfluous gormandizing, which is too much used in many fet feasts, and more to the shame than commendation of our nation, especially in the halls and companies of London; the half of which may very well be spared and employ'd to this necessary use; for people may meet in a friendly conversation to maintain their customs, and to determine their affairs, with half the expence they are now

Thus will no man be put to any charge, nor any feel the loss of it; for there is no body invited to these feasts, of so mean a rank and condition, as to value the gift of five or fix meals, more or less, in a year.

Another means to raife money towards this good work, is, out of hospitals, now become a marvellous abuse; and that especially erected by Sutton in the Charter-House; for no man is now admitted into it, but fuch as can buy it for money; and having money, there is no exception to his quality, whether young or old.

Neither is this hospital alone, but all others in the kingdom, which I refer to the 0000

examination and reformation of those that shall be appointed to overlook them.

I verily believe, if the founders gifts of those hospitals were now to be bestowed, and galleys, upon the reasons aforesaid, to be erected, they would, or such hereaster will, convert the charitable benevolencies to the use of galleys, rather than to hospitals, since they live to see the abuses of such houses.

For what they shall give to maintain galleys, it would prove a strength to the kingdom, a means to save the lives of many men that otherwise should die by the gallows; a remedy against enormities, thests, and idleness of people; a cause to make safe and peaceable travelling by land and sea, and a course to relieve more poor people, five to one, than the hospitals do.

There are many other ways, too redious to fet down, how to uphold this work, that hall no way prejudice either king or commonwealth; which I refer to after-times to confider of, when it is on foot by certain commissioners that must be appointed for that purpose.

The Ceremony of wearing the Flag, and the Use that is, and may be made of it.

Have formerly shewed, when I treated of the office of the vice-admiral, how every admiral, and admiral of a squadron, was to carry their slags, and each ship under them in their squadron: now it remains for me to speak more particularly of the slag, and theuse and custom of it at sea; for it is the standard, under which all the steet marches, as soldiers do under their ensign by land.

England, as I have declared, truly challenges the prerogative of wearing the flag, as the fole commander of our feas, and fo has held it, without contradiction, time out of mind

The privileges are thefe, That if a fleet of any country shall pass upon his majesty's feas, and meet the admiral's ship ferving on those seas, they are to acknowledge a sovereignty to his majesty by coming under the lee of the admiral, by striking their topfails, and taking in their sag; and this hath never been question'd, out of stubbornness, resisting the king's authority; but rather out of want of knowledge and ignorance, as appeared in the case of king Pbilip II. when he met the lord admiral of England, when he came to marry queen Mary.

when he came to marry queen Mary.

But though this privilege be granted to his majefty, and his deputy upon the feas, yet every fhip of the king's, that ferves under an admiral, cannot require it, if he be out of fight of the admiral; but the other stranger, be he admiral or no, is to strike

his topfail and hoift it again, to any one fhip of the king's that shall meet him.

Or if any fuch ship or steet belonging to any other prince, shall arrive in any port of his majesty's, or pass by any fort or castle of his, in their entrance, and before they come to an anchor, they must take in their slag three times, and advance it again, unless the admiral's ship be in the same harbour, and then they are not to display it, but to keep in so long as they shall remain in the presence of the admiral. But if any other ship of his majesty's be there but the admiral, they are not bound to keep in their flag, but only to strike it thrice, as aforesaid.

This case bred a great question in 1613, when the earl of Gundamar came ambassiador into England, being accompanied by two galleons of the queen of Spain's, who arrived at Portsmouth, and as he passed by Stokes-Bay, there rid a ship of the king's, that was neither admiral of the narrow seas, nor had employment under his commission.

This ship required the two Spaniards to take in their slag, as a duty due to his majesty's prerogative on the seas, which they refused to do, only they struck their topsails, till they were compelled to it.

This act was complained of to my lord admiral by the ambaffador, who found himfelf and his mafter injured by it. It pleafed my lord admiral to confer with me about it; and out of his long and ancient experience concluded, That they were not bound to ftrike their topfail, as they were required, unleis the king's fhip had been admiral of the narrow feas: and this I fet down from the long experienced admiral the earl of Nottingham.

But I am not lavish in speaking of it, whensoever I hear an argument upon this subject of the narrow seas disputed; because in these latter times, both the Freuch and Hollanders seek to usurp on his majesty's right; I will therefore wish, that his majesty's ships would take more authority upon them than is due, because I would have their insolence curbed.

If any merchant's ship shall neglect to do their duty, as aforesaid, either to ship or pinnace of his majesty's, that ship or pinnace is to fire at her, and to bring her to acknowledgment of her error by force; which being done, the ship thus offending is to pay doub!" the value of powder and shot spent against her by the king's

If any fbip of the king's shall pass by any fort or castle on the shore, out of ancient and foolih custom, they have used the lame reverence that merchants and strangers use to do, save only striking their slag, which

to hi and i hat to Ar time, fail m or far away nor re

glect to do p or pinng her to by force; us offendof powder the king's

oafs by any of ancient d the fame angers ule ag, which

is a thing improper, and indeed most ridiculous for one of the king's ships to strike to his castle, both of them being his own; and it is as much as for a man to put off his hat to himfelf.

And besides, it may happen at such a time, tide, and place, as the striking a topfail may endanger a ship upon a rock, shelve, or fand; and therefore necessary to take away this ceremony, that has neither ground

nor reason in it. All admirals in the king's fervice, were wont to carry antiently the St. George's flag in the head of the topmast; but fince king James's coming to poffels this crown, he has added to it the cross of St. Andrew, as due to Scotland, which though it be more honour to both the kingdoms to be thus linked and united together, yet in the view of the spectators, it makes not so fair a shew as the cross of St. George only, if it would please his majesty to consider it.

Besides those crosses of England and Scotland, carry'd as aforefaid, the cross of the arms of England is peculiar to the lord high admiral of England, who is, and no other, bound to bear it when he goes to fea, which flag, in truth, carries a princely shew when it is display'd.

As the lord admiral of England has the only privilege to wear the standard of England in the main-top, so has he likewise power to permit and fuffer another man to wear the bare English flag in the main-top in his presence; which case I am able to instance; and, besides this that followeth, there are few precedents, as I conceive.

In the year 1596, and the Easter before the taking of Cadiz in Spain, Calais in Picardy was beleaguered and taken by the archduke Albert, and his Spanish forces, which made the queen weigh how much it concerned her, not to permit the neighbourhood of the Spaniard, her then enemies, fo near her: hereupon with all celerity she raifed land forces, to give fuocour to Calais, and appointed the earl of Effex commander of them. No nobleman or gentleman of spirit, but voluntarily put himself into the action, as, namely, the earl of Southampton, the lord Borowe, the lord Monijoy, the lord Riche, the lord Compton, the lord Burke of Ireland, Don Christopher, fon to the pretended king of Portugal, with divers others, who were on board me in the Rainbow, at supper, and our fore-sail cut to stand over, even as news was brought of the taking of Calais.

The lord admiral, who was never backward to do his prince and country fervice, haften'd down to Dover to fecure the feas, and imbarked himself in the Vanguard, as my lord of Effex had done in the Rainbow

with me. Whereupon I took in my flag, and acknowledged my duty to my lord admiral, notwithstanding the greatness of the perfons on board me; which my lord admiral perceiving, commanded me, though my lord of Effex should oppose it, to wear the flag with him equal in the top, as long as we were in company together, which I did, though at first it was resisted by my lord of Effex.

And though the journey to Cadiz fucceeded immediately after this, and my lord of Effex had the privilege to wear the English flag in the main-top, in company of my lord admiral, who went likewise in that expedition, yet the time and cafe must be confidered; for they had both equal authority by land and fea, under the great fea! of England, which made their command alike.

In the year 1588, when the Spaniards appeared on the English coast with their fleet, a galleon of theirs being diftreffed, arrived in the port of Havre de Grace in Normandy, which being known in England, three fhips of the queen's, and one pinnace were fent to furprize her in harbour, as I have shewed before, myself being in that

Mr. Knevet, a gentleman of the queen's privy-chamber, was fent to fea at that time, with certain merchants ships, to strengthen my lord admiral's fleet, fearing the Spaniards would return again from the northward, whither they were gone. This fleet of merchants, and Mr. Knevel, was to join with four ships of the queen's, of which he was appointed admiral, though it was a merchant ship in which he served

And that power may the king of England grant to any subject of his, notwithstanding his former patent to my lord admiral of England; and yet I am of opinion, that within the compass of the parrow seas, if any fuch admiral shall be appointed by the king, and meet the admiral's ships serving on the narrow feas, who is deputy to the great lord admiral, that fuch thip there ferving, the other is to take in his flag in his presence, who doth wear it as substitute to the lord admiral, within the jurifdiction of the narrow feas, he having a former grant, and supreme authority before the other's imployment.

How far the narrow feas extend, is much controverted betwixt the French and us, they challenging, rather by words than right or precedent, half the feas betwixt England and France, as some of Flanders do by the fame reason; but I could never hear that ever they contested with us about it. England's claim to the narrow feas needs no other repetition than I have formerly re-

lated, (viz.) a confent of all nations, an everlasting possession, and an invincible power to maintain it.

Though to speak truly, in my opinion, if from headland to headland be measured in France with a line, what seas, or rather bays, shall fall within that line, or within them capes, do properly belong to France, and may be termed the King's Chamber, if so be we had no title to France ourselves; but if you will see what share of the seamy belong to them by this measure, it would not be worth contesting for, as may

appear by the following:

Beginning at Calais cliffs, with a direct line from fea-head to fea-head to the Hogue, and from the Hogue to Ufbant; but this last we will not acknowledge, though there were right in the other; for in that bound lie the islands of ferfey, an antient patrimony of England, and possessed by us near four hundred years; and what title soever France can invent to themselves for that circuit of the sea, the same we may plead by Jersey, that fronts upon the continents of

France and it.

A general that shall be invited to banquet on board another ship, or otherwise come on board any other ship, how small soever she be, that ship shall carry the slag of the admiral, and be so reputed, so long as he shall remain on board her; and the slag born in his own ship to be taken in till his return; for it is the man, and not the ship that has the authority of an admiral from a prince.

The fhewing or taking in the flag in the admiral's ship, being well considered and resolved of beforehand; is able to direct a fleet in many cases, as fully as though he had given his instructions by writing.

The flag carried under the poop of a ship shews a disgrace, and never used but when it is won or taken from an enemy.

Many times ships wearing contrary flags, and especially the colour of an enemy, it hath wrought many effects to the advantage of him that carries it, or may do again, as occasion offers.

When an admiral is in harbour or road with the reft of his fleet, at the taking in of the flag in the evening, and shooting off a piece of ordnance, he fets his watch, which his fleet must take notice of, and accordingly fet their watch. The like is to be done at the discharge of the watch in the morning; as also when he shall weigh anchor, and fet fail.

The flag in the top half furl'd up, and so worn, some are of opinion, is as great an acknowledgment, as though it was absolutely taken in; but neither that ceremony, or the taking in the flag, and advancing it thrice, gave me satisfaction when I served

on the narrow seas; but I compelled the Hollanders to take in their stag absolutely; which was the beginning of their malice towards me.

Many times an admiral will take in his own flag, and fuffer a fmaller ship to wear it as admiral, to deceive his enemy, till he hath brought him into his clutches.

In some cases an admiral will suffer many ships to wear their slag as admirals, and seeming to be of divers nations by their colours, because they shall not be suspected to be a sleet of war, till he has an opportunity to charge them, and then to take upon him his right shape.

Laws enacted for the Punishment of Offenders at Sea, in the Days of King Richard I. in his Expedition to the Holy Land.

T shall now appear, that the war by fea is no new practifed thing by this nation, as I have shewed in the days of Edward III. when there were armed out of England a thousand warlike vessels, a number far exceeding us in this age; and yet not equal to us, if we confider what art, experience, and skill hath taught us in feaaffairs fince then, that the invention of artillery, shot, and powder has been in use; for by all likelihood and reason, the condition of ships then and now, is much differing; and besides, since the days of Edward III. new worlds have been discovered. able to equal more than the rest known before, which discoveries have caused greater traffick, and by confequence the increase of more ships than in those antient times: and for the furtherance and ease of navigation, to perform their voyages with greater celerity, the fecret of the bowling hath been found out. I am therefore of opinion, if the goodness of their ships had equalled their numbers, some future fign or other would have appeared for our fatisfaction.

Which makes me believe, that most of their ships were made of ofiers, or other kind of light fubstance, and covered with hides for defence and fafeguard of the fea: but we may fay, That a ship so built, now in this age, cannot be made to brook the waves of the fea, the winds and weather being fo outragious; therefore in all likelihood the difference of times has made the difference of weather; for the weather is like the world, and people dwelling in it, that as they grow old, they have the less vigour and strength, and consequently will be worse and weaker by the continuance of it, and will by little and little decline, as no doubt it has done fince the days of Edward III. For there is no old man now living, but will confeis, the temper and calmness of the weather in the time of his youth did far exce like wi come to follow o

far exceed this of our elder years; and the like will his fon do after him, when he come to the state of an old man; and still follow one another as long as the world con-

Mariners have an observation, That the three years before, and three years after the prime, which happens every nineteenth year, the weather proves more boisterous and formy than the relt of the time, and every nineteen years worse than the other: then what would a ship do, if she were built aster the manner of vessels sour hundred years ago, and sent out into the main sea?

But leaving this argument to men of better capacity and learning than myfelf, I will prove the antiquity of ea actions, undertaken by our nation, and the kings thereof, long before the enterprize of Edward III. formerly spoken of: and I will begin with Julius Agricola under the Romans government, that first sailed about England and Scotland, and the first that discovered the islands of Orkney, which he subdued.

The fecond was the great action of king Edgar the Saxon, and king of this land, who with eight hundred fail of fhips, failed round England and Scotland, not once, but offen

And the third I am to take notice of, is Riebard I. and his glorious expedition to the holy land, against the heathen Saraeens, in which expedition he established the following laws, which in some points have continued to this day, but not with that rigour and severity, as in times past.

Laws established by King Richard I.

 Whofoever shall kill any man a shipboard, shall be bound to the back of the party killed, and thrown into the sea with him.

H. If one should be killed on land, the party should be bound in like manner, and bury'd alive with him killed.

III. Whofoever shall draw any knife or weapon, with an intent to draw blood, or by other means shall draw blood, shall lose his hand.

IV. Whofoever shall strike one, without drawing blood, with his hand or otherwise, shall be ducked three times at the yard-arm.

V. Whofoever reviles or curfes another, for fo often as he has reviled, fhall pay fo many ounces of filver.

VI. Whofoever fteals fhall have his head fhorn, and boiled pitch poured on it, and feathers ftrew'd upon the fame, whereby he may be known; and at the first landing-place where he shall come, there to be tow'd ashore.

Vol. III.

Admirals at fea have the fame authority as generals have by land, and of as great antiquity: fome are of opinion, that admirals were inflicted in *Greece by Conflantine the Great*; though modern times fay, they were erected first in *France*, others in *Spain*, and in the year 1246. in the reign of Don Ferdinand III. But let other countries pretend what they lift for themselves, our records and commissions do prove a more ancient right than those of latter times.

Upon whet Occasion Ships should falute Castles, or one another at Sea with their Cr-Inances and how the Abuse thereof may be taken away.

AM forry I have the occasion to complain of the lavish and wasteful expence of powder, in faluting fhips under a friendly pretence of meeting at fea, more practifed of late by our nation, than by any other, though no people or country have more cause to prohibit it than we, when we remember our opportunity lost against the invincible Armada of Spain, as they termed themselves, in 1588 and only through the want of powder, as is well known. And yet I must say in the praise of those of the queen's time, that the want of powder proceeded not out of a wasteful and idle confuming of it, before there were cause to use it; for neither then, nor in all the reign of queen Elizabeth, there was fpent in a lavish kind the tenth part of that which is now adays: I may impute it to many causes, as namely, our wars then that made our commanders more provident; but principally I must commend the moderate drinking of that time, which I could with a reformation of now amongst us; and that we may return to our old fashion, how odious foever it be to this new-fashioned

What I shall say, is not to make a comparison of times, or to tax our late abuses in that kind: I only advise, and ground my opinion upon reason, how things of this nature may be carried, which I refer to confideration; and defire, that if it be approved, every captain may be tied to observe it as a law established, and a penalty to the breakers of it: and the first thing I will handle, shall be the falutations of castles to ships, and the compliments of ships to castles.

A castle and the governor of it, is in the nature of a gentleman that will entertain his friend at his house, and give him a hearty welcome; and because a castle cannot perform it in words, he makes his ordnance speak it for him, with such a number of pieces as he thinks sit; after which propor-

Pppp tio

tion, an admiral is to answer by way of thanks, but to exceed the number of the castle's faluration, because an admiral's ship commonly carries three times more pieces than a castle has. This is to be referred to the will of the commander on either side.

If an admiral be accompanied by his viceadmiral, rear-admiral, and the rest of his fleet, there needs no other falutation from the caftle; for the lord admiral's welcome includes all the rest of his friends and fleet; but notwithstanding, a vice-admiral must falute a castle with two pieces less than the admiral, and the rear-admiral with two lefs than he; and this is as much to honour the admiral as the caftle; but it must be confider'd, that these three only that carry the flags of command, and rule over the fquadrons, and no other ship, is to shoot, unless it is by directions of the admiral; for their shooting will be taken as too great a familiarity with him.

When an admiral shall depart from under the command of a castle, in sign of his loving acceptance for his entertainment, both he and his two other slags are to give the same salutation that the castle gave him at his entrance, and with the same number of ordnance and form, as aforesaid.

If a fleet pass vithin fight of a castle, and not within command of his ordnance to reach him, the castle is not bound to falute, only to assord a welcome, and a visit by a gentleman of quality.

If a governor fail to perform any compliment that is meet, he must amend it upon the admiral's landing, making his ordnance roar aloud his welcome; but the ship is not to answer, because it is done to the person of the admiral, who is bound to requite the same upon the governor's visiting him on board his ship, and at his departure from thence.

The faluting of thips by one another at fea, is both ancient and decent, though in this latter time much abused; for whereas three, five, or feven pieces have been the ordinary use for a ship to salute an admiral, and never to exceed that proportion, and an admiral not to answer with above one or three, now they strive to exceed that number, thinking that many pieces add honour to the falutation: but the owners of merchant ships would be gladder it might be done with less cost, and more courtefy in another kind. But though the admiral cannot restrain this compliment in the ship that falutes, yet he may command his gunner not to return above one or three pieces, according to the old manner

And for fuch thips as are of his own fleet, he may prohibit the faluting of one another, but upon the occasions following, (viz.) in bringing good and fortunate news against an

enemy after an escape of a desperate danger, and then not to exceed three or five, and to be answered at the discretion of the admiral.

The exceffive banqueting on board is a great confuming of powder; for as men's brains are heated with wine, fo they heat their ordnance with oftentation, and profeffed kindness at that instant, and many times not without danger: and therefore, to take away the cause, a captain should have directions from under the hand of a general to forbid shooting, which would be a good excuse, and give his guests satisfaction, unless it be done in the manner following, as I have devised.

The vain drinking of healths is another means to wafte powder, which a general must likewife forbid, except it be the health of a free prince, or men of that rank and condition; and then not to exceed one piece when the health shall be begun: the king's the queen's, or their iffues, is exempted from this strictness.

Upon fome occasion an admiral may command his whole fleet to fire their guns, as namely, when a foreign prince, governors of countries, ambaffadors of great potentates, and men of great blood and quality, shall be either transported, or make a visit on board the admiral to behold the stateliness of his fleet, it were necessary they were as well refolved of their force, as the report they would make of their welcome; and in that case every ship of the fleet is to fhoot their whole number of pieces diffinctly and orderly, (as thus:) An admiral and his fquadion first to begin, the vice-admiral to follow his example, and fo the rearadmiral to do the like; but with this caution, That no fmall fhip or pinnace do mingle themselves with great ships, but to fecond one another according to their ranks and greatness.

To come now to my proposition how things should be carried, it is thus; That upon drinking of healths, or leaves taken on board ships, instead of the excessive charge of burning powder out of great ordnance, it may be done with muskets; for a man's welcome consists not so much in the difference betwixt a cannon and a lesser piece, but in the loving heart of him that invites: both the one and the other are consumed in the twinkling of an eye; and the report of a falconet, when there is no greater piece, is all one to the hearer, as if it were a cannon or falcon.

Therefore to accommodate this difference, and to bring it to a certain cultom in the king's thips hereafter, I with, that inftead of the chargeable wafting of powder that is now in use, by thooting of great ordnance, to have a number of musketiers

place foldic or to fire th shape fea. v fhall act of holder pected no ob and fe togeth it; fo made encour a coft : non w and gi them fo nons w with t lafts no gunner for he

placed, and decently armed and apparell'd, foldier-like, upon the upper deck, that when there shall be occasion to drink healths, or to take their leaves at departure, they fire their muskets at a mark, made like the shape of a man put into a barrel off at fea, within point-blank, where the foldiers shall take their aim duly: this will be an act of more pleasure and delight to the beholders than the other, where nothing is expected but the falling of a bullet, having no object to shoot at; the eye, the ear, and fense, are all in action, and employed together, and many other benefits arise by it; for the foldier will by this practice be made a perfect shotsman against he shall encounter his enemy; and with fo fmall a cost and charge, that a cartrage of a cannon will entertain perfons of good rank, and give them as great fatisfaction with them few muskets, as the number of can-nons will do; for the ear is only pleafed with the report a cannon makes, which lasts no longer than a flash of powder: no gunner is made more perfect in his art, for he shoots at random in the air, with-

The corrupt Abuses used in his Majesty's Service by Sea, and the means how to reform them.

THE difference of times has made so great a difference in our sea actions, betwirt the days of queen Elizabeth and those of this time, that I, who have been an actor in both, have cause not only to marvel, but to lament, to see abuses thus corruptly crept in: the particulars of some I will handle, and withal give instructions how to amend the errors committed in our services at sea, which will now much concern us, because our bordering neighbours, the French and Hollanders, daily increase in stripping, as we daily see by proof.

I will begin with the prime officer, who is the light and guide of the rest, viz. the lord high admiral of England, who is the main tree, and all other inferior officers are but branches that spread out of him; and where inferior offices are executed by many commissioners, and those not of greatest experience, and every one has his vote, fometimes they are carried by perfuafion of friends, or wrought upon by fervants, but commonly corruption has the upper hand, by money to prefer men without merit; for I am informed, that no place is freely disposed of without the gross feeing of fome, not otherwise approving their sufficiencies.

The most inferior officer of the ordinary in harbour is the cook, whose experience, whose long continuance in his majesty's

fervice, or testimony of his sufficiency under the hands of the ablest officers, cannot advance him to the place of a cook, if prayers of angels do not prevail above the prayers of men.

And though the meanness of this place is not to be rated with the reft of better degree, yet it will serve for an instance, to shew how things are carry'd with bribery and corruption, to the prejudice of the king's service; for it is an old saying, He that buys dear, must fell dear, or save himself by deceit.

But this is not all, nor yet the worft, that may enfue upon this bought place; for I find no man excepted from purchafing, but every one must stretch up for the price demanded for it, which makes the poor buyer confess, it is the dearest bargain a man can lay his money out on.

Here is a brave opportunity offered for an enemy, or any other ill-difpofed perfon, to buy this place, who may be the deftruction of the fhip, and all other fhips that ride near her, by fetting the cookroom on fire, and excufing it as an un'ucky accident or mifchance; for to the cook is only committed the fire in the cook-room.

And because I make this cook's office the leading card to the rest, I heartily wish and pray, for the good of his majesty's service, that the cook-seller and the cookbuyer, yet though he were a cook by name, may be all hanged together, for example, fear, and terror of others.

The next abuse to this, is, the officers of his majefty's navy, who of late years have been gentlemen unexperienced; and the clerks, formerly belonging to the officers, that are well practised how to pretend profit for the king, and themselves to reap the benefit of it. These clerks guide the unexperienced gentlemen, who are often ignorant of their frauds, as will appear, if his majesty please to grant his commission to examine abuses, and to settle a form of government in sea-affairs.

The first abuse and corruption that enter'd into this office, was in the time of the late earl of Nottingham, lord high admiral of E gland, by placing a follower of his own, who, by the power he had with the good old lord, became the fole manager and director of things by fea, and made his own will my lord's peremptory command, and fo the officers of that time have confessed to me; and since that party's quitting his office, it were good to know how other officers are come into their places, and the value they gave for them; for I know there has been paid, and it is commonly rated at 1500 l. for fuch an office; when, if you deal fairly, it scarce affords the interest of 1500 l.

Leaving

Leaving these abuses, which will prove without end, if examined by the commis-fioners aforefaid, I will now apply my felf to redrefs these encroaching dangers and corrupt dealings, and bring it to the state of Hawkins's and Burroughs's times, who were perfect and honest men in their places, the one treasurer, the other comptroller.

The way to fettle things, is to appoint with bifore an admiral, young, heroical, and of a great my lord blood: his experience in fea affairs is not Northum. Northum fo much to be required at first, as his sin-berland was for much to be required at first, as his finlord admi-cerity, honour, and wifdom; for his daily practice in his office, with con rence of able and experienced men, will quickly in-

struct him.

The next reformation will confift in the election of the four officers of his majefty's navy formerly treated of. shall execute those places, and not have past the degrees of inferior officers, as boatfwain, gunner, carpenter, &c. but are led most by the precedent or direction of the covetous and deceitful clerks aforesaid, his majesty shall never be well ferved, but his name used for a colour to their deceits, as appears by an inftance I was an eye-witnefs

At my lord of Lindsey's return from the west country to the Downs, there to revictual for two months, it was no fooner known to the officers of the navy, but twelve of their fervants posted thither to take a mufter of our men, when a muftermafter is allowed for that fervice.

I defire to know what the king gained by that needless employment, and what every one of those clerks was allowed for his pleasure in riding and wastefully banqueting in that journey? This strictness is without cause; for it is impossible for a captain deceitfully to carry a dead pay, unless a purser connive at it, which is unlikely he would hazard his estate and reputation for twenty shillings; and therefore let the officers of the navy pretend what they lift, I know they do his majefty a differvice in it; for by this occasion, and the badness of victuals, it makes seamen backward to ferve the king.

It is supposed the officers have some deceit in it for their own benefit, in taking a time of advantage by men's absence, that they know had fed upon flinking victuals at fea, and would be glad of fome refreshing ashore. These, and other like ill usages of officers, makes feamen disobey his majefty's proclamation, and fly to the fervice of other princes and states, or become pirates, with hearts of revenge for the inju-

ries done them.

And to end this voyage, I will fay fomething to parallel this muster. At my return from Portsmouth, in the company of

captain Majon, who had been treasurer of the late great warlike action of his maiefty's, it was our hap to meet with thirteen clerks and officers of the navy, fome of them stuffed in hired coaches with four horfes, the reft well mounted on horfe-back, all of them to pay but two fhips of the king's, the James and the Reformation. which, I think, will not amount to much more than one thousand pounds. I defire there may be a quere of their charge to his majesty by this journey of theirs, and it shall appear what devices they have to enrich themselves and followers; when captain Mafon at that time told me, That in paying his majesty's great armies, though part of them were as far as Gornwal, yet he never charged his majefty in all those services with more than himfelf, his clerk, and one other ordinary fervant.

As this was the end of that voyage, fo I will not let pass what happened in the beginning of it, in the James I ferved in. At the taking in of victuals at Tilbury-Hope, there appeared a certain proportion of beef and pork, able, with its fcent, to have poisoned the whole company; but by the carefulness of the quarter-masters it was found unserviceable; yet after it was refused by the faid officers of the fhip; and lay upon the harches unflowed, fome of the officers of the navy repaired aboard, and by their authority and great anger, forced it to be taken in for good victuals; which proved

as I have faid before,

My observation to this point, is, That though the officers of the navy have nothing to do with the victualling part, yet it is likely there is a combination betwixt the one and the other, like to a mayor of a corporation, a baker, who for that year will favour the brewer, that shall the next year do the like to his trade when he be-

comes mayor,

Here will I ceafe to make a y further difcovery of the abuses, but refer it all to examination, and myfelf will turn phyfician, and fludy how to cure the malignant difeafes of corruption that have crept in and infected his majesty's whole navy, and his imployments at fea, as well in the officers that assume absolute authority above the rest, and who, I think, will be found most faulty, as in the victualler, and purfer, that has relation to the victualler. My third observation, is the state of the king's ships, their built, and what is to be amended in them. My fourth is, the foremast men, gunners, and all the company in general, without whom ships cannot fail. And my last shall consist of the masters and captains, which I will make the voyage of 1635, the ground of my exceptions to them.

Book III.

rther dif-Il to exaphyfician, gnant difot in and and his he officers bove the ound most irfer, that My third g's ships, nended in nast men, general, And my captains, 1635. the

As I have spoken of my lord admiral, by his authority to be the chief reformer aforefaid, so in the second degree of reformation, I wish that such officers of the navy were chosen as are perfect in their occupation and breeding, and have paffed all offices and degrees in fhips, and namely, out of the fraternity of the Trinity-House; for they are men that know well the practice of the fea, being brought up in it from their infancies: they ferved their apprenticeships in ships, which no gentleman or clerk has done; by their painful labour they have attain'd to good estates; they are of that fufficient ability, as they have the election of the mafters that ferve in the king's fhips; their ambition will not extend higher than to his majesty's countenance, and to be honoured with the title of his fervants; in their imployments they will not strive to exceed in oftentation, or in numbers of needless fervants and followers; their diet will be answcrable to their accustom'd breedings; they will not covet flate in their lodgings, nor folemn places in their confultations; they will commend no man to office whose sufficiency they will not undertake for; no provision or store can be brought in, but they will be able to judge of the goodness of it; no boatswain, gunner, or other officer, can exceed in their demands, but they can controul them; or in their return from their voyages bring in wasteful expence, but they will be able to check them, though it be to a yard of cable, rope, or a pound of powder. This is the way, and no other way, to prevent flealth, cozenage, and all deceits, which the clerks cannot devise to do. Thus would the name of corruption and abuses be converted into merit and defert. If these men shall offend in the execution of their offices, they are not people that can carry their deceits out by friends, as not being bred that way; or if they shall be found culpable or faulty, their estates are not so mean, but will be able to make restitution for the damages

they do.

But to take away all occasion of deceit in the inferior officers of the ships, when they are at sea, these officers of the navy may appoint in every ship an able man, who, besides his labour, may have authority to overlook the expence of the gunner, carpenter, boatswain, and the rest, and to approve it under his hand with theirs, and with the testimony of the captain and mafter.

And because these men may have the better respect above the common fort, and profit withal to make them the more careful to perform the trust that is committed to them, they may be entered for drum and fife, which will add fix shillings a month to their ordinary entertainment; for

the two places are to be well fpared, as unnecessary in fea fervice.

The next officer or office I will handle This way shall be the victualler, whose negligence or west before a covetousness; for one of the two it mult be the values of the two it mult be the values of the two it mult be the values of the two it mult be the values of the two it mult be the values of the product of the goodness and puty. This officer ought to have a bitter and severe censure if he fail of the goodness and quantity of victuals of his majetty's allowance, and I wish no less than death to be inflicted on him; for no subject's estate is able to countervail the damage his majetty may fustain in such defects, in his weighty expeditions. The combinations, the abuses, and the practice of this office, I refer to future ex-

amination. The victuals at fea confifts of beer, bread, flefth, fifth, butter, cheefe, &c. and to be bought of feveral perfons, according to their professions and trades. I will therefore put them all in one number, and fet down a course how to reform them all together, viz. to bind every one in a particular bond, returnable into the exchequer, that the victuals they furnish shall be sufficient, well-conditioned, able to abide good the length of the voyage, confifting of fo many months; and if there be found defect or fault of performance thereof, the bond to be immediately forfeited, unless by a day appointed they put on board his majesty's thips the quantity of fuch victuals as shall be defective; by this means the king shall be well ferved, and the people vell fatisfy'd.

Moreover the victualler must be enjoined to put on board every ship the whole proportion of victuals to the quantity of men serving in her; for in this, there has been great deceit: for whereas his majesty allows a large and sufficient rate for every man's diet, the victualler and the purser had wont to contract betwixt themselves, that the purser shall have the victualling of a certain proportion of men, and to allow the victualler three half-pence or two-pence per diem, out of that the king allows, and justly pays.

The gain of the purfer at fea far exceeds all other officers, as will appear when their buying their places shall be examined. Both the buyer and seller of this office knows that the gain of it must arise by deceiving the king and company: which, besides that it breeds a great inconveniency, for the purfer's unreasonable griping the failors of their victuals, and plucking it, as it were, out of their bellies, it makes them become weak, sick, and feeble, and then follows an infection, and inability to do their labour, or else uproars, mutinies, and disorders ensue among the company, that a captain must interpose himself, his reputation,

Qqqq

Vol. III.

As

and credit, to appeale them; and all for the corruption of the buyer and feller of that office; besides it gives a great discontent to people, and discourages them to do service in the whole voyage.

For reformation hereof, this place is not corruptly to be bought with money, but free election to be made of an honest and careful man, that will have no end but his majesty's profit, and his own credit; he must neither contract with the victualler, nor take advantage of poor mens being ashore, for him to save their allowance of diet to enrich himself, but such surplus of victuals as remains at the end of the voyage, to fee it forth-coming, or to be accountable for it to the king's officers.

And if it be found, after the voyage, that this purfer has performed the truft committed to his charge, then to reward him according to his fervice as the lord admiral and the officers of the navy shall think fit. This confidered, will prove more beneficial and more fafe to the purfer, than to buy his office at a dear rate, which he must execute with danger; for his gain must rise by cozenage, which being discovered, a heavy punishment will be inflicted on him.

This false benefit thus gotten by the officers conniving with one another, by this reformation will turn to the king's profit: but I defire it may be carried with more moderation and pity to poor men; for the company have always been the fufferers, the purfers making their advantage of the mens being ashore, by taking to themselves their allowance of victuals in their absence.

The fecond abuse that is offered the company is in another kind, (as namely, in their pay,) wherein his majesty is no less abused than the poor men; for if at any time they fall fick, and be put ashore, such is the charity of people where they land, that they fooner perish than find pity, unless they bring money with them.

And feeing that his majesty does and must pay all those that serve him, it will be better for them, and more profit to the king, to discharge them at their first arrival, than to continue them longer unpaid; for whilft they lie fick ashore, and not difcharged, their victuals and pay amounts to thirty and odd shillings a month, which may be faved, if they are at first discharged.

In the voyage of 1635, fome of my men fell fick in the James, whom I caused to be put ashore, to avoid further infection, and commanded the purfer to make provision for their lodgings, and other necessaries, to be abated in their pay. If these men had been discharged when they were landed, the king had faved fo much as I have expressed before, and the poor men had

been furnished with money to have defray'd

their expence, which they took upon truft.

I confess this abuse is ancient, which I complained of to queen Elizabeth, who redreffed it, by fending an under-treasurer and moneys with me to fea in the last voyage fhe lived, and wherein I went admiral; but her present death following, caused it to be neglected; but fit again to be revived, for the good both of king and subject. When the purser of the James demanded his money thus disbursed, the officers of the navy with great anger asked him, who made him the queen's treasurer? Which is a direct proof they have a further end in it than the king's good; for I am told they have two fhillings in the pound for the payment of fuch moneys as the poor failors go upon the

I will proceed, and fpeak fomewhat of the king's ships, their manner of built, and their defects, which, in my opinion, ought to be amended. I will make the James my precedent, which is a beautiful ship to the eye, and of mighty force to offend; I found nothing amifs in her hull, but in her masts, yards, and bolt-sprit, which were too fhort, which made her fails too narrow, and her fail the worfe. But thefe are faults that may be eafily amended.

But in fome cases of building ships, or rather, I may fay, of making experiment, they have left no help or hope of amendment; though I am informed there was a warning given of the infufficiency of the workman before he undertook her.

In my fpeaking of the difference in the built of ships, betwixt a flush-deck and high-carved, I have said sufficiently before; only I advise, that in ships with slush-decks, a flight forecastle may be built, and the uppermost part of the ship be armed with junks of cables, for the safeguard of men against small-shot; as also to make barricadoes, and other material defences, to place feveral fowlers afore and abaft, to be the death of fo many men as shall enter. There are many other devised things to be practifed, which I refer to my fifth book, wherein I treat of stratagems.

Now I will fpeak of foremast-men, and the abuse used in pressing them, by example of this last voyage in 1635. The greatest part of these men consist of watermen, never before at fea, and others of the fame fort altogether unferviceable; and herein are the officers of the navy to blame, who to pleasure friends, or for other ends of their own, appoint taylors, porters, and others of that rank, unworthy of the hatches to lie on; and yet every one of these men ftands his majefty in 11.115. a month, when they will think much to pay an able feaman that shall be absent at a muster: so Воок П

great a power has partiality with thefe men, that they prefer the unworthy before the well-deferving, and are willing to pay 1.1.11. a month to taylors, rather than 14.5. to a failor.

The sea towns in England are not far behind these abuses in election of such men as I have found in this voyage; for that in the northern press, betwixt Tarmouth and Newcastle, never a man appeared in the James that ever had been at sea; insomuch that if I had not procured a warrant for one of my master's mates to look out for good men, never ship had been worse provided.

For reformation whereof, I would advise at the next general press, that the charge be committed to the masters, or their mates, that go in the voyage. They are to repair to the towns and corporations on the coasts, authorizing them, with the officers of the faid towns, to call all feafaring men there dwelling before them, and the masters to examine their sufficiencies, and according to their abilities to press them, and enjoin them to appear before the clerk of the check at Chalbam.

There is another great mifimanagement is his majefty's fhips, which is fit to be amended, in order hereafter to redrefs it: by allowance of the king, the worft of those lotterers I have spoken of, have as good entertainment as the ablest failor, that is no officer, and neither captain nor other commander can reform it, because custom has so settled it; for a reformation whereof, I do advise, that by consent of captain, master, and gunner, every such man's pay be proportion'd according to their sufficiencies, viz. to take it from one, and add it to another; but no way to charge the king more than with his ordinary proportion.

If this course were really taken, seamen would be as willing to serve the king, as they are now refractory to his service; it would be a great cause to make them to obey and love their commanders, and encourage them to exceed one another in their labours, in hope to have their pay mended. These people are to be governed by a captain, matter, and other inferior officers, which I have formerly treated of; and I will now describe the fitness of a captain to be chosen to serve in the king's ships.

The little employment in fea affairs makes many pretenders to the place of captain, when there is talk of expedition; and very often there are factions and quarrels among fuch pretenders. But to take away all competition that may arife amongfuthem, and that his majefly may diffinguish of their works, it were good, when such captains shall be nominated and elected, to require them to present authentick testimonies of their service and fights they have

been in at fea, which will approve their fufficiencies; for a captain is chosen for his warlike part, as the master is for the conduction of his ship.

A captain of the king's ship must be of reputation and government, bountiful, and not prodigal in his expence : he must moderate his expence according to his pay, and the time it is likely to continue, that he may be the better able to maintain his port after the fervice is ended, both for the honour of the king whom he ferves, and for his own reputation; for his after-preferment must lie upon his former behaviour and demeanour. He must abandon the beastliness of drinking, and conniving at drunkards, which are the general diforders at fea, though in reason no man should more deteft it; for they may know that drinking is not the way to preferment; for no man was ever raifed for his vice, but it is made an objection to hinder his fortune.

As a captain ought to be frugal in his own expence, fo ought he to be no less for the king's profit; as, first, in victuals: there must be no conniving betwixt him and his purfer, nor betwixt the purfer and any other officer; and what victuals foever shall come into the ship that it be not imbezelled, or fecretly convey'd out of her; he must see an equal carriage betwixt purfer and company, without advantage to either; for by this reformation the king is only to receive benefit. He must also have an eye over the gunner, as well to fee the taking in of his store, as the re-delivery of it. He may have a fervant to keep a private account of the expence of every fhot at fea, to difprove any unlawful account the gunner shall unjustly charge himself withal.

I will end this difcourfe with the mafters, who are the conductors of his majety's fhips, from their going out till their return home. There ought to be a general election of these men principally of such as have been practifed, and served in the king's ships, for an experienced commander is more to be required in that case, than a skilful mariner.

The mafters that were employ'd in this laft voyage of 1635, are all able men in the art of navigation, which they profess, and of sufficiency to take upon them the conduction of a merchant ship to any place or port wheresoever they shall trade; but for the service in the narrow seas, where they have not been accustomed, or for managing the king's ships, in which they have not been used, for want of experience, they are much to seek, as will appear by what follows.

I confess, that fince I ferved in the narrow seas, I find so great a difference betwixt the masters of that time and this, that I may compare it to an ancient art, that in

Poor III

long continuance of time has been forgotten, and loft for want of practice and ufc.

The mafters in those days were either ignorantly adventurous, or in this time providently cautious, which I may rather term over-timorous; for we then little valued those adventures, which now we properly call dangers; though I am affured the perils be alike, and not to be accounted hazard.

be alike, and not to be accounted hazard.

But I impute the true cause of security in the masters, to that they have no other ambition, but to carry out and bring home the ship under their charge, and to receive their falary for it. I consess they are the more excusable, because their breeding has not been to fail amongst sands, or in seas so narrow, that which way soever they turn themselves, they behold land on all sides of them, which are subject to the change and shift of several winds in every port; for that wind which is secure upon one shore, is death upon another; and tides that sometimes are advantageous to them, at other times may prove dangerous.

This reformation cannot be in the maflers themfelves to amend, for it requires long experience and labour to make them pericet in our feas, where the fervice depends and where they are strangers in the navigation, this defect must be supply'd with expertand skilful pilots, that make the narrow seas their daily trade and practice.

The king's ships being thus provided, they have little cause to sear danger of wind or ftorms, but only fogs, that take away the fight of the land from them, which come not often, nor continue long upon our coaft; and in that case of dark and misty weather, never thips of the kings of England were better fitted with ground-tackle, or whole shots of cables, that they may ride in the midft of the channel: but whenfoever the fog shall vanish, and the land appear, though it were in any part of the feas, betwixt the north-foreland in Kent and the Dudman in Cornwal, they will be able in few hours to harbour themselves, howsoever the wind proves that may endanger them; and therefore, in my opinion, that which is called care in fome, may be rather term'd

These masters that I term raw in the king's ships, not being used to the government of them, it is fit they be put into the right way by the boatswain, who is best able to instruct them; though in these latter times, that ignorance has prevailed against knowledge, the boatswains, by a strict decree of the officers of the navy, are prohibited from taking charge of the king's ships, as masters; but the inconveniency of this law of theirs, I desire to argue with our late reformers.

Another overfight and error in these mafters I find, That they cannot diffinguish betwirt the discipline of the king's service, and their accustomed failing and working in merchant ships; for though in their inftructions in this voyage they were commanded to keep a good distance off one another, at their coming to an anchor, fuch have been the mafter's carelefnels to observe this order, that they have pressed to be at an anchor as foon, or as near the admiral as they could, neither giving place or room to the vice admiral, or other thips of greater charge or burthen than themselves: let this be a caution to fucceeding times upon the like occasion, That wherefoever a fleet thall anchor, either at sea, harbour, or road, they fuffer the three flags first to anchor, who must be careful to take a good birth from one another, (which done,) every ship, as they are divided in squadrons, is to anchor a convenient diffance from the admiral of its fquadron, and to take place according to the draught of the ships and the depth of the water they anchor in,

A mafter must moreover observe, after his coming to an anchor, to examine the defects of his ships, and to take order for the present amendment of them.

Thirdly, he must have his boats ready to fetch water, wood, and ballast, that the want of them be no cause of his stay in harbour, if he be suddenly commanded to sea; or if his abode be longer than he looked for, then to send his men by turns, to walk in the fields on shore, some one day and some another, to take the air, and exercise themselves for their healths; this will give great satisfaction, and be a refreshing to them and the ships, when people shall be absent, and the ship made clean and sweet.

Fourthly, a mafter is, at his first arrival in a port or rode, to let fall a single cable and anchor, unless the weather force him to moor with two, which if he do; yet as he shall see an appearance of fair weather, then to weigh one of his two, that he may be ready to set fail, if he be commanded; for a man of war is like a post, that has horse continually saddled for the king's service.

Many of these abuses I consess began to creep in, like rust into iron, at the latter end of queen Elizabetb's reign, by the unableness of some officers of the navy, that then had the charge of them who did, as some now-a days do, presume to order, and dispose of all things of the sea, though they were never twenty leagues from the coast; as great presumption as for a bred seaman to take upon him the office of a judge in temporal or spiritual affairs.

THE island of Scilly is from the Land's-End of Cornwall eight leagues, E. N. E. This harbour of Scilly has twenty fathom, and there are three goings-out of it.

The next good harbour is Hellford, little frequented: it has fix or feven fathom water.

From the Lizard to Falmouth, N. and by E. four leagues: Falmouth is in an excellent harbour, and hath twelve, thirteen, or fourteen fathom.

From Falmouth to Dudman-Point, E. and

by N. four leagues.

From Dudman to Foy, N. E. four leagues. From Foy to Rambead fix leagues, E. N. E., Plimouth lies from hence, N. N. E. four leagues, and has four or five fathom.

From the Rambead to the Start eight lagges, E. S. F. From the Start to Darkmouth three leagues, N. E. and has ten or twelve fathom.

From Dartmouth to Torbay four leagues, N. E. a good road, at eight fathom, for a fourh-well wind.

From Torbay to Portland thirteen leagues, E. and by N. and within that bay lies Exment and a fouth-weft wind, at feven or eight fathom.

Within Exmouth lieth Weymouth, a barred haven; and going from thence to the Needles in the Isle of Wight lies the harbour of Pool, where you shall have five fathom at half flood.

From Portland to the Needles eleven leagues, E. and by N. From thence to St. Helen's feven leagues.

Within the harbour lies the haven of Limington and Southampton, and within that Water-Hamble; and to the E. Portjmouth, an excellent harbour; and in the Isle of Wight, Newport and New-Town.

From St. Helen's to Bechie fixteen leagues, E. N. E. Betvixt them lies Coichefler, Arundel, Shoreham, and New-Haven, all bad harbours.

From Bechie to the Shingle, E. N. E. eight leagues. Betwixt them lies Rye, a dry harboar.

From the Shingle to Dover nine leagues, N. E.

From Dover to the Downs, and so to the North-Foreland, seven leagues; there lies betwirt them Sandwich, a barred haven.

From the North-Foreland to Orford-Nefs, leaving the ifland of Sheppey, and the courfe to London on the larboard-fide.

Harwich is the best harbour upon all that coast 3 and, indeed, the best betwixt it and the Frith in Scotland.

From Orford-Ness the Coast lies, N. W. twenty nine leagues from Flamborough-Head. There lies betwirt them Sole, Listock, Yarmouth, Cromer, Blackney, Burnam; from thence to Boston, fouth-east, and to Lynn west, you pais many dangerous fands in going into these two places.

ing into these two places.

From Boston to Hull and Burlington, you must go N. and N. and by E.

From Flamborough-Head to Scarborough fix leagues N. W. from hence to Whithy

five leagues.
From thence to Hartley-Pool feven leagues,
W. N. W. from Hartley-Pool to Tinmouth,
N. N. E. nine leagues, and io up to New-

cafile.

From Tinmouth to Cockit Island, N. N.W. feven leagues. And thus much for the northern coast.

Now I will return into the other Parts of England and Wales.

From the island of Ram/ey, or the northpart of Wales, lie the Bishop and the Clerks, rocks of great danger; two leagues from thence lies the island of Grashome.

From thence to Milford-Haven three leagues, and the going in is, N. E. one of the best harbours in the world; it hath a rock in the middle of it at the entrance.

From Milford to St. Gore's-Point two leagues, and from thence to the Ness, E. feventeen leagues; there lies betwixt them the island of Coarday, Tinbey, and the point called Wormstead.

From the Ness to Steepforme, E. S. E., feven leagues; from thence to Bristol N. and by E. twelve leagues. There is betwitt the Ness and Bristol the islands of Barrey and Scilly, Cardiff, Newport, and Chepstow; all barred havens.

Now to the English Shore.

From the Holmes to Lundy, W. S. W. twenty leagues: there is betwixt them Helford-Comb, a narrow going in, but three or four fathom within.

From thence to Biddeford, S. S. W. feven leagues: it has two divitions; the one goes into Barnfaple, the other into Biddeford; barred havens.

From thence to *Lundy*, N. N. W. five leagues. Here you may anchor on both the fides of the ifland, at fourteen or fifteen fathern.

From Lundy to the cape of Cornwall twenty eight leagues S. W. and from thence to the Land's-End, five leagues S. there lies betwixt Lundy and the Land's-End, Pad-flow, St. Ives, and some other creeks, all barred havens,

The Coast of Scotland, and of the Islands.

The island of Sbetland is the place where the Hollanders begin their great fishing, in the harbour called Brassound, which is an excellent harbour, where all their bussessmeet, and begin their fishing the 23d of June. At the north point of the island, there is a good harbour, called Blansound, which you may fail through, from one side of the harbour to the other.

There is another good harbour, called the Magnus Haven, and an illand where hips may go, and ride about it; and behind it a harbour called Hamborough-Haven.

West from Scotland, and north from Ireland, there lie many islands, antiently called the Hybrides; in most of these islands there are excellent harbours.

The Lewes is the best of the islands; which the English have now planted, for conveniency of fishing: it is in length twenty nine leagues S. S. W. and N. N. E.

The islands of Orkney are thirty one in

The island of Wayes lies N. N. E. from Cainssin Scolland, and but five leagues from it you may fail through these islands in many places by Cainss, and S. from Sanda, and come out again.

From Cainess upon the main land, and the promontory of Scotland to Buckerness, twenty one leagues S. E. betwixt them, are many good harbours, Dermecke, Ross, and Lewerness.

From Buckerness to Aberdeen, thirteen leagues S. S. W. from thence to Mont-Rosse, S. W. and by S. four leagues; to Dundee S. and after S. S. W.

From Dundee to the iste of May, S. W. fix leagues. From May to the Bass, and up to Leath, nine leagues.

From the Bass to the Tape-Head, W. fix leagues; from the Tape-Head to Berwick, S. S. E. five leagues.

The Harbours in Ireland.

The Black Rock, and Cape Durfdey, S. and by W. f. three leagues; and between them the haven of Gallaway.

From Gallaway to the ifland of Arran,

From thence to Lundy, N. N. W. five fix leagues; from thence to Limerick, S. nine

From Gallaway to Blafques, S. S. W. fixteen leagues; from Blafques to Dunseys, S. E. twenty one leagues.

From Cape Cleer to the Old Head of Kingfale, E. and by N. twelve leagues.

From the *Old Head* to *Cork*, N. E. and by E. a great league.

From Cork to the east point of Waterford, E. N. E. twenty leagues; the whole southern coast lies E. N. E. and W. S. W. and betwixt Cork and Waterford lies Tochill, E. N. E. from Cork, six leagues.

Five leagues from Yochill, E. lies Dongarvan, lying in N. N. W.

From Yockill to Waterford, E. N. E. twelve leagues; the haven of Waterford lies in N. and by W.

From Waterford to Washford, the island of Saltres lying in the way, you may go betwixt it and the main land east from Waterford; from Saltres to Washford five leagues.

From Washford to Wexford, N. and by W. five leagues.

From Wexford to Dublin, N. and W. five leagues.

Five leagues from *Dublin* lies the harbour of *Drogheda*.

From Drogheda to Dundalk seven leagues.

An Observation I gather of the State of the Harbours aforesaid, and the Advantage an Enemy may take of them to annoy us.

Of fo many harbours that England affords, and towns feated upon them, as aforefaid, there are but thefe following of any importance to entertain fhips of burden, (viz.) on the fouth coast, Plimouth, Falmouth, Hambofe; lying within the island of St. Nicholas, Dartmouth, Portfonath, and those within the Isle of Wight; to the northward, Harwich, Lynn, and Humber: the two last are frequented most by ships of their own, full of danger and fands, little known to any others but to themselves; I will therefore fay little of them.

Over-against the harbours on the south coast of England, France is seated, and, namely, Normandy and Picardy, which, we may thank God, does not afford so good a harbour upon all that coast, as the worst of those I have named; otherwise our forefathers had tasted the danger of them many ages before ours; and we in this time should find it a dangerous thing to have neighbourhood with good harbours, now France labours to be great in shipping.

The harbours of greatest consequence, and for us most to sear, are Brest and Blues, forty and odd leagues asunder, and both

of them to the eastward of Usbant, the head land of Britany, which must be doubled before they can come into our Channel; and that eafterly wind which brings them about Ufbant, will be against the recovery of any harbour in England; or if they think by their fleet to intercept our trades, or to have any other defigns upon us, they will be brought betwixt Scilly and Caribdis; for betwixt their coast and ours, it is not above twenty three or twenty fix leagues in most places; so that if they be taken with a storm at north-west, they are cast upon their own shore, where they shall find neither harbour nor road to receive them, but that the merciless sea will devour them: and the like effect they will find with a foutherly wind upon our coaft, unless they were relieved with our open roads, which their own coasts yield not. In my fifth book of projects and stratagems, I have spoken more largely to this point: and to conclude, though France should be able to keep fleets in our Channel in the fummer feafon, when they shall find the weather fair, and the night fhort; on the contrary, in winter with a foutherly wind, florms, and long nights, they will find themselves destitute of harbours on both fides to relieve their ships, when they are in the Channel.

And as for Milford-Haven in Wales, whose harbour for goodness exceeds all other harbours in Europe, if an enemy should enjoy it, it would little avail him; for all c querors will covet to draw into the heart of the country they enter, and where the greatest cities are seated, and most people reforts to them. Let us compare it with London, two hundred miles from it, and let us enter into the condition of Wales, and the poverty of it; where the huge mountains will hinder the paffage, and the transportation of their carriages; confider likewise the time England will gain, to gather all its forces together to withstand them, and the distance an enemy shall march from their ships if they be forced to retire, and shall be destitute of all other supplies or helps: this will be advantage fufficient for us. Neither can an enemy steal so suddenly upon us, but that our fleet will be ready speedily to bid them welcome. These reasons considered, Milford-Haven will be made as fecure as any

The State of Ireland.

port of England.

There are many choice and good harbours in Ireland, as commonly there are in most countries where there is least trade. The more and the better they are, the greater the danger to England; because an In-

vafion in *Ireland* does as much concern us, as if it were attempted in *England*. Where there are fo many ports as in *Ireland*, they cannot fo eafily be fortified and made firong, as if they were fewer; whereby the defence of that kingdom must depend upon the faithful hearts of subjects, who heretofore have been apt in all ages to shew the contrary, as appears by their many rebellions.

The fouthern coast of *Ireland* is in the nature of *England*, a foutherly wind being dangerous to both; and the greater to *Ireland*, because the coast is more subject to mists and fogs, so that no art or skill can preserve a ship, if she be forced to bear in upon a lee shore she has not made.

I have declared in my fifth book the danger of an invafion in *I. eland*, and the best remedy to avoid it by a fleet at fea; to which I refer you: but the fafeft and fecureft course I can think on to defend that kingdom, is to draw the people by juffice and good usage to love and obedience; for then thall their hearts and hands be joined, and made to concur together, for defence of their king and country. Both they and we fee, that of late years by peace they are taught how to grow rich, which before they were not: they find by his majesty's conniving with them in religion, it has mollify'd their hearts, that they are not so hardened as formerly they have been, as appears by their voluntary disbursements when his majesty requires it of them.

I am of a contrary opinion to an ancient polition held in former times by our flatefuen of England, That the fafeft way to govern the people of Ireland, was by keeping them under, poor, needy, and ignorant, like men barbaroufly bred: whereas on the contrary, we fee by proof of late times, that by our good and friendly ulage they are made more tractable to reason, and understand the difference betwixt civil conversation and their former education. They are grown to that samiliarity with us, and our dispositions, that if religion did not hinder it, they would make no more difference to marry with us, than amongst themselves, and hold it for an honour to derive them-

felves from English blood.

We must consess it for a truth, that they made our king and both our countries more famous of late years than in former times, by the efteem they have gained in our renowned actions of war, where they have ferved; for those people that were wont to be called by the name of Kernes, have obtained the prime places of honourable imployment: which I impute to three causes; the first, is, To their late civil breeding and conversation, in comparison of times past; secondly, That they are not prohibited

ferving any prince or state, whereby all ancient jealousies are taken away; thirdly, They have that liberty and freedom, that they apply themselves to all gentlemanlike exercises, both of learning and languages, by which they infinuate into the acquaintance of other nations and people. from whom they learn their customs of civil and mannerly behaviour, acknowledging that preferment comes by virtue, and not by vice. By this alteration, his majefty inall regain fober fubjects, that have been feduced by evil magistrates.

Of Scotland.

Scotland in divers parts thereof, but efpecially in the islands of Orkney and Hybrides, has many large and good harbours, and more ships of their own to uphold trade than Ireland has, much to the shame of Ireland, which has a more fruitful country, and lies by many degrees more convenient for trade, than Scotland does, to the rich countries of France, Spain, the States, and all fouthern parts, which afford the greatest plenty of wealth; for from Ireland they may be sooner in those places aforesaid, than from fome part of Scotland to Ireland, where they are to begin their voyage.

We and other nations find that Ireland many times proves a fafety to ships, men, and goods, as it is feated and placed; for fhips that are to pass into our channel from the fouthward to England, France, Flanders, Holland, or any part of the east country, if such vessels be taken with an easterly wind before they recover Scilly or Falmouth, or fail of victuals, or otherwise distressed, Ireland lies open to entertain them, which no other shore can do with that wind, and much lefs Scotland, which is fo far to the northward, and out of all manner of trade.

It is pity Scotland is not placed where Ireland is, confidering the difference of the industry of their people; for though the country of Scotland yields no commodities worthy of transportation, whereby to make them rich, or can take off any merchandize that is brought them, by reason of

the barrenness of their soil, and the coldness of their climate, that produces nothing of value to exchange for it, yet they live not idly and lazily, as the Irifh do, but maintain a number of ships to carry out and bring back fuch commodities as the country affords, or the people stand in need of

Another happiness to us, is, that Scotland can make no use of their harbours to benefit an enemy to our annoyance; for Scotland has two impregnable defences, which are no less beneficial to England, viz. hunger and cold, that it can no way aid an enemy to invade England from thence, either with victuals, or other provisions.

I have often marvelled with myfelf, that in our forefathers days, who lived in the time of hostility betwirt us and Scotland, they had not so much foreseeing providence, as being masters of the sea, to endeavour to cut off all the ships, barks, and boats, that belonged to their kingdom, which had been eafily effected, or without reliftance; for then they had left Scotland to itself, without help from abroad, and forced them to make use of their own commodities amongst themfelves; by which means they should never have tafted the deliciousness of wines, or other delightful things of feveral kinds which other countries produce: Thus would England have had a greater power over them than by force of arms, and would fooner have brought them to uniformity and obedience to us, than by any course of cruelty: the feamen would have foon forgotten their imployment, and betaken themselves to their trades for food. And one thing I must say in their commendation, that their people are naturally apt to the fea; they would foon attain to the excellency of pilots, which grows by their dangerous and difficult navigations; which makes them more vigilant than otherwise they would be; and in the places where they generally traffick, they are held worthy of the charge they take upon them; they are no less esteemed than trusted, for their honest contracts they make with their merchants; and it is a means they are fooner freighted than others that carry greater reputation and wealth.

A Proposition to the Parliament on all the foregoing Contents of this Book.

Need not make a particular repetition of what is contained in this third book, because it is open to your eyes to behold, view, and read; it tends to the state of his majefty's navy, and the abuse that is crept in by unexperienced carelessness, if not corrupt officers, and fuch as regard their own profit more than the king's service: withal, I set down a means of reformation, which I prefented to his majesty, part whereof was writ-

ten at the request of Sir Robert Cecil, not long before the queen died; the rest I refer to my fifth book.

I will apply myfelf to you, the lords and gentlemen of parliament, for these reasons; The first, Because it concerns you more than others, who are the mouths and menchicfly trufted by the multitude of the commonwealth, that makes election of you, above others, to fpeak their cause. Secondly,

If the coldcoduces noit, yet they

e rest I refer

the lords and hefe reafons; bu more than I menchiefly he commonyou, above Secondly, In matter of fecurity to the state; for you have the same interest with them, as being embarked all in one ship; so that, if one drowns, the rest must be shipwrecked. And, lassly, because you are the people elected and chosen from the rest, for your grave and judicious understandings, that can diftinguish and determine according to reason, what shall be proposed for the good of the commonwealth; which makes me say the less, but refer all to your wife considerations.

The great, and indeed the greatest matter of importance to the state, is his majesty's navy, properly called the walls and bulwarks of England; for our ships sourishing bring safety to the kingdom, and terror to others; yourselves may challenge an interest in this royal navy, as jewels annexed to the crown, that cannot be separated from it; for though the king have the disposing of them, and the only imploying them, yet they are like his houses and lands that are envalled upon the crown, and the king can use them but for life.

The kingdom of Portugal falling to Philip II. king of Spain, who came in rather by the fword, than confent of the subjects, yet they drew him to large conditions for their freedom: and amongst the rest, because that kingdom flood upon reputation of shipping, they enjoined him to annex twelve gallcons by way of entail on the crown of *Portugal* for fo many brave ships he there found, as appeared by the goodly veffel called the St. Matthew, which I knew, and faw broke up with age, after she had been admiral of the fleet with the marquis of Santa Cruz, who overthrew Monsieur La Strauze at the islands of Tercera in 1580, and after the had been admiral for England in 1588, with the duke of Medina Sidonia; and, laftly, in that fervice and fleet, that took Sir Richard Greenville and the Revenge in 1591.

And feeing we have precedents of other times, and of other countries, to parallel with us; for the preferving the honour of England by our navy, but efpecially because it concerns us more than the firm land, we being an island that can neither defend ourselves, nor offend others, without the help of shipping, I do humbly crave your favourable cars to incline to my progessions following.

politions following.

That befides the ordinary and yearly expence his majefty contributes to the fhips in harbour, you will pleafe to add a certain annual proportion, and to confirm it by act of parliament, to be imployed as the parliament shall direct, or as the ensuing project shall seem acceptable.

I know that whatfoever I shall propose by way of imposition, the word is obnoxious, Vol. III. and you will answer me with a general negative, by example of the grants of customs, that in continuance of time are grown hereditary; but let the importance of this weighty business concerning the king's navy move you according to reason, and to devise the easiest way, and with the least charge, how his majesty's ships may be immediately sent to sea upon an unexpected occasion.

The fum that shall come from you by a voluntary gift, not to exceed 20000 l. per Annum, the moneys to be rated and raised at the discretion of justices, knights, and gentlemen of the shire, a treasurer and other officers to be nominated by the parliament; and if any innovation shall be attempted to alter this form of government, the payment to cease.

That certain commissioners be appointed for two years space to view and provide, that all materials and provisions be kept faste in magazines, and no other than themfelves to dispose of them; and every second Michaelmas term to meet and settle all things in good order, that at the next sitting of the parliament it may be presented to the two houses.

This will prove more eafeful to the country, and lefs burthenfome to the people, by ten degrees, than has been of late years taken, (viz.) To call upon them for great furns, and to be fuddenly rated and raifed by the afferment of one private man, that shall for that prefent year be chose sheriff; and such a one, if complaints be true, as carries a hand of too great partiality.

By the good husbanding and management of this 20000 *l. per Annum*, there will always be ready in eafh fo much money as will, with little help from the king, be able to put his fhips to fea, without otherwife being beholding to his fubjects; for it is to be fupposed that kings will not have yearly occasion to employ their fhips, by means whereof the stock of 20000 *l.* will increase.

Out of this 20000 *l*. there may be provifion made to allow thirty able and expert captains, each of them forty marks, or orty pound per Annum, the time they are out of imployment, enjoining them to give their attendance, when they shall be called upon. Every man shall know the ship he is to command, and no man will be so impudent, as to seek to put him from it when imployment is spoken of.

They shall hold their places, their penfions, and imployments, according to their civil carriage and behaviour; for by their example, others that expect future preferment must imitate them in their rule of

Of all diforders, they must abandon drinking, quarrelling, and the occasion that rifeth out of fuch vices; for if they confider it, drunkenness is but a short madness; and therefore unfit a madman should govern others, that cannot govern himself. This will be the way to gain a brave reputation in their youth, and an encouragement for gentlemen to imploy their fons upon fuch fervices, on hope of preferment; and it may be a means for the king to take the example of the king of *Portugal*, who inflituted, That gentlemen, according to their degrees and births, should have imployment at fea, and penfions of the king for life, which they call Fuero. Every gentleman takes his place according to his pension and quality; and it is not amiss, feeing I am upon this subject, to set down, That the occasion of the discontent of Ferdinand Magellaens, or Magellan, the discoverer of that streight, which took name of him, was upon this cause; for which he left his king's fervice, and became a creature to Ferdinand king of Spain, who im-

ploy'd him. Magellan was a gentleman well deserving, and on account of the inflitution aforefaid. he fued to the king of Portugal for a penfion of three ducats per month for himfelf, and half as much for his fon, who was a towardly young gentleman. The king willingly granted him two and an half, but absolutely refused his son; which he took for fo great an indignity, that he left the king's fervice, and fled into Spain, where he was employ'd by the king and cardinal Ximenes, in that noble voyage about the world, which was performed by his ship, though he was slain himself. This enterprize of his was prejudicial to the kingdom of *Portugal*, and he got the name of a fugitive and traytor by it.

To make out this degree of gentlemen, and their imployment, I have spoken of, I was acquainted with it when Sir Richard Lewson, and I took the carrack in Zezimbra Road; for when I went aboard her, to treat about her yielding, I found four hundred gentlemen of this fraternity with arms to defend her, all apparelled like courtiers for their reputation they held by their imploy-

ment and place.

The Beginning of our Refort to the East-Indies.

HOUGH the queen was fo wholly taken up with her warlike actions by fea with Spain, which continued the space of eighteen years, that neither she nor her merchants had leifure nor opportunity to fettle new trades in far and remote countries, as the East Indies, and other places, which king James of famous memory did, when he enjoy'd both crown and peace, as shall appear when I treat of his and king Charles's actions by fea; yet because those ages and king's reigns shall be honoured as they truly deferve, I will speak of the famous enterprizes undertaken in the queen's time to the East Indies; the first by Sir Francis Drake in 1578. the fecond by Mr. Cavendish in 1586, the third by Captain Raymond, in 1591, and the fourth by our merchants of London in 1603. to whom the queen granted her letters patents for the space of fifteen years, which was after continued and collarged by king James in the year 1609. to remain for ever. Whereupon the East India merchants built in the fame year the goodlieft and the greatest ship that ever was fram'd in this kingdom, though she proved not so fortunate to them as ships of less burthen that I have spoke of in my second book.

The increase of great ships in England may be derived from this beginning; and to make it the more wonderful, it is strange, if we confider the few ships, and the small

burthen of them in the memory of man, to what they are now; for till of late, which perhaps few will believe, the greatest part of our ships of burthen was either bought or built out of the east country, who likewife enjoy'd the greatest trade of our merchants in their own vessels.

And to bid adieu to that trade and those ships, the Jesus of Lubeck, a vessel of great burthen and strength in those days, was the last ship bought by the queen, which in the year 1564. was cast away in the port of St. John de Ulra in New Spain, under the command of Sir John Hawkins; and from that time to this, if we confider the increase of ships which England trades withal, but especially of later times in the reign of king James and king Charles, we have great cause to give God humble thanks for his bleffing poured upon us, for our strengh of ships, and wealth of subjects, both much increased by our navigation.

I cannot fay our first voyages to the East Indies were by the way of traffick, as our latter years have produced: Captain Raymond was accompanied with the Penelope, a ship of his own, with the Merchant Royal, and Edward Bonadventure, three prime ships at that time both in greatness and goodness: their imployment was to obstruct the trade of the Portuguese, and to feize thar goods by way of letters of re-

ages to the traffick, as d: Captain h the Penene Merchant ture, three in greatness t was to obtefe, and to letters of re-

Thefe

These three unfortunate ships arrived at the cape of Good Hope, where they refolved to fend home the Merchant Royal with the fick men, and to proceed on their pretended voyage defigned in England; but captain Raymond himfelf was unhappily fwallow'd up in the fea fifty leagues from the cape: the Edward Bonadventure performed her voyage, but failed, as the rest did, in the hope of profit; for neither the men nor the adventurers were a penny the better for that voyage; and unluckily at her return, after the had passed many miseries and dangers, at last the arrived in the West Indies, whither she went for relief, being mightily diftreffed. And arriving at the island of Mona, her company refolved to cut her cables to drive ashore, choosing rather to do such an unworthy act, than to venture into England with her, their case was so desperate.

Most part of her men were saved by a French pirate that hovered about that island, one of whom, Henry May by name, was imbarked in the said French ship, and in her return homeward was wrecked on the island of Bermuda, who gave us the first publick knowledge of that island; for before it was supposed to be inchanted, and possessed by spirits, though I knew the contrary; for above twenty years before this happen'd, I was acquainted with a French captain, called Russel, who was also ship wreck'd upon the same island, and escaped by means of a boat, he and his company made out of the materials of the said finip, in which with great hazard they arrived upon the coast of Newssaudland, where they were relieved by sistemen of their own country.

The Competition betwixt France and Spain by Sea, and Conclusion of the Third Book.

Frenchman meeting a Spaniard or Portuguese beyond the line, or in either of the two Indies, they hold it a thing juftifiable by law to seize upon either, especially if they make the first shot at the Frenchman, pretending that he gave the first offence; and that thereupon they offered him violence, and that themselves are but defendants.

The Spaniards and Portuguese answer to this, That the French being no discoverers of countries beyond the line, or in the Indies, they can challenge no more right to the countries and seas, than pirates of other nations can do; neither have they any colour to haunt those shores and seas, but with a purpose to rob and spoil, seeing they and all nations besides, know the king of Spain prohibits any traffick in those parts, but to his own Spanis fubjects.

They further fay, There is no ship but will in her own defence, being chased by another, and ready to be affailed and boarded, shoot first; for it is an old rule in a quarrel, That he has the advantage who gives twe first blow: And therefore this lawful resistance of a poor merchant ship, that goes not out of his way to seek others, but avoid meeting of all, cannot be reckoned a breach of peace, and consequently a forfeit of ship and goods; this is against the law of nature, for a worm, if she be trod on, will form.

And befides, whereas merchant ships go commonly armed to defend themselves against enemies, by this law, and contrary to all sense and reason, their safety must confist in going unarmed, that they may be unable to make defence, left they be quar-

relled with, and thereby made a prey to all ships they shall meet at sea.

The affailant, whom you may properly call a pirate, has fometimes other pretences, as namely, the want of victuals, or their hip being leaky, or ready to founder, to exchange thips with them.

The Spanard defires, hat these deceitful excuses, and false promotes may with uprightness be considered: to the first, they say, That a merchant ship that carries ten men, cannot afford two days victuals to a man of war that carries an hundred men; for ten days victuals after that proportion is but half a days victuals to a ship of war.

To the fecond, it is to be confidered that if one ship be exchanged for another at sea, it must be the stronger that compels the weaker to it; and as a thief that robs by land makes the offence much more horrible by committing murder, fo does the ship in this case; for if an hundred men be not able to keep the ship above water with their pump or baling, what shall ten men do in that ship, but fink or perish with patience? Here is both theft and murder committed upon poor innocent people, that offer no man molestation, nor go out of their course to feek acquaintance: but if this stands for a law, a pirate will make no conscience to bore a leak in his own ship to serve for an

Therefore I conclude, it is not the first shot that can be adjudged a breach of peace betwirt two ships that accidentally meet at sea, or that it shall make the affailant's cause the better; for in truth, the offence is given by the ship that chases, and has no cause to do it, but only to give an occasion

years after the discovery of them, because the and her Castilians had the honour and fortune to find them.

The Portuguese to this day enjoy their antient and accustomed trade to the East Indies, Guinea, and Brazil; and the Spaniards are not suffered to go there, because the Portuguese were the first discoverers of

Our king out of some confiderations prohibits the trades of the East Indies, Russia, Greenland, and Turky, but only to some particular subjects, to whom he grants his

The Hollanders, who are refractory to all good laws and inflitutions established by kings, however observe this rule among themselves, That they will not suffer any of their people to trade to the East Indies, but those whom they incorporate, and call The East India Company. And though William Cornelius Scowden has discovered another paffage into the South Sea, than through the Streights of Magellan, a voyage of fame to the undertakers and nation, yet at his arrival in the East Indies, where he thought to have found fuccour and reliet from his countrymen, most ungratefully and cruelly they seiz'd him, his ship, and all he had, and used him as rigorously and unnaturally, as if he had been a professed enemy or pirate.

The French above all other nations have always impugned the right of the first difcoverers, but not without the great punishment and just judgment of God upon them, as appears by many of their actions, as namely, in Canada, which was taken and fpoiled by us in 1628. as also in Florida and Brazil, that was deftroy'd and ruined by the Spaniards; and it is worthy of note, that they never lived in any of these colonies, but civil diffentions, famine, and murders, fell upon them; a just reward for the in-

juffice they did. The king of Spain is to cautious not to give offence in this case, that when Greenland was discovered by the E g'y's, some of his Bifcay subjects repaired thather to kill the whale for oil, being more expert therein than any other nation: but the king of Spain confidering what wrong was done to the king of England by it, and that it might concern him in the like case to have his Indies incroached upon, he prohibited his fubjects going to Greenland to molest or hinder the English in their fishing, and afterwards gave affiftance to the English, and instructed them in the manner of their whale-kil-

Subjects that defire to plant in countries they have not discovered, and therefore can claim no title to them, run many desperate and unavoidable perils; First, because the

of quarrel, that thereby he may rob and fpoil him: he it is, I say, that deserves punishment as a pirate, and not the poor defendant, that does no more than nature and reason oblige him to.

I would ask a Frenchman, whether, if a Spaniard should meet him upon the coast of Canada, where the French have a plantation, and there chase him, and that the Frenchman for his fafety should fire at him he would think it reason that the Spaniard fhould take and enjoy him as lawful prize? No, I am rather of opinion, that the Frenchman will believe as I do, that the Spaniard is worthy to be hanged for a pi-

And yet the comparison is not alike, for the French cannot account Canada their own, as the Spaniards may do the Indies; because Canada was first discovered by the English in the days of Henry VII. as all the world acknowledges, and none but the first discoverers can pretend title to any land newly discovered.

This is the title by which the king of Spain holds his Indies, both East and West; and this is the title by which the king of England holds that part of America from fifty eight to thirty eight degrees, and has held it fince the discovery of it by Sebastian Cabot, and not above two years after Columbus found the West Indies; and by this right likewise the king holds the islands of Greenland ever fince the year 1607, when discovered by his subjects: And moreover I fay, that fuch kings as are difcoverers of new or unknown lands, are bound in equity and reason to defend one another's titles in this point, and not to connive or give affistance to any other prince or country to break this law and custom, for other nations to encroach upon them; for they had as good disclaim their own rights, and suffer all other dominions to usurp over them: it is the case of our fishing, which Holland

impugns.
When king James granted his patents for the planting America, he would always admonish the patentees to be fure to keep to the northward, left they should plant in fach places, as the Spaniards might challenge to be within the compass of their discoveries; for he ever intimated, that he would defend them no farther than the articles of peace did warrant him; and if they did otherwise, they were to stand upon their own legs. This I have been often told by the fecretary of flate, who is acquainted therewirh.

This limitation princes put upon their own subjects in giving them patents, which fubjects duly observe. Queen Isabel of Caftile would not fuffer her husband's fubjects of Arragon to go to the West Indies many Book II

n countries erefore can desperate ecause the articles

articles of peace do not warrant them, for by that law of peace we are only to enjoy our ancient and accustomed trades; Secondly, they go upon their own adventure, for the king will not break league with Spain for their particular cause; Thirdly, they live in perpetual danger from their neighbours near adjoining, whom they may term enemies; but principally I would have them confider, what an excessive charge they undergo before they can bring their country to perfection, which affords nothing but wood, water, and grass: to instance in an island of ten or twelve miles in length, and half so much in breadth, which some Englishmen have with a wonderful charge of late years planted, and I fear with little hope of profit to return to them: but I make account no man can be fo ignorant as not to know, that fuch undertakers do it for other ends, or have other hopes of gain, than to reap it out of the earth of ten or twelve miles.

But it is rather suspected, they do it to nourish and uphold piracies, that by the fpoils thereof they may be the better able to maintain that island, or to give a distaste to Spain, with whom they desire his majestry should have war, not considering what the end of war is, and how difficult it is to make a peace after such a war is once begun by two great princes.

But now to return to my former propofition or argument, of the competition betwixt France and Spain, of the French furprifing the Spaniards and Portuguese beyond the line, I will conclude of nothing, only deliver my opinion, what France had to

fay in its own defence. Sir Francis Drake returning from his famous and fortunate voyage round the world in 1580, the queen found, that by the paffage through the threights of Magellan, which Drake had gone, there might be conveniency, if ever there happened hoflility betwixt her and the king of Spain, to annoy him in the fouth fea, from whence all his treature and wealth was brought, and after differfed through the world. In the year 1582, she employ'd two good ships as any in the kingdom, except her own and committee, the conduction thereof to captain Fenton and Ward, to profecute the fame voyage that Drake had happily perform'd and taught them.

But as nothing is more uncertain than the chances and fucceffes at fea, being governed by unconftant winds and waves, fo did this voyage of Mr. Fenton's prove most uncky, for they failed in all their defigns, as you may find in Mr. Hacklet's book; to which I refer you.

The king of Spain having intelligence of the defign of queen Elizabeth, and the pre-

parations of the ships aforesaid to perform her intentions in the south sea, and knowing it could not be brought to pass but through the streight of Magellan, he directed his letters to Lima in Peru, commanding one Pedro Sarniente, a choice and perfect navigator, to pass from Lima to the streights of Magellan, that way by the south sea, which was never before purposely attempted, for by reason of the forcible westerly winds that blow upon that coast, which makes it a continual see shore, it is not to be enterprised without great peril to the undertakers.

Pedro Sarmiento with two small ships proceeded upon that voyage as he was directed by the king, one of them returned again to Lima, the other, in which Sarmiente was, recovered the streights, and fo passed into Spain, giving the king an account of the narrowness of the streight, in order to fortify it, and to endeavour to ftop any ships that should attempt to pass that way; but all was false, and the king egregioufly abused by his report; for there was no place within that streight less than three miles in breadth. He likewife gave a favourable report of the pleafantness and richness of the foil, to encourage men there to inhabit; but in the end it proved the most unhappy and unfortunate expedition that ever the Spaniards undertook.

The king being pleafed with this intelligence, hoping thereby he might intercept all ships passing that way, and secure his coast of Peru, Chile, and other places, which afforded him all his treasure, he sent twenty three great galleons and three thoufand five hundred old foldiers under the command of Don Diego Flores de Valdes, a principal commander by fea; he also fent the faid Pedro Sarmiento, with commission to erect fortifications within the Streights, and to take upon him the title of governor. But as I have fpoken fomewhat of the mifhap of our English ships, so I must say the Spanish fleet succeeded ten times worse; for of the twenty three galleons and the three thousand five hundred soldiers aforesaid, few fhips or men returned, which was a great loss to Spain at that time; for in two or three years after enfued the wars betwixt them and us.

Those foldiers designed for the Streights being crofted with contrary winds, and other vexations, at last arrived there with their governour Sarmiento, and there seated and tortify'd themselves in two places; but cunningly and secretly Sarmiento seemed to go from one place to visit another, and foreseeing the calamity his men and he were like to fall into, (for neither the land, nor foil, or the narrowness of the streight, was answerable to his relation, and being altogether hopeless of relief or succour from Spain, he

Tite quitte

quitted the place, and treacherously ran away in his bark, pretending, after his arrival in Spain, that he was per force put from his cable and anchor he rid by, and could not return again for wind and weather.

In this base manner he left his poor countrymen in 1584, and in two years after, in 1586. Mr. Cavendish passing the Streights in his voyage round the world, sound but three of those poor creatures living, and the place so infected with the carkastes of those dead, that it was not to be endured. He found only six pieces of ordnauce, which he brought away with him.

But as God is just, and a rewarder of all men, both in their good an evil actions, he accordingly chaftifed *Pedro Sarmiento* for his ill utage of his countrymen; for from *Brafil*, where he first landed in his way into *Spain*, he was met and taken by an *English* man of war, (for at that time there was hostility betwixt the two nations of *England* and *Spain*,) and brought prifoner into *England*, where I became acquainted with him.

But now to return to Diego Flores de Valdes, who ranging the coast of Brajil as his course led him, had intelligence of a colony of French, planted on a river called Paria, joining upon the sea with Brajil; whereupon he steered for that port, where he met and seized five French ships, three whereof he burnt, and two he carried with him: the men sled and dispersed themselves amongst the Indians, where to this say are found many savages that resemble Frenchmen in seature of face, and may be easily distinguished from others of their countrymen.

I know not whether others may be of my opinion, or no; but in all likelihood the barbarous usage of the French colony might be the occasion of the difference betwixt the French and Spaniards for the war beyond the line; and as the cause began by blood, so it is like never toend but by blood; for nothing is like to compose this difference, so long as those two monarchies continue in this greatness.

The End of the Third Book.

be of my

TO THE

E A D

N my first dedication, I recommend the reading thereof to my dearest and most intimate friends; in the fecond, to the captains and commanders ferving in the late wars againft Spain; in the third, to all forts of seamen, from the highest to the 'owest; and in this I prohibit none but the perverse puritans, whose stomachs are fo faint and feeble, that any praise that can be attributed to a Spaniard or Papist, will make them fea-fick, and cast their gorge.

I will therefore make a Turk judge in this case betwixt the Spaniards and them, because every christian will incline to favour one sect more than another. Could God ever give a greater bleffing to man, than to enable him to win and gain the fouls of them that had been led away in infidelity and blindness? Could he ever flew a greater worldly happiness to a kingdom, than to fend there as it were, out of a cloud a new world, that affords all bleffings and riches? Could be en give more honour and reputation, than conquest over these people and their land? I wild he ever shew more love to his servants, than to discover those countries the the Moors and Turks infected and infefted the countries of Stain and Hune ry Could he in any thing more flew his wonders, than by such miracles as are re' and recorded, for the means of the converfion of those people. This shall suffice so, the will of God and sorce of his power; but as God chose the Spanish nation, for some scret judgment of his own, above all other people, to foread forth his holy name for do I observe three things in them worthy of reprehension; the one is, their ingraves of the second, their cruelty; and the third, the base condition of the people that were the authors of their prosperity.

Their ingratitude appeared towards Columbus, a man of more defert to the christian world than any other ever God created; for all the good before mentioned was wrought

by God's permiffion, and his pains and patience.

This man, after his desperate and fortunate attempt, was maliciously and innocently brought prifoner in irons, to answer the calumniation of his foldiers, which was not all, nor the worft; for this was an offence only to his body, the other to his honour and

reputation.

For the Spaniards to eclipse his glory and merit, for discovery of the new world, on no other account but his being a stranger, born in Italy, invented and deviled many fictions and idle imaginations, to leffen his praife. One while they fay he was led to the discovery by a Spaniard that lay in his house upon his return from the Indies, and

taught him the way thither.

But they could never agree upon the Spaniard's name, what province he was of, where he arrived, or what befel of him; fo it is evident all were falfe afperfions, invent ed to leffen his honour, and advance the supposed Spaniard's praise; and God justly sent the divisions afterwards in Peru amongst themselves, as a punishment for their ingratitude to Columbus; for an unthankful man incited God to punish, and man to abhor

The fecond was their cruelty to their poor conquered Indians, occasion'd principally

by avarice, whilst the revolt in Peru had almost hazarded their whole enterprize. But their tyranny being made known in Spain, the emperor, like a merciful and pious prince, prohibited all rigorous courses against the filly savages, which so inraged the conquering Spaniards, that doubtlefs, had they border'd upon any civil country that could have given them affiftance, they would as well have spoken any other language

My third observation was, the quality and condition of the commanders in the conquest of Pcru, the principal whereof was such as no man would own as his son, nor they challenge for father; their education like their birth, neither being taught to write or read; and yet daily practice brought Francisco Pisarro to a civil familiar behaviour,

and Diego de Almagro to a vain-glorious and high carriage,

What these two wanted in birth and breeding, was supplied in valour and industry; for to speak truly, considering what they attained to by their excessive travel and labour, the condition of the people they were to govern, and the multitude of enemies they fubdued, no history, ancient or modern, can yield more honour to conquerors than they de-

TO

To the READER.

ferved; and I am of opinion, the cruel usage of the *Indians* proceeded from the debauchery and lewdness of their foldiers and followers; for their enterprize in those days was not undertaken but by desperate persons of estate and life, that thought nothing well gained that was not unlawfully gotten.

I may the rather confirm my opinion, because Ferdinand Cortes, who was a gentleman by birth, and so famous for valour, government, and wisdom, that he was paralleled with Marius and Scipio in the Roman state, carried his affairs with that honour, discretion, and mercy, that he left, and there still remains the title of a marquis to his house, when neither of the other two had ever lawful child to descend from them to uphold their names or memory.

The exploits of the Portuguese were no less memorable and victorious than the Spaniards; but seeing they are now both one nation, and live but under one king; and that the enfuing discourses will speak their praises, I will say little more than in pity to them, and attributing their many crosses to the just cause.

The Portuguese nation had been famous ever fince the victorious battle of Ourique, obtained by Don Alphonso, the first king of that country, in the year 1139. Since then they have held competition with Spain, especially of late, that God made them famous in their eastern conquest, and so increased their wealth, that the cruel and miserable Yeus, who set their whole felicity in worldly riches, crept in among them, and mingled with, and infected their blood with that cowardliness and covetousness, that it may be justly judged, they truly deserved God's ire and wrath cast upon them, viz. betwire 1578, and 1580. God sent them for their punishment and sourge sour kings, and sive governors, that might be accounted kings, that spent and spoiled the wealth of their country, Don Sebalian by his rathness, Hanny by his want of resolution, Ambons by tyranny, Philip by arms, and the governors for their private advantage.

Since those years the calamity that has befaller them is lamentable, by spoils and rapines committed on them by sea in the late wars with England, and since by the loss of their trade in the Indies, which was the first cause of their renown, and the first inriching of their state.

They must impute their misfortunes to God's permission, for their joining and conniving with God's professed enemies the Jews, for their own particular ends and gain. It is written of Peru, That the constellation under which it is placed, caused so ma-

It is written of *Peru*, That the conftellation under which it is placed, caused so many divisions and staughters as were there committed, not only in the time of the *Spaniards*, but many years before.

but many years before.

The like may be faid of the Molucco islands, which, upon their first discovery, bred such a division betwirt the Spaniards and Portugues, that though the two kingdoms were in peace at home, yet there happen'd continual encounters betwirt their subjects in those parts when they met there; but the Portuguese had always the best.

in those parts when they met there; but the *Portuguese* had always the best.

Not many years fince, the like best the *English* and the *Hollanders* upon the like cause, and about the same unfortunate islands, where they had many bickerings, notwithstanding the two states continued friends.

ing the two states continued friends.

To conclude, I will concur with Charles V. the emperor, who was wont to say, It had been well those Countries had never been discovered, or at least not so much frequented: for we have inriched the insidels with the wealth of Europe and America, and decreased the trades or all the civil and known world, as we of England have proof, by our unprositable traffick thither.

And now to the discovery of the several countries.

BOOK IV.

Discoveries and Enterprizes of the Spaniards and Portuguese, and several other remarkable Passages and Obfervations.

The Discovery of several Countries and Islands.

EFORE I treat of the discovery of either of the two Indies, I will take the Canary and Tercera islands in my way, because they were known many years before the others; and in the next place, for that there is a necessity for ships to see those islands in their navigations, the one in going, the other in returning from the Indies.

The Canary islands, which are seven in number, were conquered by the Spaniards in the year 1393. in the time of king Henry III. of Spain.

The Tercera islands, being as many in number, were faid to be discovered by the Netberlanders, but by whom by name, or by whom they were employ'd, or the year of our lord, is not fet down.

Guinea was discover'd in the year 1471. in the days of Don Alonso, the fifth king of

Portugal.

The cape of Good-Hope, and an hundred and fifty leagues to the eastward of it, as far as the haven of Infanta, was discovered by Bartholomew Dias, in the days of king John II. of Portugal, in 1459.

Calicut, and the other places in the East

Indies, were discovered by Vasco de Gama, in 1497. and in the reign of Don Emanuel, king of Portug.d.

The country of Brafil was discovered in 1500. by Pedro Alvares Cabral, upon the fecond voyage that was gone to the East Indies, in the time of Don Emanuel afore-

The river of Plate was discovered by Americus Vespatius, in 1500. as he was going to find out a paffage to the Molucca's, and employ'd by the fame king Emanuel; but it is rather thought that Dies de Solis, and not Americus, was the first discoverer Peter Maldivia. of it.

The West Indies, and especially the islands of Lucayo's, were discovered by Christopher Columbus in 1592.

The country of Bacallao's, alias Newfoundland, was discovered by Sebastian Cabot, a Venetian, by the directions of Henry VII. king of England, two years after the discovery of the West Indies.

The country of Florida was discovered on Easter-Day, 1513. by Ponce de Leon, who went to find the island of Bainco, being told by the Indians there was a well there, that by drinking of the water it would make old men young.

The country of Panuco was discovered

by Francis de Garay in 1513.

The country of Jucatan was discovered

by Francisco Hernandes de Cordoua in 1517. Nombre de Dios, the islands of Jamaica, the Hondura's, and many other places, were discovered by Columbus.

Darien was discover'd by Hojeda and Nicuefa, where they endured many calamities, hunger, and mutinies, and hurts.

The river of Amazons, and the river of Orellana, and all that coaft, was discover'd by the Pinfones in 1500.

The South Sea, which was the happiest discovery of all others to the Spaniards, for that it led them to Peru, which yields them all their treafure, was found by Vasco Nunnez de Balboa in 1513. a man in difgrace at that time with Charles the emperor.

The country of Chile was discovered by Diego de Almagro; and whether Lima was in the circuit of Chile or Peru, was the difference betwixt Pizarro and Almagro, which cost both their lives, and bred their ruins.

The country of Maldivia near Chile and Peru, was discover'd and conquered by

The cape of California was discover'd by vered by Ferdinand Magellaens, a Portugueic, Pedro Alvarez in his voyage from port Navidad to the Molucca's.

Gonfalves was fent to difcover a paffage out of the South Sea into our ocean, at the time when the question was betwirt the kings of Spain and Portugal about the trade of the Molucca's.

The country of Cinaloa and Quivira was discovered by Francisco Vasques Coronado; as also the country of Granada.

The Philippine islands were discover'd by Michael Lopez in 1564, he was imploy'd by D. Lewes de Vellafco viceroy of New-Spain.

The iflands of Solomon in the South Sea were discover'd from Lima in Peru by Alvar de Mendolia in 1568. and Pedro de Sarmiento, his licutenant, whom I knew.

The Streights of Magellan were disco-

in 1520. imployed by Charles V. then king of Spain.

The island of Madera, short of the Canaries, was discovered by Machan an Enz. lishman in 1344.

Russia, or Muscovy, was discovered in the year 1553. in the reign of Edward VI. king of England. Sir Hugh Willoughby Wils fent upon the discovery; but he and his company perished in the harbour of Ursens in Lapland, Richard Chaundler being captain of another ship proceeded upon that discovery. Chery island in Greenland was discovered by Marmaduke of Hull.

Julius Agricola was the first that failed about England and Scotland, and was the first that discovered the islands of Orkney;

which he fubdued.

The Portuguese Discoveries on the Coast of Guinea, Castle de la Mina, and in the East Indies.

**IUINEA* was discovered, as you have I heard, in the year 1471, and in the reign of Don Alonjo I. who pretended title to Spain by his wife Joan, called the Exrellent, King John II. of Portugal, and the thirteenth in defcent, imagined that the fpices that came into Europe might be brought by fea, and hearing there were christians in those parts of the world, both these things incouraged him to undertake the discovery.

Bartholomew Dias, an officer in the storehouse in Lisbon, was sent from Castle de la Mina to difcover the length of the land of Africk, and found out the cape of Good Hope; from thence he failed to the eaftward one hundred and fifty leagues, to a port which he named La Infanta, and gave names to all places where he paffed.

The king would not only rely upon his relation, but fent a Franciscan frier to find out the Indies by land; but the frier, for want of language, returned from Jerusalem: after that he fent two of his fervants that were skilful in the Arabick language, the one called Peter de Covillao, the other Alphonfo de Paiva: they departed from Cintra the 7th of May, 1487, and coming to the Red Sea, they parted company; Paiva went to Prester John's country, where he died: Covillao travelled to Calicut, and other places of the Indies, where he informed himfelf fully and substantially of the whole country. In his return home he met with two jews that were fent from the king of Portugal to meet him, and to wish him to inform himself of the state of Prester John.

One of the two jews he fent back with a relation of the state of the Indies, the other he carried with him to Ormus, from whence he likewise sent him to the king, to give an account of his voyage, and himfelf went to Prester fobn, where the king, whose name was Alexander, us'd him courteoufly; but he dying, the other that fucceeded him detain'd him prisoner, so that he never lived to return to Portugal, or to fend more information to the king his mafter.

The king having information fufficient by letters the jew brought him, he immediately cut down timber, and built two new thips for that discovery in 1495, and

the 25th of October.

King John, in the mean time, died, and Don Emanuel fucceeded, who added great fame to the kingdom of Portugal: he furnished the two ships aforesaid, the one of an hundred and twenty tons, and called her the Angel Gabriel, the other of one hundred tons, and nam'd her the Raphael, with one carvel he bought, and one other to carry victuals.

He appointed for general a fervant of his call'd Vafco de Gama, well experienced in sea affairs: Paul de Gama, his brother, went captain of one ship, and Niebelas Coello of another, both of them being the king's fervants. Bartholomero Dias was to accompany them to Mina in Guinea.

The 8th of July, 1497. he embark'd at Belem with an hundred and forty eight men: the pilot was Pedro de Alanquer, who had been pilot with Bartholomew Dias in his former voyage; and if they loft company, the place of meeting was in the island of Cabo Verde. They passed by the Canaries, and off the river of Oro they lost company for eight days in a florm; but met again at the island of St. Augustin, where they refreshed themselves for seven days.

eight men: who had Dias in his company, ifland of e Canaries, t company met again ere they re-

The 3d of August Vasco de Gama went from thence, and lett Bartholomew Dias behind; the 4th of November he fpy'd land, and called it St. Hellena, supposing it had been thirty leagues from the cape of Good Hope: the people in this place would have betray'd him.

The 20th, being Wednesday, he doubled the cape : on Sunday he came to St. Blafe, being a watering-place, fixty leagues from the cape. Here he ftay'd ten days, and departed the eighth of December; and in going to the river of Infanta, he endured a great form. Here he found gentle and civil Negroes ; one of his company could speak the language of the Negroes; he named it Terra da boa gente, and the river Cobro.

The 15th of January he failed along the coaft, and met with Negroes of great civility in their boats, who gave him light of the East Indies, and he called this river Bons Sinais: here he staid thirty two days, to trim his ships, and erected a mark, which he called St. Raphael: the place was infectious, and his men began to be fick.

The first of March he came in fight of Mosambique, where they were taken to be Moors, and at first well used, but finding them to be christians, they would have betray'd them. Here they had news that Calicut was nine hundred leagues from thence, and took in a pilot that had been there; which comforted them much.

The first of April they came to certain islands which they called Acoutada's, because finding the pilot in a lye, here they whipped him, and he consessed he brought them thither to have cast them away, as alfo that he would have entired them to Quiloa, making them believe that christians dwelled there. In this course the St. Raphael struck upon a shoal, and was miraculoufly preferved, and this shelve they call'd St. Rafbael.

The 7th of May they came to Mombasca, where the people knowing them to be chriflians, and what had paffed with them in Mosambique, they practifed to betray them.

They came to Melinde, eighteen miles from Mombasca, acity built like the houses of Portugal, the king a Moor, but courteous, and glad of the Portuguese coming thither; he furnished them with pilots to Calicut; and here he met with four fhips of christians of the Indies, who were wonderful glad to fee them: those christians gave them warning not to trust the Moors of Melinde. The king entred u.to triendship with the king of Portugal.

The 22d they departed from Melinde, and croffed over the gulph, being feven hundred leagues, which they failed in thir- Cafeais on the 10th of July, 1499. ty two days, and never faw land.

The 24th of May they discovered land near Calicut, and there they found a Moor of Tunis in Barbary, who knew the Portugue/e nation, and asked them in the devil's name, how they came thither? the Moors of Calicut contrived all treasonable practices they could against the Portuguese, and fo prevailed with the king, that wars enfued betwire them, and fo continued a long time after,

They returned from Calicut, where they escaped great danger of treason, and in their way fell with divers islands, where the people were willing they should erect a cross with the arms of Portugal: this place he called Porto de Santa Meria. He came to the island of Anchedivi, where he trimmed the ship, and watered: here was a fpy fent to discover his forces; which spy counterfeited to be a christian, and born in Italy; but he was suspected to be as he was, and they racked him three times, and then he confessed his villany. general carried this spy into Portugal, where he became a good christian, and gave great light of the affairs of the East Indies; which stood the Portuguese in great

Before they arrived at Melinde they endured great mifery; and if God had not instantly miraculously succoured them, the general's brother and Nicholas Coello were refolved to have returned to Calicut, and put themselves to the mercy of the king; but at laft they fpied land, which proved the city of Magadoxa, fairly built, and in-habited with Moors, one hundred and feventeen leagues from Melinde.

The first of February they came to Melinde; where they were well entertained, and the king accepted of a pillar, to be fet up in fign of friendship with the king of Portugal, and fent an ambaffador thither.

The 17th of February they departed, and the 20th following they burnt the St. Raphael for want of men, and took the general's brother out of her.

The 20th they came to the island of Zanguebar, where the king used them courteoufly, and from thence to Mosambique.

The 3d of March to the islands of St. Blase; the 20th they doubled the cape of Good Hope, and then failed to the islands of Cabo Verde, where the general's brother fell fick, and hired a caravel to carry him to Portugal, because his own ship was weak and leaky.

Before his arrival at Cabo Verde, Nicholas Coello willingly loft his con any, that he might carry the first news of the king of his difference of the India, and came to

The general came to the Tercera's, where his brother died; and in September to Belline, where the king did him great honour, and made him earl of Vidigueira: he gave him the royal arms of Portugal for his efcutcheon, at the foot whereof were two doves, alluding to his name Gama.

In his fecond voyage he went general of thirteen ships and two caravels: he was most fortunate in that voyage, and discovered many lands and people, that afterwards proved both wealthy and profitable to the

Portuguefe by their trade.

Betwixt his first voyage and this second there were two others; the general of the one was Pedro Alvares Cahral, who departed from Lisbon the 7th of March, 1500. In his way to the Indies he discovered the country of Brazil in ten degrees, and failing to the fouthward in feventeen degrees and a half, he came to an harbour which he called Porto Siguro.

Cabral, upon this discovery, fent a pinnace to the king to inform him of it, which at this day is more profitable to Portugal than the trade of the East Indies.

Cabral, the 29th of May, fetting out from the coast of Brazil, was taken with the most violent storm that ever was read of; the day feem'd to be as black as night. the sea to burn like fire: four of his ships were fwallowed up in the fea, and Bartholomew Dias, the discoverer of the Cape of good Hope, in one of them.

The unlucky entertainment in Brazil made after amends to the Portuguese; for at this day their fugars, and the wood of Brazil, yields them more profit than the precious stones, spices, or other merchan-

dizes of the East Indies.

The first inhabiting of Brazil was with fmall charge and adventure, the people that went were desperate, and of the world kind, rather to be banished for offenders, than any hope of profit that should accrue unto them but the country proved fo plentiful and rich, that although they have received great detriments by the Hollanders in Baya and Fernanbuco, yet it will quickly be redeem'd again by peace.

Some other Particulars concerning the East Indies.

put you in mind of some observations of mine, which will not be unworthy your perufal, feeing they are to be attributed only to God, who is the fearcher of all hearts, and the discoverer of hidden secrets.

2. It is strange and surprizing, That out of fo many flourishing nations as God hath created and civiliz'd, he should elect and chuse the kingdom of *Portugal* to perform this great work of his, a country in those days of less esteem and reputation, of lefs renown and fame, and of lefs ability and valour, than any other christian monarchy we can call to mind, and to affign them fuch a time to effect it, when they enjoy'd a happy peace with their neighbours, and had no enemy to oppose or hinder their defigns.

3. The first discovery, as you have heard, was to Guinea in 1471. where nothing appeared to the Portuguese but barbarous blacks, a strange and unseen fight to them, and not to be believ'd at their return, if process of time had not made it familiar to them by after-traffick to confirm their re-

4. This discovery gave the light and way to all others that enfued upon it, as shall appear, like an art begun, that others take from one to another; but we must confess, the Portuguese, to their honour, were the first breakers of the ice, to give paffage to all other strange countries; and

1. BEFORE I treat of any particulars of the East Indies, give me leave to people that differed from us, as much as black from white; fo did America, which was not long after made known to us, produce a fort of people differing from the Europeans in whiteness, and the Africans in blackness, but a mean betwixt both, and a colour like an olive; which to as many as have feen it, feems flrange, confidering that Guinea and America lie east and west, all in one parallel, so that in reason there should be no such difference.

> 5. This change in complexion, and the plentiful increase of gold in those climates, is attributed both to one cause, which is the heat and operation of the fun; and, in my opinion, not unproperly, as may be gathered out of the enfuing reasons.

6. The fun rifing to the eastward, betwixt the two tropicks, runs its course westward over Asia and Africa till it come to the Ocean Sea, in which circuit its extream heat ingenders the rich metal of gold, and changes the complexions of creatures to a black hue, which the heat reflects from the earth.

7. Coming to the ocean aforefaid, it paffes the diffance of 8 or 900 leagues over the air of the fea, and is cooled by it, as it was formerly heated by the land, that by the time it draws near the continent of America, it has loft great part of its vigour and force, and not able to produce that effeet, as in Africa; and therefore is not able, as it were, to mellow the earth, and

refaid, it gues over by it, as and, that trinent of its vigour e that efe is not arth, and make it become gold, as after it does, when it has run its course the breadth of America, where its heat again ripens that mater and substance of gold: for we see, by experience, that the greatest quantity of gold is sent out of Peru into Spain, it being the westermost part of America; when to the eastwardmost part thereof, as Guiana, and other places nearest us, never afford gold; and this for the reasons aforesaid, as I conceive.

8. But to return to the discovery of the East Indies: I will recite some particular blefsings and benefits that God hath pour'd upon the world in general, upon Europe in particular, and upon the Portugal nation especially: for as they were the first discoverers, to their immortal honour, so all attempts by other nations, in other countries, must be attributed to them as a people that trod out the first path for others to walk in, as I will shew by reason hereafter in this book, when I come to treat of it.

9. This eaftern discovery has resolved one doubt that no ecclesiastical or modern history could do before, which was the life and martyrdom of that holy apostle St. Thomas, as the monuments there make it manifest, and as a remnant of some christians in those desolate places, gave an infallible testimony.

10. And whereas in continuance of time many errors were crept in amonght those filly christians inclining to the Greek church, yet by the pains, travel, and danger of life, the Portuguese have brought them to the light of the truth, and have since increased the slock so abundantly, that the name and true worship of Christ is propagated in the uttermost parts of the world, yea, as far as China and Japan.

11. By the eaftern discovery the length of Africk is butted out as far to the southward as the Cape of Good Hope, and from thence to the eastward as far as the Cape of Guarda Fu; in which course we have sound the Red Sea to fall into the eastern ocean, which before was not known to us in Eu-

12. By the eastern discovery, and our access to China, we have found out that guns, powder, and printing, were in use with them many hundreds of years before they were known to us western people: we may likewise add many other curious works, which to this day we cannot equal or imi-

tate them in.

13. By this discovery we have disproved that opinion of the philosophers, and other learned writers, who maintained the impossibility of inhabiting under the Torrid Zone, for the excessive hear, which our daily voyages beyond the line have made familiar with us.

Vol. III.

14. By this discovery we have authentically proved, by fact, antipodes, a thing before held ridiculous by many, (viz.) That one people's feet are opposite to another's, which, till Magellan sailed round the world, could not be made plain.

15. By this discovery we found the two poles equal in their nature, and that the same effect the north star produces unto us on this side the line, the south does the like on the other side, but with this difference, That when it is summer with them, it is winter with us; and when it is summer

with us, it is winter with them.

16. By this discovery we have found the strangeness of winds, to blow contrary to our climate, and should not have believed it, if experience had not flewed it: as, namely, the certain constancy of a wind to blow from the Canaries to the West Indies, betwixt the north and the east, and never to change; and then again, from the coast of Brazil, towards the East Indies, as far as China, we find a limited wind, certain in fome places for three months, and in others for fix; the day of their entrance and change being known to all people: and these are called the Monsons; but from whence the name is derived, whether before the christans access into those parts, I cannot find.

17. By this discovery we have found our strange and unheard of fishes; amongst the rest, and of most wonder, is the Remora, whose nature is to stop the way of a ship, and to bring her astern, though the wind be strong and large to carry her forward.

18. This fish has been heretofore writ of, and look'd upon as a poetical fiction, till a voyage in a carrack to the East Indies, put all men to filence; for the beak head of that ship was classed about with a Remora, to the fear and wonder of the mariners; for they found themselves by the heighth to be an hundred leagues aftern of their ordinary course; and at last finding the cause with labour and pains, they got this monster unglued; and at last the carrack arrived at the port of Goa, where, for the memorablenes and strangeness of it, this ship, the captain, the day it happen'd, and her arrival, are publickly pictur'd, and to be seen to this day.

19. By this discovery we are come to the knowledge of many islands and rocks not known before, and some of them not above a quarter of a mile in compas, as namely, La Peana de St. Pedra, in four degrees to the northward of the line, all white, and like a fugar-loaf; the island of St. Helena, two miles in compas, healthfully seated, that yields plenty of water, fish, goats, and fruits, as well to us in our navigations from the East Indies, as to the Portuguese in times past. The island of Ascension, wholly

Xxxx

Ternate. Tydore.

Boyna.

barren, not affording so much as water: but the strangeness of these rocks and islands, is, That they are plac'd in the midst of the ocean, the nearest of them not being within one thousand three hundred miles of any main continent.

20. We are come to know the goodness and operation of the bezoar-stone, and of the beaft it felf that yields it. The cocoa of Maldivia, and the strange growth of it upon trees five or fix fathom deep in the fea; the virtue whereof far exceeds the be-

zoar-flone

21. By this difcovery we have learnt many means for health by drugs, and choice things of nature, for man's body, the place of their growth, and the strangeness of them. We know the Abada, or rhinoceros, a beaft that has a horn in its forehead, and is thought to be the unicorn: but it is not to, though it had the fame virtue; for unicorn there is none.

22. By this discovery we are now ferved with our fpices, drugs, precious flones, and all other India commodities, immediately from thence by the shipping of Europe, which was wont to be received by the way of Turky, at unreasonable prices, and at the will of the Turk.

23. By this discovery the Portuguese have brought in and fettled the Portugueje language, which is now grown familiar and frequent in those parts of the world: they have built many famous cities and towns, erected bishopricks, churches, and monasteries; they have established temporal and spiritual laws, and the same form of government they enjoy and live under in their own country.

24. By this discovery they have found many strange kings, who govern their people with much civility, their towns and cities anciently built, their palaces of great majesty and pomp, and all things elfe answerable to their excellent policy,

rule, and government.

The Names of the Towns the Portuguefe bave in the East Indies, with their Form of Government.

Goa is the metropolitan city of all the East Indies, lies in the kingdom of Decan. and is an island twenty or thirty miles in compass, both pleasant and fruitful: the viceroy refides in this town, as does the metropolitan bishop of the whole Indies.

The carracks arrive from Portugal in this port of Goa, unless they be forced about the island of St. Lawrence, which if they be, they can fetch no harbour nearer than Gochin, which is the place the carracks use to take in their lading in their return to

Portugal.

The winter in Goa begins the 15th of May with very much rain, and so continues till the 15th of August; and during that space no ship can pass over the bar of Goa, because the continual showers of rain drive all the fands together near a mountain called Oghana, whence they fpread themselves over the shoals of the bar, and into the port of Goa, whence they can find no way out, but continue there till the 10th of August, when the rain ceases, and the sea drives the sands away

How a new Viceroy is declared, in case the old one dies; and of the several Titles given to Persons serving in the East Indies.

If a viceroy dies in the East Indies, there are always five Via's, as they call them, which are letters under the king's feal, figured 1, 2, 3, 4, 5, which they open according to their figures, beginning with number 1, and fo on, in case those named in the first be dead, till they lite of one whom the king has appointed viceroy. These letters are kept by the jesuits, and opened at mass, in the presence of all the nobility and others, with great folemnity

Homes Honrados: This is the meanest rank amongst them; every man that serves the king in the Indies, is paid according to those titles; and when they return with their certificates into Portugal, under the hand of the viceroy and Matricola-General, the king prefers them according to their or wages. titles and places.

The several Countries from whence East India Commodities are brought.

Cloves from the Molacca islands; mace and nutmegs from Banda, Java, and Malaca; pepper from Malabar; cinamon from Ceylon; pearls taken at a place called Babarem in the Persian Gulph, in June, July, August, and September; fandel from Cochin and Malaca; all China commodities from thence, as quickfilver, white fucket, camphir, lignum alloes, China roots, fine filk and lattin; galls from Cambaya, Bengala, and Siria; ginger from Cambaya, and many other parts; wax and long pepper from Bengala; musk from Tartary, by the way of China; coco de Maldivia from the shores of Maldivia; indico from Zindi and Cambaya; long pepper from Bengala and Malaca; opium from Pegu and Cambaya; alloes foccatrina from the island of Soccatora, where St. Thomas was shipwrecked; manna and wormfeed from Perfia; rhubarb from Perfia and China; callicoe from Calicut,

Some Particulars of the Carracks Navigation to the East Indies.

Every man that goes, I its in fecurity to The braveExploits of the Portuguese at Adem, perform the voyage; and if he goes not, and other Places.

pays dearly for it.

The mafter and pilot have for their pay, outward and homeward, feventy five pounds each; but the room allowed them to carry commodities, they commonly let out for five thousand ducats; no officer that goes, but buys his place of the provisor.

The boatswain has for his wages one hundred twenty five ducats, and three thousand ducats freight; the quarter-mafter has for his wages feventeen shillings and fix pence per month, and two thousand fix hundred ducats freight; and every other officer according to his rate and proportion. The factors and the purfers have no pay, only their cabins allowed, which will flow twenty pipes of wine apiece, and a cabin aloft to lie in.

There is no difference in their allowance of victuals, every man has thirty two pound of flesh a month, onions, garlick, dried fifh eaten at the beginning of the voyage. Sugar, raifons, honey, prunes, rice, and fuch things are kept for the fick men.

Every man makes his own provision to dress his meat, as wood, pans, pots, &c.

There are officers for the king that give the fame allowance to the foldiers; for the feldiers and failors are ferved apart.

In their return the king pays no foldiers; and fuch foldiers as come home are paffengers, and have no allowance, either of meat

The failors in their return have no allowance of meat, only bread and water, till they come to the Cape of good Hope, and then they make provision themselves; they are only allowed the stowage of their chest below, which if they fell, they may have eighty ducats for it.

No foldier that comes home, as aforefaid, can depart the Indies without a pass from the viceroy; and they must serve there five years before they can have it.

In failing to the Indies, fometimes they keep too much to the coast of Brafil, and are forced home again, because they cannot double the shores of Abrolhos.

The ship that goes from Mosambique to Goa, no man can adventure in, but the captain of Mosambique, and such persons as are married in the town; for none but married men are fuffered to live there, because of peopling the place, which is very unwholsome, and infectious.

The government of Mosambique is worth to the captain for his three years, three hundred thousand duckets; but after his three years, he is bound to ferve at the command of the viceroy three years more, unlefs he have a special patent from the king to the contrary.

The great fuccess of the Portuguese purchased them both same and envy, as well from christian princes as turks; and Soliman the Magnificent, in the year 1537. attempted, by his baffa Soliman, in Egypt, a voyage against the Portuguese at Adem, upon the mouth of the Red Sea.

He furnished himself with eighty brave fhips, twenty five foifts, four galleaffes, twenty galleys, and feven other veffels; all which he carried from Cairo to Suze in pieces, being eighty miles by land,

With these forces he resolutely besieged Adem, which was defended by greater valour by the Portuguese and their governour Francisco de Almada.

The Turks were forced to retire with great fhame; carrying some few Portuguese they had taken prisoners to Constantinople, and committing most barbarous cruelty upon

Don Alonso de Albuquerque, with thirty Thips won Calicut; with twenty one he took Goa; with twenty three Malaca; with twen-

and

his

ty fix he entred the Red Sea; whith twenty two he recovered Ornus. Lopes made a voyage into the Red Sea with thirty feven galleys. Lopes de Sequiera with twenty four thips laid fiege to Guida.

Henry de Menefes wasted Paitan with sisty ships: /opes Vas lest in the arsenal one hopes: /opes fur hips of war, very well furnished: Nuno d'Acuna undertook the expedition to Diu with thirty six ships.

The famous Exploit of Ferdinand Magellaens, who first failed round the

THE honourable exploits and enterprizes of the Portuguese nation ceased not, but still one or other of them was in action, and would not be fatisfy'd till they had brought to light the western parts of the world, as by their endeavour and labours they had done the eastern; for it seems they had an opinion of the world's roundness, and that by a ship sailing westward, and another eastward, they might meet together by consent, if the western sea could be discovered.

The man that first undertook to resolve this doubt, was Ferdinand Magellaens, a Portuguese by nation, and a gentleman by birth, who having lived seven years in the East Indies, and pondering with himself, that the world was round, thought there might be another way to the Molucco islands, besides the common known cour 2 by the cape of Good Hope; and was the more emboldened to it by a kinsman of his own, Juan Serrano, who dwelt in the Molucco's.

Upon his return to *Portugal*, what the occasion was, is unknown; but he and another gentleman, called *Rui Falero*, left the service of their king in 1516. and offered it to cardinal *Ximenes*, then archbishop of *Toledo*, and governor of *Spain*, upon the death of king *Ecrdinando*.

Don Emonuel king of Portical hearing of the flight of these two servants of his dient to expect their departure, accusing them as fugitives, and his subjects, and unsit for any prince to entertain; and sought to divert their proposition of a new discovery, but could not prevail with the cardinal.

Rui Falero was so highly concerned for leaving the king's service, and the dishonour that would redound to him by it, that for very grief he run mad, and dy'd. But Magellaens being honoured with the order of knighthood of St. James, proceeded upon his voyage, and set fail the 20th of September from St. Lucar; and in the year 1519, he arrived at Teneriff, one of the Canary Islands, on the 20th of the same year.

Then coming into twenty two degrees, on the coast of *Brafil*, he found a harbour, and called it the river of *Serrano*, after the name of his pilot; from thence he went to port *St. Julian*, where he wintered, and there his death was conspired by some captains, and others of his company, who

were executed for it in the faid port of St, Julian.

Mr. Douty, that conspired the death of Sir Francis Drake, (as Sir Francis seem'd to pretend,) was there executed; and in this island they found a part of the Magellaens gallows, on which his men were harged; from hence Magellaens came to the river of Santa Cruz, where one of his ships was lost, but the men saved. Sailing thirty leagues further, he came to a cape, which he called by the name of Ursula, because it was upon St. Ursula's day he there entered the Streights, and one of his ships forsook him, and returned home, whereof Stephen Gomes was pilot.

He found the *Streights* an hundred and thirty leagues in length, and two in breadth, the fhore deep, and land full of fnow, though it lay but in fifty two degrees; the point from whence fhe discovered the *South Sea*, he called *Cape Descado*, and placed a crois on it, as a token for his ship, which he did not think was returned; now did he conjecture the *Molucco's* were not far from him, but therein he was deceived.

From the Streights he failed three months, and never faw land, and was put to wonderful extremity for want of victuals, and many of his men died with hunger. The first island he fell in withal, he found uninhabited; and being two hundred leagues one from another, he called them Unfortunate Islands; then came he to other islands, which he called Ladrones, because they were all thieves, and like gipsies.

The 18th of March 1721. he landed upon an ifland called Zamal, thirty leagues from the Ladrones, uninhabited; yet he staid there to refresh his men upon it; and after arrived at an island called Zaloan, where he found civil usage; and so many islands there together, that they called the sea Archipelago de Lazaro.

He passed by the islands Cenalo, Huynan, and many others, till he came to the island of Botman, where he was civilly entertain'd, and at Catagan.

He went, by the help of pilots from one island to another, till he came to Cebu, which is the best island of the rest. The 7th of April he sent to visit the king of Cebu, who used him courteously; and here he met with some Moors, who told the king of their

o the island entertain'd,

ts from one Gebu, which The 7th of Gebu, who he met with ng of their countrymen

countrymen the Portuguese being at Malaea, and in the Indies: the king of Cebu, with his queen, and all the whole island was baptiz'd, the king called Ebarles after the emperor, his son Ferdinand, after his brother; and here they destroy'd all their idols.

Not far from Cebu there is another island call'd Matan, where the king refused to pay trioute to Magellan in the emperor's behalf; whereupon he made war with him, and was unfortunately slain, with eight of his company; which in my opinion was great folly in Magellan to adventure his life against a people and island that never christian was likely to come to more.

After his death, his company chose John Serano and Barboja, Portugueje, for their commanders. Serano was after betray'd by his interpreter, and himself and thirty of his men slain; and as many taken prisoners. Upon this disaster the king of Cebu renounced his religion, beat down the churches and crosses, and returned to his ancient idolatry. Eight of the thirty that were taken prisoners were fold into China; and within sew days after Magellan's death, they had news of the Molveco islands. Going from Matan they sound an island called Bobolit, where they burnt one of their three ships, to furnish the other two.

They came to the island called *Ponayotton*, the people being most black; from thence they went to *Chippit*, to *Cagayan*, and to *Pulon*; to the island of *Barneo*, where the king entertain'd them with great mag-

They arrived at the island of Ciumbabon, where they staid forty days to trim their ships, to take in water, wood, and other necessaries: some of the men by this time were altogether without cloaths; and there they found leaves, which, when they sell from the trees, would move and stir as though they were alive; and being cut, blood would come out of them.

In failing to Tugimnor and Solo, they paffed the sea of Weeds, and in those islands found great pearls; and then they went to the island of Baytan and Callagan, where they took a canoe, that informed them of the Molucco islands; and passing by many other islands, on the 8th of November, 1531. they arrived at the Molucco's, and the island of Tydore, where they were honourably entertain'd by the king. He told them, he had feen in the heavens certain figns, that fuch fhips, and fuch men as they were, should come to that island; and for the more friendship with the emperor, he would have his island called no more Tydore, but Castile: this king was a Moor by religion.

The king of the island of Gilolo was a pagan, but came to them with great friend-

ship: both these kings accompanied them to the island of Marc, and when they red, it was with tears. From themes they came to the islands of Chaovan, Lagran, Siebo, Grocke, Caipbe, Chulaco, Lagrand, Terenton, Ambiton, Budia, and many others, till they came to Gallion and March their state of the Caip they will fifteen days to mend their state.

they staid fifteen days to mend their stage arrived from Moula to Typical and the 15th of January, 1522, and have the 15th of January, 1522, and have the men mutinied. In this island they found great store of white sand common; and coming to Tuida, they had plenty of cinnamon; from hence they directed their course to the cape of Good-Hope, shunning the sight of the island of Sumatra, or any other land.

After many days failing with contrary winds, at laft they came to the cape of Good Hope, and finding their want and extremity to great, many of them moved to return to Mosambique, and to submit themselves to the mercy of the Portugusse; but most voices withstood it, though half the men were dead.

After a long navigation they came to the islands of Cabo Verde, and set their boat on hore, where fourteen of them were betray'd by the Portuguese of that island; and John Sebassian Cano, then captain, who had outliv'd all the other commanders, perceiving the falshood of the Portuguese, he hoisted sail, and directed his course to St. Lucar in Andalusia, where he arrived on the 6th of September, 1522, with only eighteen Spaniards of all those he carried with him, having been upon the voyage three years wanting sourteen days, and celebrated monday for funday, (that is to say,) one day's difference in computation.

The other ship turned back, by reason of her weakness, towards New Spain; and being crossed five months with contrary vids, was forced back again to the Months of illands, where she met a sleet of five hips of the king of Portugal's, command-

nips of the king of *Portugal*'s, commanded by one *Brito*, who took both fhip and goods, and fent the men prifoners to *Malaca*: this afterwards bred great contention between the two kings of *Spain* and *Portugal*.

An Addition of the Authors concerning this Voyage of Magellan.

This voyage of Magellan decided a long and difficult controverfy amongst the learned, as well divines as others; some being of opinion that the world was round, others not; and amongst the rest, that samous father of the church, St. Augustin, held that the world was not round, as is apparent by his works.

Yyyy

 \mathbf{B}_{U}

Book IV.

But Magellan's ship having failed about it, as by his voyage is manifest, has quashed the erroneous opinions of those that denied the roundness of it.

In my opinion, if the world had been certainly known to be round, as no doubt but it was imagin'd by Columbus, it might be a great motive, and indeed an unanswerable reason to animate and encourage him to the discovery of a new land, after the open fea of the cape of Good Hope was known, and the East Indies found out by the Portu-

For he could not be fo ignorant, but understand, that by running a westerly course from the Ganary Islands, if he were not interrupted by a land, the fea would conduct him to a place discovered by the Portuguese in the East Indies; and then, if the worst befel him that could, yet he should be able to shake hands with the Portuguese, his neighbours, in the most remote regions

A Difference betwixt the Spaniards and the Portuguese about the East Indies.

The Streights being newly discovered, which took the name of Magellan, and gave an entrance in the South Sea, and by confequence unto the Molucco islands, added fuel to the fire before kindled between Charles I. emperer and king of Spain, and Don John II. of Portugal, about the right of those islands, to whom they should belong, upon the division of the new world.

This bred a long question between the two princes, till it was accommodated, as shall appear in my discourse of the northern

As all good fucceffes encourage men to follow the steps of the treaders-out of the way, even fo did this discovery the more animate them, because it brought with it both honour and profit, not only by the places discovered, but by the known wealth they yielded; and out of hope that other enterprizes might prove as famous and commodious, the Spaniards neglected no occafion to fecond his late discovery; and therefore in the year 1525, this tract and paf-fage was attempted by Garcia de Louisa, a knight of Malta, with seven ships, and four hundred and fifty men.

He departed from the Groyne with unfortunate fuccefs, himfelf pafs'd the Streights, but died in the voyage; some of his ships were lost, others put into New Spain; his own thip arriv'd at the island of Tydore in the Molucco's, another came to the island of Bachiam, where the king thereof entered his ship under

colour of friendship, slew the captain, his brother, and took all the men prisoners: another was loft in Candiga; and, to conclude, they all fell into the hands of their enemies, ei-

ther Portuguese or islanders.

Vargas bishop of Placentia, fent seven ships out of Bilboa to the Molucco's; only one of them paffed the Streight, and arrived at Arequipa, a port in the South Sea, and went no further: this ship was the first that discovered the lying of the coast of

Notwithstanding the many differences and losses the Spaniard received by this new found Streight, yet it did nothing dishearten them; but they tried by all ways and means how they might have access to the Molucco islands, by another way than by the cape of Good Hope, and Ferdinand Cortes, the conqueror of New Spain, by order of the emperor, fent two ships with four hundred men, in the year 1528. the general Alvaro Serou, to feek the Molucco's from New Spain; which succeeded no better than the rest had done; neither was the Streights left off, but often attempted by these that follow.

The fecond enterprize after Magellan, was by two thips of Genoa, which arrived at the mouth of it, and one of them with a storm was cast away at the river of Plate, the captain called Pancaleon; the other in

1526, returned home.

Sebastian Cabot, a Venetian, would have paffed the Streights, but could not; he returned to the river of Plate, being then employ'd by Don Emanuel, king of Portugal.

Americus Vesputius was sent likewise by Don Emanuel to find the Streights; but neither could find the Streight, nor yet the

river of Plate.

Simon de Alcafara went with divers ships and four hundred and forty Spaniards; but before they came to the Streights, they mutiny'd, and ten or twelve being flain, returned.

From this year, till the year 1577. the attempt of the Streights lay dead, not any one feeking to enterprize it, till Sir Francis Drake had it in agitation, and performed it with as great a refolution, to the general

honour of our nation.

It was after this, and in the 1586, begun and performed by Mr. Cavendish. time of his departure from England, his days of failing, the fpace he was abroad, and the time of his return, shall appear in a brief repetition I have made by way of journal, with some addition of Sir Francis Drake himself, which is the next that follows.

An Introduction to Sir Francis Drake's Voyage about the World.

Have laboured in all my relations to walk uprightly, and with integrity, neither fwaying to the one hand, or bending to the other; I have endeavoured to carry my intentions fo equally, as not to deferve blame for too much commending; nor reproof, for detracting more than truth leads me; and as I have begun fo indifferently, fo will I continue as fincerely, and fay fomewhat of this noble gentleman Sir Francis Drake, who is to enter into the next rank of my difcourse.

There is no man so perfect, but is fit to be amended; nor none so evil, but he has something in him to be praised: and comparing the imperfections of Sir Francis Drake with his perfections, the world, and not I, shall truly judge of his merits.

His detractors lay to his charge the bafenefs of his birth and education, his oftentation, and vain-glorious boafting; his high, haughty, and infolent carriage; and except againft his fufficiency for a general, though they allow him to be an able captain.

His friends and favourers answer in his behalf, That the meanness of his birth was an argument of his worth; for what he attained to, was by no other means than merit. They fay, that every man is son to his works; and what one has by his ancestors, can scarcely be called his own; that virtue is the cause of preferment, and honour but the effect; that a man is more to be esteemed for being virtuous, than being called worshipful; the one is a title of honour, the other defert.

Marius being upbraided by Sylla in the like manner, for the bafeness of his birth, and haughtiness of carriage, answered, That he was not of so great a family as Sylla, yet Sylla could not deny but that he was the better man; for in Sylla's house were painted the acts of his forefathers; but in his were hung up the banners that he himself had won from his enemy.

In vindication of Sir Francis Drake's oftentation and vain-glory, they fay it was not inherent to him alone, but to most men of his profession and rank. It is true, he would speak much and arrogantly, but eloquently, which bred a wonder in many, that his education could yield him those helps of nature. Indeed he had sour properties to further his gift of speaking, (viz.) His boldness of speech, his understanding in what he spoke, his inclination to speak, and his use in speaking; and though vain-glory is a vice not to be excused, yet he obtain'd that same by his actions, that facility in speaking, and that wissom by his experience,

that I can fay no more, but that we are all the children of Adam.

His friends further fay, That his haughty and high carriage is formewhat excufable, when it appears not but in his command; for a general ought to be ftern towards his foldiers, couragious in his perfon, valiant in fight, generous in giving, patient in fufering, and merciful in pardoning: and if Sir Francis Drake was to be praifed for most of these virtues, let him not be blam'd or condemn'd for one only vice. Many times where a man feeks obedience, it is imputed to his pride and high carriage; but if people's hate grew upon envy, (as it is likely,) it appeared greater than if it had been grounded upon injury.

The exceptions against him by those that condemn him as an ill general, are, his neglect of furnishing his fleet to the Indies in 1585. his not keeping Santo Domin-go and Carthagena, when he was possessed of them in that voyage; his weak preparation for fuch an expedition as that of Portugal; his promife to go up to Lisbon that voyage, and non-performance; the taking of the pinnace in his way to the Indies, which difcovered his directions in 1595. All these J formerly handled; and refer the reader to the place where they are treated of; though fomething I will fay of him, as he was a private captain, and especially of his renown'd voyage about the world, being the first attempt of that nature that ever was performed by any nation, except the Spaniards themselves: and it was the more honour to him in that the Streights of Magellan were counted fo terrible in those days, that the very thoughts of attempting it were dreadful; secondly, in that it had been but once passed, and but by one ship that ever return'd into Europe, and that above fixty nine years before his enterprize. His praise was, That he could carry a voluntary action fo difcreetly, fo patiently, and fo refolutely, in fo tedious and unknown a navigation, the condition of feamen being apt to repine and murmur. But, lastly, and principally, that after fo many miferies and extremities he endured, and almost two years spent in unpractifed seas, when reason would have bid him fought home for his reft, he left his known courfe, and ventured upon an unknown fea in forty eight degrees; which fea or passage we know had been often attempted by our feas, but never difcovered.

This attempt alone must silence all his detractors; for it shew'd an extraordinary resolution in his person, a special de-

fire to enrich and benefit his country, and a fingular patience to endure the difasters and mishaps that befel them.

And yet he must not go so clear without stain or blemish: for you must know, that though he deserved well in the direc-tion and carriage of his journey, yet the ground of his enterprize was unjust, wicked, and unlawful, his defign being to fleal, and thereby to disturb the peace of princes, to rob the poor traveller, to fhed the blood of the innocent, and to make wives widows, and children fatherlefs.

No man had more experience of the inconstancy of fortune than he; for the nature of fortune is to bite when she flatters,

and to strike when she is angry. What his birth and other deferts were, needs no reiteration. Fortune did much for him; but at his death fhe was angry with him: first, in that there was a doubt whether it was natural; fecondly, and the best his friends can fay, that it was caused by grief, for failing of his expectation in that voyage; thirdly, after his mericorious fervices, his heir was profecuted and perplexed for debts and accounts to the crown; and laftly, died, like Pifarro and Almagro, without a child to fucceed him, and perpetuate his memory.

Sir Francis Drake's Voyage round the World.

SIR Francis Drake departed from Plimouth with five ships and a pinnace on the 13th of December, 1577. The 25th he fell in with the coast of Barbary; the 29th of December with the ifle of Mayo and cape Ferd; the 13th of March he passed the equinoctial line; the fifth of April he fell in with Brafil, and in thirty degrees, and fo to the river of Plate; where he loft the company of two of his fhips; but meeting them again, took out their provisions and cast them off.

The 29th of May they came to St. Julian's port, where the people were extraor-dinary tall of stature, and Magellan termed them giants. This was the place where Mr. Douty was executed the 7th of July, 1578. and in the same island where Magellan executed his mutiniers, as I have shew'd

A short Account of Mr. Cavendish's Voyage round the World in the Tear 1586.

often attempted by fundry Englishmen after Sir Francis Drake had led the way, but never any of them had the fortune or happiness to perform it, but only Mr. Ca-

HIS voyage into the South Sea was vendish, whose voyages I briefly treat of

Mr. Cavendish, having spent his best means at court, thought to recover himfelf again by a voyage into the South Sea; for

The 20th of August he fell in with the Streight of Magellan; the 25th of September he passed them; the 25th of November he came to Macho, a port in Peru, in thirty degrees, where he had appointed a meeting, if the thips had loft company; but captain Winter was returned home after he had paifed the Streights. The 25th of December he came to St. Jacob; the 29th to Cippo, where the Spaniards armed three hundred men against them.

In February he arrived in Chile; the 15th at Lima; the 16th of March at Acaculco, where he felt a terrible earthquake in his thip. From the 16th of April, till the 5th of June, he failed without feeing land, and arrived in forty eight degrees, thinking to find a paffage into our feas, which land he named Aibion: the people were courteous, and took his men for gods; they live in great extremity of cold and want. Here they trimmed their ship, and departed the 25th of July, 1579. standing his course for the Molucco's.

The 29th of September he fell in with certain islands, where he met with the worstcondition'd people of all his voyage; the 19th of October he came to Mendiona, where he water'd; then to the islands Tagolads and Saron the 1st of November ; the 4th he had fight of the Molucco's; and coming to Ternate, was kindly and civilly used by the king; the 10th of December to Celebes; and here his ship struck upon a rock, but was most miraculously preserved: he came near to Beratin, where he was refreshed, but found the people cruel. The 16th of March he came to Java Major, thinking to go from thence to Malaca, but necessity forced him to direct his course homeward. The 25th of March 1580, he departed from Java; the 15th of June he passed the cape of Good-Hope, having fifty feven men, and but three buts of water; the 12th of July he came under the line; the 16th he fell in with the coast of Guinea, and there watered; the 22d of August into the height of the Canaries; the 11th of September into the height of Tercera; the 24th in fight of Scilly; the 25th to Plimouth, where he was well welcomed, and his ship afterwards carried to Deptford; where she lies to this day for a monument, and himfelf knighted in her, as he worthily deferved.

his best er himfelf Sea; for then then the wars with Spain began, and it was lawful to make any spoil upon the Spaniards. According to his hope, he enriched himfelf with a greater fortune than was left him at first, if discretion had taught him how to

He built two ships from the stocks for this voyage, and departed from Plimouth on the 21st of July, 1586. The 5th of August he fell into the Cana. 13 the 27th of September he departed from Sera Leona in Guinea; the 25th of October he fell in with the coast of Brasil; the 6th of January he put into the Streights of Magellan, where he found but twenty two Spaniards alive of three hundred which Diego Flores de Valdes left there, in his unfortunate voyage he undertook to intercept the English in their paffage that way.

The 27th of February they were out of the Streights; the 14th of March came to the island of St. Maria and Chile; after to Marmorano, and the town of Irica; the 4th of May, 1587. he came to Pista, from thence to Cheripa, to Paita, and to the

island of Puna. The 12th of July he paffed the equinoctial; the 28th he came to Acapaleo, which he burnt; the 13th of August to the port of Navidad, and then to St. Jago; the 3d of September to the bay of Composella; the 12th to the island of St. Andrew; the 26th to the bay of Maffedan, and so to the port of Aquacara, near the cape of California, where he lay till the 4th of November, and took his great and rich prize that came from the Philippine islands.

In forty four days he went to the islands of Ladrones, being nigh two thousand leagues from thence; the island he fell in withal was called Guana: the 14th of January to the Philippines, he fell in with

Tandaya, then to Manila, and fo to the Molucco's, he passed by the islands of Mindanao, Sibolla, and Borneo; the 28th to Java Major; the 29th of May he fell in with the cape of Good Hope; the 7th of June with the island of St. Hellena; the 4th of July 1588, he passed the line, being the 4th time he had paffed it.

The 24th of August he saw Flores and Corvo; the 3d of September he met a Flemish hulk, that told him the good fuccefs of our navy against the Spaniards in 1588, the 5th he met with captain Clarke of Southbampton, who had taken a Brafil man, and entering into our channel, he was in a more violent ftorm and imminent danger than in his whole voyage, as he told me himfelf; the 9th he came with great joy to Plimouth, and was received with much applause for his honourable enterprize, as he well deferved.

As there were divers Englishmen that attempted this voyage to the South Sea, and only two performed it, as you have heard i fo there were two others that passed the Streights, but not with the like fuccefs, (viz.) Sir Richard Hawkins in 1593. who found the Spaniards better provided than when Drake and Cavendish were there; the Spaniards having intelligence of his coming, after a long and cruel fight, took and carried him and his ship to Lima, where he remained prisoner till 1597, and was then brought for Spain in that fleet I met and fought at the Tercera islands.

The other that passed the Streights was Mr. John Davies, the discoverer to the north-west, who being captain of the Defire with Mr. Cavendish in his second voyage, and the same ship he had performed his voyage about the world in, repassed the Streights when Mr. Cavendifb could not; but by contrary winds and foul weather, was

forced to return back again. Captain Davies was after flain in his fecond voyage to the East Indies. two voyages of Drake and Cavendish proved fo happy, that they encouraged not only Englishmen, but Hollanders to enterprize it, hoping to annoy the Spaniards, those Streights giving a passage to Peru, which afforded the greatest wealth in the

Of fuch Englishmen as attempted the Passage of the Streights, and

N the year 1582, and two years after Drake's return, her majesty sent two thips, and two pinnaces, under the com-mand of Mr. Edward Fenton, to try his fortune in the South Sea; which the king of Spain hearing, he employ'd Diego Flores de Valdes, (who was after general of the Castile squadron for England in 1588.) to way-lay Fenton, as he passed the Streights of Magellan; which Mr. Fenton being informed of, when he arrived at Brafil, and Vol. III.

in the fame port where two of Flores's ships had flay'd, and with whom he had a fmall encounter; and perceiving it was in vain to proceed any farther, he returned home without feeing the Streights.

This voyage of Flores, from the begin- 1582. ning to the latter end, proved most miserable and unfortunate; for befides the lofs of the greatest part of his fleet and men in going and coming, he built a fort within the Streights, and placed in it for governor Pedro

Pedro Sarmiento, with five hundred Spaniards, who perished, as I have before expreffed.

The earl of Cumberland, on the 26th of June, fent two ships and two pinnares to pass the Streights, in the year after the war broke out betwixt England and Spain. These Thips arrived in forty four degrees upon the coast of Brafil, to the fourthward of the line, intending to profecute their defign for the South Sea; but being in want of all things necessary for such a voyage, they proceeded no farther.

Mr. Chidley, being encouraged by good fuccess of Mr. Cavendifb, who the 9th of September before, arrived from his prosperous voyage, fold the better part of his estate to furnish him in this expedition for the South-Sea; but his fuccess proved

most lamentable, himself and most of his men dying without feeing the Streights, or returning a penny profit towards his ex-

Mr. Cavendish having spent what he got 1:11 in his former voyage, attempted a fecond: but with the like fuccefs as Mr. Chidley, both as to death, and failing of the fight of the Streights, except in his ship the Depue, which I have spoken of.

Mr. Benjamin Wood, a mariner by profession, but more understanding than ordinary mariners, undertook this voyage with one fhip and a pinnace belonging to Sir Robert Dudley; but there was never any news of thip or man, being supposed to be cast away upon the shoals of Abrolbos, which lie in feventeen degrees to the fouthward upon the coast of Brafil.

Of fuch Holland Ships as have passed the Streights; but to little Purpose

1597. FIVE ships went from Holland, and paffed the Streights of Magellan, only one of them returned by the cape of Good Hope. In those ships there went several Englishmen, and particularly one called Mr. Adams of Lymebouse. This man afterwards arrived at the island of Japan, where he was much efteemed by the people of that country, and found means from thence to give advertisement into England of his being there, and the state of that country, with defire that our merchants would undertake the trade of Japan: he was so industrious and careful to benefit his country, that if he had lived, he intended to have attempted a paffage from thence to England, by the north-east, which has been often enterpriz'd from hence, but still failed. But I do not approve of his opinion herein; for that in winter the Monfons always blow foutherly, a feafon of continual night; and in fummer northerly, full in

their teeth, as they should pass.

Five other ships of Holland passed the Streights, only their pinnace was cast away before the entered the Streights, which thips

and captains I well knew.

The Naffau fleet departed from Holland with the greatest pride and assurance of profir that men could do. They were termed the Nasjau fleet, because the prince of Orange was the greatest adventurer in them. the East.

They were furnished with an extraordinary expence, and choice men, both of foldiers and failors; but paffing the Streights, and coming into the South Sea, they found the world much altered in those parts since Drake's and Cavendish's being there; for wherefoever they offered to land, they were repulfed with loss and shame; so that in conclusion they could not perform so much with sourceen or sisteen choice and brave thips, and two or three thousand men, as Mr. Cavendifb had done with one ship alone of an hundred and twenty ton and thirty men, he having landed in feveral

Cornelius Van Scowton discovered a new 1615. affage into the South Sea, three degrees to the fouthward of the Streights of Magellan; in which voyage he arrived at many islands, in his course to the East Indies, that were never discovered or known before, where he found people of feveral complexions; but none of those places where he arrived gave any great hope or promise of prosit, if the navigation thither had been cafy.

This shall suffice touching matters of the East Indies, and the Streights of Magellan, until I have occasion hereafter to mention them. And another while I will direct my course unto America and the West Indies, which was discovered within few years after

of fame, no, the river of the difcovery No man deferved to have that country called after his name, but Columbus, the first discoverer of it, who was unworthily and unthankfully dealt withat by the Spaniards in Historical, where he was governor; for they fent him pritioner into Spain in chains. But king Ferdinand and Isabel his wife are to be excused from any hand in this unworthy act; for they hearing of his using, causted him to be released; and before this happened, they did him the greatest honour that ever was done to subjects; for they made him fit in their presence.

The Spaniards cannot be excused for their ingratitude to Columbus on another account; for they write, though few give credit to their relation, that a pilot in a carvel that was forced with an easterly wind upon the coalt of America, and returned but with three men alive, died in Columbus's house, from whom he had the

light of his discovery.

But no author either names the pilot's, or the carvel's name, or where he arrived, or to what province in Stain she belong'd; but consusted by one saith, she was a Portuguese, another a Spaniard, another a Biscainer, another that she belonged to the island of Madera, another to Tercera; and they differ as much in the place where she arrived. This was foully done of the Spaniards, to detract from Columnus, for no other reason but that he was a stranger.

Christopher Colon, or Columbus, as we call him, was born in Genoa in Italy, his original a mariner; afterwards he betook himfelf to make fea-cards, and had this voyage in his thoughts a long time, but was much troubled how to undertake it for want of means; for he faw the king of Portugal busy in his conquest of Africk, and in his enterprize in the East Indies; the king of Spain was as much taken up in his wars of Granada: whereupon he fent his brother Bartholomew Colon to Henry VII. king of England, who was both rich, and free from war; but the king gave little credit to him: and indeed the three kings did rather deride him, than accept of his offers, looking upon him as a cheat, and as an impof-

Columbus being at Lisbon, embarked for Palos de Moguer in Spain, where he spake with one Alonso Pinson, a skilful pilot, and a Franciscan frier called Perez Macbina, a learned cosmographer. The frier desired him to recommend his design to the duke of Medina Sidonia, and the duke of Medina Celi, who had ships at that time in St. Mary port; but they rejected him as the kings had done, and looked upon his proposal no better than a dream. Then the frier advited him to go to the king and queen, who were at the siege of Granada,

and writ to another frier in his behalf called Ferdinand de Talavera, the queen's confessor; he came to the court in 1480. and delivered his petition to the king and queen; but being a poor man, a stranger, and evil apparelled, was scorn'd, only Alphonso de Avila, contador one day carried him to Pedro Gonjales de Mendoça, archbishop of Toledo, who brought him to the king and queen, and promis'd to furnish him for his voyage, when the war of Granada was at an end, which happened not long after; and because the king wanted money, an officer of his, called Levis de St. Angel, lent him sixteen thousand ducats.

The discovery of the *Indies*, and beating the *Moors* out of *Spain*, after they had been there seven hundred and seventy years,

fell out both in one year.

Columbus was turnified with three carvels and an hundred and twenty men at Palos de Moguer. Martin Pinjon was pilot of one, Francis Pinjon of another, and Detus Pinjon of the third, all three brothers, and departed the third of August, 1492. They came to the island of Gomera, one of the Canaries, where they refreshed; from thence he sailed thirty four days west without seeing land, insomuch that his company murmured, and contrived his death; but he fatisfy'd them with good words and promises; at last he spy'd a thick cloud, which prov'd land, on the 11th of Ostober, whereat they all rejoiced, thanked God, and kiss'd Columbus's hands.

The first land they fell in with was called Guinaya, one of the islands of Lucaios: from thence he went to Hispaniola, then called Haitu, where the admiral's ship was loft, but all the men and furniture

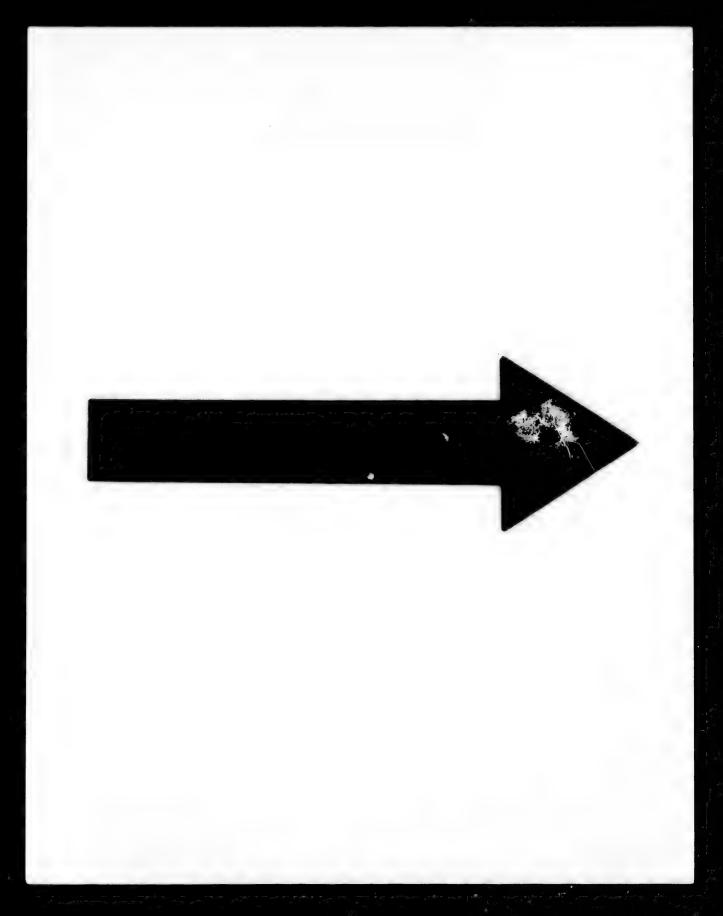

faved.

The *Indians* fled from them, all but one woman, whom they took and cloathed, and us'd courteoufly, and let her go again; which did fo much imbolden the *Indians*, that they reforted to the *Spaniards*, and help'd them to unlade their flip that was loft, and do them other fervices; and with the good will of the king they built a caftle of wood, and left thirty eight *Spaniards* in it under a captain; and this was the first footing the *Spaniards* had in the *Indies. Columbus* took ten parrots, some turkeys, and other things the land afforded, and returned to *Palos* in *Spain* in fifty days.

The king and queen were at Barcelona when Columbus arrived, whither he went with his Indians and other rarities the third of April, a year after he departed from

thence.

At his coming to the king the Indians were baptiz'd, the king, queen, and prince

being present, who were their godfathers and godmother: they caused Columbus to fit by them, which was never done to any fubject. They confirmed the privilege of the tenths, and gave him the title of admiral of the Indies, and to his brother Bartholomew that of Adelantado.

The queen favour'd this discovery more than the king, and would not for a while let any Arragonians go to the Indies without licence. The king rewarded many of Columbus's company; but the mariner, who first discovered the land, not being recompenced to his content, fled into Barbary, where he turned Turk.

The Indians confess'd to Columbus, that there were many prophecies amongst them, That they fhould be fubdued with white men with beards, with apparel on their backs, with bright fwords that should cleave a man in funder, and fhould girt their fwords to their fides.

Columbus in his fecond voyage had feven-

teen fhips and one thousand two hundred men, mares, sheep, cows, and corn to fow. The first land he fell in with was the island of Descada; and coming to Hispaniola he found his thirty eight Spaniards flain, through their own fault, for injuring the Indians. He built a town, and in honour of the queen called it Isabella. And now began the Spaniards and Columbus to difagree. as I have shew'd before.

What afterwards befel the Spaniards in their discoveries and conquests of the Indies, has been fufficiently handled by feveral

I will only treat of the famous exploits of Francis Pizarro and Ferdinando Cortes; the one, conqueror of the rich countries and mines of Peru, the other of the famous countries of New Spain and Mexico. Their births, originals, and adventures, are fuch. and fo strange, that former times cannot fhew the like, and, perhaps, in future ages they will fcarce be believ'd.

Of the first Discovery of the South Sca by Vasco Nunnez de Balboa, which was the first Step to the Discovery and Conquest of Peru.

V Ajco Nunnez de Balboa, an industrious man, but in difgrace with his king, undertook the difcovery of the South Sea with but a few Spaniards, and performed it with prodigious labour, fufferings, and danger from the Indians, with whom he often fought, but still came off victorious. On the 25th of September, 1513. from the top of a high mountain he fpy'd the sea to the fouthward of him, which so much rejoiced him and his men, that it amaz'd the

An Indian king on the fouth fide treated him with much courtefy, carrying him in his canoes to the island of pearls; and on this fide Vajco built the town of St. Michael, the first the Spaniards had there.

Vajio having discovered the sea and coast, settling friendship wheresoever he came, and gathering much wealth, returned to Darien, whence he first set out, and was received with much joy and triumph; thence he fent away a messenger to give the king of Spain an account of his fuccess, who pardoned his past offences, and made him Adelantado of the South

Vasco Nunnez de Balboa continuing at Darien, Pedrarias d'Avila arrived there. being fent from Spain to take upon him that government, and receiv'd by Vasco with extraordinary honour; but had Vasco's messenger arriv'd in time, Vasco had been appointed governor. Pedrarias carried one thousand five hundred men, but he and they behaved themselves so cruelly in all parts, that they brought much destruction upon the Spaniards.

Vasco and he fell out, but were reconciled by the bishop; and Vasco married his daughter. Vafco being upon the South Sea, the place of his command, Pedrarias fent for and got false witnesses to accuse him, that he should say, He would not obey him, but would be upon his guard with his three hundred men he had with him, if any body offered to wrong him. Upon this false fuggestion Pedrarias put him to death; at which the king of Spain was much offended, and Pedrarias gained the ill-will of all men; for Vasco was generally beloved and respected; and the sentence given against him was unjust, being procur'd by false witnesses, and out of a private grudge.

The Actions of Francis Pizarro, Conqueror of Peru.

BEFORE I speak of *Francisco Pizarro*, may seem the more strange and admirable: his deeds, and exploits, I will set down he was bastard to captain *Pizarro*, serving his birth and education, that his actions in Navarre, and was left an infant at

admirable: rro, ferving n infant at own or take compassion of him; till at last his father for shame took him home, and brought him to do all kind of drudgery; and one day fending him to keep his hogs in the field, he gave them a fort of poison, which killed several of them. The boy not daring to return home, run away, and went to Seville, and from thence shipped himself for the Indies, and by degrees came to be enfign, and afterwards captain.

Pizarro and Diego de Almagro, being at Panama, were desirous, like other undertakers, to try their fortunes in discoveries. Almagro being rich, drew to him one Ferdinand Luque, a schoolmaster and priest of that town, who was likewise wealthy; and all three undertook a discovery, with a vow, one to another, equally to divide the profit that should accrue. It was determined amongst them, that Pizarro should undertake the conquest; Almagro go and come with all necessaries to relieve them; and Luque to make provision for supplies. This happen'd in the year 1525.

The first voyage that Pizarro made, was with one ship, and one hundred and four-teen men: he sailed one hundred leagues; and went ashore several times, where he found sharp encounters, lost some of his men, and was himfelf hurt in feveral places; which forced him to return to Chincama, not far from Panama, repenting of his enterprize.

Almagro, who staid behind Pizarro, to fupply him, as you have heard, went after him with feventy men, and came to the river of St. John; and finding no fign of Pizarro's being there, returned; but at his going back he landed at some places where he found Pizarro had been, and where he

Almagro flew and hurt several men, and returned to Panama, thinking Pizarro had done the like; but understanding that he was at Chincama, he went to him, and by consent furnished two ships, and carried two hundred Spaniards and some Indians. They arrived at a marshy and waterish place, where the people live in trees: they are warlike, and killed many Spaniards, and called them the Scum of the Sea, having no fathers; and faid they would have none in their country that had beards, or that would break their customs.

Pizarro and Almagro had a great defire to conquer that country, because of the shew of gold and stones; but could not do it with that fmall force, because many of them were dead. Almagro returned to Panama for fourfcore men more; but before his coming back, Pizarro endured great want of victuals.

the church-door, where no body would unhealthful, that they left it, and went to Chatama, where they found plenty of all things, and thought to make themselves so rich, that they needed not to proceed further: but they were deceived; for the Indians were their enemies; and fo many, that they durst not fight them. Almagro was to go back for more men to Panama, and Pizarro to stay in the island of Guara.

The Spaniards were fo weak and tired, and fo discontented, that they defired to retire with Almagro, and to leave their hopes of gold; but Pizarro would not fuffer them, either to go or write, left they fhould have discredited the country; and so Almagro would have got no foldiers: but notwithstanding this prohibition, the soldiers writ, and hid their letters in bottoms of thread, by which means their miseries came to be known, and complained of to the governor, who commanded, that no man should stay with Pizarro against his will.

At Almagro's coming to Panama, one Pedro de la Rios was arrived for governor, who proclaimed, That no man should stay with Pizarro against his liking; and sent a messenger to Pizarro to let him know so much. Whereupon most of his men left him & and those that Almagro took up, run away from him; so that Pizarro had but twelve men left with him, whereof one was a Grecian. He went to an island called Gorgena, where he lived upon fnakes, herbs, and crab-fishes, till Almagro's return from Panama; and then he went over to the main land, and put the Greek ashore, who brought him news of the riches of that country, and the plenty of victuals, with the state of their king Atabaliba; which was great joy to them all; for the fouth sea was the fountain and happiness of all their dif-

Pizarro hereupon return'd to Panama, and from thence into Spain, to carry the emperor news of this rich country, which he defired the government of. He left two Spamards behind him to learn the language, customs, and riches of the country; but they were afterwards flain by the Indians.

Pizarro was above three years upon this discovery of Peru, and endured as much hunger, and other miferies, as man could do.

Pizarro's return to Panama, thence into Spain, and thence back again to Peru.

At Pizarro's arrival at Panama, he imparted the hope of his discovery to Almagro and Luque his affociates, who were grown poor by their undertakings; but yet furnished him with one thousand pieces of gold for his journey into Spain, most part of which they borrowed.

Upon Almagro's return, they found their forces to finall, the country to barren and him the title of Adelantado of Peru: and to

Book I

2.411

encourage men to go with him, Pizarro promifed more riches than he knew of, though not fo great as after it proved. He carried with him three of his brethren, Ferdinand, John, and Gonfalo; Ferdinand only legitimate, the others baftards. They arrived in Panama in great pomp and pride. But Almagro was offended with Francis Pizarro, because he had taken upon himself all the honour in Spain, and excluded him who was at all the expence, and part of the labour and pains. Pizarro excused himself; which gave but little fatisfaction.

The expence of the Pizarro's was fo great, and their means fo fmall, that they could not proceed upon their enterprize, without the help of Almagro; whom Francis Pizarro laboured to win again. In conclusion, by mediation of friends, Almagro furnished him with seven hundred pieces, and fuch arms and victuals as he had; fo that Pizarre proceeded with two ships, and as many men as he could carry. He came to a place called Coaque, where he found much wealth, but endured much mifery. From hence he fent to king Atabaliba for friendship; who answered, If he would return the wealth gotten, and clear the country, he would be his friend; or else not. A frier was fent to persuade him, but all in vain; fo that they came to a battle. Many of the Indians were flain, and their king taken prisoner; and not a Spaniard killed or hurt, but only Francis Pizarro in the head, as he was fnatching at the king to take him.

Before this, Pizarro took the island of Puna, and gained great wealth, which he gave to his foldiers that came to him lately. Here his people fell fick of the pox, a natural disease of those parts; and here he delivered seventy prisoners that had been taken by the islanders, and sent them free to Tumbes, whence they were. Notwithstanding this courtesy, they incensed the people against the Spaniards, and slew three that were sent in civil manner to treat with them; which so enraged Pizarro, that he took their town, and brought them to obedience.

These things happen'd before the taking of Atabaliba prisoner; who now being in their hands, offered for his ransom, as much filver and gold as would fill a great and spacious room wherein he was; which he truly performed; but the time was so long before it could be brought two hundred miles, that Ferdinand Pizarro adventured to go for it; and in that journey he learnt much of the secrets of the country.

Francis Pizarro divided the treasure thus gotten, and gave to every man his due; never foldiers in the world were so rich. He dealt justly with Almagro, and gave him what was his due: all things grew exceeding dear, a shirt at ten pounds, a quart of

wine at five pounds, and one thousand two hundred and fifty pounds a horse. Pizarro sent his brother Ferdinand to the emperor with his fifths, and a relation of what had happened: many common foldiers went, who carried, some twenty, some thirty, some forty thousand ducats in plate.

There was an Indian called Philip, a Christian, and interpreter to the Spaniards, who fell in love with one of Atabaliba's wives; and thinking to marry her after his death accufed him of plotting the deftruction of the Spaniards, for which he was condemned and executed; but whether juftly, or no, is a question. Before his death he desired to be baptized; but whether from his heart, or no, that is uncertain.

Pizarro hearing the fame of Cufco, marched thither, and took it, where he found as much wealth as he had by the ranform of Atabaliba; and it is thought there was as much hid that never came to light.

Almagro had commission from the emperor to be marshal of Peru, and governor of one hundred leagues of land further than Pizarro. Whereupon he took upon him to govern Cusco; and this was the first beginning of the strife betwire them two, but for the present accommodated; and Almagro went to discover the country of Chile in 1535, where he endured much hunger, cold, and other disasters.

Ferdinand Pizarro returned out of Spain, and came to Lyma, after Almagro's departure to Cbile; and brought a patent to his brother, wherein he was made a marquis, and to Almagro the government of New Toledo.

He required all the filver and gold that was received for the ranfom of Atabaliba for the emperor; the other being a king: but the foldiers answered, they had paid their fifths, which was their due. This caused a sudden mutiny: but Pizarro app-ased it, though with the ill will of his soldiers. Mango, whom Pizarro had made king, rebelled against him, and had almost taken Caseo. In the constict he stew divers Spaniards.

Almagro hearing the emperor had made him governor, as aforefaid, returned out of Cbile, and took Cuseo by force, alledging it was in his government. He imprisoned Ferdinand Pizarro: Mango the Indian king befleged it; and now began broils betwist Almagro and Pizarro; and now did Francisco Pizarro receive many losses by the Indians that rebelled against him. Pizarro sent forces to regain Cuseo from Almagro; but by mediation of friends they were to meet and consult before they fought, but to little purpose; for that treaty broke up, and they sought a most cruel battle, in which Almagro was taken, and put into the same prison he had put the brother of Pi-

him. If the Indians had taken advantage of this division, they had defeated the whole power of the Spaniards.

Almagro was of mean birth, and never known who was his father: he could not read; but was valiant, frank, merciful, and vain-glorious. Francis Pizarro, upon this accident fent his brother Ferdinand into Spain with the emperor's fifths, and to excuse the death of Almagro. He came to Valladolid in great state, and with much wealth; but within a while after was committed to prison.

Francis Pizarro went on with his victories, and endured great hardships; yet he prevailed, got great wealth, and made peace with the *Indian* kings. Gonzalo Pizarre was a principal man in all these undertaking.

Francis Pizarro's Death.

Francis Pizarro returning from the City of the Kings, endeavoured to be reconciled to Diego de Almagro, fon to him that was put to death; but he would accept of no conditions of friendship; neither would John de Rada advise him to it, who was left in charge of him at his father's death, with command to feek revenge of the Pizarro's; and though Francis Pizarro was ftill informed of the practice against him, yet he little esteemed of it; but notwith-stand his security, on the 24th of June, 1541. John de Rada and ten others lentred upon him whilft he was at dinner, and flew him. He was a man neither liberal, nor covetous, nor would he proclaim what he gave; he was a good husband for the king, and a great game ter, not regarding with whom he play'd; he would never wear rich apparel, and yet fometimes would put on a garment that Ferdinando Cortes fent him; he took a pride to wear white fhoes, and a white hat, in imitation of Gonfalo the great captain; he used his foldiers well, and got their loves; he was gross, valiant, and ho-nourable, and negligent of his health or life.

Upon his death, his and Almagro's faction had many bickerings; and at last those of Almagro's party feditiously proclaimed, there was no other governor in Peru but Diego de Almagro. He appointed John de Rada his general; they committed many infolencies, murders, and cruelties; they divided all the goods of the Pizarro's and their friends, and placed whom they lifted in command, meaning to make Diego de

Almagro their king.

The emperor hearing of those tumults in Peru, sent one Vaca de Castro, a doctor, with authority to punish them; and he coming thither, those who stood for the emperor repaired to him: whereupon Almagro

zarro, who there condemned and executed they fought a cruel battle, in which Almawas overthrown; though more men were flain on the other fide; few captains escaped, and those that were hurt, died, by reason of the great frost and show that was in the country.

Vaca de Castro executed thirty of the principal offenders, and banished divers others. Almagro fled to Cufco, thinking to find relief; but his lieutenant he left there, hearing the fuccess of the battle, apprehended him, and Vaca de Castro at his coming thi-

ther cut of his head.

This Diego de Almagro was a bastard, whom his father had by an Indian woman in Fanama; but he was braver than the meftifo's used to be; he was the first that ever took up arms against the king in the Indies: his followers were fo loving and constant to him, that though they had often offers of pardon, they would not leave him.

Vaca de Castro settled things in good order, gave the Indians content, who now begun again to cultivate their grounds, which before they could not do for the wars; and about this time many mines were dif-

The emperor being informed of the revolts in Peru, and the ill usage of the Indians, he displaced his commissioners there, and chose others, giving them an oath to deal justly, and to order things uprightly. He made forty laws, and figned them at Barcelona the 20th of November, 1542. But these laws were ill taken in Peru.

He fent Blasco Nunnez Vela with the title of viceroy, with the laws aforefaid; wherein the emperor gave great freedom to the Indians; which discontented the Spaniards; though no doubt the emperor did it

out of a good conscience.

These things bred so great a heart-burning in the Spaniards, that with one confent all the towns of Peru revolted, and made Conzalo Pizarro their general. The viceroy armed as much on the other fide; and at first sent the bishop to persuade Pizarro; but he would admit no treaty. The viceroy was hated of all men, and especially for murdering the king's factor, that was taken prisoner in the City of the Kings.

Now began great garboils, what with the imprisoning of the viceroy, and the coming of Gonzalo; but before this happen'd, the viceroy had imprisoned Vaca de Castro, and the five commissioners that came with him out of Spain, for the better appealing of things, and fent Castro prisoner into Spain.

Pizarro came to the City of the Kings, and caused the emperor's commissioners to admit him for governor. Those that had the charge to carry the viceroy prisoner into Spain, fet him at liberty: which proved prepared all his forces to meet him, where an unlucky fervice; for if he had been carry'd into Spain, Pizarro would have agrees with the commissioners. Pizarro ftrengthened himfelf as well by land as by fea, and fent Ferdinand Bachicao with fifty men, who was efteemed a coward, but did much mischief: he increased his two brigantines to twenty eight fhips, and came to Panama, where he did what he pleased, like a tyrant. His death was practis'd in Panama; which he hearing, prevented, with the death of those that intended it, and returned to Peru with four hundred men, to the defence of Pizarro, who followed his victory, and put his enemies to many streights. They committed great cruelties one against another when they were taken on either fide.

Pizarro hearing of the great spoils that Bacbicao made at fea, by confent of his council displaced him, and put in Pedro de

Hinojosa in his room.

Pizarro sent Hinojosa to scour the seas, left they should make head against him,

and to give fatisfaction for the spoils that Bacbicao had made; but they of Panama were jealous of him, till at last they agreed he should enter the town with forty men, and afterwards return to Peru to Pizarro.

The viceroy Blasco Nunnez and Pizarro came to a battle, in which the vicerov was taken prifoner; and being known to one that had ferved him, he cut off his head, and the next day buried him, Pizarro mourning in black for him.

After this Pizarro governed with great justice and uprightness, till he was drawn into tyranny by Francis Carvajal and others, who would make him king, faying, They might do it, because the country was gain'd by them, as well as Pelaius king of Spain, when the Moors entred it. They would have conditioned to have Ferdinando Pizarro, who was prisoner in Spain, set at liberty: others proposed to bring in the turk amongst

Gasca sent out of Spain to quell the Rebellion in Petu.

THE emperor hearing of the tumult in Peru, occasioned by the commissioners proceeding against the viceroy, and the insolencies of Pizarro, being then troubled with his wars of Germany, chose out a milder man than Blasco Nunnez to govern in Peru, which was Pedro de la Gasca, a priest; a man whose wisdom was tried in other affairs. He went with little shew of pride: the commissioners he chose to be fuch as he could truft, and he had the title of prefident. The emperor writ to Pizarro, and dated his tetter from Venlo in Germany in February 1646.

Gasca arrived at Nombre de Dios, and carried himself mildly, saying, He came not to make war, but, according to his profeffion, to make peace, and revoked the rigour of the laws that caufed the war. From Panama he fent the emperor's letters; and writ himself to Pizarro, telling him, He was come to pardon all offences, to draw him to obedience, to give fatisfaction to his people, and, if he refused this grace, to

make war.

Pizarro was enraged at the receipt of these letters, and would not suffer the gentleman that brought them to fit down; which the gentleman took for a great affront. Pizarro called for his friends, to confult what answer to give the president's letter. Carvajal, the chief incendiary, was absent; and therefore it was hoped he would accept of grace; yet every man delivering his opinion, some advised to take and raze Panama and Nombre de Dios, that the emperor might have no place to relieve

his men and shipping; and they having all the fhips in the fouth fea, might without fear enjoy Peru to themselves, and then doubted not but to make New Spain revolt too, or, at leaft, they would rob all the towns on the fea coast, and live by spoil and rapine; which indeed they might have done, having the general of the fea true to them.

Pizarro cunningly answered Gasca's letter, by confent of thirty of his men, under their hands; That they understood of his coming by Hinojosa, general of the sea, and the fair flew of good he pretended; but it was too late, after so many murders, occafioned by the viceroys; perfuading him to return to inform the emperor, That they would receive no governor but Pizarro, and offered to fend fome man of quality into Spain to make their case known to the emperor. Carvajal diverted Pizarro from all good intentions, and would not fuffer him to make any acknowledgment to Spain: They fent these letters to Gasca, and offered to give him a great quantity of money to depart home, and if he refused it, they writ to their admiral Hinojosa to apprehend him. These letters being brought to Panama, put Gasca in fear that he should be killed; for they absolutely refused to receive him in Peru.

Gasca dealt so cunningly with Hinojo, 3, that he brought him to fubmit himself and fleet, and became a true fervant to the empe-This was the overthrow of Pizarro; and Hinojofa was continued general, and none of his captains displaced. Gasca now prepared again for war, and furnish'd himBook IV

Gasca's carriage, and the submission of the ships, made a great change amongst the rebels; for happy was he that could appear for the emperor. Pizarro was much grieved to hear of these alterations; but, like a couragious captain, fent to all his friends to come to him with their forces; but most part of them forfook him, and the town of Lima, Cufco, and the rest, took part with the emperor.

When John de Casta came to Pizarro to Arequipa, they confulted what to do, having four hundred and fifty men in the whole country against them: he resolv'd to go to Chile, where never Spaniard had been; but he was followed by one Centeno with a loyal party for the emperor, between whom was fought a cruel battle, Pizarro gaining the victory: he lost two hundred and twenty men, and Centeno many more. Centeno fled; but the others having to great a loss did not follow him. Pizarro, upon the victory, divided his forces into feveral parts. Cepeda, a principal man of account on his fide, perfuaded him to make conditions with Gasca, which he would not do, but was angry at the motion, and grew fuf-

picious of him.

Gasca came into Peru with two thousand men, where he heard of the overthrow Pizarro had given Centeno; and his men being fickly, and finding the corn green, and not to be eaten, they were much discouraged; but Centeno coming with the remainder of his forces, put them into heart; whereupon he went in the pursuit of Pizarro, but had great trouble in passing the river Apurima. Pizarro being advertis'd of it, departed from Cusco with a thousand soldiers. Donna Maria Calderon speaking against the tyranny of Pizarro, Fran. Calderon entered her chamber one morning, and strangled her in her bed. Now came their armies in view of one another, every one taking advantage of the place: Gasca delay'd giving battle, in hopes that most of Pizarro's men would leave him; but they did not; and he being forced by fnow, cold, and hunger, engaged in the heat of the action. Cepeda, who (as I faid before) advis'd Pifarro to accept of conditions, fled to Gafea, which much difhearten'd Pizar-ro's fide. This example, and others that did the like, made most of them yield.

Pifarro feeing it, chose rather to submit than fly, and yielded himself to Villa Vicentia. ferjeant-major, who carried him to Gasca. Never fuch a battle was fought, in which the heads and chief commanders were doctors and scholars.

VOL. III.

Gasca sent forces to cut off those that escap'd in their way to Cusco, and to secure the town. The day following, being the ninth of April, 1548. Gasca committed the cause of Pizarro and other offenders to judges, who condemn'd him and thirteen more to death, wherof Francis Carvajal was one, and indeed the chief promoter of all the mischief in those parts. He was eighty four years of age, and had been an enfign in the battle of Ravenna: he was foldier to the great captain Gonçalo Fernandez, and the most noted foldier in the Indies, yet never counted valiant nor skilful. It was a by-word, As cruel as Carvajal, because he had been the executioner of four hundred Spaniards Pizarro caused to be put to death after Blasco Nunnez came into Peru, carrying blacks with him continually for that purpose. Pizarro was never overthrown but in this battle, though he had fought many.

Gasca's soldiers looked for a better reward than was given them; though, indeed, they were well dealt with, yet they mutiny'd upon it, but were foon quieted.

Gasca took a course for the ease of the Indians, and to reduce them to the christian religion, as also for the peaceable govern-

ment of the kingdom.

When Gasca arriv'd at Nombre de Dios out of Spain, he brought not an hundred men with him, nor money, but procured credit, and, at his going away, paid all debts, and carried with him to the emperor almost two millions, but for himself not a penny, being the first man in authority that ever did the like; for covetousness was the bane of all the Spanish affairs.

No man that had commanded in Peru had escaped death or imprisonment but this Gasca: Francis Pizarro and his brothers beheaded Almagro; Almagro's fon murdered Francis Pizarro; Blasco apprehended Va-ca de Castro; Gonçalo Pizarro sew Blasco Nunnez; and Gasca did as much to Gonçalo Pizarro. There were flain one hundred and fifty eight captains and men in authothority, which is to be imputed to the genius and riches of the country: for the like divisions happen'd before the Spaniards came thither, which made a long war amongst them.

When Gasca had settled all things in good order, he prepared for his return into Spain, and came to Panama, leaving much wealth there, which he could not carry; but it happened that two fons of Rodrigo Contreras, governor of Nicaragua, with two hundred foldiers entered the town, and took the treasure, and as much more as they could get. One of the two brothers got himself with his wealth into two or three ships, the other follow'd Ga_{f} -g ca, thinking to rob and kill him. They murdered many, and flew a bishop, because he sent to their father into Spain on account of their villanies: they drew to them all factious and discontented people that favoured the party of Pizarro.

Gafea hearing of those disorders, returned with speed, sought with, and overcame them; one of the brothers was drowned in passing a river: he dispatched thips after the other, and took him and all his wealth. This proved a fortunate success to Gasea, and got him great honour.

He embarked at Nombre de Dios for Spain in 1550, with much wealth for others, and reputation to himself: his going, coming, and staying, was little more than four years. The emperor made him bishop of Plascentia, and sent for him to Ausburg in Germany, where he then lay, because he would be informed by word of mouth of all proceedings, and the state and condition of the record of the Indies

people of the *Indies*.

This shall suffice for so much as concerns the beginning, progress, and conclusion of the *Spanish* conquest of *Peru*, which were full of difficulties, hazards and cruel murders among themselves. For what concerns particular men, towns, and countries, I refer you to divers authors, as well in *Spanish* as *English*; and will now proceed to the conquest of *Mexico*, by that renown'd and fortunate gentleman Don *Ferdinand Cortes*.

The Exploits of Don Ferdinand Cortes Marquis del Valle.

FERDINAND CORTES was the fon of a gen-leman, but of imall fortunes; and feeing his father could not maintain him in the port of his birth, he defir'd to put himself into the world; and, with his father's bleffing, and little help otherwise, he made shift to get into the wars of where he stay'd not above a year, to want and sickness; and being force necessity to return for Spain, was for so beget ill he got to Seville, knowing his father's circumstances could not relieve him at home.

Not long after his arrival at Seville, there happened a fleet to depart from thence to the Indies, in which he procured a paffäge; and being taught to write and read, put himself into the service of a scrivener, and by degrees, through his own industry, advanced himself to perform those actions you shall read in the following discourse.

After running through feveral employments in Hispaniola and Cuba, he became familiar and intimate with the governor of that island Diego Velasquez. This governor, upon the report of the wealth of Jucatan, had fent his nephew John de Gryolva, to discover along that coast; who returning with a promifing account of the riches, not only of that coast he was fent to, but of that afterwards called New Spain, Velasquez fitted out a fleet at his own expence to conquer that country, and gave the command of it to Cortes, whom, upon fecond thoughts, he defign'd to have removed; which Cortes having intelligence of, he hafted away with his fleet upon his discovery.

Being arrived at Vera Cruz, and receiving there information of the vaft wealth of the king of Mexico, he fet forward towards him on the 16th of Angust, 1520.

with five hundred foot, fifteen horse, and one thousand three hundred *Indians* to carry the baggage.

After four days march he came to a goodly country, called *Chinchecas*; but before he came thither he had paffed high hills, full of fnow and ice, though it was in August.

Next he came to *Tlafcalla*, a people who were enemies to the *Mexicans*. Cortes overthrew them in three conflicts: the town had twenty thoufand houses, very fair, and handsome markets and fairs: Cortes took it by night, and returned to his camp, where he found his men in mutiny; but appeased them, out of hope they should spread abroad the gospel of Christ.

From thence he went to Chalotecan, a country no less fritful; where he was entertained with their kind of musick, but they were set on by the king of Mexico to betray him, which was discovered by an Indian woman; and Cortes suddenly set upon them, and overcame them. The king of Mexico sent to excuse himself of this treason, and to lay it upon the people of the country: he sent to invite Cortes to Mexico, and as he passed the country he was well entertained, especially in Italetuleo and Xaliso, the one friend, the other enemy to the Mexico.

When Cortes came within half a mile of Montezuma, the king fent a thousand couriers, all in one garb, to meet him, who saluted him one after another, first touching the ground with their fingers, and kissing it; then came Montezuma with two hundred better apparelled, two and two together, without shoes, though they use shoes at other times; he leaned upon two of his nobility, to shew that he was upheld by his nobles.

Cortes was told, he must not touch the king, for that it was the custom of the country; he presented the king with a chain of bugles, and fome diamonds in it; which the king took in good part, and gave him in requital another of gold wrought in fnails, crabs, and fuch toys. He lodged Cortes in his palace with great folemnity, and made liberal provision for his army. The king erected a curious throne of state, where he directed his speech to the Spamards, as follows:

Noble foldiers, and merciful captains to them that yield, you are welcome into this country of ours; I would have you know, that our forefathers have told us, and our chronicles declare it, That we are not antiently of this land wherein we live, but brought hither by a king, who left us bere, because we refused to return with bim in company: Our forefathers marry'd, bad iffue, built boufes, which we enjoy; and we have ever been of opinion, that they will come to us again, and make us subjects to them, as they have formerly been to our ancestors. And therefore considering from whence you come, and that you are fent from a great king, we yield to you all obedience and service, and make account you are entred into your own bouses.

I am not ignorant of what hath happen'd to you by the way, and that the Cempoalans have spoken ill of me; they are my enemies, and I pray you believe them not: I know they tell you my bouses and walls are gold, and that I make my felf a god: but I pray you bebold my bouses that are made of wood, lime, and stone, and my self a stessly man like others. Indeed I have plate from my anceftors, and what I have shall be yours. I must now depart; but will so provide, that neither

you nor yours shall want.

Cortes answer'd, That what he faid was true; and that the king of Spain was the king they looked for , and that he was fent thither purposely to let them know so much. After they had passed fix days in great jollity, Cortes had news that fome of his men were murdered by the king's appointment; for which he was glad, thinking to take that occasion to subdue and conquer him and his country.

Cortes fent for the malefactors, and put them to death: they accused Montezuma, whom likewise he imprisoned, but within a while after he fet him at liberty: he confessed his fault, and promised his allegiance ever after.

The king chose rather to dwell in the palace with Cortes, than at pleasure abroad. To give him satisfaction, he sent to discover mines for him, and procured a great quantity of wealth to present him; he

wifhed and advised his nobles to obey Cortes, and labour'd how he might subdue Cacomacfin, his vaffal, who wholly refused to submit to Cortes. This act of his was affirmed by publick notaries in writing by the confent of all the nobility, and interchangeably given to one another.

Valasques, the governor of Cuba, envying Cortes, fent Narvaes with eighteen fail of ships, to command Cortes to go out and quit Mexico; whereat Cortes was amazed, and in a dilemma; for if he made head against Narvaes, the Indians would prefently have revolted, and if he did not, Narvaes would in time posters himself of the country: wherefore he refolved with one hundred and feventy men to go against Narvaes, leaving a garrifon in Tenuftitlan, which he commended to the care of the king. Narvaes had eight hundred Spaniards, and nineteen great pieces; nevertheless Cortes fet upon, took him, and the rest yielded themfelves.

In this interim, the citizens of Tenustitlan revolted against the king and Spaniards, and affaulted the castle, alledging, their diflike to the Spaniards, was for breaking down their idol.

Cortes hastened thither with seventy horse, and five hundred Spaniards, which gave heart to them in the castle; the Indians were desperate, and desired rather to die than live: they put Cortes to a retreat,

which emboldened them much.

Cortes afterwards used many engines, and other inventions; and though he flew multitudes of Indians, yet they valued it not: Montezuma looking out of a window, thinking to diffuade the people from their violent courses against the Spaniards, was ftruck with a ftone, of which wound he died within three days. He was a man of a good nature, wife, and prudent. The Spaniards gave the Mexicans his body to bury, and offered the Indians conditions of peace; which they wholly refused, vowing to thrust the Spaniards out of their country, though it were with the loss of 1000 men to one. Yet within a day they deceitfully made a proposition of peace, which Cortes accepted of; and to give them the more content, he fet a priest of theirs at liberty, thinking it would have wrought more heartily; but the day following, when Cortes had the least suspicion of them, and sat quietly at dinner, they attempted one of his houses: whereupon he suddenly rose from table, and with his horse charged the Indians, where he lost divers men, and was himself fore wounded, and scarce able to retire. It was now come to that pass with the Spaniards, that they must either perish, or quit the city; and that night they refolv'd

Cortes

to fly with Montezuma's children, and treafure; but the Indians having notice of it, purfued them, recovered the prisoners, slew one hundred and fifty Spaniards, forty one horfes, and two thousand Indians that took their part. Now did Cortes endure great mifery and famine, and had but one dead horse to feed on in five days, till he came to Tlascalla.

The Tlascallans entertained him courteoufly, where he ftay'd ten days; he built many fortreffes for his own fafety and theirs, and fent for aid into Hispaniola: In the mean time he gained the love of many Indians, who took part against the Mexi-

Cortes built thirteen boats; and on the other fide, the new king of Mexico prepar'd for war, and made certain pikes to annoy the horie, which they feared more than the Cortes cut a paffage into the falt lake, for his boats to have a passage to the siege of Tenustitlan: these ships intercepted all provision, and annoy'd the Indians infinitely. Cortes affailed the town in four places, having in his army one hundred and twenty thousand men; some came for fear, some for liberty, fome for friendship, some out of gain: this fiege lafted ten weeks, and wafted ten thousand people with famine, and other missortunes. Cortes by chance took the new king, as he was stealing away secretly by the lake : he fubdu'd Tenustitlan, and fourteen towns by the lake fide; as alfo all the Mexicans realms, and provinces to the crown of Spain, giving great spoil to the foldiers, and referving the fifths to the

Cortes deserved more honour than all the rest of the Spaniards, for his conquest in the Indies; he subdued New Spain, and gave it that name, because it was like Spain; he may very well be compared to Marius and Scipio in the Roman state: his house remains great to this day, and has the title

of marquis del Valle, which he left to his posterity.

Cortes being afterwards captain-general, and Mendoça viceroy of Nova Espania, there happened many private grudges between them, but yet they joined together for the finding out of the paffage from those seas to ours, which we properly call the north west paffage; as also in the conquest of Sibola and Quivira, where they were perfuaded by certain friers, That the people worshipped the cross, and had other tokens of christia. nity: but all proved false, and sew Spaniards returned home, their mifery was fo great, and the country fo cold and barren, the people cruel, and five hundred leagues from Mexico.

Cortes, after his taking Mexico, fent to discover the northern parts, and his people arrived in a country where Ticoantipe Cician Pipe was king, who received them lovingly, and fent an ambaffador to Cortes, think. ing he was come out of the clouds, and that their veffels were great whales: they wondered at their horses, and accepted a friendly peace, offering Cortes fifty thoufand men to affift in conquering Tutepec, who was his enemy for using the christians

Notwithstanding that Ferdinand Cortes had deferved as much honour as could be laid upon him; to the difgrace and shame of that time and age, he was called from his command, and at his arrival in Spain

was unworthily dealt withal.

He afterward went the unfortunate journey with Charles the first to Algiers, not having fo much command as to be admitted a councellor of war. In that expedition he lost two emeralds in the field, which could never be found again, valued at one hundred thousand crowns. He died the same year, and much about the fame time that Henry VIII. king of England, died.

The Names of the first Governors of the Island Hispaniola, where the Spaniards made their first Habitation, and from whence they discovered other Parts of the West Indies; with an Account of all those Discoveries.

Hristopher Columbus was governor eight years; during which time he and his brother Bartbolomew conquered and peopled the greatest part of it, and made it beneficial to the king.

Francis de Bovadilla succeeded Columbus, and fent him prisoner into Spain; he go-

verned three years, and well.

Nicholas de Ovando was next, and went thither with thirty ships, into which Bovadilla put all the wealth he had got for himfelf and the king, which was the greatest the Indies had afforded till then; but all

these ships with their wealth, except six, were cast away in a storm. Ovando was a religious man, and governed feven years with much wifdom. When he went thence, with much wisdom. he was fo poor, that he was forced to borrow money for his expences, though his revenue was two thousand pounds a year. He would not fuffer any fcandalous perion to live among them: he conquered some provinces not fubdued before, pacify'd others, and was made chief commendary of Alcantara when he return'd home.

James Columbus governed fix or feven years, but was removed, and in difigrace with the king, with whom he had feveral years fuits for his father's right to the Indies.

F. Luis of Figuerea, prior of the monaflery of Mayorano, was fent by cardinal Ximenes, who governed after the death of king Ferdinand and his queen. He took from the courtiers all their Indians, because they being in Spain, their fervants used the Indians very ill. He put them to school to be instructed, but many of them died of the small pox. In his time the planting

of fugars in that island was much improved.

After him went Marcello de Villalobes but with the title of prefident, which still con-

The first bishop of St. Domingo was D. F. Garcia de Podilla, a Franciscan. Many miof the Indians. The first archbishop of St. Domingo was Alfonfo de Fuca Mayor.

In the ifland the Spaniards found no fort of four-footed beafts, except three forts of coneys; but they have now all forts of cattle, and of one cow there came eight hundred in twenty fix years. Many of the dogs the Spaniards carry'd turned wild, and did more harm than wolves; and the cats they carried out of Stain would not caterwaul there.

The Islands of the Lucavo's.

These islands are four hundred in number, lying to the northward of Hifpaniola, and the first discovered by Columbus. The people are fairer than in Cuba, and Indians used to come from other places to live with those women. They had no flesh; and when the Spaniards carry'd them to Hiffaniola, and gave them flesh to eat, they died. They thought, that when they died they were carried into the northern regions, and from thence to paradife in the

Seven inhabitants of Hispaniola, amongst whom was Lucas Vafquez de Ayllon, a scholar, and auditor of the illand, fitted out two carvels at Puerto de Plata, in the year 1722, to fetch Indians from the islands Lu-1250's to work in their mines; but they found no men there, and therefore refolved to go northward for fome, because they would not lose their labour. They came into thirty two degrees, where is now cape St. Tiden, and the river Jordan. The Indians took their fhips for great fifthes, and entertained the Spaniards well, who brought away two of those Indians; one whereof was call away in one of the carvels, the other starved himself to death.

Lucas Vasquez, by the report of an Indian, supposed the country to be rich, and them at their first landing. VOL. III.

therefore went into Spain to beg leave of the emperor to conquer it. Leave was granted; and he being made a knight of the order of St. Jago, returned to St. Domingo, where he fitted out fome thips in the year 1524, but his admiral thip was loft in the river Jordan, with many men; and this was his end.

St. John de Puerto Rico, or Borriquen.

The people of this island were braver than those of Hispaniola. Columbus discovered it in his fecond voyage, and John Ponce de Leon went to inhabit it in 1509. The king and queen received him courteoufly, and became christians. At first they thought the Spaniards were immortal; wherefore, to try it by confent, they drowned one Salcedo, whom they much feared; and feeing he died when they threw him into the water, they took heart, revolted, and killed five hundred Spaniards. They much dreaded a dog called Bezerillo; his mafter received pay of the emperor for him, and the dog did great fervice. He would diftinguish betwixt the Indians that were friends and focs; at laft he was killed with a poisoned arrow. The first bishop of this island was Alonfo Manfo, Anno 1511.

Florida.

The admiral Columbus taking John Ponce from his government at Borriquen, and he being left without command, and rich, fitted out two carvels, and not finding the island Boynea, where the Indians told the Spaniards, there was a well that made old men young, he discovered the coast of Florida on Easter-Day, Anno 1515. He fitted out three ships at Seville, came to Guadahope, where putting men ashore for wood and water, and to wash their cloths, the people of that island slew them. Thence he went to Florida, where the Indians standing on their guard, wounded him, and many more; and he died of his hurt at Cuba, after lofing much of his wealth. He failed with Columbus in the year 1493, and was a good officer, and did good fervice.

Ferdinand de Soto, who had been in the wars of Peru, and was grown rich by the ranfom of Atabaliba, defired the conquest of Florida, whither he went, and fpent five years in the attempt; but he and all his men died without doing any thing.

After the death of this Soto many fued for the conquest of Florida; and in 1548. Julian Samana begged it : but the emperor thinking it no good course to convert the Indians by force, fent feveral friers to convert them; but the Indians killed four of

Tame.

Panuco.

Fifty leagues from Florida is the river of The first discoverer of it was Francis de Garay, who only failed along the coaft; but he that undertook the conquest was Pampbilo de Narvaes, with the title of Adelantado. He failed from St. Lucar with five ships, six hundred men, one hundred horses, and all other provisions, in the year 1527, and fuffered much by the way through the ignorance of his pilots: yet he proceeded with three hundred men; but his fault was, that he did not inhabit where he landed. Of the three hundred Spaniards that went ashore with him, only four lived, who wander'd fix years up and down naked, and wrought many miracles a as healing of difeases, and raising a dead man to life. This Narvaes was he that went to oppose Cortes in New Spain. A Morisco foretold it to him, That his fleet should have an ill end; and few of it escaped.

Francis de Garay fitted out three carvels at Jamaica in the year 1528, intending to attempt Florida, which they thought to be an island; for they were more willing to inhabit islands than the continent. Attempting to land, all his men were either kill'd or hurt; but he got to Panuco, and returned to Jamaica, where he refitted his fhips, and recruited his forces, but had worse success than before. He vied with Cortes, hoping to gain as much honour as he had done, because the country promised well. He therefore provided eleven ships, with seven hundred men, one hundred and fifty horses, and all necessaries, and failed to Panuco, where he loft all, but himfelf, who escaped to die afterwards at Mexico. Nunno de Guzman who was also governor of Panuco; he carried but two or three ships, and eighty men, and yet revenged the flaughters the Indians had made.

Jamaica.

Columbus discovered Jamaica in his second voyage. His fon James conquered it, when he was governor of Hijpaniola. Francis de Garay was the richest governor it ever had, but for his loss in the expedition to Panuca. This island breeds the best hogs in the Indies: the chief town is called Seville. The first abbot it had was Peter Martyr of Angleria, who writ the decades of the Indies.

The discovery of New Spain is before, with the actions of Cortes.

de Ovando began the conquest of it, when he was governor of Hispaniola: the chief town and port in it is the Havana. The first bishop was Hernando de Meja, a Dominican. Many miracles were wrought in thi, island, by which means it was the sooner fubdued.

Yucatan.

Francis Hernandez de Cordova discover'd it Anno 1517. having one hundred and ten men with him. Here landing to take wa. ter he was opposed, and had twenty men killed, fifty wounded, as he was himself in thirty three places, and two taken, whom the Indians farrificed. He returned to Cuba troubled for his lofs; but glad that he had found fuch a fruitful country.

Francis de Montejo went next to conquer it, with five hundred Spaniards, in ships of his own, and built a town called Sunta Maria de Vitoria. Here he endured much hunger, and other miferies; but outlived them; and continued twenty years, marrying an Indian woman, and following the customs of the Indians, He refused to go with Cortes upon his conquest.
